"(C) exempt any person from such regulations with respect to a particular fuel or fuel additive upon a finding that any additional testing of such fuel or fuel additive would be duplicative of adequate existing testing."

#### TESTING BY SMALL MANUFACTURERS

Sec. 220. Section 206(a)(1) of the Clean Air Act is amended by adding at the end thereof the following: "In the case of any manufacturer of vehicles or vehicle engines whose projected sales in the United States for any model year (as determined by the Administrator) will not exceed three hundred, the regulations prescribed by the Administrator concerning testing of the manufacturer for purposes of determining compliance with regulations under section 202 for the useful life of the vehicle or engine shall not require operation of any vehicle or engine manufactured during such model year for more than five thousand miles or one hundred and sixty hours, respectively, but the Administrator shall apply such adjustment factors as he deems appropriate to assure that each such vehicle or engine will comply during its useful life with the regulations prescribed under section 202 of this Act."

#### CALIFORNIA WAIVER

Sec. 221. Section 209(b) of the Clean Air Act is amended to read as follows:

"(b)(1) The Administrator shall, after notice and opportunity for public hearing, waive application of this section to any State which has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, if the State determines that the State standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards. No such waiver shall be granted if the Administrator finds that—

"(A) the determination of the State is arbitrary and capricious,

"(B) such State does not need such State standards to meet compelling and extraordinary conditions, or

"(C) such State standards and accompanying enforcement procedures are not consistent with section 202(a) of this part.

"(2) If each State standard is at least as stringent as the comparable applicable Federal standard, such State standards shall be deemed to be at least as protective of health and welfare as such Federal standards for purposes of paragraph (1).

"(3) In the case of any new motor vehicle or new motor vehicle engine to which State standards apply pursuant to a waiver granted under paragraph (1), compliance with such State standards shall be treated as compliance with applicable Federal standards for purposes of this title."

And amend the table of contents accordingly.

Page 378, strike out line 23 and all that follows down through line 18 on page 385 and insert in lieu thereof the following:

#### LIGHT-DUTY MOTOR VEHICLE EMISSIONS

Sec. 203. (a) Subparagraph (A) of section 202(b)(1) of the Clean Air Act is amended to read as follows:

"(A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines

manufactured during or after the model year 1980 shall contain standards which provide that such emissions do not exceed 8.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of hydrocarbons from light-duty vehicles and engines manufactured during or after model year 1980 shall contain standards which require a reduction of at least 90 per centum from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970."

(b) Subparagraph (B) of section 202(b)(1) of such Act is amended to read as follows:

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1981 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured after the model year 1981 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.0 grams per mile except in the case of a revision or waiver by the Administrator under paragraph (5) or (6)."

(c) Section 202(b) of such Act is amended by striking out paragraph (5) thereof and substituting the following:

"(5)(A) Upon the petition of any manufacturer or on his own motion, the Administrator, after notice and opportunity for public hearing, shall revise the standard required under subparagraph (B) of paragraph (1) with respect to light-duty vehicles and engines manufactured during any period of two or more model years beginning after the model year 1981 if he determines that such standard should be revised due to (i) the lack of available, practicable, emission control technology to meet such standard during such period, (ii) the cost of compliance with such standard, and (iii) the impact of such standard on motor vehicle fuel consumption. No such revision may be made if the Administrator determines that such revision would endanger public health.

"(B) A revised standard established under this paragraph shall provide for such reduction of emissions of oxides of nitrogen from light-duty vehicles and engines as the Administrator deems appropriate based on (i) technology which is available and practicable during the period for which such standard applies, (ii) the cost of compliance, (iii) the impact on motor vehicle fuel consumption, and (iv) the need to protect public health. No such standard shall permit emissions of oxides of nitrogen in excess of 2.0 grams per vehicle mile.

"(C) A revised standard promulgated under this paragraph shall apply for a period of not less than two model years.

"(D) A revised standard established under this paragraph shall take effect beginning with the third model year which begins after the model year during which it is promulgated. In the case of a petition submitted by a manufacturer under this paragraph within such period as may be appropriate for purposes of this subparagraph, the Administrator shall promulgate a revision, or refuse to promulgate such a revision, within ninety days after the receipt of such petition.

"(6)(A) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) for any class or category of light-duty vehicles and engines manufactured by such manufacturer during any period of four or more model years beginning after the model year 1981 if he determines that such waiver is necessary to permit the

use of an innovative power train technology in such class or category which use can produce a substantial energy saving for such class or category as compared to conventional power trains incorporating spark ignited, gasoline, internal combustion engines. No such waiver may be granted if the Administrator determines that such waiver would endanger public health.

"(B) Upon granting a waiver under this paragraph respecting any class or category of vehicles or engines, the Administrator shall promulgate an interim standard applicable to such class or category such as will (i) permit the use of the innovative power train technology on the basis of which such waiver was granted and (ii) take into account the need to protect public health. No such interim standard shall permit emissions of oxides of nitrogen in excess of 2.0 grams per vehicle mile.

"(C) A waiver under this paragraph shall apply for a period of not less than four model years.

"(D) An interim standard promulgated under this paragraph shall take effect beginning with the third model year which begins after the model year during which it is promulgated. In the case of a petition submitted by a manufacturer under this paragraph within such period as may be appropriate for purposes of this subparagraph, the Administrator shall grant a waiver or refuse to grant such a waiver within ninety days after the receipt of such petition.

"(7)(A) Following each model year, the Administrator shall report to the Congress respecting the motor vehicle fuel consumption consequences, if any, of the standards applicable for such model year in relationship to the motor vehicle fuel consumption associated with the standards applicable for the immediately preceding model year.

"(B) The Secretary of Transportation and the Federal Energy Administration shall each submit to Congress, as promptly as practicable following submission by the Administrator of the fuel consumption report referred to in subparagraph (a), separate reports respecting such fuel consumption."

Page 402, strike out line 6 and all that follows down through line 8 on page 411 and insert in lieu thereof the following:

#### WARRANTIES

Sec. 209. (a) Section 207(b)(2) of the Clean Air Act is amended by adding the following at the end thereof: "No such warranty shall be invalid on the basis of any part used in the maintenance or repair of a vehicle or engine if such part was certified as provided under subsection (a)(2)."

(b) Section 207(a) of such Act is amended by striking out "(1)" and "(2)" and inserting in lieu thereof "(A)" and "(B)" respectively, by inserting "(1)" after "(A)" and by adding the following new paragraph at the end thereof:

"(2) In the case of a motor vehicle part or motor vehicle engine part, the manufacturer or rebuilder of such part may certify that use of such part will not result in a failure of the vehicle or engine to comply with emission standards promulgated under section 202. Such certification shall be made only under such regulations as may be promulgated by the Administrator to carry out the purposes of subsection (b). The Administrator shall promulgate such regulations no later than two years following the date of the enactment of this paragraph."

(c) Section 207(b) of such Act is amended by striking out "its useful life (as determined under section 202(d))" in each place it appears and inserting in lieu thereof "a period of eighteen months or eighteen thousand miles (or the equivalent), whichever first occurs."

(d) Section 207(c)(3) of such Act is amended by inserting after the first sentence thereof the following: "The manufacturer

shall provide in boldface type on the first page of the written maintenance instructions notice that maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any automotive part which has been certified as provided in subsection (a) (2)."

(e) Section 207 of such Act is amended by adding the following new subsection at the end thereof:

"(g) Nothing in this section shall be construed to provide that any labor required to be provided at the cost of the manufacturer pursuant to warranty under regulations under subsection (b) (2) may be performed by any persons other than persons specified by the manufacturer or that any part required to be provided at the cost of the manufacturer under such warranty may be other than a part specified by the manufacturer."

(f) Section 207(a) (1) of such Act, as designated by subsection (b) of this section, is amended by adding the following at the end thereof: "For purposes of clause (1) (B) of this subsection the term 'defect' means a defect which existed at the time of sale of the new motor vehicle or motor vehicle engine to the ultimate purchaser."

(g) Section 214 of such Act is amended by adding the following new paragraph at the end thereof:

"(7) The term 'emission control device or system' means, for purposes of section 207, a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions. Such term shall not include those vehicle components which were in general use prior to model year 1968."

Mr. DINGELL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. ROGERS. Mr. Chairman, may we have a copy of the amendment?

Mr. DINGELL. Mr. Chairman, the amendment was printed in the Record. It has been made available through that device to all of my colleagues. I regret I do not have a copy of the amendment immediately before me, but it is in the Record.

Mr. ROGERS. Mr. Chairman, I will ask the gentleman if it is identical to what is in the Record.

Mr. DINGELL. Mr. Chairman, it is identical to that which was published in the Record.

Mr. Chairman, this is the amendment which was cosponsored by my good friend and colleague, the gentleman from North Carolina (Mr. BROYHILL), and me. It has the support of the UAW, the AFL-CIO, the Automobile Dealers, the automobile companies, the American Automobile Association, and the auto market parts industry, as well as the support of a large number of organizations and individuals throughout the whole of our society, including the chamber of commerce.

Mr. Chairman, copies of the amendment and lists of those who join in sponsorship have been made available to my colleagues.

To my colleagues I point out that here

is the schedule that would be imposed under the legislation which we have before us. Observe that it is the same, for all intents and purposes, with regard to hydrocarbons at the end and throughout the length of the bill. It only goes to 9 grams per mile with carbon monoxide because California's and every other study has shown that this is about as low as we need to go. It goes to 1.0, which was the level agreed upon by the House last year, and allows a waiver up to 2.0 grams of NO<sub>x</sub> only for technology which gives additional mileage and only if there is a finding that this can be accomplished without endangering public health.

Mr. Chairman, I point out to my colleagues that to fail to do this will be to rule out diesels and other advanced technologies which are presenting enormous opportunities for energy savings.

Mr. Chairman, I would beg my colleagues to understand that the committee bill virtually rules out all advanced technology which will save energy, including diesels, lean burn, stratified charge, and even the gas turbine and turbocharged engines or new efficient driveline technologies.

Let me show my colleagues some of the information I think they ought to know. I tried very diligently to have the White House have the three-agency study updated with regard to health benefits, environmental benefits, cost savings, and fuel savings; but it was not done until last week. The EPA judgments on which the House has been called upon to act have been entirely deficient. The President had no complete or integrated analytical information available to him when he made his judgments.

Mr. Chairman, here are the consequences in terms of energy losses of the administration bill. Taking the middle figure of 140,000 barrels of oil a day, that is an energy loss of \$3.5 billion a day in oil and \$3.5 billion in foreign exchange every year.

Mr. Chairman, I beg my colleagues to understand the consequences of what we are doing. Here are the effects of the different strategies lying before us, and this is according to Mr. Costle of the EPA when he testified before our congressional committee.

Mr. Chairman, if adopted, the amendment offered by the gentleman from North Carolina (Mr. BROYHILL) and me will cost in new car prices, \$170 additional. The legislation sponsored by the gentleman from Florida (Mr. ROGERS) will cost a buyer \$350 additional; but with the 5- to 14-percent fuel penalty that will be involved, it will cost the consumers not only the initial payment of \$350 additional, but it will cost about \$190 more over the lifetime of the car. This is what has already been imposed on American consumers, according to Douglas Costle, the Administrator of EPA.

Mr. Chairman, \$1,000 in total Government regulations on the automobile is added by these things to the initial cost of the automobile. This is a figure, according to the EPA, of losses in automobile sales in the thousands on a yearly basis. The administration's proposal will

cost 99,000 cars. Under our proposals, there will be a loss of 32,000 sales, and there will be a loss in the number of jobs in thousands, according to the EPA.

Mr. Chairman, I call upon my colleagues to note that last year it was said that the current administration's proposal, which is substantially identical to that which is before us, in H.R. 6161, would cost as many as 100,000 additional jobs. According to the EPA, the proposal made by the gentleman from North Carolina (Mr. BROYHILL) and me will cost only 7,000 jobs.

Again, Mr. Chairman, I beg my colleagues to consider this at a time when the economy is only now recovering from the deepest recession in history. Here are the NO<sub>x</sub> effects, and I beg my colleagues to look at this because it is over NO<sub>x</sub> that the big controversy arises.

Here is what the DOT analysis said, and incidentally, the administration suppressed all of the information with regard to environmental consequences, health benefits, and other things until the gentleman from California (Mr. Moss) forced them to deliver to his committee that information under threat of subpoena.

Observe that it is evident that a reduction of automobile emissions from 2.0 to 0.4 grams could not produce the claimed reductions in lower health effects.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. DINGELL was allowed to proceed for 3 additional minutes.)

Mr. DINGELL. The Department of Transportation analysis further said:

That it is difficult to put a price tag on health and even more difficult to judge the cost on life.

However it has also been suggested in health studies that additional health gains attributable to any lower emission controls would come more likely from tighter controls on stationary sources rather than automobiles across the Nation.

Of total damage in terms of health consequences: There is no health consequence which is demonstrated and by 1990 we will be at exactly the same place in terms of health consequences.

There has been a lot of fuss about carbon monoxide. I want the Members to observe this chart, carbon monoxide in the three main regions in the United States where we are told there are major environmental problems, take Los Angeles, Denver, and the Washington metropolitan area. Observe the 1.10 parts per million of the area where there is no hazard under three schedules. In Los Angeles, by the same time and by the same place, we get to zero evil effect in terms of carbon monoxide. The same is true of Denver. The same is true of the Washington metropolitan area. All three schedules, in terms of health consequences from carbon monoxide emissions, under any of the schedules, are exactly the same.

There are more additions to this proposal in our amendment which would preserve the economic warranty and

which would say to the small businessmen, that they would have a fair chance at the aftermarket parts sales. Let me point out that this industry, over 160,000 member firms strong, supports the aftermarket parts provision of the amendment which we offer.

I beg my colleagues, on the basis of jobs, on the basis of fuel savings, on the basis of conservation and on the basis of health environmental benefits, that the best schedule and legislation lying before the committee is here, Dingell-Broyhill. We save the consumers and we save our constituents almost \$350 a car over the life of the vehicle by voting for this amendment with no health penalties, right in this amendment. But there are other advantages from the amendment which are enormous.

I beg my colleagues to bear that in mind, to impose a greater burden on the American economy, the worker and the consumer is totally unjustified.

Unless there could be a showing of health benefits, and the EPA, Doug Costle and the administration, despite the fact they tried to suppress the information, have consistently made it plain that there is no certain or hard data on health benefits whatsoever going below the level fixed in Dingell-Broyhill. Indeed, California has pointed out that to go below 9 grams per mile constitutes a massive waste of energy. The catalyst manufacturers have said that this is as far as they can go in terms of providing rhodium and other precious metals that go into the catalysts. By 1983 diesels will be removed from the road by the administration's .04 NO<sub>x</sub> proposal, with a loss of 25 percent in fuel savings.

The whole consequence of these proposals before us is very clear when one looks at the facts and the information.

I would also point out that the foreign manufacturers, Volvo, the Japanese car makers and Volkswagen and all others have said this is exactly the schedule to which we should go.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. DINGELL) has expired.

(At the request of Mr. Russo, and by unanimous consent, Mr. DINGELL was allowed to proceed for 2 additional minutes.)

Mr. RUSSO. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. The gentleman from Illinois has been gracious enough to get additional time for me, and I am glad to yield to him.

Mr. RUSSO. Mr. Chairman, I rise in strong support of the Dingell-Broyhill amendment and want to compliment the gentleman from Michigan on his presentation of the amendment.

Mr. Chairman, there can be no doubt that today's consideration of amendments to the Clean Air Act represents a key decision point in the development of our national energy policy for the next several decades. The vote today on the Dingell-Broyhill amendment will show just how serious we really are about energy conservation. The fleet average fuel economy performance standards for model years 1981 through

1985, set by the Energy Policy and Conservation Act of 1975, represent major targets of fuel conservation which we cannot afford to abandon at this time—ask any Arab oil minister and he will tell you why. The Dingell-Broyhill substitute assures us that the fuel economy goals can be met on time because the emission limits reflect realistically obtainable reductions in tailpipe emissions, NO<sub>x</sub> in particular.

The Dingell-Broyhill emissions schedule assures us that auto makers will not need to devote all of their research and quality control efforts toward improvements in existing control technologies. Rather, the flexibility will be there for them to channel research efforts toward new engine designs and more sophisticated add-on devices as the means to ultimately achieving greater emission reductions than are now possible.

And I am concerned over the proven effects which the emissions schedule as now written will have on the sticker price of every new car. The interagency report on the effects of various emission requirements, as updated this March, still shows that the levels required in H.R. 6161 would add up to \$340 in additional cost to the consumer. This, combined with the additional system maintenance costs of up to \$100, is more than can be justified by the resulting fuel penalties and insignificant air quality improvements promised by the administration proposal. The Dingell-Broyhill substitute offers the most reasonable balance here between the additional costs of achieving control and the need to keep from breaking the customer's pocketbook.

Finally, the Dingell-Broyhill substitute assures that, beyond the current average of over 80 percent emission reductions in 1977 cars, we will continue improving with further reductions in the auto component of overall air pollution. I am convinced that we can follow this course while maintaining the needed balance between our environmental, health, and energy needs.

With regard to the performance warranty and parts certification provisions, again I believe the Dingell-Broyhill substitute offers the best solution. I attach great importance to the automotive parts industry and independent garages as essential segments of the small business community. I have no doubt that the imposition of a 5-year/50,000-mile warranty would effectively shut out their shares of the emission control maintenance and related repair work.

The committee bill would authorize the automatic transfer to the 5 year/50,000-mile term after 3 years. The language holds out the slim possibility that a 2-year Federal Trade Commission (FTC) study on the market effects of the lengthier term could prove that there are significant anticompetitive effects. Even then, it would be up to the Congress to reverse the automatic effect of the committee bill's language. Well, there is enough evidence now to convince me of its anticompetitive effects. The March 1977 testimony before EPA by the Justice Department and the De-

cember 1974 report of the Small Business Subcommittee on Environmental Problems Affecting Small Businesses, Monopolistic Tendencies of Auto Emission Warranty Provisions, both conclude that there would be definite negative impacts on the automotive aftermarket created by the 5 year/50,000-mile warranty.

For 5 years customers would, for the assurance of proper maintenance to the specifications of the manufacturer, be inclined to depend on the dealer to perform this work. Once the customer is at the dealership, there is greater likelihood that he will request other maintenance and repair work which he might normally have done at an independent garage. Currently, 75 percent to 80 percent of the service work on automobiles is performed by independent garages in this country.

The Health Subcommittee adopted a provision to the section 209 language which was expected to defuse the projections of an auto company monopoly on parts and servicing. As H.R. 6161 now reads, it would authorize the vehicle owner to choose an independent garage to perform warranty work using certified automotive aftermarket parts. Auto companies would be obliged, under the law, to reimburse the independent garages for their work.

This arrangement thus takes the fundamental decisionmaking control over repair arrangements away from the manufacturer—who must still bear the liability for proper repair work—and gives it to the owner. This band-aid approach can only lead to greater built-in costs in the price tag of automobiles which the consumer will have to pay. Extending the manufacturer's liability to cover the work of anyone not of their choosing is just plain bad policy and promises to be unworkable in practice.

So we owe it to ourselves to think about this vote on the Dingell-Broyhill substitute and its impacts on the fuel conservation effort and on the viability of the automotive aftermarket industry. I urge my colleagues to adopt this amendment.

AMENDMENT OFFERED BY MR. PREYER AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. DINGELL

Mr. PREYER. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. PREYER as a substitute for the amendment offered by Mr. DINGELL: In lieu of the matter proposed to be inserted by the Dingell amendment, insert the following:

#### TITLE II—AMENDMENTS RELATING PRIMARILY TO MOBILE SOURCES

##### LIMITATION ON INDIRECT SOURCE REVIEW AUTHORITY

SEC. 201. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

##### "INDIRECT SOURCE REVIEW PROGRAM STUDY

"Sec. 318. The Administrator shall conduct a study to determine if, and under what conditions, indirect source review programs (as defined in section 124(g)) contained in, or which could be contained in, State implementation plans are necessary to, and are

likely to be effective to reduce, or prevent or minimize any projected increase in, emissions of any mobile source-related air pollutant or otherwise assist in attaining or maintaining any national primary ambient air quality for such pollutant. Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, the Administrator shall report to the Congress the results and findings of the study conducted under this section. In carrying out this section, the Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences for an independent study to be conducted by the Academy. In conducting such study, the Administrator shall consult with other appropriate governmental agencies. In making the report under this section, the Administrator shall consider the study and advice of the Academy and of other appropriate governmental agencies. Of the funds authorized to be appropriated to the Administrator by this Act, such amounts as are required shall be available to carry out such independent study."

(b) Section 110(a) of such Act is amended by adding at the end thereof the following new paragraph:

"(5) Except as may be otherwise provided under paragraph (2) (I) and section 124—

"(A) no applicable implementation plan, nor any amendment or revision thereof, shall be required under any provision of this Act, as a condition of approval of such plan under paragraph (2), to include, and no plan promulgated by the Administrator shall include, any indirect source review program (as defined in section 124(g)), and

"(B) any State may revise an applicable implementation plan approved under section 110(a) to suspend or revoke any such program included in such plan.

This paragraph shall not prevent the Administrator from approving any such program if it is adopted and submitted by a State as part of an applicable implementation plan."

(c) Section 110(a)(2) of such Act is amended by striking out the period at the end of section 110(a)(2)(H) and inserting in lieu thereof a semicolon and by adding the following new subparagraph at the end thereof:

"(I) it includes an indirect source review program meeting the requirements of section 124 if the Administrator determines—

"(i) as provided under section 124(a), that such program would be necessary in an air quality control region, or portion thereof, in the State in order to assist in attaining or maintaining a national primary ambient air quality standard, and

"(ii) as provided under section 124(b), that such program is likely to be effective in reducing emissions of a mobile source-related air pollutant, in preventing or minimizing any projected increase in such emissions, or otherwise assisting in attaining or maintaining any national primary ambient air quality standard for such pollutant;"

(d) Title I of the Clean Air Act is further amended by adding at the end thereof the following new section:

#### "LIMITATIONS ON INDIRECT SOURCE CONTROLS

"Sec. 124. (a) Regulations promulgated by the Administrator under subsection (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan, an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with such other information as may be available to the Administrator), that such a program would be necessary to assure attainment of the national primary ambient air quality standards for mobile source-related pollutants by the primary standard attainment date for such

pollutant or to assure maintenance of such standards thereafter assuming the following conditions existed—

"(1) Light-duty motor vehicles and engines manufactured during and after model year 1975 had achieved a reduction in emissions of carbon monoxide and hydrocarbons of 90 per centum from the emissions of such pollutants allowable under standards under section 202 applicable to model year 1970, and such vehicles and engines manufactured during and after model year 1976 had achieved a reduction in emissions of oxides of nitrogen of 90 per centum from the emissions of such pollutant allowable under such standards applicable to model year 1971.

"(2) All practicable emission limitations and transportation control measures in the applicable implementation plan had been implemented as provided in such plan.

"(b) (1) Regulations promulgated by the Administrator under subsection (c) shall not require a State to include in the State implementation plan, as a condition of approval of such plan under section 110(a)(2), an indirect source review program for any air quality control region, or portion thereof, unless, after notice and opportunity for public hearing, he determines, on the basis of the study conducted under section 318 (together with such other information as may be available to the Administrator), that such program is likely to be effective in such State to reduce emissions of a mobile source-related air pollutant, to prevent or minimize any projected increases in such emissions, or otherwise to assist in attaining or maintaining any national primary ambient air quality standard for any such pollutant—

"(A) in general,

"(B) Under any specified set of conditions, or

"(C) in any designated air quality control region or portion thereof.

"(2) If the Administrator makes the determination in paragraph (1) (B) or (C), then any such regulations may apply only in any air quality control region where the conditions specified in paragraph (1) (B) exist or in any region designated in paragraph (1) (C).

"(c) (1) (A) Within three months after the date required for completion of the study conducted under section 318, the Administrator shall publish proposed regulations requiring adequate State indirect source review programs to be included in appropriate State plans, as a condition of approval of such plans, subject to the limitations of subsections (a) and (b). Not later than three months after proposal of such regulations, the Administrator shall promulgate final regulations with appropriate modifications. Regulations promulgated under this section may be revised from time to time.

"(B) Within nine months after the later of (i) promulgation of final regulations under subparagraph (A) or (ii) determinations made under subsections (a) and (b), each State required to include an indirect source review program in the applicable implementation plan as a condition of approval under section 110(a)(2) shall submit to the Administrator a plan revision containing such a program.

"(C) Within eight months from the date required for submission of a plan revision under subparagraph (B) the Administrator shall approve or disapprove so much of the implementation plan as provides for the implementation of, enforcement of, or variance from, such indirect source review program. The Administrator shall approve such provisions of such plan if he determines that the plan revision meets the requirements of regulations prescribed under this subsection. The Administrator may not disapprove any indirect source review program which he has previously approved unless he deter-

mines that the State in a substantial number of instances, has failed to carry out the requirements of such program in accordance with the provisions of this section. No determination of disapproval under the preceding sentence shall take effect for a period of three months following the date of such determination.

"(2) Regulations (or revisions thereof) published or promulgated under this subsection shall specify each State implementation plan with respect to which a plan revision will be required to comply with such regulations at the time such regulations (or revisions) are promulgated.

"(3) No indirect source (other than a parking facility which the Administrator determines will be used predominantly as part of a park-and-ride portion of a public transportation system which will assist in reducing regional air pollution concentrations) shall commence construction or modification after the date three months after the date required under paragraph (1) (C) for approval or disapproval of a State plan revision submitted under paragraph (1) (B) in any air quality control region for which the State is required to submit such a revision, unless the State's plan revision has been approved by the Administrator and such construction or modification complies with such approved plan.

"(d) (1) Except as provided in paragraph (2), any violation of a term or condition of any indirect source review program contained in an approved State plan (or in a plan promulgated under section 110(c), as permitted under subsection (e) (3)), any violation of a term or condition of any permit or variance under such an indirect source review program, and any violation of subsection (c) (3) of this section shall be treated as a violation of a requirement of an applicable implementation plan for purposes of this Act.

"(2) No person who has received a permit to construct or modify an indirect source from a governmental unit with an approved indirect source review program and who complies with the terms and conditions of such permit shall be deemed to be in violation of an applicable implementation plan under this subsection with respect to such construction or modification and no such permit may be withdrawn or revoked by the Administrator.

"(3) The regulations promulgated under subsection (c) may not require any indirect source which commences construction or modification before the date six months after any revision of an applicable implementation plan required by reason of a revision or amendment of the regulations promulgated under subsection (c) to comply with any requirement of such revised or amended implementation plan.

"(e) (1) Except as provided in paragraph (3) of this subsection, the Administrator shall have no authority to promulgate, implement, or enforce regulations under section 110 (c) (1) relating to an indirect source review program for any air quality control region or any portion thereof located in any State.

"(2) In the event an indirect source review program is required for any air quality control region or part thereof in any State and such State fails to adopt a program which meets the requirements of this section, the State's indirect source review program shall be disapproved by the Administrator.

"(3) Paragraph (1) shall not apply to promulgation, implementation, or enforcement of regulations respecting indirect source review programs which apply only to federally assisted highways, airports, and other major federally assisted indirect sources and federally owned or operated indirect sources. Nothing in this section shall be construed to limit the authority of the Ad-

ministrator to conduct preconstruction or premodification review of a federally assisted highway, airport or other major federally assisted indirect source or federally owned or operated indirect source, which commences construction or modification on or before the date three months after the date required under subsection (c) (1) (C) for approval or disapproval of a State plan revision.

"(f) (1) The regulations promulgated by the Administrator under subsection (c) shall provide that variances may be granted by the Governor of a State with an approved indirect source review program permitting construction (or modification) and operation of an indirect source notwithstanding the requirements of the indirect source review program in any case in which such variance will encourage development of long-term transportation patterns and modes which will—

"(A) improve, in the long term, air quality and protect public health, and

"(B) be energy efficient, or which will prevent any requirement of the indirect source review program from creating any economic advantage or disadvantage for urban, suburban, or rural areas.

"(2) Except for a variance granted under this section, a plan promulgated under section 110(c) in conformance with subsection (e) (3) of this section, or a plan revision under section 110(a) (3) or 110(a) (5) (B), no variance, extension, compliance order, plan revision, or other action deferring or modifying a requirement of an applicable implementation plan may be taken with respect to any indirect source by the State or by the Administrator.

"(3) Any variance granted under this section shall terminate not later than January 1, 1985. Upon termination of any variance under this section, the indirect source to which such variance was granted shall be subject to all requirements and limitations of the applicable implementation plan.

"(4) A variance may be granted under this subsection only if the Governor determines that—

"(A) emissions from vehicles attracted to the indirect source with respect to which such variance is granted will not cause or contribute to air pollution concentrations in excess of any national primary ambient air quality standard for any mobile source-related pollutant in any part of the air quality control region in which such source is located upon expiration of such variance or thereafter (taking into account all other variances previously granted under this subsection),

"(B) any new indirect source receiving such a variance will be located so as to be (upon expiration of the variance) compatible with, and conveniently and economically served by, public transportation and such location will be compatible with any comprehensive public transportation measures under section 123(b) (5),

"(C) such indirect source will be designed and constructed so as to minimize emissions of mobile source-related pollutants from vehicles attracted to such source and will use the best practicable traffic flow measures, and

"(D) such indirect source as newly constructed or modified will become compatible with transportation control measures provided in the applicable implementation plan.

No subsequent variance may be granted under this subsection if the Administrator determines, after notice and opportunity for public hearing, that variances have been granted without regard to the requirements of this paragraph in a substantial number of instances. The prohibition contained in the preceding sentence shall be for such period as the Administrator deems necessary to assure compliance with such requirements.

"(g) (1) For purposes of this section the

term 'indirect source review program' means the facility-by-facility review of indirect sources of air pollution, including such measures as are necessary to assure, or assist in assuring, that a new or modified indirect source will not attract mobile sources of air pollution, the emissions from which would cause or contribute to air pollution concentrations—

"(A) exceeding any national primary ambient air quality standard for a mobile source-related air pollutant after the primary standard attainment date, or

"(B) preventing maintenance of any such standard after such date.

"(2) Such term shall include measures which—

"(A) require a prior permit for construction (or modification) of any such indirect source and require operation of such source in the manner approved pursuant to such permit; and

"(B) limit the issuance of any such permit to indirect sources which will not have the effects referred to in subparagraph (A) or (B) of paragraph (1)."

(e) Section 302 of such Act is amended by adding the following new subsections at the end thereof:

"(1) The term 'indirect source' means a facility, building, structure, installation, real property, road, or highway which attracts, or may attract, mobile sources of pollution. Such term includes parking lots, parking garages, and other facilities subject to any measure for management of parking supply (within the meaning of section 110(c) (2) (D) (ii), including regulation of existing on- and off-street parking). Direct emissions sources or facilities at, within, or associated with, any indirect source shall not be deemed indirect sources for the purpose of this Act.

"(k) The term 'mobile source-related air pollutant' means any air pollutant which is subject to regulation under section 202, 211 (c) (1) (A), or 231 of this Act."

(f) Section 110(a) (2) (B) of such Act is amended by striking out "land-use and" and by inserting after "transportation controls" the following: ", air quality maintenance plans, and preconstruction review of direct sources of air pollution."

#### EXTENSION OF TRANSPORTATION CONTROL COMPLIANCE DATES

SEC. 202. Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

#### "EXTENSION OF TRANSPORTATION CONTROL COMPLIANCE DATES

"SEC. 123. (a) (1) Upon application submitted by the Governor of a State, the Administrator may extend the date required for compliance with any transportation control measure adopted by a State and included in an applicable implementation plan.

"(2) Upon application submitted by the chief executive officer of a general purpose unit of local government which is carrying out responsibility delegated under section 110(c) (3), or on his own motion, the Administrator may extend the date required for compliance with any transportation control measure which was promulgated by the Administrator under section 110(c). In the case of an application submitted by such officer, such extension shall apply only to the extent that such measure applies within the jurisdiction of such unit.

"(b) (1) (A) No extension may be granted under subsection (a) with respect to any transportation control measure unless such measure is applicable in an air quality control region in which the State or unit of local government (or the Administrator, as the case may be) has implemented within such jurisdiction all requirements (except as provided in subparagraph (B)) of the applicable implementation plan which are required

to be implemented as of the date of application and are intended to control any mobile source-related pollutant. Such implementation includes initiating and diligently pursuing enforcement actions to bring non-complying persons into compliance.

"(B) For purposes of subparagraph (A) the State or unit of local government (or Administrator) shall not be required, as of the date on which such extension is granted, to have implemented:

"(i) transportation control measures with respect to which a finding has been made under paragraph (2), and

"(ii) requirements for indirect source review programs (as defined in section 124).

"(2) No extension may be granted under subsection (a) for any transportation control measure unless—

"(A) the Administrator finds that implementation of such measure on the required date would (i) cause, or contribute to, a failure to meet basic transportation needs of the area, (ii) be infeasible, or (iii) otherwise cause seriously disruptive and widespread economic or social effects,

"(B) the Administrator states with reasonable specificity the factual basis of the finding made under subparagraph (A), and

"(C) the applicant has prepared (or the Administrator has prepared, if acting on his own motion)—

"(i) a detailed planning study identifying and quantifying the respect (if any) in which the basic transportation needs of the area could not be met if the applicable measure were not extended, the seriously disruptive and widespread economic or social effects (if any) of not extending such measure, the respects (if any) in which implementation of such measure would be infeasible, and the effects on public health and welfare expected to result from the continued air pollution associated with the extension,

"(ii) an examination of measures (including establishment, improvement, or expansion of public transportation) other than those measures for which an extension is sought, which could be implemented and used to attain and maintain national ambient air quality standards as expeditiously as practicable, and

"(iii) a detailed description of the measures to be undertaken during all such extensions to minimize any risk to public health.

"(3) No extension may be granted under subsection (a) unless there has been prior notice and opportunity for public hearing.

"(4) No finding may be made under paragraph (2) (A) (i) unless the Administrator finds that implementation of public transportation (or other means) which would meet such needs by such required date would be impracticable.

"(5) (A) Except as provided in subparagraph (B) of this paragraph, each transportation control measure for which an extension is granted under subsection (a) shall be required to be implemented (under a compliance schedule containing increments of progress prescribed pursuant to such extension) as expeditiously as practicable but not later than January 1, 1980.

"(B) Such measure shall be required to be implemented as expeditiously as practicable but not later than January 1, 1985, if the applicable implementation plan is revised within the one-year period specified in paragraph (6)—

"(i) to include comprehensive measures (including compliance schedules containing increments of progress) to, as expeditiously as practicable, establish, expand, or improve public transportation to meet basic transportation needs while implementing transportation control measures necessary to attain and maintain national ambient air quality standards, and

"(ii) to meet the requirements of paragraphs (1) and (2) of subsection (d).

"(6) No extension for any transportation control measure under subsection (a) shall remain in effect for more than one year after such extension is granted unless, before such date, the applicable implementation plan is revised to include—

"(A) requirements to use (insofar as necessary), for the purpose of implementing the transportation control measures with respect to which such extension was granted, funds which are reasonably available to the State or local government; and

"(B) in the case of an area which has been granted an extension beyond January 1, 1980, requirements to use (insofar as necessary), for the additional purpose of implementing the comprehensive public transportation measures required under paragraph (5)(B), funds which are reasonably available to the State or local government.

"(c) In the case of any applicable implementation plan containing measures requiring—

"(1) retrofits on other than commercially owned in-use vehicles, or

"(2) gas rationing which the Administrator finds would have seriously disruptive and widespread economic or social effects if implemented before January 1, 1985,

the Administrator may, after notice and opportunity for public hearing, approve elimination of such measures from the plan notwithstanding the requirements of section 110(a). No later than nine months after approval of the elimination of any such measure is granted with respect to any applicable implementation plan, a revised plan must be submitted (as provided in section 110(a)(2)(H)) to meet such requirements.

"(d) Not later than one year after date of enactment of this section, the Administrator shall complete a review of all applicable implementation plans for mobile source-related pollutants to determine whether or not such plans would be adequate as of such date to attain, by the date required under section 110, the national primary ambient air quality standards for such pollutants and maintain them thereafter if no extensions, exemptions, or variances had been granted under sections 111(f), 118, 119, 121, 124, and this section. Unless the Administrator determines that any such plan would be adequate (within the meaning of the preceding sentence) he shall require revision of such plan. The revised plan shall be such as would be adequate (within the meaning of the first sentence of this subsection). The Administrator shall promptly notify the State when any plan revision is required under this subsection and shall require submission of such revised plan on such date (not sooner than sixty days or later than six months after such notice) as he may determine. Such revised plan shall—

"(1) identify and provide for implementation of the remaining emission reductions necessary for the plan to be adequate within the meaning of this subsection with respect to mobile source-related pollutants and the measures to be implemented to accomplish these reductions;

"(2) identify the financial and manpower resources necessary to carry out such measures, and commit the State or local government to provide those resources; and

"(3) include emission limitations, applicable to stationary sources which emit any mobile source-related air pollutant in significant amounts, requiring reduction of such emissions to the maximum extent technologically feasible (for a finding that any such emission limitation not so included is not necessary for the plan to be adequate within the meaning of this subsection and a justification for such finding).

If the Administrator determines that a proposed plan revision does not incorporate the most expeditious practicable date for

achievement of adequacy within the meaning of this subsection, he shall notify the Governor of the deficiencies in the proposed revision. This notification shall include the Administrator's judgment as to the additional control strategies that should be incorporated, and the most expeditious dates which are practicable for implementing the measures included or to be included in the plan. The notification shall also specify a date for submission of the modified plan revision not more than one hundred and twenty days from the date of notification.

"(e) Except for a compliance date extension issued under this section, a plan revision under section 110(a)(3), or an elimination approved under subsection (c), no extension, compliance order, plan revision, or other action deferring or modifying a requirement of an applicable implementation plan may be taken with respect to any transportation control measure by the State or by the Administrator.

"(f) (1) For purposes of this section and section 110(a)(2)(B), the term 'transportation control measure' does not include any measure for management of parking supply (as defined in section 110(c)(2)(D)(ii) except that such definition shall be applied without regard to whether or not a facility is new) or any indirect source review program (as defined in section 124).

"(2) For purposes of subsection (b)(6), the term 'funds which are reasonably available' means—

"(A) grants which have been made to a State or local government under Federal law,

"(B) funds which have been appropriated under State or local law, or

"(C) any combination of such grants, and funds, which may, consistent with the terms of the legislation providing for such grant or making such appropriation, be used for the purposes referred to in such subsection (b)(6)."

#### LIGHT-DUTY MOTOR VEHICLE EMISSIONS

Sec. 203. (a) Subparagraph (A) of section 202(b)(1) of the Clean Air Act is amended to read as follows:

"(A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles, and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the interim standards which were prescribed (as of December 1, 1973) under paragraph (5)(A) of this subsection for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during the model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per mile of hydrocarbons and 15.0 grams per mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of such pollutants from such vehicles and engines manufactured during the model year 1980 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 0.41 gram per mile of hydrocarbons and 9.0 grams per mile of carbon monoxide. The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during or after model year 1981 shall contain standards which require a reduction of at least 90 per centum from emissions of carbon monoxide and hydrocarbons allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970."

(b) Subparagraph (B) of such section 202(b)(1) is amended to read as follows:

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1975 and 1976 shall contain standards which are identical to the standards which were prescribed (as of December 1, 1973) under subsection (a) for light-duty vehicles and engines manufactured during model year 1975. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1980 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile. Except as provided in paragraphs (5), (6), and (7), the regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during or after model year 1981 shall contain standards which provide that emissions from such vehicles and engines may not exceed 1.0 grams per vehicle mile."

(c) Section 202(b) of such Act is amended by striking out paragraph (5) thereof and substituting the following:

"(5) The Administrator shall, not later than June 30, 1980, and after notice and opportunity for public hearing, determine whether or not a standard for emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during and after 1983 which provides that emissions from such vehicles and engines may not exceed 4 grams per vehicle mile may reasonably be anticipated to be necessary to protect public health. If he so determines under the preceding sentence, such standard for such pollutant shall be 0.4 gram per vehicle mile.

"(6) In the case of any manufacturer of light-duty vehicles having worldwide production of not more than 300,000 such vehicles during model year 1976 (as determined by the Administrator) in lieu of the standard required under the third sentence of paragraph (1)(B), in the case of the model year 1981, there shall be applied a standard which provides that emissions from such vehicles and engines shall not exceed 2.0 grams per vehicle mile.

"(7) For the model years 1981 and 1982, the Administrator may, after notice and opportunity for public hearing, waive the standard required under the third sentence of paragraph (1)(B) in the case of qualified diesel vehicles manufactured by any manufacturer during such model years if the Administrator determines that—

"(A) emissions of oxides of nitrogen from such vehicles will not exceed 1.5 grams per vehicle mile for a period of 100,000 miles and emissions of other pollutants will not exceed the applicable standard for a period of 100,000 miles,

"(B) such manufacturer has made maximum feasible efforts to meet such standard required under the third sentence of paragraph (1)(B) for the model years 1981 and 1982, and

"(C) such vehicles will meet all applicable fuel economy standards.

In the case of any waiver under this paragraph, the applicable standard for purposes of this Act for vehicles to which such waiver applies shall provide that emissions of oxides of nitrogen from such vehicles shall not exceed 1.5 grams per vehicle mile. For purposes of this paragraph, the term 'qualified diesel vehicle' means a diesel powered vehicle weighing in excess of 3,000 pounds."

(d) Section 206 of such Act (relating to compliance testing and certification) is amended by adding the following new subsection at the end thereof:

"(g)(1) In the case of any class or category of vehicles or engines subject to a standard of 0.4 grams per vehicle mile for

oxides of nitrogen (as provided in section 202(b)(5)), a certificate of conformity shall be issued under subsection (a) and shall not be suspended or revoked under subsection (b) for such vehicles or engines manufactured by a manufacturer during any model year after the model year 1982 and before the model year 1986 notwithstanding the failure of such vehicles or engines to meet such standard if—

"(A) emission of oxides of nitrogen from such vehicles and engines do not exceed 1.0 grams per vehicle mile, and

"(B) such manufacturer pays a nonconformance penalty as provided under regulations promulgated, after notice and opportunity for public hearing, by the Administrator.

"(2) The regulations promulgated under paragraph (1) shall provide for a nonconformance penalty in an amount equal to the difference between the costs of compliance (by vehicles and engines subject to such penalty) with a standard of 0.4 grams per vehicle mile and the costs of compliance (by such vehicles and engines) with a standard of 1.0 grams per vehicle mile, for oxides of nitrogen.

"(3) In the case of any diesel vehicles if the Administrator determines, after notice and opportunity for public hearing, that such vehicles will meet a standard for oxides of nitrogen which provides that emissions of such pollutant shall not exceed 1.0 grams per vehicle mile for a period of 100,000 miles, a standard established under section 202(b)(5) shall not apply to such vehicles and the applicable standard for purposes of this Act shall provide that emissions of such pollutant shall not exceed 1.0 grams per vehicle mile."

(c) Part A of title II of such Act is amended by redesignating section 214 as section 218 and by inserting after section 213 the following new section:

**"STUDY OF UNREGULATED POLLUTANTS FROM MOTOR VEHICLES"**

"SEC. 214. (a) The Administrator shall conduct a study concerning the effects on health and welfare of emissions from motor vehicles or motor vehicle engines to which section 202 applies of sulfuric acid mist, other pollutants which are not subject to standards under section 202, and pollutants which may be present in the ambient air which are derivatives of any pollutant emitted from motor vehicles. Such study shall characterize and quantify such emissions, and determine the effects of such pollutants emitted from diesel, rotary, stratified charge, lean burn, catalytically equipped, and conventional internal combustion engines as well as engines or control devices which the Administrator determines are likely to come into common use.

"(b) The Administrator shall report to Congress the findings and results of the study conducted under subsection (a) not later than one year after the date of the enactment of the Clean Air Act Amendments of 1977 and annually thereafter.

"(c) The reports required to be submitted to the Congress under this section shall be submitted directly to the Congress by the Administrator before disclosure or submission of such reports to the Office of Management and Budget, the President, or any other department or agency of the United States. Nothing in this subsection shall be construed to preclude the Office of Management and Budget from submitting its comments concerning any such report to the Congress."

(f) Section 203(a)(4) of the Clean Air Act is amended by striking out "or" at the end of subparagraph (A), by striking out the period at the end of subparagraph (B) and by adding the following new subparagraph at the end thereof:

"(C) to fail to make maximum efforts which are feasible for such manufacturer

to comply with any standard under section 202 of this Act."

**EMISSION STANDARDS FOR HEAVY DUTY VEHICLES OR ENGINES AND CERTAIN OTHER VEHICLES OR ENGINES**

SEC. 204. (a) Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(3) (A) (i) The Administrator shall prescribe regulations under paragraph (1) of this subsection applicable to emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen from classes or categories of heavy-duty vehicles or engines manufactured during and after model year 1979. Such regulations applicable to such pollutants from such classes or categories of vehicles or engines manufactured during model years 1979 through 1984 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers and to noise, energy, and safety factors associated with the application of such technology.

"(ii) Unless a different standard is temporarily promulgated as provided in subparagraph (B) or unless the standard is changed as provided in subparagraph (E), regulations under paragraph (1) of this subsection applicable to emissions from vehicles or engines manufactured during and after model year 1985 shall contain standards which require a reduction of at least 65 percent in the case of oxides of nitrogen and a reduction of at least 90 percent in the case of carbon monoxide and hydrocarbons from the average of the actually measured emissions from heavy-duty gasoline-fueled vehicle weight, horsepower or such other factors as may be manufactured during the baseline model year.

"(iii) In establishing classes or categories of vehicles or engines for purposes of regulations under this subsection, the Administrator may base such classes or categories on gross vehicle weight, horsepower, or such other factors as may be appropriate.

"(iv) For the purpose of this paragraph, the term 'baseline model year' means, with respect to any pollutant emitted from any vehicle or engine, or class or category thereof, the model year immediately preceding the model year in which Federal standards applicable to such vehicle or engine, or class or category thereof, first applied with respect to such pollutant.

"(B) During the period of June 1 through December 31, 1979, and during each period of June 1 through December 31 of each third year after 1979, the Administrator may, after notice and opportunity for a public hearing promulgate regulations revising any standard prescribed as provided in subparagraph (A) (ii) for any class or category of heavy-duty vehicles or engines. Such standard shall apply only for the period of three model years beginning five model years after the model year in which such revised standard is promulgated. In revising any standard under this subparagraph for any such three model year period the Administrator shall determine the maximum degree of emission reduction which can be achieved by means reasonably expected to be available for production of such period and shall prescribe a revised emission standard in accordance with such determination.

"(C) Action revising any standard for any period may be taken by the Administrator under subparagraph (B) only if—

"(i) he finds that compliance with the emission standards otherwise applicable for such model year cannot be achieved by technology, processes, operating methods, or other

alternatives reasonably expected to be available for production for such model year without increasing cost or decreasing fuel economy to an excessive and unreasonable degree; and

"(ii) the National Academy of Sciences has not, pursuant to its study and investigation under subsection (c), issued a report substantially contrary to the findings of the Administrator under clause (i).

"(D) A report shall be made to the Congress with respect to any standard revised under subparagraph (B) which shall contain—

"(i) a summary of the health effects found, or believed to be associated with, the pollutant covered by such standard,

"(ii) an analysis of the cost-effectiveness of other strategies for attaining and maintaining national ambient air quality standards and carrying out regulations under section 160 (relating to significant deterioration) in relation to the cost-effectiveness for such purposes of standards which, but for such revision, would apply,

"(iii) a summary of the research and development efforts and progress being made by each manufacturer for purposes of meeting the standards promulgated as provided in subparagraph (A) (ii) or, if applicable, subparagraph (E), and

"(iv) specific findings as to the relative costs of compliance, and relative fuel economy, which may be expected to result from the application for any model year of such revised standard and the application for such model year of the standard which, but for such revision, would apply.

"(E) (i) The Administrator shall conduct a continuing pollutant-specific study concerning the effects of each air pollutant emitted from heavy-duty vehicles or engines on the public health and welfare. The results of such study shall be published in the Federal Register and reported to the Congress not later than June 1, 1979, and before June 1 of each third year thereafter.

"(ii) On the basis of such study and such other information as is available to him (including the studies under sections 214 and 216), the Administrator may, after notice and opportunity for a public hearing, promulgate regulations under paragraph (1) of this subsection changing any standard prescribed in subparagraph (A) (ii) (or revised under subparagraph (B) or previously changed under this subparagraph). No such changed standard shall apply for any model year before the model year five years after the model year during which regulations containing such changed standard are promulgated.

"(F) For purposes of this paragraph, motorcycles and motorcycle engines shall be treated in the same manner as heavy-duty vehicles and engines unless the Administrator promulgates a rule reclassifying motorcycles as light-duty vehicles within the meaning of this section or unless the Administrator promulgates regulations under subsection (a) applying standards applicable to the emission of air pollutants from motorcycles as a separate class or category."

(b) Section 202(b)(3) of such Act is amended by adding the following new subparagraph at the end thereof:

"(C) The term 'heavy duty vehicle' means a truck, bus, or other vehicle manufactured primarily for use on the public streets, roads, and highways (not including any vehicle operated exclusively on a rail or rails) which has a gross vehicle weight (as determined under regulations promulgated by the Administrator) in excess of six thousand pounds. Such term includes any such vehicle which has special features enabling off-street or off-highway operation and use."

(c) Section 312 of such Act is amended by inserting "AND STUDIES OF COST-EFFECTIVENESS ANALYSIS" at the end of the heading thereof and by adding the following new subsection at the end thereof:

"(c) Not later than January 1, 1979, the Administrator shall study the possibility of increased use of cost-effectiveness analyses in devising strategies for the control of air pollution and shall report its recommendations to the Congress, including any recommendations for revisions in any provision of this Act. Such study shall also include an analysis and report to Congress concerning whether or not existing air pollution control strategies are adequate to achieve the purposes of this Act."

(d) Part A of title II of such Act is amended by inserting after section 216 the following new section:

**"STUDY OF PARTICULATE EMISSIONS FROM MOTOR VEHICLES"**

"SEC. 217. (a) (1) The Administrator shall conduct a study concerning the effects on health and welfare of particulate emissions from motor vehicles or motor vehicle engines to which section 202 applies. Such study shall characterize and quantify such emissions and analyze the relationship of such emissions to various fuels and fuel additives.

"(2) The study shall also include an analysis of particulate emissions from mobile sources which are not related to engine emissions (including, but not limited to tire debris, and asbestos from brake lining).

"(b) The Administrator shall report to the Congress the findings and results of the study conducted under subsection (a) not later than two years after the date of the enactment of the Clean Air Act Amendments of 1977. Such report shall also include recommendations for standards or methods to regulate particulate emissions described in paragraph (2) of subsection (a)."

(e) Section 206 of such Act (relating to compliance testing and certification) is amended by adding the following new subsection at the end thereof:

"(f) (1) In the case of any class or category of heavy-duty vehicles or engines or motorcycles to which a standard promulgated under section 202(a) of this Act applies, except as provided in paragraph (2), a certificate of conformity shall be issued under subsection (a) and shall not be suspended or revoked under subsection (b) for such vehicles or engines manufactured by a manufacturer notwithstanding the failure of such vehicles or engines to meet such standard if such manufacturer pays a non-conformance penalty as provided under regulations promulgated by the Administrator after notice and opportunity for public hearing.

"(2) No certificate of conformity may be issued under paragraph (1) with respect to any class or category of vehicle or engine if the degree by which the manufacturer fails to meet any standard promulgated under section 202(a) with respect to such class or category exceeds the percentage determined under regulations promulgated by the Administrator to be practicable. Such regulations shall require such testing of vehicles or engines being produced as may be necessary to determine the percentage of the classes or categories of vehicles or engines which are not in compliance with the regulations with respect to which a certificate of conformity was issued and shall be promulgated not later than one year after the date of enactment of the Clean Air Act Amendments of 1977.

"(3) The regulations promulgated under paragraph (1) shall, not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, provide for non-conformance penalties in amounts determined under a formula established by the Administrator. Such penalties under such formula—

"(A) may vary from pollutant-to-pollutant;

"(B) may vary by class or category or vehicle or engine;

"(C) shall take into account the extent to which actual emissions of any air pollutant exceed allowable emissions under the standards promulgated under section 202;

"(D) shall create incentives for the development of production vehicles or engines which achieve the required degree of emission reduction; and

"(E) shall remove any competitive disadvantage to manufacturers whose engines or vehicles achieve the required degree of emission reduction."

**AIRCRAFT EMISSIONS STANDARDS**

SEC. 205. Section 231(c) of the Clean Air Act is amended to read as follows:

"(c) Any regulations in effect under this section on date of enactment of the Clean Air Act Amendments of 1977 or proposed or promulgated thereafter, or amendments thereof, with respect to aircraft shall not apply if disapproved by the Secretary of Transportation, after notice and opportunity for public hearing, on the basis of a finding that any such regulation would create a hazard to aircraft safety. Any such finding shall include a reasonably specific statement of the basis upon which the finding was made."

**ASSURANCE OF PROTECTION OF PUBLIC HEALTH AND SAFETY**

SEC. 206. (a) Section 202(a) of the Clean Air Act is amended by inserting "paragraph (1) of" before "this subsection" in paragraph (2) thereof and by adding a new paragraph at the end thereof:

"(4) (A) Effective with respect to vehicles and engines manufactured after model year 1978, no emission control device, system, or element of design shall be used in a new motor vehicle or new motor vehicle engine for purposes of complying with standards prescribed under this subsection if such device, system, or element of design will cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation, function, or malfunction.

"(B) In determining whether an unreasonable risk exists under subparagraph (A), the Administrator shall consider, among other factors, (i) whether and to what extent the use of any device, system, or element of design causes, increases, reduces, or eliminates emissions of any unregulated pollutants; (ii) available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such device, system, or element of design; and (iii) the availability of other devices, systems, or elements of design which may be used to conform to standards prescribed under this subsection without causing or contributing to such unreasonable risk. The Administrator shall include in the consideration required by this paragraph all relevant information developed pursuant to section 214."

(b) Section 206(a) of such Act is amended by adding at the end thereof the following:

"(3) (A) A certificate of conformity may be issued under this section only if the Administrator determines that the manufacturer (or in the case of a vehicle or engine for import, any person) has established to the satisfaction of the Administrator that any emission control device, system, or element of design installed on, or incorporated in, such vehicle or engine conforms to applicable requirements of section 202(a) (4).

"(B) The Administrator may conduct such tests and may require the manufacturer (or any such person) to conduct such tests and provide such information as is necessary to carry out subparagraph (A) of this paragraph. Such requirements shall include a requirement for prompt reporting of the emission of any unregulated pollutant from a system, device, or element of design if such pollutant was not emitted, or was emitted in significantly lesser amounts, from the vehicle

or engine without use of the system, device, or element of design."

(c) (1) Section 206(b) (2) (A) (i) of such Act is amended by inserting "and with the requirements of section 202(a) (4)" after "conformity was issued".

(2) Section 206(b) (2) (A) of such Act is amended by inserting "and requirements" after "such regulations" in each place it appears.

**TEST PROCEDURES FOR MEASURING EVAPORATIVE EMISSIONS**

SEC. 207. Section 202(b) (1) of the Clean Air Act is amended by adding a new subparagraph (C) as follows:

"(C) Effective with respect to vehicles and engines manufactured after model year 1978 (or in the case of heavy-duty vehicles or engines, such later model year as the Administrator determines is the earliest feasible model year), the test procedure promulgated under paragraph (2) for measurement of evaporative emissions of hydrocarbons shall require that such emissions be measured from the vehicle or engine as a whole. Regulations to carry out this subparagraph shall be promulgated not later than two hundred and seventy days after date of enactment of this subparagraph."

**VEHICLE INSPECTION AND MAINTENANCE**

SEC. 208. (a) Section 110(a) (G) of the Clean Air Act is amended by striking out "; and" and inserting in lieu thereof: ", and it complies with applicable provisions of section 215 respecting the annual inspection and maintenance of motor vehicles registered in such State;"

(b) Part A of title II of the Clean Air Act is amended by inserting the following new section after section 214:

**"INSPECTION AND MAINTENANCE"**

"SEC. 215. (a) Each applicable implementation plan which, as in effect on June 30, 1975, contained transportation control measures applicable to any air quality control region in a State, shall provide for the annual inspection, testing, and maintenance of all light-duty vehicles to which this section applies which are registered in such region by any person whose residence or principal place of business (or both) is located in such air quality control region. Such program of inspection, testing, and maintenance shall be conducted in accordance with regulations of the Administrator and shall require that vehicles meet requirements which are no less stringent than the program of inspection, testing, and maintenance in effect in the State of New Jersey on the date of the enactment of this section. Such plan shall, except as permitted under paragraph (1) or (2) of this subsection, prohibit the registration and operation of vehicles subject to such inspection and testing in such State unless such vehicles comply with such program. The regulations of the Administrator shall—

"(1) provide for the exemption from the inspection, testing, and maintenance required under this section of such antique and other vehicles as the Administrator deems appropriate; and

"(2) authorize the operation of vehicles which have not met the applicable standard for such temporary period as may be appropriate to repair or adjust the vehicle in order to meet such requirements or to undertake the tuneup required for registration and operation of the vehicle pursuant to subsection (c) (1).

"(b) (1) For purposes of complying with the provisions of subsection (a), except as provided in paragraph (2) of this subsection, the plan shall require testing for emissions using testing procedures and equipment approved by the Administrator and shall permit the use of existing State motor vehicle inspection and testing facilities and procedures so long as they are consistent with

such requirement. The Administrator shall approve testing procedures and equipment for purposes of this paragraph only if he determines that such procedures and equipment comply with such standards respecting calibration, instrumentation, and maintenance as he deems appropriate.

"(2) Upon promulgation of regulations under section 207(b)(1), the plan shall require testing for emissions using the short-test procedures and equipment established under section 207(b)(1), except that such adjustments and exceptions may be made as the Administrator deems necessary to phase in such testing procedures and equipment as expeditiously as practicable.

"(c)(1) Each applicable implementation plan required under subsection (a) to prohibit the registration and operation of non-complying vehicles may permit the registration and operation of any such vehicle if—

"(A) following the inspection and testing by reason of which such vehicle was determined to be a noncomplying vehicle or within the three-month period immediately preceding the date of such inspection and testing, a major engine tune-up has been undertaken with respect to such vehicle,

"(B) with respect to such vehicle, any nonconformity covered by section 207 (a), (b), or (c) has been remedied, and

"(C) such vehicle has (for purposes of providing statistical information only) been reinspected and retested under this section following the actions referred to in subparagraphs (A) and (B) of this paragraph.

Nothing in the preceding sentence shall be construed to prohibit the Administrator from approving any implementation plan which contains any requirement prohibiting the registration and operation of any noncomplying vehicles.

"(2) The requirements or authority contained in this section shall not be deemed to affect or impair any requirement contained in any other provision of this Act.

"(d) Regulations of the Administrator under this section shall provide for retest of any vehicle which initially fails to meet applicable requirements of the program."

(c) Section 210 of such Act is amended by adding the following at the end thereof: "Grants may be made under this section by way of reimbursement in any case in which amounts have been expended by the State before the date on which any such grant was made. Any grant under this section may be reduced or suspended by the Administrator upon his determination, following notice and opportunity for a public hearing, that a State vehicle inspection and maintenance program is not equal to or more stringent than the requirements established pursuant to section 215."

(d) Not later than six months after the date of enactment of this Act, the Administrator shall notify each State which will be required to revise the applicable implementation plan to include an inspection and maintenance program for purposes of compliance with the amendments made by this section, and each such State shall, within nine months after receiving such notice, submit to the Administrator a revision of such plan. Within three months after the date required for submission of such revision, the Administrator shall approve or disapprove the revision if he determines that it complies with the amendments made by this Act and was adopted after reasonable notice and hearings. The provisions which are required under section 215 to be included in such plan shall be implemented not later than two years after the date of enactment of this Act.

#### WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

Sec. 209. (a) Section 207(a) of the Clean Air Act is amended by striking out "(1)" and "(2)" and inserting in lieu thereof "(A)"

and "(B)" respectively, by inserting "(1)" after "(a)" and by adding the following new paragraph at the end thereof:

"(2) In the case of a motor vehicle part or motor vehicle engine part, the manufacturer or rebuilder of such part may certify in writing that use of such part for the period specified by such part manufacturer or rebuilder will not result in a failure of the vehicle or engine to comply with emission standards promulgated under section 202 during such period. Not later than two years following the date of enactment of this paragraph and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations respecting the certification under this paragraph. Such regulations with respect to any such part, or class thereof, shall specify—

"(A) such testing requirements, and

"(B) such other terms and conditions of a certification under this paragraph,

as the Administrator determines are necessary and appropriate to assure the suitability of any such part, or class thereof, as a substitute for any original equipment manufacturer's part for the purpose of this section. Following promulgation of such regulations, no such part may be certified except in accordance with such regulations.

"(3) For the purpose of this part, the terms 'motor vehicle part' and 'motor vehicle engine part' means any part (other than original equipment manufacturer's parts) intended for use on or in a motor vehicle or motor vehicle engine and includes new, rebuilt, and replacement parts."

(b) Section 207(a)(1) of such Act, as designated by subsection (a) of this section, is amended by adding the following at the end thereof: "For purposes of paragraph (1) (B) of this subsection, the term 'defect' means a defect which exists at the time of a claim respecting a warranty under this subsection and which may reasonably be determined by the Administrator to have existed at the time of sale of the new motor vehicle or motor vehicle engine to the ultimate purchaser, whether or not such defect was evident at the time of such sale."

(c) Section 207(b) of such Act is amended to read as follows:

"(b)(1) Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977 and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations requiring manufacturers of motor vehicles and motor vehicle engines to warrant the emission control device or system of each new motor vehicle or new motor vehicle engine to which a regulation under section 202 applies. Such regulations shall apply to new motor vehicles and new motor vehicle engines manufactured in a model year beginning after the Administrator first prescribes warranty regulations under this subsection. The warranty under such regulations shall run to the ultimate purchaser and each subsequent purchaser. Such warranty shall apply to the emission control system or device of each such vehicle or engine at any time during—

"(A) a period of eighteen months or eighteen thousand miles (or the equivalent), whichever first occurs, in the case of any motor vehicle or engine manufactured in a model year beginning after the date the Administrator first prescribes regulations under this subsection but before the date referred to in subparagraph (B), and

"(B) the useful life of the vehicle or engine (as determined under section 202(d)), unless otherwise provided by Act of Congress, in the case of any motor vehicle or engine manufactured after the date three years after the date the Administrator first prescribes such regulations.

Such warranty shall provide that, except as provided in paragraph (3), if any such vehicle or engine fails to conform as tested in

accordance with paragraph (2) during any such time to the regulations prescribed under section 202, such manufacturer shall bear the reasonable cost of remedying such nonconformity. Actual remedying of the nonconformity may be performed by the manufacturer or by any person engaged in the business of repairing or servicing motor vehicles, or, except as may otherwise be determined by the Administrator, by the owner of such vehicle or engine or any other individual, at the option of the owner.

"(2) Regulations under this subsection shall specify the alternative test methods, and equipment, which may be used to ascertain with reasonable assurance for the purpose of this subsection whether each vehicle and engine to which a regulation applies under section 202 will conform with the emission standards contained in such regulations for the period specified in paragraph (1) of this subsection. Such alternative test methods shall include the short-test method promulgated under section 206(a)(1), the test method required under section 215, and any test method required under section 110(a)(2)(G).

"(3) The warranty under this subsection shall cease to be effective with respect to any particular vehicle or engine if such vehicle or engine has been grossly abused in its operation or maintenance (as determined in accordance with regulations under this subsection).

"(4) If any part used in the maintenance or repair of a vehicle or engine is certified as provided in subsection (a)(2), a manufacturer may not claim that the warranty has ceased to be effective with respect to such vehicle or engine by reason of the use of such part.

"(5) Regulations respecting the warranty under this subsection and regulations respecting the parts certification under subsection (a)(2) shall require the inclusion in such warranty and such certification of such provisions as the Administrator determines are necessary and appropriate to—

"(A) establish orderly procedures for the implementation of this subsection in cases where the nonconformity is remedied by a person other than the manufacturer (or dealer); and

"(B) prevent fraud or abuse and, insofar as practicable, to minimize costs in the implementation of this subsection.

"(6) Regulations under this subsection and under subsection (c) shall include (A) measures to assure that necessary information and instructions are made available to any person who is authorized to remedy a specific nonconformity under either such subsection and (B) a requirement, as a condition of the warranty, or under a recall order, that the manufacturer, in appropriate cases as determined by the Administrator, shall provide such necessary information and instructions."

(d) The Federal Trade Commission shall undertake a study to determine whether or not any anticompetitive effects would result from any warranty required to be provided pursuant to section 207(b) of the Clean Air Act if such warranty applied, as provided in section 207(b), for the useful life (as determined under section 202(d) of such Act) of vehicles and engines to which such warranty applies in lieu of the eighteen months or eighteen thousand mile period, as provided in such section 207(b). Such study shall include public hearings. Such study shall include an analysis of alternative definitions of the term "emission control system or device" for the purpose of such section 207(b) and the effect such definitions may have on competition, health and welfare, and the durability of components which may affect emissions. Such study shall also include an analysis of any measures implemented by the Administrator to prevent or diminish such anticompetitive effects and

shall include a finding with respect to whether or not significant anticompetitive effects would nevertheless result from such warranty if the warranty applied for such useful life. Such study shall be undertaken primarily by the Bureau of Competition in consultation with the Bureau of Consumer Affairs. The results of such study shall be submitted to the Congress not later than the end of the first two model years during which the warranty under section 207(b) has been in effect. The Administrator shall submit, before the end of such first two model years, a report to Congress analyzing the effects of the warranty under section 207(b) of such Act on public health and welfare and on the durability of emission control devices and systems.

(e)(1) Section 207(c)(1) of such Act is amended—

(A) by striking out “, although properly maintained and used,” after “vehicles or engines” the first time it appears in the first sentence of such paragraph (1);

(B) by revising the second sentence of such paragraph to read: “The plan shall provide that, except as provided in the last sentence of this paragraph, such manufacturer shall bear the reasonable cost of remedying such nonconformity and shall include such measures as the Administrator determines necessary and appropriate to assure that the plan will be fully implemented.”;

(C) by inserting after such second sentence a new sentence to read: “Regulations of the Administrator under this subsection may in appropriate cases permit the actual remedying of the nonconformity to be performed by any person engaged in the business of repairing or servicing motor vehicles, by any class or category of such persons, by the owners of such vehicles or engines, by any other individual, or by any combination thereof, at the option of the owner and in accordance with regulations promulgated pursuant to subsection (b)(5).”; and

(D) by inserting the following new sentence at the end of such paragraph (1): “In making the determination of nonconformity under the first sentence of this paragraph and in determining the scope of any recall requirement under this subsection, the Administrator shall exclude from consideration any vehicle or engine which has been grossly abused in its operation or maintenance (in accordance with the regulations promulgated pursuant to subsection (b)(3)).”.

(2) The first sentence of section 207(c)(3) of such Act is amended to read: “The manufacturer shall furnish with each new motor vehicle or motor vehicle engine appropriate written guidelines (as determined by the Administrator) for the maintenance and use of the vehicle or engine for the purpose of this section.”.

(3) Section 207(c)(3) of such Act is amended by inserting after the first sentence thereof the following: “The manufacturer shall provide in boldface type on the first page of the written maintenance guidelines notice that maintenance, replacement, or repair of the emission control devices and systems may be performed by any person engaged in the business of repairing or servicing motor vehicles or any other person, using any motor vehicle part or motor vehicle engine part which has been certified as provided in subsection (a)(2).”.

(f) Section 208(a) of such Act is amended to read as follows:

#### RECORDS AND REPORTS

“Sec. 208. (a)(1) Every manufacturer shall establish and maintain such records, make such reports, conduct such tests, and provide such information as the Administrator may reasonably require for the purpose of carrying out this part and regulations thereunder.

“(2) For purposes of implementation and enforcement of this part and regulations thereunder, officers or employees duly desig-

nated by the Administrator, upon presenting appropriate credentials to the manufacturer or person in charge, are authorized (A) to enter, at reasonable times, any plant or other establishment of such manufacturer, for the purpose of conducting tests, or observing the conduct of tests, of vehicles or engines in the possession or under the control of the manufacturer, or (B) to inspect and copy at reasonable times, records, files, papers, processes, controls and facilities used by such manufacturer in conducting tests under regulations of the Administrator. Each such inspection shall be commenced and completed with reasonable promptness.”.

#### PARTS STANDARDS; PREEMPTION OF STATE LAW

“Sec. 210. Section 209 of the Clean Air Act (relating to State standards) is amended by redesignating subsection (c) as (f) and by inserting after subsection (b) the following new subsection:

“(c)(1) Whenever a regulation respecting the certification of any part or class thereof is in effect under section 207(a)(2), no State or political subdivision thereof shall adopt or attempt to enforce any standard or any requirement of certification, inspection, or approval applicable to the same aspect of such part.

“(2) In the case of a State with respect to which a waiver is in effect under subsection (b), the preemption contained in paragraph (1) shall not apply to any such State standard or requirement respecting any part or class thereof unless the Administrator determines, by rule after notice and opportunity for a public hearing, that the preemption of such State standard or requirement will not result in a failure of vehicles or engines to comply with emission standards established by such State.”.

#### PROTECTION OF COMPETITION; ASSURANCE OF CONSUMER FREEDOM OF CHOICE

Sec. 211. (a) Section 207 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

“(g) The Administrator may, after notice and opportunity for a public hearing, promulgate such rules and take such other actions as may be necessary and appropriate—

“(1) to minimize or eliminate any unfair or improper competitive advantage by vehicle or engine manufacturers or dealers in the repair or maintenance of motor vehicles or engines and the repair, maintenance or replacement of any motor vehicle part or motor vehicle engine part, which may result in part from any requirement of this section; or

“(2) to protect or enhance consumer freedom of choice in the implementation of any requirement of this section.”.

(b) Section 203(a)(4) of such Act is amended by inserting the following at the end thereof:

“(E) to fail or refuse to comply with any requirement under section 207(g),

or for any person other than a manufacturer to fail or refuse to comply with any requirement under section 207.”.

#### ANTITAMPERING PROHIBITION

Sec. 212. (a) Section 203(a)(3) of the Clean Air Act is amended by inserting “(A)” after “(3)” and by adding the following new subparagraph (B) at the end thereof:

“(B) for the person engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles or motor vehicle engines or who operates a fleet of motor vehicles, knowingly to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title following its sale and delivery to the ultimate purchaser.”.

(b) Section 203(a) of such Act is amended by adding the following at the end thereof after paragraph (5): “Nothing in paragraph (3) shall be construed to require the use of parts produced or sold by the manufacturer of the vehicle or engine in maintaining or

repairing any motor vehicle or motor vehicle engine.”.

(c) Section 205 of such Act is amended to read as follows:

#### “PENALTIES

“Sec. 205. Any person who violates paragraph (1), (2), or (4) of section 203(a) or any person, manufacturer, or dealer who violates paragraph (3)(A) of section 203(a) shall be subject to a civil penalty of not more than \$10,000. Any person who violates paragraph (3)(B) of such section 203(a) shall be subject to a civil penalty of not more than \$2,500. Any such violation with respect to paragraph (1), (3), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine.”.

#### COST OF VAPOR RECOVERY SYSTEMS TO BE BORNE BY OWNER OF RETAIL OUTLET

Sec. 213. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### “COST OF EMISSION CONTROL FOR CERTAIN VAPOR RECOVERY TO BE BORNE BY OWNER OF RETAIL OUTLET

“Sec. 320. (a) The regulations under this Act applicable to vapor recovery with respect to mobile source fuels at retail outlets of such fuels shall provide that the cost of procurement and installation of such vapor recovery shall be borne by the owner of such outlet (as determined under such regulations). Except as provided in subsection (b), such regulations shall provide that no lease of a retail outlet by the owner thereof which is entered into or renewed after the date of enactment of the Clean Air Act Amendments of 1977 may provide for a payment by the lessee of the cost of procurement and installation of vapor recovery equipment. Such regulations shall also provide that the cost of procurements and installation of vapor recovery equipment may be recovered by the owner of such outlet by means of price increases in the cost of any product sold by such owner, notwithstanding any provision of law.

“(b) The regulations of the Administrator referred to in subsection (a) shall permit a lease of a retail outlet to provide for payment by the lessee of the cost of procurement and installation of vapor recovery equipment over a reasonable period (as determined in accordance with such regulations), if the owner of such outlet does not sell, trade in, or otherwise dispense any product at wholesale or retail at such outlet.”.

(b) Section 113(b)(3) of such Act is amended by inserting “or section 320” before the semicolon.

(c) Title III of such Act is amended by adding the following new section at the end thereof:

#### “VAPOR RECOVERY FOR SMALL BUSINESS MARKETERS OF PETROLEUM PRODUCTS

“Sec. 324. (a) Except as provided in subsection (b) the regulations under this Act applicable to vapor recovery from fueling of motor vehicles at retail outlets of gasoline shall provide, with respect to independent small business marketers of gasoline, for a three-year phase-in period for the installation of such vapor recovery equipment under which such marketers shall have—

“(1) 33 percent of their outlets in compliance at the end of the first year during which such regulations apply to such marketers,

“(2) 66 percent at the end of such second year, and

“(3) 100 percent at the end of the third year.

“(b)(1) The regulations referred to in subsection (a) shall not apply to independent small business marketers of gasoline before the expiration of the period ending two years after the date of enactment of this

section or the period ending six months after the date of submission of the report under paragraph (3), whichever is later.

"(2) The Federal Trade Commission shall study, and not later than one year after the date of enactment of this section report to the Administrator on, the effect the application to independent small business marketers of gasoline of the regulations referred to in subsection (a) will have on the ability of such marketers to compete in gasoline marketing. In the course of such study, the Commission shall provide opportunity for a public hearing and for submission of written views, data, and argument and shall request the participation in such hearing of other interested departments and agencies (including the Federal Energy Administration).

"(3) Not later than eighteen months after the date of enactment of this section, the Administrator shall submit a report to the House Interstate and Foreign Commerce Committee and to the Senate Public Works Committee, which analyzes (A) the effect referred to in subsection (b) (2); (B) the need for such regulations to be applied to independent small business marketers of gasoline to assist in attaining or maintaining national ambient air quality standards or in preventing significant deterioration of air quality; and (C) the availability of means for eliminating or minimizing any effects referred to in subsection (b) (2) which are detrimental. The analysis required under clause (C) shall include a discussion of the measures referred to in subsection 202(a) (5) (pertaining to fill pipe standards) and 202(a) (6) (pertaining to onboard hydrocarbon technology). The Administrator's report under this paragraph shall include his conclusions as to whether, and to what extent, such regulations (or such other regulations relating to vapor recovery from fueling of motor vehicles at retail outlets of gasoline) should apply to independent small business marketers of gasoline.

"(4) The Administrator may, on the basis of the conclusions contained in the report under paragraph (3), promulgate regulations—

"(A) exempting independent small business marketers of gasoline, or any class thereof, from the duty to comply with the regulations referred to in subsection (a);

"(B) deferring or modifying the regulations referred to in subsection (a) in the case of independent small business marketers of gasoline, or any class thereof;

"(C) containing provisions to eliminate or minimize any effects referred to in subsection (b) (2) which are detrimental; or

"(D) taking any combination of the actions referred to in subparagraphs (A) through (C).

Regulations under this paragraph may be promulgated by the Administrator only upon a finding that such regulations are necessary in order to assure that application of the regulations referred to in subsection (a) to independent small business marketers of gasoline will not cause each independent marketer to be unable to compete in gasoline marketing.

"(5) The Administrator and the Federal Trade Commission shall keep confidential the commercial or financial information obtained under this section, except that such information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act or when relevant in any proceeding under this Act.

"(c) For purposes of this section, an independent small business marketer of gasoline is a person engaged in the marketing of gasoline who would be required to pay for procurement and installation of vapor recovery equipment under section 320 of this Act or under regulations of the Administrator, unless such person (1) is a refiner,

or (2) controls, is controlled by, or is under common control with, a refiner, or (3) is otherwise directly or indirectly affiliated (as determined under the regulations of the Administrator) with a refiner or with a person who controls, is controlled by, or is under a common control with a refiner (unless the sole affiliation referred to in (3) is by means of a supply contract or an agreement or contract to use a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or any such person). For the purpose of this section, the term 'refiner' shall not include any refiner whose total refinery capacity (including the refinery capacity of any person who controls, is controlled by, or is under common control with, such refiner) does not exceed 65,000 barrels per day. For purposes of this section, 'control' of a corporation means ownership of more than 50 percent of its stock."

#### CALIFORNIA WAIVER

Sec. 214 Section 209(b) of the Clean Air Act is amended to read as follows:

"(b) (1) The Administrator shall, after notice and opportunity for public hearing, waive application of this section to any State which has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, if the State determines that the State standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards. No such waiver shall be granted if the Administrator finds that—

"(A) the determination of the State is arbitrary and capricious,

"(B) such State does not need such State standards to meet compelling and extraordinary conditions, or

"(C) such State standards and accompanying enforcement procedures are not consistent with section 202(a) of this part.

"(2) If each State standard is at least as stringent as the comparable applicable Federal standard, such State standards shall be deemed to be at least as protective of health and welfare as such Federal standards for purposes of paragraph (1).

"(3) In the case of any new motor vehicle or new motor vehicle engine to which State standards apply pursuant to a waiver granted under paragraph (1), compliance with such State standards shall be treated as compliance with applicable Federal standards for purposes of this title."

#### HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

Sec. 215. (a) Section 203(a) of the Clean Air Act is amended by adding the following at the end thereof: "No action with respect to any element of design referred to in paragraph (3) (including any adjustment or alteration of such element) shall be treated as a prohibited act under such paragraph (3) if such action will not adversely affect the emission control performance of the vehicle or engine."

(b) Title II of such Act is amended by inserting the following new section after section 215:

#### "HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

"Sec. 216. (a) (1) Any action taken with respect to any element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title (including any alteration or adjustment of such element), shall be treated for purposes of section 203(a) as not adversely affecting the emission control performance of the vehicle or engine if such action is performed in accordance with high altitude adjustment instructions provided by the manufacturer under subsection (b) and approved by the Administrator.

"(2) If the Administrator finds that adjustments or modifications made pursuant to instructions of the manufacturer under

paragraph (1) will not insure emission control performance at least equivalent to that which would result if no such adjustments or modifications were made, he shall disapprove such instructions. Such finding shall be based upon minimum engineering evaluations consistent with good engineering practice. In any case in which emissions of one or more pollutants are increased by reason of adjustments or modifications made to reduce emissions of one or more other pollutants, emission control performance may be found by the Administrator to be equivalent for purposes of this subsection if the aggregate effect of emission control performance resulting from such adjustments or modifications will be more protective of health and welfare than the effect of emission control performance if no such adjustments or modifications had been made.

"(b) (1) (A) Upon submission of any new motor vehicle or motor vehicle engine to the Administrator for purposes of obtaining a certificate of conformity under section 206 (a) (1), the manufacturer shall submit to the Administrator instructions providing for such vehicle and engine adjustments and modifications as may be necessary to insure emission control performance at high altitudes. If the Administrator does not disapprove such instructions on or before the issuance of the certificate of conformity for the vehicle or engine, such instructions shall be treated as approved for purposes of this section.

"(B) In the case of any model year beginning after the date of enactment of this section, instructions respecting vehicles or engines manufactured during such model year which have been approved by the Administrator, shall be included in the instructions required under section 207(c) (3) and shall, not later than the date on which a class or category of motor vehicles or motor vehicle engines first becomes available for sale to the general public, be made available to any person upon request.

"(C) In the case of any model year beginning before the date of enactment of this section, instructions respecting each class or category of vehicles or engines to which this title applies providing for such vehicle and engine adjustments and modifications as may be necessary to insure emission control performance at high altitudes shall be submitted to the Administrator not later than 12 months after the date of the enactment of this section. If the Administrator does not disapprove such instructions on or before the date 18 months after such date of enactment, such instructions shall be treated as approved for purposes of this section.

"(D) If any instructions provided by a manufacturer for purposes of this section are disapproved by the Administrator, not later than sixty days after such disapproval, the manufacturer shall revise the instructions (in accordance with such requirements as the Administrator determines necessary for approval) and shall make the revised and approved instructions available to any person upon request.

"(2) Any violation by a manufacturer of paragraph (1) shall be treated as a violation by such manufacturer of section 203(a) (3) (A) for purposes of the penalties contained in section 205.

"(c) No instructions which require the use of any parts produced or sold by the manufacturer of the vehicle or engine may be promulgated or approved by the Administrator under this section.

"(d) This section shall not apply to any motor vehicle or motor vehicle engine the sale or delivery of which was subject to the regulations of the Administrator respecting compliance with the standards under section 202 by vehicles or engines sold or delivered at designated high altitude locations."

## FILL PIPE STANDARDS

SEC. 216. Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(5) (A) If the Administrator promulgates final regulations which define the degree of control required and the test procedures by which compliance could be determined for gasoline vapor recovery of uncontrolled emissions from the fueling of motor vehicles, the Administrator shall prescribe, by regulations, fill pipe standards for new motor vehicles in order to insure effective connection between such fill pipe and any vapor recovery system which the Administrator determines may be required to comply with such vapor recovery regulations. In promulgating such standards the Administrator shall take into consideration limits on fill pipe diameter, minimum design criteria for nozzle retainer lips, limits on the location of the unloaded fuel restrictors, a minimum access zone surrounding a fill pipe, a minimum fill pipe or nozzle insertion angle, and such other factors as he deems pertinent.

"(B) Regulations prescribing standards under subparagraph (A) shall not become effective until the introduction of the model year for which it would be feasible to implement such standards taking into consideration the restraints of an adequate lead-time for design and production.

"(C) Nothing in subparagraph (A) shall (i) prevent the Administrator from specifying different nozzle and fill neck sizes for gasoline with additives and gasoline without additives or (ii) permit the Administrator to require a specific location, configuration, modeling, or styling of the motor vehicle body with respect to the fuel tank fill neck or fill nozzle clearance envelope.

"(D) Any standards promulgated under subparagraph (A), or amendments thereto, may be prescribed only after consultation with the Secretary of Transportation in order to assure appropriate consideration for vehicle safety.

"(E) For the purpose of this paragraph, the term 'fill pipe' shall include the fuel tank fill pipe, fill neck, fill inlet, and closure."

## ONBOARD HYDROCARBON TECHNOLOGY

SEC. 217. Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(6) (A) The Administrator shall determine the feasibility and desirability of requiring new motor vehicles to utilize on-board hydrocarbon control technology which would avoid the necessity of gasoline vapor recovery of uncontrolled emissions emanating from the fueling of motor vehicles. The Administrator shall compare the costs and effectiveness of such technology to that of implementing and maintaining vapor recovery systems (taking into consideration such factors as fuel economy, economic costs of such technology, administrative burdens, and equitable distribution of costs). If the Administrator finds that it is feasible and desirable to employ such technology, he shall prescribe, by regulations, standards which shall not become effective until the introduction to the model year for which it would be feasible to implement such standards, taking into consideration compliance costs and the restraints of an adequate lead time for design and production.

"(B) Any regulations promulgated under subparagraph (A), or amendments thereto, shall not apply if disapproved by the Secretary of Transportation, after notice and opportunity for public hearing, on the basis of a finding that any such regulations would create a hazard to vehicle safety. Any such finding shall include a reasonably specific statement of the basis upon which the finding was made."

## CARBON MONOXIDE INTRUSION INTO SUSTAINED USE VEHICLES

SEC. 218. (a) The Administrator, in conjunction with the Secretary of Transportation, shall study the problem of carbon monoxide intrusion into the passenger area of sustained-use motor vehicles. Such study shall include an analysis of the sources and levels of carbon monoxide in the passenger area of such vehicles and a determination of the effects of carbon monoxide upon the passengers. The study shall also review available methods of monitoring and testing for the presence of carbon monoxide and shall analyze the cost and effectiveness of alternative methods of monitoring and testing. The study shall analyze the cost and effectiveness of alternative strategies for attaining and maintaining acceptable levels of carbon monoxide in the passenger area of such vehicles. Within one year the Administrator shall report to the Congress respecting the results of such study.

(b) For the purpose of this section, the term "sustained-use motor vehicle" means any diesel or gasoline fueled motor vehicle (whether light or heavy duty) which, as determined by the Administrator (in conjunction with the Secretary), is normally used and occupied for a sustained, continuous, or extensive period of time, including buses, taxicabs, and police vehicles.

## IMPLEMENTATION OF MOTOR VEHICLE EMISSION STANDARDS AND WARRANTIES

SEC. 219. (a) Section 203(a)(4) of the Clean Air Act is amended by inserting after subparagraph (c) the following:

"(D) to fail or refuse to comply with the terms and conditions of the warranty under section 207 (a) or (b) with respect to any vehicle or to fail or refuse to comply with any requirement under subsection (b)(5) or (b)(6) of section 207, or"

(b) Section 206(a)(1) of such Act is amended by inserting at the end thereof the following: "The certification test requirements under this subsection shall be revised to include, in addition to the emission data and durability data tests, a short test to assist in determining conformity with such standards. Such short test shall be promulgated not later than one year after the date of enactment of this sentence. Such short test shall be effective as expeditiously as practicable in the judgment of the Administrator, but in any event such test shall be effective with respect to the 1982 and subsequent model year new motor vehicles and engines."

(c) Section 206(b)(1) of such Act is amended by inserting "(A)" after "(b)(1)" and by adding the following new subparagraph (B) at the end thereof:

"(B) (i) The Administrator shall, within one year after the date of enactment of this subparagraph promulgate regulations establishing a test procedure which implements the authority of subparagraph (A) and which meets the requirements of this subparagraph.

"(ii) Regulations promulgated under this subparagraph shall require the production line testing of each new motor vehicle or engine (or an adequate sample of each class or category of vehicles or engines, as determined by the Administrator) under the short test prescribed under subsection (a)(1) of this Act. Any such vehicle or engine which fails to pass such short test shall be deemed not to be covered by the certificate of conformity for that class or category of vehicles or engines."

(d) Section 206(b)(2) of such Act is amended by inserting "(A)" after "paragraph (1)" wherever it appears therein.

## TESTING OF FUELS AND FUEL ADDITIVES

SEC. 220. Section 211 of the Clean Air Act is amended by inserting a new subsection to read as follows:

"(e) (1) Not later than one year after date of enactment of this subsection and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations which implement the authority under subsection (b)(2) (A) and (B) with respect to each fuel or fuel additive which is registered on the date of promulgation of such regulations and with respect to each fuel or fuel additive for which an application for registration is filed thereafter.

"(2) Regulations under subsection (b) to carry out this subsection shall require that the requisite information be provided to the Administrator by each such manufacturer—

"(A) prior to registration, in the case of any fuel or fuel additive which is not registered on the date of promulgation of such regulations; or

"(B) not later than three years after the date of promulgation of such regulations, in the case of any fuel or fuel additive which is registered on such date.

"(3) In promulgating such regulations, the Administrator may—

"(A) exempt any small business (as defined in such regulations) from or defer or modify the requirements of, such regulations with respect to any such small business;

"(B) provide for cost-sharing with respect to the testing of any fuel or fuel additive which is manufactured or processed by two or more persons or otherwise provide for shared responsibility to meet the requirements of this section without duplication; or

"(C) exempt any person from such regulations with respect to a particular fuel or fuel additive upon a finding that any additional testing of such fuel or fuel additive would be duplicative or adequate existing testing."

## PREEMPTION OF STATE LAW

SEC. 221. Section 209 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

(d) Notwithstanding any other provision of this section, any State may test, or require to be tested by any new motor vehicle dealer, any new motor vehicle or new motor vehicle engine manufactured during or after the first model year in which the short test is effective under paragraph (1) of section 206(a). Such testing shall be in accordance with such short test prescribed under such paragraph (1), and the State may prohibit the sale or delivery by such dealer, or the registration or titling, or any such new motor vehicle or engine which fails to pass such test. In the case of any State in which a statewide vehicle inspection and maintenance program is in effect on the date of the enactment of this subsection, until the first model year in which such short test is effective under section 206(a)(1), such State may test, or require to be tested by any new motor vehicle dealer, under a test identical to the test used in such program as in effect on such date, any new motor vehicle or new motor vehicle engine and may prohibit the sale or delivery by such dealer, or the registration or titling, of any such new motor vehicle or engine which fails to pass such test. Any prohibition under this subsection may be enforced in State courts under State law.

(e) Notwithstanding subsection (a) of this section, any State in which a vehicle inspection and maintenance program is required to be implemented under section 215 of this Act may adopt and enforce for any model year new motor vehicle or engine emission standards which are identical to the California standards for which a waiver has been granted for such model year, unless either California or such State fails to adopt its standards at least two years prior to the commencement of such model year (as determined by the regulations of the Administrator)."

## TESTING BY SMALL MANUFACTURERS

Sec. 222. Section 206(a)(1) of the Clean Air Act is amended by adding at the end thereof the following: In the case of any manufacturer of vehicles or vehicle engines whose projected sales in the United States for any model year (as determined by the Administrator) will not exceed three hundred, the regulations prescribed by the Administrator concerning testing by the manufacturer for purposes of determining compliance with regulations under section 202 for the useful life of the vehicle or engine shall not require operation of any vehicle or engine manufactured during such model year for more than five thousand miles or one hundred and sixty hours, respectively, but the Administrator shall apply such adjustment factors as he deems appropriate to assure that each such vehicle or engine will comply during its useful life with the regulations prescribed under section 202 of this Act."

Mr. PREYER (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. DINGELL. Reserving the right to object, Mr. Chairman, this is a very long amendment. May I ask, has it been published in the Record?

Mr. PREYER. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from North Carolina.

Mr. PREYER. I thank the gentleman for yielding.

This amendment has not been published in the Record. It is a long amendment. If the gentleman will yield, I think I can explain it very simply.

Mr. DINGELL. Yes, I yield to the gentleman. I would like to know what the differences are. It rises like Venus from the fountain, and I would like to have a rather fair appreciation of what the gentleman is doing.

Mr. PREYER. If the gentleman will yield further, the difference is that this amendment and the original committee provision of this title are very similar.

Mr. DINGELL. Is the gentleman saying this is the committee's proposal?

Mr. PREYER. This is a committee proposal with two changes which I can explain very simply. Otherwise, the other 76 pages are the same.

Mr. DINGELL. The gentleman has said this is the committee's position with a few changes? I have heard some talk of compromise around here. Will the gentleman tell me is he compromising with the committee, because, as I recall, he supported the committee earlier—or is this a compromise, and if so, with whom?

Mr. PREYER. If the gentleman will yield further, I will explain the amendment.

Mr. DINGELL. I have no objection, if the gentleman will just explain whether it is compromise, with whom it is a compromise, and what it does. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to

the request of the gentleman from North Carolina?

There was no objection.

Mr. PREYER. Mr. Chairman, my substitute amendment is simply the second title of the committee bill with two critical changes. The first change in my amendment would roll back the 1979 standards to 1980, that is, it delays the enforcement of the committee bill standards for another year. In other words, instead of mandated allowable emissions of 0.41 and 9.0 for hydrocarbons and carbon monoxide, respectively, by 1979, these figures would be required by 1980. This is consistent with the figures suggested by the gentleman from Michigan (Mr. DINGELL) and the gentleman from North Carolina (Mr. BROXHILL).

Second, it provides a waiver where oxides and nitrogen would go into effect for vehicles weighing 3,000 pounds or more, not 4,500 pounds or more as is presently provided in the committee bill. This action accurately reflects the intention of the Carter administration in this area and, I think, the intention of the committee. It is a technical oversight that it was put in at 4,500 pounds. This change recognizes the viability of the diesel engine and encourages its use. So that what this amendment does, in short, is for the model years 1978, 1979, and 1980 it adopts the Dingell-Broyhill figures. For the years 1980 through 1983 it adopts the committee bill's figures. Since the life of this bill is 3 years, the committee figures would be further subject to review by Congress before they would finally go into effect. We would have another crack at that.

While the figures have attracted the most attention in this section of the bill, there are other features in the committee bill which the Dingell-Broyhill amendment would strike out and which are retained by my amendment. For example, the assembly line short test of cars is retained. It retains the committee's position on warranty repairs. The question of warranty repairs is a very complex one, but I think we should point out that Mr. Griffin Bell, the Attorney General, has made it clear that in his judgment the position in the committee bill is the one that spurs free competition.

So that, in sum, I believe that my amendment that goes halfway between the Rogers position on the one hand and the Dingell-Broyhill position on the other is a compromise in the purest sense. It rolls back the 1979 standards 1 full year and provides for more latitude for diesel engines with respect to nitrogen oxide emissions.

I have participated with the gentleman from Florida, Chairman ROGERS, and the rest of the subcommittee working on the clean air bill now for some 3 years. I know at firsthand the kind of patient effort that the members of the committee and especially the chairman have put into this bill. The gentleman from Florida has worked unbelievably long hours on this bill in an effort to strike a balance, to resolve the controversies, and to come up with a fair solution.

We have seen the report on this bill. At least, even if we have never read it, we can weigh it, and I have never seen a more detailed report, I believe, since I have been here in the Congress. I commend the staff, especially Jeffery Schwarz and Steve Connelly, for the work they have done on this. I believe the thoroughness of the report indicates the kind of effort and care that have gone into the writing of this bill.

Few of us can understand all the scientific evidence laid out in that report. We are not scientists, and I think it is going to get down for most of us to a judgment call on this bill, that it will not be a question of clear scientific proof, that one position is clearly better than any other. Statistics do not always lie but they seldom voluntarily tell the truth, and we can argue any position on this bill from a set of statistics and some study or another. But what it is going to get down to for most of us is: Does it strike the balance fairly between the energy needs of this country, the increased costs involved, the need of the automobile industry for stability, and the importance of the health of our citizens and of the environment?

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(On request of Mr. OTTINGER, and by unanimous consent, Mr. PREYER was allowed to proceed for 3 additional minutes.)

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. PREYER. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, there are two things I want to clarify. As I understand it, what the gentleman's amendment does is to delay implementation of the committee's standards for 1 year, keeping the present standards in effect for 1 additional year, but then it goes to the committee's standards. Is that correct?

Mr. PREYER. The gentleman is correct.

Mr. OTTINGER. So that we will end up with the same protection that we would have in the committee bill but with the implementation being delayed 1 additional year.

Mr. PREYER. The gentleman is correct.

Mr. OTTINGER. And the second thing is that with respect to NO<sub>x</sub>, the committee position is preserved. There is no requirement that we go to a 0.4 NO<sub>x</sub>, but the committee position is maintained in that if the Secretary finds that the Nation's health requires it, the Secretary can then require that NO<sub>x</sub> go from 1.0 to 0.4.

Mr. PREYER. The gentleman is correct.

Mr. OTTINGER. I think the gentleman's position is acceptable and I support it.

Mr. PREYER. I thank the gentleman. Mr. Chairman, if I may complete my statement, I will then be glad to yield to all the gentlemen.

I have said that basically we have to decide this as a matter of judgment, and

I think in reaching that judgment it ought to carry great weight with us that the Department of Transportation, the Federal Energy Administration, the President's Energy Advisor, Mr. Schlesinger, the EPA, the Council on Environmental Quality, all of these agencies with different objectives have all endorsed the committee provisions in the bill. I think the fact that a man like Dr. Carter supports the committee provisions and the fact that many of the people on our committee who are environmentally strongly oriented, even though they thought the committee bill was too lax in this area, have supported it, should give us confidence that we have struck a fair balance in this bill.

I think the Dingell-Broyhill amendment is thoroughly respectable intellectually and I do not say that those who support it are "tools of the automobile industry." I know the gentleman from North Carolina (Mr. BROYHILL) does not have a strong United Auto Workers group in his area of the State. They just strike the balance differently.

My amendment moves toward the Dingell-Broyhill amendment in a spirit of compromise. I hope the Dingell-Broyhill supporters will also be willing to give some ground and will accept this amendment in the same spirit.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mr. PREYER. I yield to the gentleman from Ohio.

Mr. SEIBERLING. Mr. Chairman, I would like to commend the gentleman for this amendment. This is a particularly troublesome issue to someone who comes from an area as I do that is dependent on the auto industry for its primary economic base; but on the other hand, it seems to me the evidence of possible health hazards is so overwhelming at this time that I think that to abandon key principles in the Clean Air Act before we know anything more about the impact of the proposed Dingell standards would be a serious mistake. However, having had long experience in industry and particularly being familiar with the auto industry, I recognize the problem of leadtime. For practical purposes, the 1979 model year is here. I think the industry should have 1 more year of time to complete the necessary tooling and preparatory work without facing possible dislocation and shutdowns. This amendment meets that requirement.

Mr. BROYHILL. Mr. Chairman, I move to strike the requisite number of words. I rise in support of the Dingell amendment.

Mr. Chairman, I rise in support of the amendment offered by my colleague, the gentleman from Michigan (Mr. DINGELL), which has been offered on behalf of himself, also on behalf of myself, since the two of us have been asking our colleagues for the past several weeks to support this schedule of emission standards which I have on the easel here before me.

Mr. Chairman, I want to assure my colleagues that the goal of this substitute amendment that we have offered this morning is to achieve stricter air quality control. At the same time we want to

balance this concern with other national goals. We have other social goals in this country. Our amendment will not only control automobile pollution, it will also save fuel. It will hold down consumer costs and will preserve the strength of the American economy by not forcing people out of work.

Mr. Chairman, I want to emphasize and reemphasize what my colleague, the gentleman from Michigan, has already pointed out. It is important to note that this can be accomplished with the end result of having air just as clean as we would have under the committee proposal. I would invite our colleagues to examine the charts we have brought to the Chamber this morning. I think this is a most important point to remember.

Mr. Chairman, the energy savings that the Dingell-Broyhill amendment would achieve are significant. They would produce fuel efficiency in motor vehicles, the overall energy savings are quite significant. If we look at the California experience where automobiles are being sold there with different emission standards and the fuel penalty on the automobiles sold in California is significant, one automobile company testified that the penalty was 12 percent or more.

Another factor is that the models that are sold in the California market are significantly less than that in the other 49 States. Savings for consumers under the amendment, the schedule of emission standards we are advocating, is also significant. As pointed out by the gentleman from Michigan (Mr. DINGELL), it is as much as \$350 a car. This was the testimony of Mr. Costle, Administrator of EPA, before the Committee on Interstate and Foreign Commerce.

Mr. Chairman, my colleague, the gentleman from North Carolina, comes in with another amendment. I am not quite sure what it does. From what I can see, all it does is one thing, that is, that it continues the 1978 standard for 1 more year.

Of course, continuing the Dingell-Broyhill 1978 schedule of emissions standards for 1979 we thought was most important, because there is inadequate lead time at the present time for designing, planning, engineering, construction and building of a prototype for 1979. They should be doing this at the present time, and it makes absolutely no sense to require them to go back to the drawing board and to plan and engineer a new prototype for another year. We do think this would result in some significant savings to consumers.

But, there is still a significant difference between the schedule of emissions that we are suggesting and that which has been suggested by Mr. PREYER of North Carolina. That is in the NO<sub>x</sub> level, oxides of nitrogen—the last column on the right. Why is this important? The committee bill would reduce this NO<sub>x</sub> level to 1.0 gram per mile and give the Administrator the authority to lower it even further, to 0.4 gram per mile; whereas the schedule of emissions Mr. DINGELL and I offer would retain the standard at 1.0, and give the Administrator the authority to give a waiver to increase that up to 2.0, providing that it

is shown that new technological development is needed to develop more efficient automobile engines, and also provided that the Administrator determines that this level would not endanger public health.

Now, why is this important?

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Michigan.

Mr. DINGELL. The waiver up for 1.0 to 2.0 grams per mile cannot take place unless the technology to do so is in existence and it would not endanger public health.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

By unanimous consent Mr. BROYHILL was allowed to proceed for 5 additional minutes.

Mr. BROYHILL. Let me make sure we understand what the gentleman from Michigan just said. The waiver upward can only occur if they show that the technology is in existence to develop more fuel efficient engines; second, that it will not endanger public health.

Now, why is this problem of controlling NO<sub>x</sub> unique? I hope the Members will listen to this. When we raise the operating temperature of the automobile engine in order to make it more fuel efficient and thereby also burn up the hydrocarbons—in other words, other pollutants—what we do is increase the amount of NO<sub>x</sub>, that comes out of the tailpipe. NO<sub>x</sub>, or oxides of nitrogen, is not found in the gasoline. It is formed as a combination of the burning of the gasoline combined with the oxygen in the air.

If we lower the temperature of the burn, we are going to get less fuel efficiency, burn up less of the hydrocarbons in the gasoline, and we get more NO<sub>x</sub>. As someone pointed out, we just cannot repeal the law of thermodynamics.

So, this is a significant problem, this NO<sub>x</sub> level, if we are going to achieve the fuel efficiency goals that we have set in the bill that passed last year. So, I would urge that the Members recognize the need to set the oxides of nitrogen standards at this level, and that this is necessary in order to achieve the consumer savings that we have set as our goal in other legislation before us.

Mr. Chairman, the goal of the Dingell-Broyhill substitute offered this morning is to achieve strict air quality controls and, at the same time, balance this concern with other national goals. Our amendment will not only control automobile pollution, it will also save fuel, hold down consumer costs, and preserve the strength of the American economy. What is perhaps most important to note is that this will be accomplished through Dingell-Broyhill with the end result being air just as clean as we would have under the committee proposal.

This last point is an extremely important one for my colleagues to understand. Proponents of the committee bill would have Members believe that this is an issue of clean air verses filthy air. It simply is not.

There are several studies completed which support the view that the health

benefits will be as great with Dingell-Broyhill as with the committee bill. Excerpts from a new Yale University study of NO<sub>x</sub> include "an emission standard for NO<sub>x</sub> of 1 gram per mile—that which is contained in the Dingell-Broyhill substitute—would eliminate excess incidences of acute respiratory disease by 1981, or have roughly the same effect as the 0.4 gram per mile standard that is contained in the committee version."

The study goes on to report that—

The California 1975 and Federal 1977 automotive emission standard of 2.0 grams per mile would result in an acute respiratory illness rate of only approximately 5 percent that of 1973 by 1984.

Yet the Dingell-Broyhill substitute becomes twice as stringent as this.

A draft report by the Federal Task Force on Motor Vehicle Goals last September reported that—

Control of carbon monoxide (CO) at the present level of 15 grams per mile is sufficient to reduce projected excess cardiac deaths and person days of discomfort to ZERO by 2000 as emission-controlled cars replace older vehicles. Lower CO emission levels do not change these health indicators.

Yet Dingell-Broyhill still reduces the allowable CO emissions from 15 grams per mile to 9.

Last year, a study done by the Department of Transportation, the Federal Energy Administration, and the Environmental Protection Agency concluded that by 1990, the health effects of last years' Dingell-Broyhill amendment would have been the same as the committee bill. Yet Dingell-Broyhill this year is considerably more stringent.

The clean air or health effects of the two schedules are, at best, hotly contested. Do not believe that we will be voting on a health issue where the outcome of the two proposals will be vastly different. They will not, so far as the health of the Nation is concerned.

What we must examine, then, are the other benefits to be gained from the Dingell-Broyhill substitute. Not only will air quality increase as emissions standards become more stringent, but, with the Dingell-Broyhill substitute, the Nation will realize considerable other gains.

#### ENERGY SAVINGS

The emission schedule in Dingell-Broyhill would continue to produce fuel efficiency in motor vehicles and overall energy savings for the country while the committee schedule could waste fuel, conservatively estimated to be 2.41 billion gallons a year, or 140,000 barrels of oil per day, based on Government analyses. Last year's Federal task force report estimated that the committee standards of this year would result in a fuel penalty of 12 percent or more. We can also see this type of result if we examine the California experience, where one major automotive company reported that "the more stringent 1976 California standards cause a 12-percent fuel economy penalty, compared to cars meeting the current Federal standards". We expect the trend to continue in 1977, with California models suffering a 10-percent penalty.

Savings for consumers is also accomplished under Dingell-Broyhill. The

more stringent standards of the committee bill would require higher initial purchase costs of \$350 per car, according to testimony by Mr. Douglas Costle, Administrator of EPA. In addition, EPA's support data, the March 21, 1977 "Cost/Technology Analysis," revised April 11, also indicates that under the committee bill standards, maintenance costs to consumers might be increased as much as \$100 per vehicle. Some of the provisions in the committee bill pertaining to the automotive aftermarket threaten to raise maintenance and servicing costs to the consumer even higher.

#### JOB CERTAINTY

Jobs in the automotive industries would be protected under the standards in Dingell-Broyhill as customers would find the fuel efficient, clean burning, reasonably priced, and dependable vehicles produced under such standards more desirable and acceptable. Again, our aftermarket provisions insure the preservation of a competitive environment so essential to independent businesses. One study reported that 1 in 6 of every non-agricultural job was related to the automotive industry.

The Dingell-Broyhill schedule and its phase-in of tighter standards permits automobile and emission control parts manufacturers to maximize efforts to produce innovative fuel and emission control devices and systems. While new and innovative technologies for emissions reduction would not be blocked by the Dingell-Broyhill substitute, there are provisions in our bill to assure that such new devices will not endanger public health or safety.

Technology development is especially important in regard to the diesel engine.

It is important to note that auto manufacturers testifying before both the Health and Environment Subcommittee on clean air and before the Energy and Power Subcommittee on auto fuel economy recently, agreed to the need for the NO<sub>x</sub> suspension or waiver proceeding by EPA under the Dingell-Broyhill emission schedule for 1982 and beyond. Automakers, both foreign and domestic, who produce or plan to produce diesel engines for their models, testified to the need for the Dingell-Broyhill 1.0 NO<sub>x</sub> standard in 1982 and future model years to include the waiver to allow for the energy savings of the diesel engine to be realized and for the diesel to be put into mass production. Emission testing by manufacturers and government agencies of the various small and large diesel engines concludes that the NO<sub>x</sub> standard should not be set below 1.5, or the diesel would be lost for mass production. They have, in fact, urged that the NO<sub>x</sub> standard remain at 2.0. The diesel can claim up to a 25-percent fuel efficiency improvement above the spark ignited, gasoline powered vehicle, but that savings could be lost for the nation if diesels are outlawed or not encouraged for mass production.

The committee bill would have the effect of outlawing diesels under 4,500 pounds which are, of course, the most fuel efficient diesels. Both small and large diesels, including the GM Oldsmobile diesel to be introduced in model year 1978 at current emission standards,

would be lost under the committee's proposed standards and authority for EPA to lower the NO<sub>x</sub> level to 0.4. The 1978 model GM Oldsmobile diesel is projected to weigh in at less than 4,500 pounds. Diesels cannot now attain 0.4 NO<sub>x</sub> and could not be certified under EPA durability test procedures at 1.0 NO<sub>x</sub>. Dingell-Broyhill encourages increased production of diesels and their related fuel economy improvement. The committee bill does not.

Automobile manufacturers have come a long way in reducing polluting emission. According to studies done in 1966 by the National Air Pollution Control Administration, mobile polluters were the largest single contributor to pollution in the atmosphere. Exhaust from cars, trucks, and buses accounted for about 60 percent of the total air pollution, or about 90 million tons per year.

As of last year, emissions at the tailpipe of autos had been reduced by over 80 percent for CO and HC and by more than 40 percent for NO<sub>x</sub>. This was done with considerable effort and cost to both the industry and to the consumer.

The real improvement in air quality results from the replacement of older, polluting vehicles with newer, controlled automobiles. Rapid progress toward cleaner air continues, and would continue even if we froze today's standards. But if we raise car prices, increase maintenance costs, and make cars less fuel efficient, then older cars will stay on the road a longer time. This will result in no effective environmental improvement.

The major differences between the committee bill and Dingell-Broyhill are as follows:

First. The committee bill changes auto emission standards in 1979. As this bill realistically will not be enacted into law until June or July of this year, the 1978 standards should be carried through 1979. Inasmuch as the year-long EPA certification process for the 1979 model cars begins in midsummer this year, there is already an inadequate lead-time for designing, planning, engineering, testing, building of prototypes, and retooling for 1979 models if standards are changed for that year. Such a situation not only will result in disruption within the automobile industry, but may also result in substantial unemployment to automotive workers. As we have recently observed, the effect of such an occurrence is to produce significant adverse impacts throughout our national economy.

Second. In 1981, the committee bill reduces the NO<sub>x</sub> level to 1.0, while Dingell-Broyhill does not reduce to this level until 1 year later. Under Dingell-Broyhill, the Administrator is given the latitude to revise the standard up to 2.0 for periods of two or more model years if he determines that such standard should be revised due to: The lack of available technology; the cost of compliance with such standard; or the impact of such standards on motor vehicle fuel consumption. However, no such revision may be made if the Administrator determines that it would endanger public health.

Third. For 1983 and beyond, the committee NO<sub>x</sub> standard is reduced from 1.0

to 0.4. The Dingell-Broyhill amendment maintains the 1.0 NO<sub>x</sub> standard. With regard to NO<sub>x</sub>, the ultimate level which represents the best tradeoff between fuel economy and air quality will fall within the 1 to 2 grams per mile range. Not enough is known about the exact effects of NO<sub>x</sub>, so the Dingell-Broyhill amendment holds the standard to the lower figure.

During the Health and Environment Subcommittee hearings in 1975, and again in 1977, it was generally agreed to by the testimony that a 0.4 NO<sub>x</sub> standard was not technologically feasible in the foreseeable future. The Senate committee bill has already abandoned 0.4 gram per mile as a standard and goes no lower than 1.0 gram per mile. Furthermore, only catalytic converter technology appears to have possible potential in later years to meet 0.4 NO<sub>x</sub>, while other methods which are clean and fuel-efficient—lean burn, diesel, stratified charge—are unable to do so.

Thus, retaining the potential for a 0.4 NO<sub>x</sub> standard would inhibit development of these other innovative and fuel-efficient engines. This is precisely contrary to the purpose of the act stated in the committee report, to encourage improvement of technologies with significant fuel economy and emissions control potential.

The Motor Vehicle Goals, or "300 day study" identified five strategies to control NO<sub>x</sub> in the atmosphere, each of which would be more cost-effective than reducing auto emissions below 2 grams per mile. Even so, the Dingell-Broyhill NO<sub>x</sub> standard will be twice as stringent as this.

The problem of controlling NO<sub>x</sub> is unique, for if you raise the operating temperature of an engine to make it more efficient and to reduce hydrocarbons, you increase NO<sub>x</sub>. Conversely, if you lower the temperature to reduce NO<sub>x</sub>, you increase hydrocarbons. Thus Dingell-Broyhill sets the standard at a safe level, 1.0, yet allows the Administrator of the EPA to adjust the level higher to accommodate new technological developments which may be more efficient and thus more effective in reducing our national pollution problem. Here again, the higher NO<sub>x</sub> level would not be permitted if the Administrator determined that the level would endanger the public health, our primary consideration.

I again urge my colleagues to vote for a balanced policy, one that will clean up the air in a realistic and effective manner.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Kentucky.

Mr. CARTER. I thank the distinguished gentleman for yielding to me. Does this same principle apply to diesel engines?

Mr. BROYHILL. Of course, diesel fuel burns at a higher temperature and diesel, of course, has to have a higher temperature. If the gentleman has operated a diesel engine, he knows it has to go through a preheating period before one actually turns the ignition on to start the engine.

Because of the diesel fuel burning at a higher temperature, there is more NO<sub>x</sub> that comes out. But remember this: In diesel technology, we have some very significant fuel savings. For example, the diesel engines that are coming out on experimental cars now are achieving as much as 25 percent or more better mileage than through the gasoline technology. But if we lower that NO<sub>x</sub> level or standard down, we are just going to completely cancel out the development of any diesel technology, and that would include, I would say, even the Volkswagen Rabbit.

Mr. CARTER. Mr. Chairman, if the gentleman will yield further, the principle of the diesel engine is entirely different from that of the ordinary combustion engine in the automobile, in that by compression the air must be heated before it fires. The diesel engine has no spark plugs.

Mr. BROYHILL. That is right.

Mr. CARTER. It is an entirely different operation.

Mr. BROYHILL. It burns at a far higher temperature.

Mr. LLOYD of California. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from California (Mr. LLOYD).

Mr. LLOYD of California. I thank the gentleman for yielding.

Mr. Chairman, can the gentleman tell me how long the equipment which is to hold the emissions down is good for? Can we document, perhaps, that equipment goes out of standard within, say, 90 days?

Mr. BROYHILL. The automobile manufacturers under present law must build these emission control systems under a production warranty that they will last for 50,000 miles or 5 years, and they must so certify to EPA. Under the present law, not the law we are rewriting here, but under the present law, EPA has recall authority if they find that a significant number of these are not up to standard.

Mr. LLOYD of California. If the gentleman will yield further, would the gentleman agree that as an automobile is used, with the ignition systems we have today, breaking points, et cetera, spark plugs, that, in reality, there is a steady decline in an internal combustion engine of this type, such that there is constant maintenance on these emission control devices, and that, in reality, the thing literally goes down hill and it can actually produce more pollutants with a very less efficient fuel economy engine than if there were nothing on it, say, if you do nothing on it for 2 years and just drive it, as compared with having the equipment or not having the equipment? Is that true?

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. BROYHILL) has expired.

On request of Mr. LLOYD of California and by unanimous consent, Mr. BROYHILL was allowed to proceed for 3 additional minutes.

Mr. BROYHILL. I am not an engineer, but it certainly sounds reasonable that any piece of machinery or any equipment like this, if used for a period of

time, will require maintenance. Perhaps I do not know the point the gentleman is trying to make.

Mr. LLOYD of California. The point I am trying to make is that unless this equipment is maintained, that all of these emissions that occur are compounded because of the equipment on it to hold the pollution down. But it is the equipment itself that gets in the way, unless it is properly maintained. We would be better off if we cut the size of the engine by 50 percent than keeping an engine of 400 or 500 cubic inches and including all of these devices on it in order to reduce the emissions, when, in reality, we are just doing nothing but wasting gas. Would the gentleman agree with that?

Mr. BROYHILL. I suggest that we meet these other goals we have, and one of those is the more efficient automobile, and we are going to find that the engine weight as well as the total weight of the automobile is going to come down significantly.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. I thank the gentleman for yielding.

Mr. Chairman, this Member is not as knowledgeable on this subject as the gentleman from North Carolina, and I would appreciate some assistance in considering these two amendments.

I understand that in the case of the NO<sub>x</sub> in all of these standards we are really talking about a health situation. That is why these standards are being imposed. It is for a health purpose. I would like to find out why the Dingell-Broyhill amendment in the provision for NO<sub>x</sub> does not permit the Administrator to go below the 1.0 level in the event that it is determined after a hearing that there is a health factor involved, to permit it to go down to the lower standard that was originally proposed.

Mr. BROYHILL. Mr. Chairman, the gentleman knows, of course, that this is only a 3-year bill; and I am talking about the 3-year authorization. Congress is going to be able to monitor the situation, if that is the case.

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. BROYHILL) has expired.

By unanimous consent, Mr. BROYHILL was allowed to proceed for 2 additional minutes.

Mr. BROYHILL. To continue, Mr. Chairman, I would like to invite the gentleman from Georgia (Mr. LEVITAS) to study the material that we have brought to the floor, which shows very clearly that the standards that we are advocating here today will result in the same air quality as the standards that have been proposed by the committee and also by the gentleman from North Carolina (Mr. PREYER), and without the substantial economic penalties that would occur under the stricter provision.

Mr. LEVITAS. Mr. Chairman, if the gentleman will yield further I remember that last year when I supported the gentleman's amendment, it did have authority for the Administrator of the EPA

to go to a lower level, but there are other differences, not with respect to these numbers, but with respect to such things as the warranties, catalytic converters, or matters of that sort, so that there are differences between the gentleman's amendment and the Preyer amendment, is that not correct?

Mr. BROYHILL. Yes, and I would be glad to go into that later.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, there are only two differences that I can discern between the committee bill and the newly born Preyer substitute. One is that they change the weight limits on diesels. The other is that they give 1 additional year on 1.5, 1.5, and 2.0 at the beginning.

It is, I would say, a distinction without a real difference and leaves a 1 year, 1980, standard out on a limb which creates higher manufacturer costs for just a 1-year standard with those unnecessary costs hurting the consumer.

Mr. BROYHILL. The warranty section that is in the amendment offered by the gentleman from Michigan (Mr. DINGELL) and myself is a warranty section that is advocated by the after parts market people, and I would urge the Members' acceptance of that also.

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. BROYHILL) has expired.

On request of Mr. ERTEL and by unanimous consent, Mr. BROYHILL was allowed to proceed for 2 additional minutes.

Mr. ERTEL. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Pennsylvania.

Mr. ERTEL. Mr. Chairman, I am curious about the last factor in the Dingell-Broyhill amendment with respect to nitrous oxide, the 1.0 to 2.0. I do not understand the standard there.

As I understand it the standard is 1.0, and then we can get a variance upward to 2.0, and that can be given upon application of the industry to, I guess, the EPA Administrator under the gentleman's amendment. Is that correct?

Mr. BROYHILL. There has to be a showing that it is necessary to develop a technology for significant savings in fuel; and second, that it will not have any adverse impact on public health.

Mr. ERTEL. However, it seems to me at that point we have the industry proving something against themselves. They are trying to prove that they cannot comply with the standards.

Mr. Chairman, I think the gentleman is asking the industry to basically come in and say that they are not accomplishing the task, rather than setting the standards.

Mr. BROYHILL. No I think the gentleman misunderstands the purpose of this amendment.

Mr. ERTEL. That is what I want to know.

Mr. BROYHILL. The purpose of this amendment is not for a waiver for the whole fleet. That is not the purpose and

not the intent. The purpose of this is only to permit the development of technology in certain automobiles and in perhaps a certain engine or in a certain new development, and only very small parts of the fleet would be involved.

The committee bill, in fact, has the same type of thing, except that they go from 0.4 to 1.0. However, we are saying that in order to develop technology with the potential of saving significant amounts of fuel, we should give this small waiver, not for the whole fleet, by any means. That was not our intent.

AMENDMENT OFFERED BY MR. STAGGERS TO THE AMENDMENT OFFERED BY MR. DINGELL

Mr. STAGGERS. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. STAGGERS to the amendment offered by Mr. DINGELL: Section 214 of the Dingell amendment is amended by striking out subsection (c) thereof and inserting in lieu thereof the following:

(c) Section 202 of such Act is amended by adding the following new subsection at the end thereof:

"(1) The high altitude regulation in effect with respect to model year 1977 motor vehicles shall not apply to the manufacture, distribution, or sale of 1978 and later model year motor vehicles. Any future regulation affecting the sale or distribution of motor vehicles or engines in high altitude areas of the country shall take effect no earlier than model year 1981.

"(2) Any future regulation applicable to high altitude vehicles or engines shall not require a percentage of reduction in the emissions of such vehicles which is greater than the required percentage of reduction in emissions from motor vehicles as set forth in Section 202(b). This percentage reduction shall be determined by comparing any proposed high altitude emission standards to high altitude emissions from vehicles manufactured during model year 1970. In no event shall regulations applicable to high altitude vehicles establish a numerical standard which is more stringent than that applicable to vehicles certified under non-high altitude conditions.

"(3) Section 307(a) shall apply to any high altitude regulation referred to in paragraph (2) and before promulgating any such regulation, the Administrator shall consider and make a finding with respect to—

"(A) the economic impact upon consumers, individual high altitude dealers, and the automobile industry of any such regulation, including the economic impact which was experienced as a result of the regulation imposed during model year 1977 with respect to high altitude certification requirements;

"(B) the present and future availability of emission control technology capable of meeting the applicable vehicle and engine emission requirements without reducing model availability; and

"(C) the likelihood that the adoption of such a high altitude regulation will result in any significant improvement in air quality in any area to which it shall apply."

Mr. STAGGERS (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. STAGGERS. Mr. Chairman, the regulation which we are talking about

here affects the sale of cars in 166 counties located in the States of Arizona, Colorado, Idaho, Montana, Nebraska, Nevada, New Mexico, Oregon, Utah, and Wyoming.

It has to do with high altitude regulations of our pollution devices. The amendment would provide a suspension of the regulations through model year 1980 in order to allow the EPA to conduct a new rulemaking investigation respecting its various documents concerning reductions and increases in auto emissions EPA would be required to come up with schedules to insure that in the future high altitude vehicles will not impose a more stringent and burdensome requirement than that standard pertaining to auto emission standards at the sea level. We do not think the situation should exist. At the present time, though, automobiles in high altitude areas cost a lot more. We do not think this is a good business deal and it is not good for the people of America.

The car dealers are only making, at the present time, one-half of the number of cars that are available for high altitudes because the manufacturers claim they cost so much more money. We need twice as many such cars as are presently being made for the high altitude areas. They are only making half enough of them at the present time.

Fuel economy deteriorates considerably because of pollution devices when automobiles, enter the high altitudes. This is one of the places wherein we need to save fuel now.

Mr. BROYHILL. Will the gentleman from West Virginia yield?

Mr. STAGGERS. I yield to the gentleman from North Carolina.

Mr. BROYHILL. Mr. Chairman, as I understand the amendment offered by the gentleman from West Virginia, it does not take authority away from the EPA to write these regulations for high altitude areas, the only thing it says is that the EPA will be rewriting the schedule of regulations so that they will have less economic impact and a lower cost factor in those areas.

Is that the purpose of the gentleman's amendment?

Mr. STAGGERS. That is right.

Not only that, but the cost is so much more and the pollution in these high altitude areas is so great that the EPA needs to do something to remedy this situation. We think EPA should act. EPA has admitted that it is not doing the job.

Mr. BROYHILL. Mr. Chairman, I thank the gentleman from West Virginia and I support his amendment.

Mr. WIRTH. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Colorado.

Mr. WIRTH. Mr. Chairman, I am not so sure that this amendment will do as the gentleman from West Virginia says and I will rise later in opposition to his amendment. What we are doing is waiving all EPA requirements until 1981, which is totally unfair for the people in these mountainous regions.

Mr. STAGGERS. Let me say that the

gentleman from Colorado has not stated the truth. He has not read the amendment through and does not know what he is talking about. I think the gentleman had better reread the amendment. We have said it would run the car cost up. I believe the gentleman from Colorado will have to agree with that, and that today they are making only half of the cars needed for the high altitude portions of the country today. Does the gentleman disagree with that?

Mr. WIRTH. I will later quote from the amendment on my own time.

Mr. DINGELL. Mr. Chairman, would the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I want to say I am delighted that the gentleman from West Virginia (Mr. STAGGERS) has offered this amendment. It is a good amendment and I am delighted to support it. It is going to give an opportunity for EPA to rethink some of the standards that they have set for the westerly parts of our country, concerning high altitude emissions, and doing so under circumstances that they can come forward with standards which will protect both the health and environment of the people in those areas. It will also give them an opportunity to have greater model availability at a lower cost which is highly desirable. In my view it has no adverse health impact, since only 2 or 3 percent of the cars in those areas are sold with these requirements because most of the cars come into the high altitude areas from the outside areas.

I am glad to support the amendment offered by the gentleman from West Virginia (Mr. STAGGERS).

Mr. MARRIOTT. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Staggers amendment.

Mr. Chairman, I rise in support of the Staggers amendment to the Dingell amendment. This amendment would in fact suspend until model year 1981 the present high altitude regulation. I would like to ask if my colleagues will remember the letter we sent out to all Members laying down the criteria and the benefits of this amendment. Effective this past September with the production of 1977 model cars, a new EPA regulation went into effect which requires that all cars sold for principal use in counties above 4,000 feet be certified at that elevation to meet Federal emission standards.

The regulation affects the sale of cars in 166 counties located in the States of Arizona, Colorado, Idaho, Montana, Nebraska, Nevada, New Mexico, Oregon, Utah, and Wyoming.

It requires all cars that are to be sold in these counties to be certified in a separate emission certification process from that required for the rest of the national auto fleet.

The purpose of the regulation is to improve air quality in certain metropolitan areas located above 4,000 feet where auto emission levels are adversely affected by high altitude operating conditions.

The present EPA regulation has created a number of problems for both consumers located in or near these high altitude areas and for new car dealers. Although the regulation has demonstrably interfered and adversely affected the new car market, it can offer no real hope of cleaning up the air in high altitude areas which presently experience auto related pollution problems.

At least as presently designed, the EPA regulation will not help the air pollution problem of these high altitude areas.

Effective this past September with the introduction of 1977 model autos, a new EPA regulation went into effect which required that all cars sold for principal use in counties above 4,000 feet be certified.

For these reasons, I am supporting this amendment to section 5 of the Dingell substitute. This amendment will suspend the present EPA high altitude regulation and require EPA to rethink its policy relative to the high altitude auto emissions problem.

The amendment specifies criteria which are to be considered by EPA in a new public rulemaking proceeding which must be held prior to the promulgation of any future high altitude regulation. These criteria include:

First. The economic impact which would be experienced by both consumers and new car dealers;

Second. The availability of technology capable of meeting high altitude emission standards; and

Third. The likelihood that the regulation would result in any significant improvement in air quality in those regions to which it would apply.

The amendment also contains a provision which would insure that the burden of meeting emission standards at high altitude is no greater in terms of percentage reductions of pollutants than that imposed by the Clean Air Act with respect to non-high-altitude cars.

I would note that the 166 high counties which are presently designated as high altitude for purposes of the current EPA regulation contain only 2 to 3 percent of the national sales market. The manufacturers have determined that it is not economically feasible to certify their entire line of products for use at high altitude.

The result has been a reduction in availability of models and options by approximately 50 percent.

Standard transmissions and six cylinder engines are among the most frequent options which are simply not available to high altitude consumers.

Due to the additional emission control equipment which is required to meet the high altitude regulation currently in effect, present high altitude vehicles are priced significantly higher than comparable low altitude cars.

The price of this additional equipment ranges anywhere from \$22 to \$90 depending upon make and model.

More significantly, however, is the added cost which high altitude customers must pay as a result of limited availability. Since many standard items

are simply not available on high altitude cars, the customer in these 166 counties is forced to pay extra costs for optional equipment.

The high-altitude customer may find himself paying for an automatic transmission, a larger engine, power steering and power brakes, et cetera, which he or she never intended to buy. The difference in cost may run as high as \$500 due to these factors alone. This \$500 figure does not take into account the added fuel costs which will result if all of this optional equipment is added.

Unfortunately, no one benefits from these higher costs. The customer does not benefit because his new car—which may not even be the car he really wanted—performs poorly and gets 5 to 7 percent less fuel economy than a comparable low-altitude car.

The dealer does not benefit because he loses sales due to the competitive disadvantage he finds himself in.

Nor does the environment benefit by means of this regulation. Metropolitan areas which do experience air quality problems are well known for the large amount of tourist and other nonresidential traffic flowing through them. These vehicles are not subject to the present regulation and are therefore not affected by it.

Due in large part to the regulation being totally unenforceable, many customers living in high-altitude counties merely drive to a nearby low-altitude area to buy their cars. This eliminates to a significant degree any potential air quality benefit. As local publicity has advertised the ease with which the present regulation may be avoided, these occurrences have become more and more widespread.

It has been estimated that the actual percentage of high-altitude cars being driven in the 166 high-altitude counties is negligible.

I will cite one last problem which, more than any other, truly highlights the absurdity of this regulation. Of 166 counties designated as high altitude by EPA, only 18 have been determined by EPA to have any type of auto-related pollution problem.

In the other 148 counties which contain mostly rural populations, small dealers are precluded from trading cars with neighboring dealers because they now have different types of cars. Without this ability to trade, many of these small dealers may go out of business. Yet there is no air quality problem in these 148 counties to justify any governmental intervention at all.

Because this regulation creates numerous problems for high-altitude car buyers and franchised dealers, because it seeks to apply a cure where no illness has been detected, because it is unenforceable and is being widely disregarded, and because it cannot begin to accomplish its goal of improving air quality in those areas where a problem does exist I would strongly urge you to support this high-altitude amendment.

Mr. WIRTH. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to

the amendment offered by the distinguished chairman of the committee, the gentleman from West Virginia (Mr. STAGGERS).

First of all I want to thank the gentleman from West Virginia (Mr. STAGGERS) for reflecting and recognizing the difficulties we face at high altitudes. There is no question we have very severe problems there. I am going to offer an amendment later to the Preyer substitute to focus attention on the problems of the emissions at high altitudes, a focus which unhappily the amendment offered by the gentleman from West Virginia (Mr. STAGGERS) does not contain.

There are some very significant problems with the amendment offered by the gentleman from West Virginia. Let me quickly go through those. First of all it repeals the certification by EPA until 1981.

The gentleman from West Virginia (Mr. STAGGERS) said I was not telling the truth when I mentioned that before. Let me read from the amendment:

Any future regulation affecting the sale or distribution of motor vehicles or engines in high altitude areas of the country shall take effect no earlier than model year 1981.

Let me quote again:

Shall take effect no earlier than model year 1981.

Effectively what we are doing in this amendment were we to pass the amendment offered by the gentleman from West Virginia (Mr. STAGGERS) is telling the Rocky Mountain region, which is, I admit, only 3 percent of the population, that we are going to do nothing about cleaning up the air in the Rockies until 1981. And this is in an area of the country, I remind my colleagues, in which we are going to have to move to very significant coal conversion if we are serious about our national energy problem and serious about conversion to coal from oil and natural gas. The air can absorb only so much pollution. If we refuse in this amendment to clean up the auto emissions, and then find that our air is filled with coal emissions, we are going to be in a disastrous situation in the Rocky Mountain area.

The most significant problem with the amendment offered by the gentleman from West Virginia (Mr. STAGGERS) is waiving the requirement until 1981 and then begin making progress. That is simply not fair to Denver or to Albuquerque or to other high-altitude cities. The Members know the problems we have now with the brown cloud difficulties. We have air pollution in Denver which is worse than it is in Los Angeles.

Mr. Chairman, we have very major problems there and they are getting worse. To accept this amendment, to say that we are going to do nothing until 1981 is, in my opinion, an immense disservice to the citizens of the Rocky Mountain region, who have enough burden already with twice the pollution at high altitudes.

Mr. Chairman, I would hope we would defeat this amendment and then come around and accept the constructive amendment that I will offer.

Mr. STAGGERS. Mr. Chairman, will the gentleman yield?

Mr. WIRTH. I yield to the gentleman from West Virginia.

Mr. STAGGERS. Mr. Chairman, the gentleman knows emissions devices are going to be put on all the cars manufactured for low level, high level, or any other level. To say that we are just taking the devices off at high altitudes is not true.

Mr. WIRTH. Mr. Chairman, I would like to reclaim my time.

The amendment says:

Any future regulation affecting the sale or distribution of motor vehicles or engines in high altitude areas of the country shall take effect no earlier than model year 1981.

The gentleman has got to read the amendment offered by Detroit, which the gentleman is offering, which is saying this will not go into effect until 1981. Now, that is unfair to the people of the Rocky Mountain area.

Mr. Chairman, I would ask that we defeat the amendment and come back and attempt a constructive approach later.

Mr. RONCALIO. Mr. Chairman, I move to strike the requisite number of words. I rise in support of the Staggers amendment.

Mr. STAGGERS. Mr. Chairman, will the gentleman yield?

Mr. RONCALIO. I yield to the gentleman from West Virginia.

Mr. STAGGERS. Mr. Chairman, the gentleman from Colorado keeps repeating that my amendment changes the date of application of the high altitude regulation to 1981. The gentleman did not answer my question whether emission control technology is required on all the cars in the low areas and the high altitude areas, and whether there will be air pollution devices on these vehicles, wherever they are located? It has been shown that control technology in high altitude areas is highly costly and just not doing the job and does not solve the problem of air pollution.

Mr. RONCALIO. Mr. Chairman, I want to commend my colleague, the gentleman from Colorado (Mr. WIRTH) very much for the gentleman's diligence in trying to do something about the air above Denver. I fly that area two or three times a month. I take off from Cheyenne, 100 miles north of Denver, at around 6,200 feet altitude. Denver is about a mile high. Sometimes I see the pollution as far north as Fort Collins, creeping almost into Wyoming.

I appreciate what the gentleman is advocating, but I do not believe the gentleman's proposition would be beneficial to the overall problem. We have got to go along in the hope that in the next several years, that those whose wisdom is greater than that of Congress—Members of those districts that manufacture automobiles, those who sell them, as well as those who drive them and who put up with all the fuel efficiency problems—can ultimately come up with the self-adjusting mechanism that will make every care acceptable at every elevation in the country. That will take place if we adopt the Staggers amendment and allow the transition toward that mechanism.

I am speaking for the auto dealers in Wyoming. If they are in cooperation with Detroit, that is how it is; but I think a column, like Mr. Buchwald's in this morning's Post, can do more toward goading Detroit toward shaping up than anything we do here.

Mr. Chairman, I call attention to the fact that the STAGGER's proposal maintains discretionary authority in EPA to determine the best means of achieving air quality at high altitudes. That is what is important. It then allows EPA to consider all the alternatives to the problem and take up all the self-adjusting mechanisms that are vital to solve this problem.

Mr. WIRTH. Mr. Chairman, will the gentleman yield?

Mr. RONCALIO. I yield to the gentleman from Colorado.

Mr. WIRTH. Mr. Chairman, the gentleman is absolutely correct in pointing out some of the technological problems also referred to by the chairman.

What we have got to do is make our way toward the adaptation of all cars to high altitudes. That does not mean that we completely preclude any kind of automobile from the emission standards, which this amendment does, by 1981.

What my amendment does is move up into that area where the technology works, we add to and maintain it where it is in position to meet it. We give the automobile companies a waiver so that we have a balanced approach which does not exist in this amendment. I am also very sympathetic to dealers' dilemmas which the gentleman refers to. The dealers in my district have the same problems. The amendment I will offer also provides relief to the dealers so that they have a full auto line without the brown cloud problems we have now.

Mr. RONCALIO. As I said, I have profound respect for my good friend from Colorado, but I simply happen to disagree with him on this particular point.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. RONCALIO. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chairman, I just wanted to rise in support of the Staggers amendment and in support of the position taken by the gentleman in the well.

Mr. RONCALIO. I appreciate all kind remarks, especially from spokesmen of the great State of Colorado.

Mr. MARRIOTT. Mr. Chairman, will the gentleman yield?

Mr. RONCALIO. I yield to the gentleman from Utah.

Mr. MARRIOTT. Mr. Chairman, I want to clarify one thing. The reason the 1981 date is there is because they need at least 2 years.

Mr. RONCALIO. We are only talking about 2 years, only 2 years. It is not a 4-year continuation. The 1978 product is virtually being manufactured now.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

(On request of Mr. WIRTH and by unanimous consent Mr. RONCALIO was allowed to proceed for 2 additional minutes.)

Mr. WIRTH. Mr. Chairman, will the gentleman yield to me?

Mr. RONCALIO. I yield.

Mr. WIRTH. I thank the gentleman for yielding to me. When we are talking about the years involved, it is also important to understand what year the base on emission standards comes from. It comes from 1970 automobiles. Under the amendment offered by the gentleman from West Virginia, we are going to, hopefully by 1980, achieve 90 percent reduction in standards from a 1970 automobile. Unhappily, the 1970 standards at high altitude are twice those at sea level.

Consequently, what the gentleman from West Virginia is proposing today is that we accept the high altitude which, first, has twice as much emission as any other level in the country, or below 4,000 feet. That is one set of problems. Second, we are never going to get, given the mathematics of the way the formula is set up for high altitudes, there is no way in which we can arrive at cleaning up the air at high altitude under the amendment offered by the gentleman from West Virginia. Arithmetically, it does not work.

Mr. RONCALIO. I respectfully disagree with the gentleman. I think there will be a way to achieve his goal, and we are on the way to doing that. I think in the process we simply have to have certain trade-offs.

Yesterday, I voted against Mr. BREUX and his amendment, and I recognize the fact that in his opinion my stock fell yesterday. Today, I am going to support the Staggers amendment because I think a balance is necessary, and I think that the Rocky Mountains have to contribute to that balance.

Mr. WIRTH. I commend the gentleman for his stand on the Breux amendment.

Mr. HUBBARD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the Staggers amendment and the Dingell-Broyhill amendment, particularly its provisions regarding the performance warranty in the original Clean Air Act. Too, the Staggers amendment is a helpful addition.

It is critically important that the Congress extend the emission standards now in effect for the 1977 model year for the 1978 and 1979 models because of the long leadtime needed for auto production, for certification of compliance with Federal emissions and mileage standards, and for conversion to meet new standards. The Dingell-Broyhill amendment proposes to reduce hydrocarbon emissions from the current permissible level of 1.5 grams per mile to 0.41 grams per mile in the 1980 model year. This is the original goal of the Clean Air Act and, because of the clear health danger posed by hydrocarbon emissions, any relaxation of the original goal should be opposed.

Regarding carbon monoxide, the Dingell-Broyhill amendment sets a standard of 9 grams per mile in 1980. This standard is totally consistent with the need for air quality, though it is higher than the original goal of 3.4 grams per mile. With the 9-gram standard, EPA projects

that every city in the Nation will meet carbon monoxide air quality standards by 1990. The 9-gram standard will reduce carbon monoxide contaminants by 80 percent by 1990, while the 3.4-gram standard will reduce these contaminants by 83 percent—a negligible difference.

The performance warranty provisions of the committee bill will have a major anticompetitive and anticonsumer impact, not only in my opinion, but in the opinion of the House Small Business Committee and of the Antitrust Division of the Justice Department. I see no justification for simply reducing the performance warranty period to 3 years, as the committee bill would do, and calling for another study which will inevitably lead to the conclusions reached by the House Small Business Committee and the Department of Justice. The evidence clearly shows that the only solution to the anticompetitive and anticonsumer aspects of the performance warranty is its permanent reduction to 18 months or 18,000 miles, as provided by the Dingell-Broyhill amendment.

It is ludicrous to propose, as the committee bill does, that the independent aftermarket industry should be given the right to do warranty and recall work normally paid for by the manufacturer, and then be reimbursed by the manufacturer. This would place the independent garage industry in the same position in which the service station industry finds itself—under the thumb of the major oil companies capable of dictating prices and practices.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. HUBBARD. I yield to the gentleman from Florida (Mr. Rogers).

Mr. ROGERS. I thank the gentleman for yielding.

Mr. Chairman, I just wanted to make a correction. The gentleman said that the Attorney General and the Justice Department supported the Dingell amendment. I have a letter here, dated May 12, 1977, from the Attorney General, which says to the contrary. I would be glad to supply this to the gentleman.

OFFICE OF THE ATTORNEY GENERAL,

Washington, D.C., May 12, 1977.

HON. PAUL ROGERS,

Chairman, Subcommittee on Health and Environment, Committee on Interstate and Foreign Commerce, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your letter of May 11, 1977, concerning the position of the Department of Justice on pending amendments to the Clean Air Act, and in particular to Title II of H.R. 6161.

After consulting with the relevant divisions of this Department, I am advised that the Justice Department's Antitrust Division has in the past commented critically on regulations proposed by the Environmental Protection Agency with respect to implementation of the warranty provisions under section 207 of the Clean Air Act, although I understand that upon further consideration, the Division has taken a less critical view. However, the Division's original comments were not intended to be and should in no way be construed as an endorsement of the Dingell substitute, which was offered in the House Commerce Committee.

After reviewing Title II of H.R. 6161 and the language of the Dingell substitute, I have concluded that, on balance, the Department

would prefer the enactment of Title II of H.R. 6161. While there are specific provisions of Title II of H.R. 6161 with which the Department might not be in full accord, depending on their interpretation and implementation, I share your view that it represents an appropriate and fair balance of measures to protect the environment and assure free competition, free choice and consumer protection.

Yours sincerely,

GRIFFIN B. BELL,  
Attorney General.

The Department of Justice supports the committee proposition rather than the Dingell amendment, and I have the letter here for the gentleman.

Mr. HUBBARD. I believe my comments do not coincide with what the gentleman interprets them to be.

Mr. ROGERS. I understood the gentleman to say that the Department of Justice supported the Dingell amendment. I wanted the gentleman to know that this is not true.

Mr. HUBBARD. I said it called for another study which will inevitably lead to the conclusions reached by the House Small Business Committee and the Department of Justice.

I would agree that the gentleman from Florida is correct.

Mr. ROGERS. I thank the gentleman.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield on this point?

Mr. HUBBARD. I yield to the gentleman from North Carolina (Mr. Broyhill).

Mr. BROYHILL. I thank the gentleman for yielding.

Mr. Chairman, the Antitrust Division of the Justice Department submitted testimony to the EPA saying that their conclusion was that the present warranty is anticompetitive. If the gentleman would like to come over here and examine it, I have it right here.

Mr. HUBBARD. I think the gentleman is agreeing with my position.

Mr. ROGERS. Mr. Chairman, if the gentleman will yield, here is the letter dated May 12, and I will give it to the gentleman from North Carolina.

The CHAIRMAN. The time of the gentleman from Kentucky (Mr. Hubbard) has expired.

(By unanimous consent, Mr. HUBBARD was allowed to proceed for 1 additional minute.)

Mr. HUBBARD. Mr. Chairman, many of my constituents in the independent garage and aftermarket parts industry have made it clear to me they do not wish, nor have ever asked for the right, to do this type of warranty and recall work. Frankly, they resent the committee's inference that the stipulation of a manufacturer's right to do this work in the Dingell/Broyhill amendment is handing a so-called monopoly to the major domestic auto makers. This is not so, and I can assure you that if it were, the aftermarket parts and service industry would not be supporting the Dingell/Broyhill amendment to their own detriment.

I therefore urge my colleagues to support the Dingell/Broyhill amendment as a workable means of achieving our important clean air goals, and as the only equitable and permanent solution to the

anticompetitive and anticonsumer aspect of the performance warranty provisions of the Clean Air Act.

AMENDMENT OFFERED BY MR. CARR TO THE AMENDMENT OFFERED BY MR. PREYER AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. DINGELL

Mr. CARR. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. CARR to the amendment offered by Mr. PREYER as a substitute for the amendment offered by Mr. DINGELL: "Page 27 strike line 18 and insert:

"(A) emissions of oxides of nitrogen from such vehicles will not exceed 1.5 grams per vehicle mile for a period of 100,000 miles and emissions of other pollutants will not exceed the applicable standard for a period of 100,000 miles,

"(B) such manufacturer has made maximum feasible efforts to meet such standard required under the third sentence of paragraph (1)(B) for the model years 1981 and 1982, and

"(C) such vehicles will meet all applicable fuel economy standards.

In the case of any waiver under this paragraph, the applicable standard for purposes of this Act for vehicles to which such waiver applies shall provide that emissions of oxides of nitrogen from such vehicles shall not exceed 1.5 grams per vehicle mile. For purposes of this paragraph, the term 'qualified diesel vehicle' means a diesel powered vehicle of an inertial weight of 3,000 pounds."

(d) Section 206 of such Act (relating to compliance testing and certification) is amended by adding the following new subsection at the end thereof:

"(g) (1) In the case of any class or category of vehicles or engines subject to a standard of 0.4 grams per vehicle mile for oxides of nitrogen (as provided in section 202(b)(5)), a certificate of conformity shall be issued under subsection

Mr. CARR. Mr. Chairman, I should not need to take the whole 5 minutes. I have discussed this amendment with the gentleman from Florida (Mr. ROGERS). It is a technical and perfecting amendment to the substitute amendment offered by my dear friend, the gentleman from North Carolina (Mr. PREYER), in which he stated that he was lowering the weight limits for vehicles from 4,500 pounds to 3,000 pounds or in excess of 3,000 pounds.

Mr. Chairman, I would just advise the committee that automobile weights are sized in 500 pound classifications, and we seek merely to say "3,000 pounds or over."

In addition, Mr. Chairman, we seek, through this amendment, to clear up any ambiguity as to what kind of weight we are talking about. There are several kinds of weights that apply to automobiles. The inertial weight which my amendment uses is the same weight that EPA uses as the inertial weight on the dynamometer.

Mr. PREYER. Mr. Chairman, will the gentleman yield?

Mr. CARR. I yield to the gentleman from North Carolina.

Mr. PREYER. Mr. Chairman, I thank the gentleman for yielding.

I have studied the amendment. It is

agreeable with me, and I think the committee has studied it and it is agreeable to this side of the aisle.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. CARR. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, we have no objection to the amendment on this side of the aisle.

Mr. CARTER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I did not get a copy of the gentleman's amendment.

Mr. ROGERS. Mr. Chairman, if the gentleman will yield, I am sorry. I thought the gentleman had given him one.

Mr. CARTER. I would like to see it. Until I have the privilege of reading and understanding something about it, I would have to call for a vote on it. It may be all right.

#### PARLIAMENTARY INQUIRY

Mr. ECKHARDT. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. ECKHARDT. Mr. Chairman, do I understand correctly that we have before us, of course, the original instrument, and then we have the Dingell-Broyhill amendment and we have an amendment in the form of a substitute, which is denominated the Preyer substitute, and then we have before us an amendment by the gentleman from West Virginia (Mr. STAGGER): to the Dingell-Broyhill amendment?

The CHAIRMAN. The Chair will state that the gentleman is correct.

Mr. ECKHARDT. And then, Mr. Chairman, we have an amendment offered by Mr. CARR to the Preyer substitute amendment for the Dingell-Broyhill amendment?

The CHAIRMAN. The gentleman is correct.

Mr. ECKHARDT. Mr. Chairman, that, of course, is proper. There are four matters before us at this time, but we could not have a further amendment to either the Preyer substitute or to the Dingell-Broyhill amendment at this time; is that correct?

The CHAIRMAN. The Chair will state that the gentleman's position is correct. No further amendments to the Dingell amendment nor to the Preyer substitute amendment for the Dingell amendment could be entertained until the Staggers amendment to the Dingell amendment and the Carr amendment to the Preyer substitute for the Dingell amendment are first disposed of.

Mr. ECKHARDT. Mr. Chairman, is it not true that the order of voting would be first on the Staggers amendment?

The CHAIRMAN. That is correct. It has priority.

Mr. ECKHARDT. I thank the Chair.

The CHAIRMAN. Does the gentleman from Kentucky (Mr. CARTER) seek recognition?

Mr. CARTER. I do, Mr. Chairman, just to remove my objections to the amendment which we just considered.

The CHAIRMAN. That is the Carr amendment.

Mr. CARTER. That is exactly right, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from West Virginia (Mr. STAGGERS) to the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment to the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. CARR) to the amendment offered by the gentleman from North Carolina (Mr. PREYER) as a substitute for the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment to the amendment offered as a substitute for the amendment as amended was agreed to.

Mr. MAGUIRE. Mr. Chairman, I move to strike the last word.

Mr. FLIPPO. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Alabama.

Mr. FLIPPO. Mr. Chairman, I do not pretend to understand the chemistry of thousands of possible combinations of carbon and hydrogen atoms that are grouped under the auto emission heading of "HC." Nor do I pretend to understand the chemistry involved in relating hydrocarbons to carbon monoxide, or to the eight different nitrogen oxides that we refer to simply as NO<sub>x</sub>.

I can, however, understand that the Dingell-Broyhill proposal will eliminate 90 percent of all auto emissions, and that the administration proposal will eliminate just a little more—93 percent—but at an extreme cost in both dollars and in fuel waste.

I find these facts very persuasive. Especially since the Environmental Protection Agency's own studies show no measurable difference in air quality between a 90-percent reduction in tailpipe emissions and the very expensive attempts to wring out an extra 3 percent by meeting the administration's 93-percent reduction standards.

The economics of Dingell-Broyhill, Mr. Speaker, have convinced me that its standards serve the Nation best in terms of less inflationary pressure, substantial gains in clean air, and a smaller upward impetus on unemployment than that which would be suffered under the committee proposal.

Mr. MAGUIRE. Mr. Chairman, I believe it is important as we debate the auto emissions issue today that we recognize that we are not coming into this Chamber and addressing this issue for the first time and that we are not being presented here with alternatives for the first time.

This matter does have a history. It was in 1970 that this Congress passed the Clean Air Act amendments which provide for a schedule for a reduction of emissions from automobiles. We had standards established which were to be met by 1975. They were delayed until

1976. They were delayed further until 1977. They were delayed still further until 1978. The committee this year has proposed that they be delayed again to take only the next modest step forward in 1979 and to stretch out the remainder of the steps through 1983. Certainly this is a modest enough proposal.

We now have the amendment offered by the gentleman from North Carolina (Mr. PREYER) as a substitute for the amendment offered by the gentleman from Michigan (Mr. DINGELL). I believe the Preyer substitute is well motivated. Although it provides for yet another extension, it does not abandon the statutory standards as does the Dingell amendment, but delays the next modest step from 1979 until 1980. But it represents, unhappily, yet another unnecessary modification of the projected standards.

Why does this keep happening? Last year we dealt with this bill and we discovered that every Member has automobile dealers in his district. We know how that works. The automobile dealers come in and they call upon the Members of Congress. They come in and all they know is what they are told by the companies. I do not believe anybody misunderstands that. Our job is not to rubber-stamp that, but to make reasoned judgments on the merits of any issue, including this one.

The companies have had a miserable record over the years on safety, on fuel economy and now on emissions control. I do not believe there is a Member in this body that does not recognize that that is the truth. But our job is to figure out what can be done and how we are going to protect the public health accordingly. I am sure we will all agree to that.

So, what is the question? The question is what actually can be done technically on what kind of a time schedule.

There is no question but that the manufacturers can meet the statutory deadlines for emission controls sooner than the committee proposal suggests. The National Academy of Sciences has said that they could have met them in 1977 with respect to HC and CO and probably with respect to 0.4 NO<sub>x</sub>.

EPA in its own documentation to us indicates that several of the controls on specific emissions can be met a year or more earlier even than the administration is proposing.

I do not believe anyone can believe that this or any other administration would insist that something can be done when in fact it cannot be done or if it would involve unacceptable tradeoffs. What we have before us today in the Preyer amendment is a compromise of a compromise of a compromise.

At what point in this compromising process do we desert altogether our responsibility to deal with the public health? I must express my appreciation for an administration which is at least willing to ask the right question and say, "What can the companies do and how close can we get to that? But when we start fading off of that too many different times for political reasons, then I

think we are not doing the job of protecting the public health.

The gentleman from Michigan (Mr. DINGELL) who has offered the amendment, says again and again that there are fuel economy penalties and that the costs are excessive. It would take much longer than we have in this debate this morning to analyze all of the technical aspects of the arguments of the gentleman from Michigan (Mr. DINGELL). The difficulty with the arguments of the gentleman from Michigan (Mr. DINGELL)—and this was true last year; it is true this year—is that he too often compares the impacts of the committee proposal not against what he has proposed, but against the present situation.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. ECKHARDT, and by unanimous consent, Mr. MAGUIRE was allowed to proceed for 5 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman yield? The gentleman has mentioned my name.

Mr. MAGUIRE. I will be happy to yield to the gentleman from Michigan when I have completed my critique. I do not yield to the gentleman at this point.

Or he takes a worst case for comparison. Or he cites California data from past years which are not relevant to current or future technologies and, therefore, are not applicable to the committee proposal. Or he assumes things that have not been proven. For example, in his own analysis he says he assumes a 10-percent fuel penalty, and there is no basis for that assumption. Once that assumption is taken out of the calculation, the whole argument falls like a pack of cards.

We do have the technical capability today to meet the statutory standards. The companies have met them on test vehicles of 4,500 pounds. Both GM and Ford have done that. They have not carried that out over 50,000 miles as yet, but the primary technical scientific problem has been solved. If the basic scientific problem had not been solved, it would be more difficult to say we ought to have a direct schedule for reduction of these emissions. But the primary scientific problem has been solved. All that remains is the secondary issue of how do we perfect this so that it extends over 50,000 miles through mechanical adjustments of the sensors and whatnot. That is a secondary, not a primary, technical problem and requires only modification and adjustments of what we already have achieved.

The Ford Motor Co. has testified it can meet the standards down to 1.0 NO<sub>x</sub> with minimum fuel economy penalties.

The administration goes beyond that and says if we optimize for fuel economy, we will have fuel economy improvements under the President's emissions control proposal. If we optimize for cost and put fuel economy in a secondary position of priority, we will still meet the emission standards without upsetting fuel economy. Indeed, the committee proposal may even be better than the Dingell proposal,

because when we move to three-way catalysts and we move to electronic controls on the engine, we move into new technologies which are good for fuel economy as well as for emission standards.

All of the arguments of the gentleman from Michigan (Mr. DINGELL) are based on what happened in California several years ago with an exhaust gas recirculation system, which has nothing to do with what we are planning to do and with what the administration is projecting with respect to electronic controls on the engine.

Mr. DINGELL. Mr. Chairman, the gentleman mentioned my name. Will he yield?

Mr. MAGUIRE. Now I am happy to yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I observe with great distress the gentleman has not read my views. He has not observed we have not taken the worst case but the middle case. We have consulted with the Office of Management and Budget and as a matter of fact our figures are based entirely on the idea that there would be a three-way catalyst under either set of circumstances. We are only using the administration figures embodying the additional costs. We pointed out it will cost \$350 per car in their proposal and ours will cost \$70.

I urge my colleagues to look at the charts and see what the figures are.

Mr. MAGUIRE. The administration figures show that the cost increase for the committee proposal is only \$65 to \$70 more than the Dingell proposal if EPA stays at 1.0 NO<sub>x</sub>, and \$85 to \$165 if we go to 0.4 NO<sub>x</sub>.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. MAGUIRE) has expired.

Mr. MAGUIRE. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

Mr. HILLIS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. ECKHARDT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I yield to the gentleman in the well, the gentleman from New Jersey (Mr. MAGUIRE).

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman from Texas.

Does the gentleman from Michigan want to tell us he does not assume a 10-percent fuel economy penalty as a basis for all of his calculations, because that is the way I read his views in the report. He says he "assumes"—that is his word—and that assumption is not supported by an analysis of the data. The EPA and DOT and FEA, and Dr. Schlesinger who is in charge of energy for the President all support the President's proposal and say there will be no fuel economy penalty.

Does not the gentleman "assume" a 10-percent penalty?

Mr. DINGELL. If the gentleman will permit me, he mentioned my name.

Mr. MAGUIRE. The gentleman from Texas has the time.

Mr. ECKHARDT. I yield to the gentleman from Michigan.

Mr. DINGELL. I suggest the gentleman read page 469 of the report. He will find I am quoting Government documents as to the fuel penalty, quoting EPA, DOT, and FEA, which all say there will be a fuel penalty of between 5 and 15 percent. These are the administration documents.

Mr. MAGUIRE. Those documents the gentleman is referring to all critiques of the EPA in-house proposal which is not the administration proposal.

Mr. ECKHARDT. Mr. Chairman, I would like to ask the gentleman in the well a question. I think he has very eloquently expounded the proposition that the automobile industry does have the capability of meeting the standards presented both in the bill and in the substitute offered by the gentleman from North Carolina (Mr. PREYER). All day yesterday or most of yesterday we were concerned about the ceilings on the development of industry all over this country and there are some problems with respect to ambient air quality. We are bumping up against the same ceiling, I understand.

Mr. MAGUIRE. That is correct.

Mr. ECKHARDT. Is it not true that if we do not require the automobile companies to do what the gentleman in the well has shown they are competent to do we will not be able within the next 5 or 10 years under section 117 to prevent the shutdown of industry in the districts of Members here on the floor. It is a trade-off, as I see it.

Mr. MAGUIRE. The gentleman is absolutely correct. The bill is designed to insist that the best available control technology be used by stationary sources and in the part relating to auto emissions that the companies be asked to do what foreign companies have been doing and what has been done for several years in California. They are asked to do what they can do and nothing more, and if they do that then we will have more room for economic development in other sectors.

Mr. ECKHARDT. And if we do not do that, we jeopardize far more jobs than exist in a single industry if we shut down stationary sources or freeze development throughout the Nation, as I see it. I think the tradeout would cost far more in jobs if we did not limit the automobile industry in a manner that is done with great discretion by the amendment offered by the gentleman from North Carolina (Mr. PREYER).

Mr. MAGUIRE. Mr. Chairman, I agree with the gentleman. If the gentleman will yield further, even with respect to the automobile industry itself, the projections made by the administration are that we are going to have dramatic increases in employment in the next few years in the auto industry, even given the administration's strategy for emission control.

And, of course, the bottom line is if they build the best cars, they will have the biggest sales.

Mr. DOWNEY. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from New York.

Mr. DOWNEY. Mr. Chairman, I would like to associate myself with the remarks of the gentleman. I would like to make one point that was sort of highlighted or convoluted.

Mr. MAGUIRE. I apologize.

Mr. DOWNEY. That is not on the description of the gentleman from Michigan, but the fuel penalty, the 10 percent. Would the gentleman tell the Committee once again that this is an assumption of electronics in the dialog?

Mr. MAGUIRE. Mr. Chairman, if the gentleman will yield further, I would be happy to respond. The fact of the matter is that those 10- or 12-percent figures are based on experience with the California models several years ago with outmoded emission control technology and not on current technology with three-way catalysts and electronic controls. Therefore, the California data on fuel economy cited by the gentleman from Michigan is irrelevant.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

I rise in opposition to the Dingell-Broyhill amendment.

Mr. Chairman, I think all of us have been studying this proposition for a long time. We debated this bill last year. We studied and debated the problem prior to last year. We now hear the same arguments from the automobile industry that we have heard since the first bill was ever brought to this floor. "Oh, it is going to destroy jobs."

Is it? Do you know what the first quarter 1977 earnings of General Motors, Ford, Chrysler, and American Motors were? They were \$1,451,400,000 for the first quarter. That is not too bad. In fact, this is the best year the automobile companies have ever had. I salute them and I am glad they are having such a fine year.

As a matter of fact, there are reports that General Motors is putting on second shifts at this time. The employment situation is improving.

Furthermore, the automobile manufacturers said all these pollution laws are going to cause jobs to be lost. The contrary has happened. A recent CEQ study showed that at most perhaps 17,000 jobs were lost nationwide as a result of environmental laws.

Do you know how many jobs were created? Between 600,000 and 1 million.

In his testimony Leonard Woodcock did not mention loss of jobs. The head of the United Auto Workers did not even bring up that issue before the committee, because the loss of jobs issue has no validity. It is just the contrary.

Now, can the automobile companies attain the statutory standards? Well, of course, they can. The automobile companies are already meeting tighter emissions standards in California.

California is already below 2 NO<sub>x</sub> this year; California is meeting a NO<sub>x</sub> standard of 1.5. The automobile manufacturers have already gone to 0.41 HC, less than 1.5. The research models are even attaining levels below the 0.4 NO<sub>x</sub> not for the

full 50,000 miles yet, but the technology exists. Nobody denies that. Even Mr. Woodcock in his testimony says that. When Senator McClure on the other side said, "Do you foresee us meeting both the pollution standards and the mileage standards without going to Pinto-size automobiles?"

Mr. Woodcock said, "I think it can be done, yes."

I agree.

The Dingell amendment would not permit the Administrator ever to consider the health effects. The Administrator could not set 0.4 NO<sub>x</sub> standards, even if the 1980 study shows that the 0.4 NO<sub>x</sub> standard is necessary for health. The Dingell substitute does not permit the consideration of the possible health effects of failing to go to 0.4 NO<sub>x</sub>.

No health considerations? Do the Members know what Mr. Woodcock said? Here is what he said in testimony before the subcommittee.

Mr. WAXMAN asked, "Mr. Woodcock, what if the Administrator finds that the 1.0 NO<sub>x</sub> is not enough?"

Mr. Woodcock said, "If it were found it would endanger public health, then it would come first."

Mr. WAXMAN, "Would you not agree with the notion we could allow for the EPA Administrator to have the power—that is all this bill does—to have the power to make the NO<sub>x</sub> standards even more stringent than 1.0?"

Mr. Woodcock himself answered, "If it were required to protect the public health, yes, sir."

That is what the committee bill does. That is what the Preyer compromise does. Let me just say this: The committee is willing to go ahead with the compromise. We think the bill is written properly. Schlesinger signed off on it; O'Leary of Energy signed off on it; we have the three-agency study and we just got a letter from Brock Adams, Secretary of Transportation. O'Leary, EPA, they all say the bill is reasonable. There will be no substantial fuel penalty, but we are willing to accept the Preyer compromise.

The CHAIRMAN. The time of the gentleman from Florida has expired.

By unanimous consent Mr. ROGERS was allowed to proceed for 5 additional minutes.

Mr. ROGERS. So, here again we have all of these tired arguments such as, "Oh, there is going to be a fuel penalty." Do the Members know how much has happened on fuel increase since 1974? In that year the automobile companies came in and said they would be ruined if they had to do a little bit to clean up? They have increased mileage. General Motors has said it in testimony, in the papers and in their ads—they have increased mileage 48 percent to 50 percent since 1974, although the auto emission standards have been tightened about 50 percent. That is a pretty good balance, to increase fuel economy at the same time we are cleaning up the air.

So, these are the facts. But again we hear those same old arguments. Perhaps the Members saw the editorial in the Star yesterday. The Star said it is tired

of hearing the automobile industry come out with the same things such as, "We are going to lose jobs, we can't do it, the industry will close down."

These statements are absurd. The standards of the Preyer subtitle are realistic. I would be willing to, and Dr. CARTER and other members of the committee will speak to this—I would be willing to go with the compromise to try to help Members in representing their constituencies. I think basically we will accept consideration of health elements by adopting the last half of the committee bill. We certainly give complete relief to the automobile industry by adopting the first half in the Dingell amendment. I do not know what more fair compromise could have worked out.

Let me tell the Members about health and why Dr. CARTER, who is one of the most distinguished physicians I know, and who certainly has contributed greatly to this body in the consideration of this bill, is concerned with it. The experts are now telling us that environmental causes result in 80 to 90 percent of cancer in this Nation—cancer.

Auto emissions cause aggravated heart conditions, lung conditions, bronchitis, asthma. We can go right down the line. Those are the effects of pollution. If we could not do anything, if we were helpless, that would be different, but we are not. We know the tougher standards can be met.

Look what California has already done. We know about what the difference in cost is. As the health study showed, if we have to go to 0.4, it will cost about \$70.

Do the Members know how many children it would affect if we do not go to 0.4 NO<sub>x</sub>? And I am talking about just children alone. About 11 million children would be harmed. That is a pretty substantial reduction in children adversely affected by automobile pollution if we go to 0.4 NO<sub>x</sub>.

Let me just give this to the Members and I will conclude. We had the three agencies 'EPA, DOT, FEA' do a study on what the cost difference is. The Members will see that the Dingell amendment costs something, too.

Mr. DINGELL. If the gentleman will yield, I gave the figures as \$170 for mine and \$350 for the administration's.

The CHAIRMAN. The gentleman from Florida (Mr. ROGERS) has the time.

Mr. ROGERS. Mr. Chairman, I will be glad to yield to the gentleman if he will allow me to conclude.

The committee bill contains the possibility of remaining at 1.0 NO<sub>x</sub>, as we first proposed, which the Dingell amendment also does. We do not necessarily go to 0.4 NO<sub>x</sub>. I am going to give the Members the range. I am not going to pick out the worst number. Here is the range. Yearly cost increase per car above those attributable to 1977 emission standards resulting from the committee bill range from \$18 to \$28 a year cost. All Dingell-Broyhill sponsors do is get a life cost of the car. The Dingell-Broyhill bill has a range of from \$11 to \$22. That is about \$6 or \$7 difference.

The fuel economy, if the manufacturer chooses to minimize costs, is 3 to 4 percent on the committee bill, and it is exactly the same, 3 to 4 percent here in the Dingell-Broyhill bill.

Fuel economy, if the manufacturer chooses to try to stress fuel economy, is a plus 2 percent on the committee bill and a plus 2 percent with the Dingell bill.

The CHAIRMAN. The time of the gentleman from Florida (Mr. ROGERS) has expired.

By unanimous consent, Mr. ROGERS was allowed to proceed for 3 additional minutes.

Mr. ROGERS. But look at what happens on carbon monoxide. The committee bill would produce a reduction of CO emissions by 77 percent. Dingell-Broyhill would achieve a reduction of only 40 percent. That is a difference of almost 40 percent. It is 37 percent. That translates into a 40 percent more emissions and will increase occurrences of heart attacks, impairment of heart and circulatory systems, and impairment of human reflexes. And evidence shows that many accidents are caused by this carbon monoxide. Hearing impairments and reduced visual acuity also result from excess CO. And, of course, the gentleman from Michigan (Mr. DINGELL) tried to focus only on headaches. Well, carbon monoxide causes those, too.

If we have to go to the 0.4 NO because of health effects of not doing so and that determination would be made after the Administrator makes a study—let me show what the cost difference would be. The committee bill cost would be between \$26 and \$43. That is the range. The Dingell-Broyhill range is \$11 to \$22. All it costs is about \$15 to \$20 more to clean up the air.

Fuel economy is 0 to minus 8 percent for the committee bill. The Dingell-Broyhill provision would cause minus 2 to minus 4 percent. In other words, we could get a plus 4 percent fuel gain to a minus 6 with the committee bill, because when the manufacturers attain 0.4, they could improve the engine and put some electronic equipment in the engine to improve fuel economy. If this is done the committee bill is 0 to plus 2 percent fuel economy gain. The Dingell substitute gets plus 2 percentage in fuel economy. But concerning NO<sub>x</sub> emissions there would be an 80-percent reduction under the committee bill, but only a 0- to 50-percent reduction with the Dingell substitute. So it is a difference of up to 80 percent with the committee bill, a difference of about 5.3 million to 11.6 million fewer respiratory attacks, if the Administrator's study confirms what we already believe.

The outstanding scientist, Dr. Stewart, said we ought to eliminate carbon monoxide, which the Dingell bill never allows to be reduced below 9, although last year, the Dingell provision would have reduced carbon monoxide to 3.4. The Preyer substitute is a proper compromise. When we consider fuel economy, the energy experts in the administration are all signed off on our bill. The bill would not cause excessive cost nor excessive fuel penalty. But most important the effects on health

are so dramatic that I would hope that the committee will make the judgment in this Congress that we can have all three, no excessive costs or fuel penalty, and beneficial health effects with the Preyer amendment.

The CHAIRMAN. The time of the gentleman from Florida (Mr. ROGERS) has again expired.

By unanimous consent, Mr. ROGERS was allowed to proceed for 1 additional minute.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I am delighted to hear the gentleman's comments.

I will be glad to put in the record a secret memorandum from EPA to the Department of the Treasury outlining interest costs, and my colleagues will find that the costs are exactly as set forth down there in the chart in the well.

Mr. ROGERS. Mr. Chairman I understand that the gentleman may have some secret report. Such report was never approved officially and never was a part of the record or the Dingell proposal. However, if the Members will notice—and we have the letters here for distribution—the three-agency study has just gone over this whole matter. As a matter of fact, those findings were just reported in the New York Times.

Mr. CONYERS. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Michigan.

Mr. CONYERS. Mr. Chairman, I would like to say that the gentleman from Florida (Mr. ROGERS), the chairman of the subcommittee, has done an excellent job.

This has not been an easy position for me to take. I am the only member of the Michigan delegation who has not gone along with this tremendous powerhouse coalition of labor, apparently, and management.

Mr. Chairman, I think this spells out very clearly the meaning of some of the remarks of Mr. Woodcock in supporting our position here today.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Preyer substitute amendment for the Dingell amendment.

Mr. HILLIS. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Indiana.

Mr. HILLIS. Mr. Chairman, there are several proposals in Congress which set new auto emissions standards. Very real concerns exist regarding which offers the best solution to the problem of continuing to improve air quality standards while improving the fuel efficiency of automobiles. The factors which must be considered are numerous. In my judgment, the measure which properly weighs the issues and offers the best solution, is that proposed by Mr. DINGELL and Mr. BROYHILL.

Health data indicates that the emissions standards in the Dingell-Broyhill

bill are stringent enough to protect public health and continue the present rate of progress in air quality improvement. The Dingell-Broyhill emissions schedule simultaneously provides engineers with the leadtime necessary to develop technology to allow good auto driveability and easy auto maintenance. Further, a special exception is made in the Dingell-Broyhill standards for innovative fuel-efficient engines such as the lean burn and the diesel. In their bill, Dingell and Broyhill also allow for the possibility of maintaining the oxides of nitrogen standard of 2 grams per mile, a factor which would make a critical cross-the-fleet difference of  $1\frac{1}{2}$  miles per gallon.

The auto companies can probably meet the standards set by the Congress; that is not the issue. The issue is, given the absence of health reasons for adopting more stringent standards, why adopt standards which will result in the waste of precious fuel? The trade-offs on auto emissions are very clear. If we expect to have any chance of meeting the fuel economy standards set for 1985, the numbers set forth in the Dingell-Broyhill bill must be accepted as written. There is no room for negotiation or compromise.

There is no doubt we all want air of sufficient quality throughout our land that is noninjurious to any of us and we want to continue the present rate of progress in the improvement of air quality. All evidence indicates that the standards in the Dingell-Broyhill bill are stringent enough to protect the public health and to do these things. I join with many of my colleagues to urge each of you to support the Dingell-Broyhill amendment for your vote could make as much difference as 15 billion gallons of gasoline for the years 1978-85 compared between the schedule embodied in H.R. 6161 relative to or in comparison to the schedule under the Dingell-Broyhill standard. Now is the time that we have to balance energy and the environment. It appears to me that the adoption of Dingell-Broyhill amendment is the proper way to do so. It will chart sensible and steady progress toward reducing auto emissions without jeopardizing fuel efficiencies.

The United Auto Workers support the Dingell-Broyhill as does the Automobile Dealers Association. Commonsense dictates that the Dingell-Broyhill bill be accepted as the best available compromise.

Mr. CARTER. Mr. Chairman, I support the Preyer substitute amendment for the Dingell amendment.

Actually, if we look at the schedule, we will find that with the Preyer substitute amendment, for the years 1978, 1979, and 1980 the emissions will be exactly the same as Dingell-Broyhill.

We have been up the hill and down the hill and have been discussing everything under the Sun today, but the important thing about it is that for the next 3 years the standards will be exactly the same.

Mr. Chairman, I see no reason really for so much tremendous waste of voices

about this very subject when really the figures are the same for the next 3 years.

Mr. Chairman, over the years we have been told by some of our automobile dealers that they could not control their emissions. The fact is that not only have they controlled them, but they have improved gasoline mileage over the years. There is no question about that. As the chairman has stated, I believe it has been improved by approximately 50 percent. Yet, they say they cannot do it.

Mr. Chairman, they have confused the public many, many times as, for example, by placing Chevrolet motors in Buick and Oldsmobile automobiles.

Mr. Chairman, how can we trust people who do such things as that?

Mr. Chairman, let us get down to some of the health aspects of this matter.

I regret very much that it is necessary, in order to get this legislation through, to accept an increase in  $\text{NO}_x$ .  $\text{NO}_x$ , nitrous oxide, combines with amines to form nitrosamine, which is one of the most carcinogenic substances in the entire world. In our crowded cities we must do something about it. There is no question about that.

Mr. Chairman, in the canyons of New York City and Detroit  $\text{NO}_x$  is present, and I am happy to see that most of the men in those urban areas do support this legislation, because it impacts on them. It affects the health of their children and of their elderly more than it does in any other area in our country, and something must be done. We cannot go along with just a tap on the shoulder. We have to set standards. We have to set certain goals, and we have to reach them step by step. This legislation provides for that. It provides that in 3 years the  $\text{NO}_x$  standards will change. I wish it were sooner, because it would result in a great improvement in the health of the country.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman from Kentucky for the remarks he has made and I wish to associate myself with his remarks.

I would ask the gentleman from Kentucky, is it not true that one of the other points we should keep in mind in comparing the Preyer substitute to the Dingell amendment is that the Dingell proposal abandons altogether two of the final targets, that is the carbon monoxide target of 3.4 and the nitrous oxide target of 0.4? Also should we not remember that even the Dingell proposal last year would have permitted going down to 0.4 and this year's Dingell proposal does not? The Preyer substitute gives us the same the next 3 years as Dingell gives us, but at least keeps the three pollution control targets firmly in place for the future. Is this not one of the most important points we should keep in mind?

Mr. CARTER. Yes, it is.

Mr. MAGUIRE. I thank the gentleman from Kentucky.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. CARTER was allowed to proceed for 3 additional minutes.)

Mr. CARTER. Mr. Chairman, we have heard a lot about automotive parts and accessories dealers. I have a letter here from the Automotive Parts & Accessories Association, Automotive Service Councils, saying:

Do not be misled into thinking that all manufacturers and sellers of automotive parts favor the Dingell-Broyhill "Clean Air" bill.

Our associations, representing the majority of auto parts makers, volume retailers, and independent garage owners across the country, wholeheartedly champion H.R. 6161.

Let not your hearts be troubled by the fact that some dealers may oppose this, because they are not many; most of them support it.

Mr. Chairman, I urge the Members of the House to consider that this is one time when they should put the health of our country above political considerations.

We live in a country now in which 75 to 90 percent of cancer is caused by our environment.

There will be 690,000 cancer cases this year. One out of four Members here in the House can expect to develop cancer. There will be 395,000 deaths this year from cancer; 1,055 deaths per day.

Mr. Chairman, it is highly important, it is extremely important, that we proceed with dispatch to take these noxious substances, these carcinogenic substances, from areas that are absolutely killing the people of our country both young and old.

Mr. Chairman, I urge support of the Preyer substitute to the Dingell-Broyhill amendment.

Mr. WAXMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. LLOYD of California. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I am delighted to yield to my colleague, the gentleman from California (Mr. LLOYD).

Mr. LLOYD of California. Mr. Chairman, I rise in support of the Dingell-Broyhill amendment. I am probably one of a handful of California Representatives to take this position. After extensive consideration, however, I think a "yes" vote best serves the interests of my constituency.

As you are all aware, California was exempted from auto emission levels set in the 1970 act in order to enforce even stricter standards. My vote either way on emission standards in this bill would have no effect on California air quality.

With this in mind, what are some of the other effects of the Dingell-Broyhill amendment which California could share? First is the question of auto efficiency. Estimates of up to 20 percent greater fuel efficiency under the Dingell-Broyhill amendment equate to a significant gasoline saving for the entire Nation. We need to reduce the trend of dependence on foreign oil. Greater fuel efficiency can help accomplish this for the entire Nation, including California. There

is a fear that the committee's emission levels will cost jobs in the auto industry. Unemployment is a problem for the entire Nation, including California. California can share in the economic and energy benefits of the Dingell-Broyhill amendment. California can also continue to set auto emission levels higher than national standards.

No one supports smog and pollution. Neither does anyone support unemployment and excessive energy consumption. My vote for Dingell-Broyhill is consistent with economic energy and antipollution goals for the State of California.

Mr. WAXMAN: Mr. Chairman, I rise to speak in opposition to the Dingell amendment.

Mr. Chairman, we are considering the most controversial part of the Clean Air Act. This is the part that will establish the time in which the auto industry will have to meet the standards to limit the amount of pollution that goes into the air from their cars. Automobiles are the single largest source of pollution.

What we are also going to do in this proposal is establish what those standards will be.

So we are considering two things. The time we are going to give the auto industry to meet the standards, and what standards they are ultimately going to have to achieve.

Everybody is for giving the auto industry more time. The committee proposal is for giving them more time. The Preyer amendment is for giving them more time, and the Dingell amendment is for giving them more time.

I just want to say quite frankly that we probably did not have to give them more time. The National Academy of Sciences insists they could have met those standards in 1977. I had occasion to talk to President Carter about this matter, and he said that he thought the auto industry could have met them a long time ago if they really wanted to meet those standards.

But why would not the auto industry want to meet those standards if they could have met those standards? They have had three extensions since the 1970 act was adopted—three extensions to meet that standard which was going to represent a 90-percent reduction in three pollutants. They had three extensions, and now they are coming in and asking Congress to change not only the standards to be achieved but to give them a fourth extension.

What they have done is come to Congress in one of the most incredible lobbying campaigns that I think Congress has ever seen to try to really get them off the hook permanently. What the Dingell proposal is suggesting is not just an extension of time for them to meet the standards, but they are asking for two out of three pollutant standards to be changed. For  $\text{NO}_x$ , a pollutant which causes people to get cancer, they are asking that they never have to meet the 0.4 standard which was set up in the original act but to go to a more lenient standard. For CO, they are asking for elimination of the permanent standard and to change it to one that is going to be a

little bit easier for them to meet, but which unfortunately will have an adverse health impact. The auto industry has spent an incredible amount of money in this lobbying campaign, and I think if they had spent that money in trying to meet these standards, we would not be fighting this fight out today, and we would be talking about cleaner cities and healthier people across the country.

Can they meet the standards? After all, the first couple of extensions were based on the fact that they could not meet the standards and they were thus granted more time. But they can meet the standards now. The auto industry testified before our subcommittee they can meet the standards. The EPA says they can meet those standards.

In California today they are already achieving emission levels at or very near to 0.41 grams per mile for hydrocarbons, 9 grams per mile on carbon monoxide, and 1.5 grams per mile for  $\text{NO}_x$ . The standards in California will become even tighter in 1980. The committee bill would not require the imposition of standards stronger than those of California until 1981, and under the Preyer substitute until 1982; that is, 5 years after they are already meeting the standards for 10 percent of the automobile market in California.

Will there be a fuel penalty? Will this hurt our energy program? President Carter told us that the energy crisis is tantamount to a state of war. There is no one more concerned about energy than President Carter and Dr. Schlesinger, the projected head of the new Department of Energy. They both state that the auto industry can meet these standards without a fuel penalty, and they support the proposal that the committee is recommending. Does anybody believe that the President of the United States would support a proposal that is going to hurt the ability of the United States to deal with this energy crisis?

Is it not easier for all of us to just go along with the auto industry and the UAW and give them what they want?

The CHAIRMAN: The time of the gentleman has expired.

(By unanimous consent, Mr. WAXMAN was allowed to proceed for 3 additional minutes.)

Mr. WAXMAN: It is absolutely politically easier to just go along. But it is not only politically easier for us to go along, it would have been politically easier for President Carter to go along. After all, he had facing him big labor—the UAW—and big business—the auto manufacturers—and the Business Roundtable—very formidable forces in our society arguing that we ought to give Detroit this break. But he looked at it, and despite all that political pressure, he said that is not right; we can meet those standards and protect the public health of the American people; and we can have fuel efficiency, and we can have a growing economy, and we are not going to hurt the auto industry.

It is embarrassing to see foreign automobile manufacturers meeting the standards that our own American man-

ufacturers cannot meet to protect us on fuel economy and on health.

Health is really what we are talking about. We are talking about heart disease and we are talking about lung disease and we are talking about cancer. One out of four people in this country will get cancer and it is coming from environmental causes.

When Leonard Woodcock was before us in our subcommittee, I asked him whether he would agree to allow the Administrator, if health consequences were involved, to tighten up that  $\text{NO}_x$  standard to 0.4, and he said "If it were required to protect the public health, yes, sir."

That is one of the essential differences between the proposals. What incentives are we giving to the automobile industry to finally do what we mandated them to do in 1970? If we pass the Dingell amendment we are giving them every incentive in the world never to try to tighten up the automobile standards because they will always know they can come into the Congress and lobby and get their way and never have to do what we would have them do to protect the American people.

The gentleman from Michigan Representative DINGELL would have this House make a series of false choices: Between clean air and increased use of gasoline, and between health and increased use of gasoline, and between costs and increased use of gasoline. But that is not the choice before us. What we are confronting is a choice between dirty air and the health of the American people, and between dirty air and clean cities, and between dirty air and economic growth, and between dirty air and decreased cancer rates.

Mr. Chairman, I honestly have more faith in the automobile manufacturers and makers of cars than they have in themselves. It is a sad day when they believe we are asking too much of them to achieve in 1981 what they are already doing today in California. It is a sad day when they say we are asking more of them than the health of the American people deserves.

Mr. STOCKMAN: Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the Dingell amendment and in opposition to compromise No. 6, the Preyer substitute, and I indicate that because I believe in the last 2 years we have had six different compromises from the Health and Environment Subcommittee. But it is not really a compromise, I would suggest to the House, because the only place in which a compromise is made is in the front end of the schedule, in 1979.

But the real policy difference, the real contention between the Dingell approach and the committee bill, is in the final end of the schedule and whether we mandate by law to go below 1.0 on  $\text{NO}_x$  and 9.0 carbon monoxide and these items are the same in both the committee bill and the Preyer compromise. So the real question is between the Dingell substitute and the committee bill.

In the last few hours we have been inundated with a veritable blizzard of statistics and facts related to fuel economy and health effects and costs and so forth from the committee justifying the schedule in the bill. Indeed the committee report contains 40 pages of charts and numbers attempting to justify its position. But in all fairness I would suggest to the House that most of these are of highly questionable value because before statistics and figures can be useful they must be not only accurate but also relevant to the policy issues involved. The fact is most of the numbers we have heard are not.

Let me give the House a few examples. On page 245 of the committee report, and this number was just repeated a moment ago by the distinguished chairman of the subcommittee, we are given the glowing report that the GM fleet of new cars in 1977 is getting 43 percent better fuel economy than in 1974, and the suggestion is that by tightening up the standards we have not penalized fuel economy at all, and, that in fact, tighter and tighter emission controls and better fuel economy go hand in hand. But, I would suggest, anything would look good compared to the 1974 figures because 1974 was a disastrous year for fuel economy, an absolute disaster.

The more relevant comparison is to take those numbers for 1977, and compare them to the precontrol period, 1970 or 1968. We will find instead of a 48-percent gain in fuel economy, there has been less than a 10-percent gain since 1968, and most of that gain is due to the down sizing of cars this year and due to changes in the fleet mix.

We have been continually told by advocates of the committee position and continually told in the committee report that the California 1977 new car fleet is getting better fuel economy; in fact, is getting the same fuel economy as the rest of the country, despite the fact that there are tougher standards in the California law; but again, we are comparing apples and oranges, because we have a totally different fleet mix of cars in California, compared to the rest of the country. Forty percent of the 1977 cars in California are imports, compacts and subcompacts. They are small. That is compared to only 13 percent imports in the rest of the United States.

The fact is, if we make an appropriate comparison on a car-to-car basis from the Chevelle to the Olds, there is a 12-percent fuel penalty in the 1977 California models.

We are further told that any fuel penalties that may result from stiff emission standards will be miraculously wiped out with a technological fix coming down the road, the three-way catalyst. In the committee report on page 239 it says that it is already a proven technology. I would ask, what is the evidence for this? The committee report cites the Volvo. It says it is getting 0.4 NO<sub>x</sub>, but it does not say this Volvo does not even come close to the 50,000-mile durability test. In fact, the oxygen sensor has consistently burned out after 15,000 miles. It also does

not say that the Volvo uses ultrasophisticated electronic ignition and fuel injection, at a cost of \$500 or \$600 for the control system in a high-priced car that most people cannot buy, anyway.

The committee report and the advocates of the committee schedule have also noted that GM and Ford intend to market cars equipped in California with a three-way catalyst in 1978 and indicate that the current tests even now are below the statutory standards.

What has not been indicated is that these test cars are not meeting the 50,000-mile test. The Ford Pinto with a three-way catalyst failed at 50,000 miles and has consistently done so.

What the committee report and the advocates have not said is that American cars tested on the three-way catalyst have such high rhodium loadings they couldn't possibly be mass marketed.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(By unanimous consent, Mr. STOCKMAN was allowed to proceed for an additional 3 minutes.)

Mr. STOCKMAN. Mr. Chairman, I would also like to say something to the question of fuel economy, because we have been told that diesels are our major hope for keeping large family cars on the road, that is, large enough for family size, that can still meet the fuel economy goals of the EPCA. We have also been assured by the committee that the diesels, the Mercedes diesels being tested in California today are meeting the 0.4 NO<sub>x</sub>; but again what the committee report did not say is that these Mercedes in California being tested today contain an experimental exhaust gas recirculation system that certainly does not get NO<sub>x</sub> down below the standards, but what it also does is destroy the engine in a very short time because of the reintroduction of carbon particles. And we will never get the technology certified, unless it can be effective for the useful life of the engine, and certainly unless it does not destroy the engine.

I think we have had the same kind of misinformation or half information in the health area. It was suggested a moment ago that environmental causes account for 90 percent of all cancer in the country today; but what that statistic failed to include or note was that those environmental causes include cigarette smoking as well, and certainly that is not a relevant statistic to use in this debate.

At one point in the committee bill, there is a projection on page 259, which compares the Dingell amendment to the committee bill in terms of lower respiratory disease in children aged 6 to 12 for the year 2000. It indicates something very serious; that, under the Dingell standard there could be a 60-percent increase in reduced days of activity and in respiratory difficulties for children.

What the report does not say is that it is based on a projection of 15 or 20 years out, where we do not know the variables and where the fact is that we are using a base of something like 14.6 billion children days. When we compare the numbers against a base like that, we find the reduced days indicated in the report, il-

ness days, amount to 0.02 of 1 percent of all children days under the Dingell bill and 0.01 of 1 percent under the committee bill. In fact, there is no difference statistically; that statistic does not mean anything.

I would suggest that the case has not been made for the committee position. We can force Detroit to do anything we want, to get 35 miles per gallon, to get standards for emission even lower than are in this bill; but the fact is, we cannot force the American people to buy those cars, and we cannot force Detroit to produce a car that can be made at a cost, with the size and service characteristics that the American people want.

So, it is not a matter of a technological miracle around the corner, nor a breakthrough we just cannot overcome. It is a matter of costs and trade-offs, and the Dingell substitute contains a far better trade-off in that regard.

Mr. RINALDO. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Preyer amendment.

Mr. Chairman, I rise in support of the Preyer compromise, and I urge my colleagues to support this important amendment also. I do this as someone who originally supported the committee bill and opposed the Dingell-Broyhill amendment. I take this new position because the legislation, as far as I am concerned, with the Preyer amendment will strike an acceptable balance between economic and environmental priorities. I take this position despite the fact that the bill already contains some provisions that I do not support. The auto emissions provisions will grant the auto industry a few years of relief before it must meet new auto emission requirements. This approach will benefit the auto industry in particular, and the economy in general. At the same time, the bill balances this relief by requiring more stringent auto emission standards to be met in the 1980's. This approach will insure real progress toward achieving cleaner, healthier air.

Similarly, the bill's nondegradation provisions, while no longer as strong as I would prefer, will nevertheless place some restraint on the rate of pollution growth in areas with comparatively clean air. Yet, the restraints on pollution are not so rigid that they will block economic growth in such regions.

This legislation will also stimulate economic growth in a number of ways. It will curb EPA's authority to block construction of indirect emission sources, such as shopping centers. It will allow reasonable extensions of air quality compliance deadlines in nonattainment areas, thereby reducing present EPA restrictions on new industrial growth in such regions. It will eliminate EPA's authority to impose such drastic antipollution measures as parking restrictions, parking taxes, and gasoline rationing.

Air pollution could affect everyone's health.

This bill, with the Preyer amendment, will take an economically and technologically sound approach to the problem.

I urge your support of this very vital and important compromise amendment.

Mr. LENT. Mr. Chairman, will the gentleman yield?

Mr. RINALDO. I yield to the gentleman from New York.

Mr. LENT. Mr. Chairman, I thank the gentleman for yielding. I want to associate myself with the remarks of the gentleman from New Jersey and thank him for the contribution he has made to the debate.

For those Members who have been struggling with the choice of whether to vote for the committee bill or Dingell-Broyhill, the compromise offered by the gentleman from North Carolina (Mr. PREYER) is ideal.

It gives the automotive industry the easier auto emission standards of Dingell-Broyhill for model years 1978, 1979, and 1980. For the next 3 years, the committee bill standards would go into effect.

Recognizing the difficulty of passing the committee standards intact, all of our colleagues who joined the fight for strict standards, led by the distinguished chairman, the gentleman from Florida (Mr. ROGERS), have urged support for the Preyer compromise.

It is a sensible compromise and I urge my colleagues to give it their support.

Mr. STAGGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. ROGERS. Mr. Chairman, I wonder if the gentleman would mind withholding just one moment to see if we could come to an agreed time.

Mr. Chairman, we have discussed this, the gentleman from North Carolina (Mr. PREYER), the gentleman from Kentucky (Mr. CARTER), and the gentleman from North Carolina (Mr. BROYHILL). So may I ask unanimous consent that all debate on the Dingell-Broyhill amendment and all amendments thereto be concluded in 30 minutes, and that a vote then would occur at 25 minutes past 1?

The CHAIRMAN. The Chair will ask the gentleman if he is setting the time by the clock or on the basis of minutes of debate?

Mr. ROGERS. I would say on the basis of debate, but I would hope it would be 1:25.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida that all debate on the Dingell amendment and on the Preyer substitute for the Dingell amendment, and all amendments thereto, be concluded in 30 minutes?

Mr. LEVITAS. Mr. Chairman, reserving the right to object, I have an amendment to the Dingell amendment which has not yet been offered. As I understand it, unless this amendment could be offered prior to 30 minutes, it could not be considered. Under those circumstances, I would reserve the right to object.

Mr. DINGELL. Mr. Chairman, reserving the right to object, to attack the problem raised by the gentleman from Georgia (Mr. LEVITAS), I would just reserve the right to object and ask if the gentleman from Florida would not in-

clude that in his unanimous-consent request.

Mr. ROGERS. Certainly, I will do that.

The CHAIRMAN. Would the gentleman restate his request?

Mr. ROGERS. Mr. Chairman, I would ask unanimous consent that all debate on the Dingell amendment, and all amendments thereto, which includes the amendment of the gentleman from Georgia (Mr. LEVITAS), be concluded in 30 minutes.

Mr. DINGELL. Mr. Chairman, reserving the right to object, I would specifically indicate that the gentleman from Georgia (Mr. LEVITAS) shall have time to offer his amendment.

Mr. ROGERS. He shall have time.

Mr. STAGGERS. Mr. Chairman, may I ask the chairman of the committee that I have my time?

The CHAIRMAN. Is there objection to the request of the gentleman from Florida (Mr. ROGERS)?

Mrs. SMITH of Nebraska. Mr. Chairman, reserving the right to object, could I offer my amendment also?

Mr. ROGERS. Mr. Chairman, I would include that in the unanimous-consent request.

I think the gentleman from West Virginia (Mr. STAGGERS) may have an amendment.

Mr. STAGGERS. Mr. Chairman, reserving the right to object, I have an amendment. I was standing on my feet. I would like to be recognized, and I would request that my 5 minutes not be taken out of this.

Mr. ROGERS. Mr. Chairman, I would ask unanimous consent that the gentleman from West Virginia (Mr. STAGGERS) have 5 minutes before the time begins to run, before the 30 minutes begins to run.

Mr. ECKHARDT. Mr. Chairman, reserving the right to object, let me ask this question: Will the gentleman from West Virginia (Mr. STAGGERS) have 5 minutes and no one else will have a chance to speak?

Mr. STAGGERS. If the gentleman will yield, I am not offering my amendment at this time. My request was to strike the requisite number of words.

The CHAIRMAN. The Chair understands the unanimous-consent request of the gentleman from Florida (Mr. ROGERS) is as follows: In the event the gentleman from West Virginia (Mr. STAGGERS), the chairman of the committee, is recognized for 5 minutes, following that 5 minutes, all debate on the Preyer substitute to the Dingell amendment and on the Dingell amendment, and any and all amendments thereto, be concluded in 30 minutes of debate.

Mr. ROGERS. With the right that the two amendments also be shown.

The CHAIRMAN. The Chair will announce that in the event the unanimous-consent request is granted, it is the Chair's intention to exercise its best discretion to allocate the time through the recognition of those who have amendments pending. Of course, all germane amendments can be considered and voted upon.

Mr. WIRTH. Mr. Chairman, I would

also like to reserve the right to object.

Mr. ROGERS. Mr. Chairman, I would have no objection to the gentleman's being included.

The CHAIRMAN. The Chair has stated his intent to first recognize, at his discretion, those Members wishing to offer amendments.

Mr. WIRTH. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

Mr. PEPPER. Reserving the right to object, Mr. Chairman, will the time that is allowed be allocated among those who are standing?

The CHAIRMAN. The Chair will restate the Chair's intent, and that is if a limitation on time is imposed, this, of course, essentially abrogates the 5-minute rule; and it is the intention of the Chair to first recognize those Members who will have amendments to offer within that 30-minute period.

Mr. PEPPER. Further reserving the right to object, Mr. Chairman, if there is time remaining after those who have amendments offer them, will that remaining time be allocated among those who are standing?

The CHAIRMAN. The Chair will state that if there is time remaining after those who have amendments pending have been recognized, then, yes, Members will be recognized as equitably as possible in the remaining amount of time.

Mr. PEPPER. Mr. Chairman, I withdraw my reservation of objection.

Mr. LEVITAS. Mr. Chairman, I withdraw my reservation of objection.

Mr. DINGELL. Mr. Chairman, I withdraw my reservation of objection.

Mrs. SMITH of Nebraska. Mr. Chairman, I withdraw my reservation of objection.

Mr. ECKHARDT. Mr. Chairman, I withdraw my reservation of objection.

Mr. STAGGERS. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. STAGGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to say that I am going to offer an amendment at the proper time to the Preyer substitute amendment.

Mrs. FENWICK. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from New Jersey.

Mrs. FENWICK. Mr. Chairman, I just wanted to state that I would like to associate myself with the remarks of my colleague, the gentleman from New Jersey (Mr. RINALDO); and I support the Preyer substitute amendment.

Mr. STAGGERS. Mr. Chairman, the amendment that I will offer protects the small automobile parts dealers of America from being wiped out.

I know that every Member representing every district in this land has some automobile parts dealers in his district.

Mr. Chairman, in the Preyer substitute amendment it says that at the end of 3 years, the 18 months or 18,000 miles provision would be wiped out; and there will be a study made then as to whether the warranty provision would go to 50,000 miles or 5 years.

Mr. Chairman, let me cite a personal example. The day before yesterday, in coming into Washington, my car stopped. I could not get it started; but after a while, the car, contrary-like, did start and then stopped a couple of more times. I arrived in Washington and found out that I needed a coil. I asked an establishment what the price was here in Washington. They said \$17.

I called my little auto parts dealer in Keyser, W. Va., and they have the same genuine part, and it was \$9.

Mr. Chairman, I do not want to wipe out those little auto parts dealers. We want some competition in America. There are 160,000 of them and they hire hundreds of thousands of people. I do not want to see them wiped out at the end of a 3-year period.

Yes, there is going to be a study; but the reversion back to the 5-year, 50,000-mile warranty provision would enable the manufacturer to supply all of the parts, and the parts will cost twice as much.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I would like to commend the gentleman from West Virginia (Mr. STAGGERS). He is pointing out a very significant effect in both the committee bill and in the Preyer substitute. He is pointing out that the little parts manufacturer and the little parts dealer would be wiped out at the end of 3 years because of the proposal that is offered by the committee and the proposal offered by the gentleman from North Carolina (Mr. PREYER), which would eliminate the little parts manufacturer and seller because they would require, at the end of 3 years, that the warranty for air pollution equipment go to 60 months and 50,000 miles and therefore permanently deny those people participation in the marketplace.

Again, Mr. Chairman, I commend the gentleman for pointing this out.

Mr. STAGGERS. Mr. Chairman, I thank the gentleman for his comments. The purpose of this amendment is to assure that the Clean Air Act contains adequate safeguards for free competition in the afterparts market in this country, and that is all it is for.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I certainly will support the amendment of the gentleman from West Virginia (Mr. STAGGERS).

Mr. STAGGERS. Mr. Chairman, I thank the gentleman.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I appreciate the gentleman's yielding.

The committee bill does suspend for 3 years the 5-year, 50,000-mile requirement and establishes 18 months or 18,000 miles.

Furthermore, the Dingell amendment would create a monopoly for the automobile manufacturers which would mean that the independents could not come in and sell the parts or put them on because the Dingell amendment says that the manufacturers are given a monopoly to designate who shall put the part on and where it shall be done.

Mr. STAGGERS. Mr. Chairman, I believe the gentleman from Florida is stating only for the first year. I think, then, this direction should come from the automobile manufacturers and the manufacturer should designate who should install the parts in that first 18 months.

Mr. ROGERS. That creates a monopoly for Detroit and I do not think the gentleman wants to do that.

Mr. STAGGERS. I can assure the gentleman that this will protect the 160,000 small parts dealers of this land.

The CHAIRMAN. The time of the gentleman has expired.

The Chair announces that at the time of the limitation of debate there were three amendments at the desk: by the gentleman from Colorado (Mr. WIRTH), the gentleman from Georgia (Mr. LEVITAS), and the gentleman from Nebraska (Mrs. SMITH). The Chair has also been notified that the gentleman from West Virginia (Mr. STAGGERS) may offer an amendment. In addition, some 35 Members have sought recognition.

The Chair will proceed as previously announced, to recognize first Members on the list who seek to offer amendments.

The Chair recognizes the gentlewoman from Nebraska (Mrs. SMITH).

AMENDMENT OFFERED BY MRS. SMITH OF NEBRASKA TO THE AMENDMENT OFFERED BY MR. DINGELL

Mrs. SMITH of Nebraska. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mrs. SMITH of Nebraska to the amendment offered by Mr. DINGELL: Add the following new language to the end of section 219:

"(f) (1) For the purposes of this subsection—

"(A) The terms 'gasoline' and 'refinery' have the meaning provided under regulations of the Administrator promulgated under this section.

"(B) The term 'small refinery' means a refinery producing gasoline which—

"(i) was in operation or under construction on October 1, 1976, and

"(ii) has a crude oil or bona fide feed stock capacity (as determined by the Administrator) of 50,000 barrels per day or less, and

"(iii) is owned or controlled by a refinery with a total combined crude oil or bona fide stock capacity (as determined by the Administrator) of 175,000 barrels per day or less.

"(2) No regulations of the Administrator under this section (or any amendment or revision thereof) respecting the control or prohibition of lead additives in gasoline shall require a small refinery to reduce the average lead content per gallon of gasoline refined at such refinery below the lower of the applicable amount specified in table A or table B below:

TABLE A

| If the gasoline production is no greater than 50 per cent of refining capacity and if the refinery capacity in barrels per day is— | The applicable amount (in grams per gallon) is— |
|--|---|
| 2,000 and under.....   | 3.0   |
| 2,001-4,000.....   | 2.9   |
| 4,001-6,000.....   | 2.8   |
| 6,001-8,000.....   | 2.7   |
| 8,001-10,000.....  | 2.6   |
| 10,001-12,000.....   | 2.5   |
| 12,001-14,000.....   | 2.4   |
| 14,001-16,000.....   | 2.3   |
| 16,001-18,000.....   | 2.2   |
| 18,001-20,000.....   | 2.1   |
| 20,001-22,000.....   | 2.0   |
| 22,001-24,000.....   | 1.9   |
| 24,001-26,000.....   | 1.8   |
| 26,001-28,000.....   | 1.7   |
| 28,001-30,000.....   | 1.6   |
| 30,001-32,000.....   | 1.5   |
| 32,001-34,000.....   | 1.4   |
| 34,001-36,000.....   | 1.3   |
| 36,001-38,000.....   | 1.2   |
| 38,001-40,000.....   | 1.1   |
| 40,001-42,000.....   | 1.0   |
| 42,001-44,000.....   | 0.9   |
| 44,001-46,000.....   | 0.8   |
| 46,001-48,000.....   | 0.7   |
| 48,001-50,000.....   | 0.6   |

TABLE B

| If the gasoline production is no greater than refining capacity and if the average gasoline production of the refinery (in the barrels per day) for the immediate preceding calendar year was— | The applicable amount (in grams per gallon) is— |
|--|---|
| 1,000 or under.....  | 3.0   |
| 1,001 to 2,000.....  | 2.9   |
| 2,001 to 3,000.....  | 2.8   |
| 3,001 to 4,000.....  | 2.7   |
| 4,001 to 5,000.....  | 2.6   |
| 5,001 to 6,000.....  | 2.5   |
| 6,001 to 7,000.....  | 2.4   |
| 7,001 to 8,000.....  | 2.3   |
| 8,001 to 9,000.....  | 2.2   |
| 9,001 to 10,000.....   | 2.1   |
| 10,001 to 11,000.....  | 2.0   |
| 11,001 to 12,000.....  | 1.9   |
| 12,001 to 13,000.....  | 1.8   |
| 13,001 to 14,000.....  | 1.7   |
| 14,001 to 15,000.....  | 1.6   |
| 15,001 to 16,000.....  | 1.5   |
| 16,001 to 17,000.....  | 1.4   |
| 17,001 to 18,000.....  | 1.3   |
| 18,001 to 19,000.....  | 1.2   |
| 19,001 to 20,000.....  | 1.1   |
| 20,001 to 21,000.....  | 1.0   |
| 21,001 to 22,000.....  | 0.9   |
| 22,001 to 23,000.....  | 0.8   |
| 23,001 to 24,000.....  | 0.7   |
| 24,001 to 25,000.....  | 0.6   |

"(3) Effective on the date of the enactment of this subsection, the regulations of the Administrator under this section respecting fuel additives (40 C.F.R. Part 80) shall be deemed amended to comply with the requirement contained in paragraph (2)."

Mrs. SMITH of Nebraska (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Nebraska?

There was no objection.

Mrs. SMITH of Nebraska. Mr. Chairman, this amendment will offer relief for small gasoline refineries, most of which are located in rural areas. They are being forced to comply with Environmental Protection Agency regulations regarding the phasedown of lead in gasoline. These are regulations that were designed primarily for large refineries located near urban areas.

In its effort to set the 0.5 grams per gallon standard for lead in gasoline, the EPA has placed an almost intolerable burden on the small refinery. The cost of complying with these rules is prohibitive for most of these refineries and many might have to be closed.

The EPA is not requiring leaded gasoline to contain less lead than at present. However, it does require that by October 1, 1979, a refinery's gasoline production of all grades contain no more than an average of 0.5 grams of lead per gallon. To meet that lead level a refinery must either produce large volumes of unleaded gasoline or reduce the lead content of its leaded gasoline or do both. Small refineries are generally too small in capacity to justify the complex equipment necessary to produce unleaded gasoline or to lower the lead content of their existing volumes of gasoline.

As an alternative, I am proposing that small refineries—those with a production capacity of 50,000 barrels per day or less and owned or controlled by a refiner with a total capacity of 175,000 barrels per day or less—meet a lead standard per gallon of gasoline in inverse proportion to its size. A copy of the amendment was printed in the May 23, CONGRESSIONAL RECORD. There also is a lead standard established based on gasoline production.

The EPA itself is concerned about the effect of its phase down regulations on small refiners and refineries. It commissioned a study to be done on the subject. One of the findings was that—

Some small refineries or refiners will consider termination of their gasoline business and some of those that elect to do so may close their facilities unless they are granted either a complete waiver for lead limitations or unless an intermediate standard . . . is applied to them.

I do not believe this Nation can afford to forcibly reduce its gasoline production capacity at a time when we are facing severe energy shortages. In addition, if some of these affected refineries go out of business, jobs will be lost at a time when we are fighting a serious unemployment problem.

I believe my amendment sets some realistic standards for continued gasoline production and, at the same time, the amendment will not have the effect of putting more lead in the air. What it will do is allow those automobiles, farm equipment and other vehicles within a limited area—primarily rural—that use leaded gasoline to continue to do so.

In any case, the great weight of medical and scientific evidence establishes that the public—especially in rural areas—is not now, nor in the foreseeable future, facing any health hazard from

lead in the air as a result of lead in gasoline.

Therefore, it would seem to me that this amendment will not contribute to the deterioration of the environment nor endanger anyone's health. What is addressed is an injustice to a small segment of the petroleum industry. An injustice that can be corrected by the passage of this amendment.

Mr. DINGELL. Mr. Chairman, will the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I have no objection to the amendment. Does the gentleman from Florida (Mr. ROGERS) have any objection to the amendment?

Mr. ROGERS. If the gentlewoman will yield, I have no objection to the amendment.

Mrs. SMITH of Nebraska. I thank the gentlemen.

Mr. BROYHILL. Mr. Chairman, will the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from North Carolina.

Mr. BROYHILL. Mr. Chairman, although I have not had complete opportunity to fully examine the amendment, it would appear from a brief examination to apply only to local refiners and I understand the product would still have to be adequately labeled. I will accept the amendment.

Mrs. SMITH of Nebraska. I thank the gentleman from North Carolina.

Mr. CARTER. Mr. Chairman, will the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, we certainly have no objection to the amendment.

Mrs. SMITH of Nebraska. I thank the gentleman.

Mr. BURLESON of Texas. Mr. Chairman, will the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from Texas.

Mr. BURLESON of Texas. Mr. Chairman, I support the amendment offered by the gentlewoman from Nebraska (Mrs. SMITH). It is a very practical amendment. It will absolutely save the small refineries which could not survive under the provisions of the committee bill. The managers of this measure seemingly now recognize this situation by the fact they have agreed to accept the amendment. I appreciate their understanding and compliment the gentlewoman from Nebraska for her taking the lead in this matter.

Mr. JOHN T. MYERS. Mr. Chairman, will the gentlewoman yield?

Mrs. SMITH of Nebraska. I yield to the gentleman from Indiana.

Mr. JOHN T. MYERS. Mr. Chairman, I congratulate the gentlewoman from Nebraska for offering this very fine amendment. This is going to help some very small refineries that are very much needed, especially in rural America, in order to provide fuel to the farmers of our country so that they may provide food and fiber for the large cities and the needs of our country, as well as for

purposes of export. Without this amendment, a number of these smaller refineries probably would be forced to cease operations and thereby causing greater problems toward supplying the fuel needed.

Mr. THONE. Mr. Chairman, I strongly support the amendment of Mrs. SMITH. It is a necessary and most practical amendment. Following is a telegram which very well sets out the issues involved:

MAY 18, 1977.

Farmland Industries is vitally interested in the amendment to the Clean Air Act (H.R. 6161) proposed by Mrs. Virginia Smith, Third District, Nebraska. This amendment will provide relief for small petroleum refineries now adversely affected by Environmental Protection Agency (EPA) regulation reducing the limits on lead in motor gasoline. The present regulations require that all refiners reduce the average lead content of their gasoline pool to .8 gram per gallon by January 1, 1978, and to .5 gram per gallon by October 1, 1979.

Studies done by qualified consulting firms and presented to the EPA show that compliance with these regulations will reduce U.S. gasoline production by 5 percent to 7 percent. An additional one million barrels per day of crude oil will have to be processed to maintain gasoline production at current levels. This regulation can hardly be in the best interests of energy conservation and maximum utilization of our energy resources.

In addition to this overall adverse effect on our Nation's energy supplies, the effect on small refineries is especially critical due to their limited capital resources. Also, their simplified processing equipment does not allow production of sufficient quantities of high octane gasoline to comply with the lead phasedown regulation while still meeting gasoline market demands.

The amendment offered by Mrs. Smith is a positive step providing relief for small refiners who serve a very critical section of the gasoline market. In the past, Congress has taken great pains to insure the competitive viability of small refiners. The relief proposed in the amendment continues that concept.

Under terms of the Smith amendment refineries operated by Farmland Industries at Phillipsburg, Kansas and Scottsbluff, Nebraska, and other small refiners can continue to operate efficiently and produce the petroleum products needed by the midwest agricultural markets they serve while also conserving crude oil in the midcontinent and Rocky Mountain area where supplies are becoming increasingly scarce.

Farmland industries asks your full support for this amendment to H.R. 6161.

Respectfully,

ERNEST T. LINDSEY,  
President, Farmland Industries, Inc.,  
Kansas City, Mo.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from Nebraska (Mrs. SMITH) to the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment to the amendment was agreed to.

ANNOUNCEMENT BY THE CHAIR

The CHAIRMAN. The Chair announces that there are three amendments remaining. The Chair will in its discretion recognize each Member for an amendment for a total of 3 minutes, and following the disposition of the amendments, the Chair will recognize the remaining 35 Members to the best of his ability.

AMENDMENT OFFERED BY MR. WIRTH TO THE AMENDMENT OFFERED BY MR. PREYER AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. DINGELL AS AMENDED

Mr. WIRTH. Mr. Chairman, I offer an amendment to the amendment offered as a substitute for the amendment. The Clerk read as follows:

Amendment offered by Mr. WIRTH to the amendment offered by Mr. PREYER as a substitute for the amendment offered by Mr. DINGELL, as amended: At the end of section 215 insert:

(d) Section 203(a)(4) of such Act is amended by striking out "or" in subparagraph (D), by striking out the period at the end of subparagraph (E) and substituting "or", and by adding the following new subparagraph at the end thereof:

"(E) to knowingly discriminate in the pricing of new motor vehicles manufactured after the model year 1978, or in the availability of models of such new motor vehicles, between dealers located in high altitude areas (as determined under regulations of the Administrator) and dealers located in other areas."

(e) Section 202(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(7)(A) In the case of any class or category of new motor vehicles sold by a manufacturer in high altitude areas (as determined under regulations of the Administrator), such manufacturer may file with the Administrator an application requesting the suspension of the effective date of any standard required under any other provision of this section. No such suspension shall be effective for more than two model years and no manufacturer may apply for more than one such suspension with respect to any such standard.

"(B) The Administrator shall grant a suspension under this paragraph with respect to any standard only if he determines, after notice and opportunity for public hearing, that the applicant has established that it is not technologically feasible (taking cost into account) for such manufacturer to comply with such standard for the model year (or years as the case may be) for which the suspension would apply in the case of such class or category of vehicles sold in high altitude areas.

"(C) In the case of vehicles for which suspension of the standard for any pollutant has been granted under this paragraph for any model year, the applicable standard for such pollutant for purposes of this Act shall require the same reduction of emissions of such pollutant for such vehicles for such model year as was required for such vehicles for the last preceding model year during which no such suspension was in effect."

Mr. WIRTH (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

Mr. DINGELL. Reserving the right to object, Mr. Chairman, I will ask, was the amendment published?

Mr. WIRTH. If the gentleman will yield, the amendment was published in the RECORD, yes.

Mr. DINGELL. Where in the RECORD? Mr. WIRTH. The amendment was published in the RECORD last night.

Mr. DINGELL. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection

to the request of the gentleman from Colorado?

There was no objection.

Mr. WIRTH. Mr. Chairman, a recent poll by the Urban Observatory of the University of Denver found that air quality was the No. 1 concern of Denver's citizens.

And with good reason.

A brown poisonous cloud of pollutants hangs over Denver and daily threatens the lives of the city's 1.2 million people. Automobile emissions are a major source of that poison cloud, and the reason that it has grown to such alarming proportions—not only in Denver but in the entire Intermountain West—is clear: because of the simple variable of altitude, cars pollute twice as much in the Rockies, and in other high altitude areas, as they do at sea level.

To meet this problem, the EPA has required that cars manufactured for the current 1977 model year and sold at high altitudes, must be certified to meet high altitude emission standards.

The EPA requirement is well intentioned, Mr. Speaker, but as with many well-intentioned regulations, it has had unintended consequences which have penalized some groups of people, inconvenienced others, and, more importantly, frustrated the aims of the law itself.

What has resulted is this: to meet the EPA standards, Detroit has either adjusted the engine calibrations on cars to be sold at high altitudes, or has installed altitude-sensitive carburetors, which automatically adjust the fuel/air mixture to insure that emission standards are met. But, unhappily, at the same time that we are attempting to solve emission problems, we are creating marketing problems. The EPA requirements—according to the manufacturers—cannot be met by some models. As a result Rocky Mountain car dealers are offered less than a full range of car and truck models. Moreover, the models which are available are priced higher by the manufacturer to reflect the cost of meeting EPA standards—somewhere between \$22 and \$85 per car, generally around \$35 per car.

High altitude dealers justifiably complain that this puts them at a competitive disadvantage with low altitude dealers, and that they are losing sales. Their point is well taken. Because fewer models are available at high altitudes, and because those models cost more, consumers have an incentive to go to the flatlands to buy their cars with the result, as the Rocky Mountain dealers correctly argue, that the air quality standards are frustrated—even worsened—by the growing presence of autos which do not meet high altitude standards.

No one benefits from this situation—not the manufacturers; not the dealers; and, most certainly, not the people of the Rocky Mountains whose lives are endangered by auto emission pollutants.

Mr. Chairman, the issue is clear: How can we protect public health by insuring that emission standards are met at high altitudes without penalizing the area's automobile dealers?

The amendment which I am offering today is designed to deal with the problem and all its consequences.

First, to insure that clean air standards are met, the amendment will continue EPA's high altitude emission standards.

Second, by prohibiting discrimination in model range availability starting in 1979, the amendment creates a strong incentive for the manufacturer to work as hard on certifying high altitude cars as on low altitude cars. Part of the current problem is that manufacturers have not made the same effort to develop systems that meet standards at high altitude as they have for the low altitude fleet.

Third, by prohibiting pricing discrimination between high and low altitude dealers—again starting in 1979—the amendment assures that clean air compliance costs for high and low altitude cars will be spread over the entire nationwide production. These provisions will remove any competitive disadvantage for high altitude dealers and eliminate any incentive for consumers to shop for cars at lower altitudes.

Lastly, my amendment allows manufacturers a delay in meeting standards for new cars at high altitudes if they can prove that it is not technologically feasible—taking cost into account—to meet the high altitude standards by the same deadline as for low altitude cars. It does not require certification at any price—but only if and when the technology is reasonably available.

Beyond the specific provisions of my amendment lies a further point that must be considered. Because automobiles are responsible for a large proportion of the total air quality problem in the West, the more pollution given off by automobiles, the less "room" there is for growth by other industries which emit the same types of pollutants or similar pollutants. Thus, by tackling pollution from automobiles, this amendment provides some more breathing room for other industries which want to come in. This is particularly critical when Denver and other areas confront the problem on nonattainment: How does one permit growth in areas where the air already exceeds the health standards? Clearly, before such growth can occur, reductions in pollution from existing sources must be obtained—if at all reasonable, feasible, and practical.

Mr. Chairman, this amendment offers a fair and balanced solution to the thorny problem of high altitude emission standards.

It is fair to the Rocky Mountain consumer, who has model choice at equitable prices;

It is fair to the Rocky Mountain dealer, who can market models competitively;

It is fair to the manufacturer, who can obtain a waiver if compliance is not feasible;

And above all, it is fair to the health of the citizens of our high altitude areas, who are potential victims of twice as much dirty air as people living elsewhere in the United States.

Mr. Chairman, this amendment also maintains our clear national commitment to clean air, and I urge its adoption.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. WIRTH. I yield to the gentleman from Florida.

Mr. ROGERS. I thank the gentleman.

I may say that I have looked at the amendment. I have discussed it with the gentleman from Kentucky (Mr. CARTER) and I have no objection to the amendment on this side.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. WIRTH. I yield to the gentleman from Kentucky.

Mr. CARTER. I thank the gentleman for yielding.

Certainly I have no objection to the amendment.

Mr. WIRTH. I thank the gentlemen for their support.

Mr. Chairman, I think the approach which I have outlined in my amendment is one which provides the kind of constructive attitude toward auto emissions, is not punitive toward Detroit, nor is it punitive toward the people in the Rocky Mountain region. I think it gives us an opportunity to work out the high altitude issue, and I urge my colleagues to accept my amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Colorado (Mr. WIRTH) to the amendment offered by the gentleman from North Carolina (Mr. Preyer) as a substitute for the amendment offered by the gentleman from Michigan (Mr. DINGELL), as amended.

The amendment to the amendment offered as a substitute for the amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. LEVITAS TO THE AMENDMENT OFFERED BY MR. DINGELL AS AMENDED

Mr. LEVITAS. Mr. Chairman, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVITAS to the amendment offered by Mr. DINGELL, as amended:

At the end of section 203 of the amendment strike out the closing quotation marks and insert in lieu thereof the following:

"(8) The Administrator shall undertake a study and, not later than June 30, 1980, submit a report to Congress respecting whether or not a standard for emissions of oxides of nitrogen from light duty vehicles and engines which provides for a lower level of emissions than the level otherwise required under this section is necessary in order to protect public health."

Mr. LEVITAS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. LEVITAS. Mr. Chairman, this amendment deals with the Dingell amendment and provides that in the event the Dingell amendment should be adopted, the Administrator of EPA would be mandated to undertake a study

and report to Congress not later than June 30, 1980, respecting whether or not a standard for emissions of oxides of nitrogen from light-duty vehicles and engines which provides for a lower level of emissions than the level otherwise required is necessary in order to protect public health. I think it is a public health amendment, and I think it would go a long way toward alleviating many of the problems that exist. If the study shows that the health needs require a NO<sub>x</sub> level below 1.0 then it could be legislated by Congress based on the facts, for a change. If a level below 1.0 is needed we could provide it down to 0.4 or even lower or at whatever level the health requires based on the facts.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from North Carolina.

Mr. BROYHILL. I thank the gentleman for yielding.

The gentleman has had the opportunity to discuss this in some detail with the gentleman from Michigan (Mr. DINGELL), and I think it does strengthen the bill. It does provide for important information to come back to the Congress to help us fulfill our legislative responsibility.

Mr. LEVITAS. I thank the gentleman. Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Michigan.

Mr. DINGELL. I thank the gentleman for yielding.

I happen to think a study to establish health benefits for NO<sub>x</sub> levels is eminently desirable. It provides information not now available to Congress. I urge my colleagues to accept the amendment. It is a good one.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. LEVITAS) to the amendment offered by the gentleman from Michigan (Mr. DINGELL), as amended.

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 43, noes 2.

So the amendment to the amendment, as amended, was agreed to.

The CHAIRMAN. There being no further amendments, at the time the limitation of time was called, there were 35 Members standing. First the Chairman will inquire: Do any of the Members who were standing have amendments to be offered?

There being none, the Chair recognizes the gentlewoman from New Jersey (Mrs. FENWICK).

(By unanimous consent, Mrs. FENWICK yielded her time to Mr. CARTER.)

(By unanimous consent, Messrs. HILLIS, KILDEE, and FORD of Michigan yielded their time to Mr. DINGELL.)

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Chairman, those of us from the major industrial areas are in a real bind. Last winter the

rubberworkers and the utility companies and the factory owners in my area came to me and said: "We have got to get relief from the stationary air pollution regulations." I went to bat and pleaded with EPA to try to be more practical and reasonable.

Now the auto makers and workers want similar relief, but what we have to understand, and we all have to understand it, is that we all breathe the same air and there is a limit to how much we can put in that air and still have public health. So we have to make some adjustments.

The Preyer amendment makes a reasonable adjustment and, therefore, I support the Preyer substitute.

(By unanimous consent, Mr. JENNETTE yielded his time to Mr. DINGELL.)

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. TRAXLER).

Mr. TRAXLER. Mr. Chairman, I rise in strong support of the Dingell amendment.

(By unanimous consent, Mr. TRAXLER yielded the balance of his time to Mr. DINGELL.)

The CHAIRMAN. The Chair recognizes the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Mr. Chairman, let me give a quick review of my high altitude auto emissions amendment that is in the committee bill and the Pryor bill. My amendment has two basic provisions:

First. It allows auto dealers to adjust emission control devices on all 1968 to 1976 model year vehicles and 1977 and later vehicles not manufactured for high altitude operation to improve the high altitude emissions performance of those vehicles.

Second. It mandates that auto manufacturers provide written instructions on how to best adjust the emission control devices for better performance at high altitudes.

The reason for my amendment going beyond model year 1976 is one of population mobility. With population being as mobile as it is, EPA's regulations requiring that all 1977 and later model year vehicles meet the air quality standards at their designated place of sale will not solve the high altitude air quality problem. If the high altitude auto emissions problem is to be dealt with effectively, the problem of post-1976 vehicles geared for sea level operation ending up in high altitude areas must be remedied.

Denver is a prime example of the magnitude of the population mobility problem. According to statistics provided by Bell Telephone Co., yearly migration from low altitude areas into the Denver SMSA is substantial. In 1973, the latest year for which statistics are available, 82.7 percent of the persons migrating into the Denver SMSA were from States in which there are no EPA-designated high altitude counties. Using the net migration figure of 20,100 for the Denver SMSA in 1973, this means that at least 16,623 persons migrated into the Denver SMSA from low altitude areas.

The future migration into Denver and other high altitude cities is sure to continue at a rapid pace. Virtually all of these people will be driving vehicles geared for sea level operation and, as time goes on, manufactured after 1976. If these post-1976 vehicles cannot be adjusted for proper high altitude performance, they will negate the air quality benefits gained thus far by the 1977 and later model year vehicles which have been manufactured for high altitude operation.

The language of my amendment has been reworked time and again to try to get all parties involved to agree on its provisions. The Dingell-Broyhill substitute leaves out a lot of the important parts of this amendment. I hope it was mere oversight for the language in the Dingell-Broyhill substitute is the conference report language from my high altitude amendment from the 94th Congress. The conference report language was the end product of confused Senate committee staffers who really did not understand my amendment and overworked House committee staffers who were trying to push something through before the October 2, 1976, adjournment date. As a result, it was chopped up pretty badly and weakened considerably.

In a nutshell, the differences between our amendment and the Dingell-Broyhill substitute are:

#### DINGELL-BROYHILL

1. Only applies to vehicles manufactured before the 1978 model year. It *doesn't* take into account the *population mobility factor*.

#### SCHROEDER

1. Applies to all 1968 to 1977 vehicles and 1977 and later model-year vehicles *not* manufactured for high-altitude operation. It takes into account the *population mobility factor*.

#### DINGELL-BROYHILL

2. Contains a provision which would allow manufacturers to require the use of manufacturer parts if they can convince the EPA Administrator that the use of these parts is necessary to insure emission control performance. This provision is unfair to the thousands of aftermarket parts manufacturers and suppliers that could supply parts that would perform equally well.

#### SCHROEDER

2. Stipulates that the use of manufacturer parts may *not* be required. Period. This makes it fair for everyone. The manufacturer can *suggest* that certain manufacturer parts should or can be used, but *cannot require* that these parts be used.

#### DINGELL-BROYHILL

3. Allows the manufacturer to get off the hook for failing to comply with the provisions of the amendment if the manufacturer says it wasn't a "knowing" violation.

#### SCHROEDER

3. If the manufacturer fails to live up to the bill's provisions, this failure shall be treated as a violation by such manufacturer of Sec. 203(a)(3) and subject to the penalties contained in Sec. 205.

In sum—the Dingell-Broyhill substitute only deals with half the problem. I spent 3 years working with the manufacturers, EPA, the auto dealers, and various health and environmental groups to get language that is acceptable to all. I hope this language is kept in the high al-

titude section of whichever amendment is adopted.

(By unanimous consent, Mrs. SCHROEDER yielded the balance of her time to Mr. PEPPER.)

(By unanimous consent, Mr. ROSE yielded his time to Mr. PREYER.)

(By unanimous consent, Mr. PREYER yielded his time to Mr. GLICKMAN.)

The CHAIRMAN. The Chair recognizes the gentleman from Kansas (Mr. GLICKMAN).

Mr. GLICKMAN. Mr. Chairman, I have been listening here for 2 days and I am so confused about the entire issue relating to the Clean Air Act amendments the Members could not believe it. We have heard about the NO<sub>x</sub> standards, the SO<sub>2</sub> standards, and the HO<sub>x</sub> standards, and not being an expert I basically supported the Dingell-Broyhill substitute because I felt an additional element was needed, and then because an additional year was needed to give the automobile industry time to comply, that is why I support the Preyer amendment. I think it represents a decent compromise. There is much too much emotion in this entire argument. We want clean air for future generations, and I believe that the purposes of clean air can best be served by the Preyer amendment, which gives the automobile industry an additional year to comply with stiff standards, and after that time, they must comply.

The gentleman from Michigan (Mr. STOCKMAN) reflected a little earlier that the Preyer amendment goes only to the first 3 years, but not to the last 3 years; and that is the whole point. The first 3 years should be where our concern is focused upon. We need to determine the impact on the energy question. This Preyer amendment is a fair compromise from somebody who basically is very worried about both energy needs and clean air and basically was going to support the Dingell-Broyhill amendment and probably will if this amendment fails, but I still believe it is a fair compromise.

Frankly, I do not see why the parties could not have compromised in the first place, because I do not think they were that far apart; but apart from this, I think it is reasonable and fair. We have debated this long enough.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. SKELTON).

Mr. SKELTON. Mr. Chairman, I rise in support of the Dingell-Broyhill amendment to title II of the bill.

The committee bill establishes auto emission standards which are unnecessarily stringent and based upon unrealistic projections. It fails to strike the necessary balance between environmental, employment, and energy concerns.

In my congressional district people often drive long distances from homes in rural communities to jobs in metropolitan areas and from isolated farms to towns in order to shop and conduct business. With public transportation not available in these areas, the auto is the only source of transportation. It must remain affordable and dependable. Moreover, in light of rising fuel costs and our

national energy goals, it must be made more fuel efficient. The emission standards in the committee bill would jeopardize our desire for energy conservation by wasting at least 2.41 billion gallons of fuel a year.

In addition, the standards in the committee bill would actually hinder efforts to meet national clean air standards. Because automobiles manufactured in compliance with the committee bill's standards will have higher sales prices, higher operating and maintenance costs, and reduced fuel efficiency. Consumers will thus keep their older, pollution-prone vehicles longer. This, in turn, will jeopardize thousands of jobs in the auto and related industries.

There is a more than good chance that if the standards for 1979 automobiles mandated in the committee bill are put into effect, the auto industry will not even be able to meet them, due to inadequate lead time. The result then would be disruption within the automobile industry, substantial unemployment among automobile workers, and a downturn in our national economy.

In contrast, the Dingell-Broyhill amendment presents a reasonable approach to the complex problem of balancing environmental standards with energy conservation and the economy. With Dingell-Broyhill, jobs would be protected and a strong economy maintained since it would allow a more careful, well-timed phase-in of emissions standards. Fuel efficiency in automobiles and overall energy savings could be attained, as auto manufacturers would be given ample lead time to produce innovative fuel and emission control devices and systems. Consumers who need autos for jobs and essential shopping would find them more fuel efficient and reasonable priced. This would encourage automobile sales and help maintain full employment in the automobile industry. Yet, Dingell-Broyhill is environmentally sound and would adequately protect public health.

It is for these reasons that I urge my colleagues in the House to adopt the Dingell-Broyhill amendment.

(By unanimous consent, Mr. LLOYD of California yielded his time to Mr. DINGELL.)

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. BROWN).

Mr. BROWN of California. Mr. Chairman, I rise in opposition to the Dingell-Broyhill amendment and in support of the committee bill. I have listened to these arguments, as everyone else has, for 2 days. Frankly, I think they have led to more confusion than anything else. I am deeply concerned about public health and about energy economy and efficiency.

I believe that the committee bill will protect the public health and will give us energy economy and efficiency and that this is what we have to do.

Mr. Chairman, I distrust the automobile companies. I think if the Interstate and Foreign Commerce Committee had come in with the Dingell-Broyhill

amendment, they or other Members would have come in with further weakening amendments in order to prevent this Congress from regulating the automobile industry.

Mr. Chairman, I have faced this for the last 25 years and I think it is time that we draw the line and adopt the committee bill.

(By unanimous consent, Mr. WAXMAN yielded his time to Mr. PEPPER.)

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. BLANCHARD).

Mr. BLANCHARD. Mr. Chairman, I support the Dingell-Broyhill amendment.

(By unanimous consent, Mr. BLANCHARD yielded the balance of his time to Mr. DINGELL.)

(By unanimous consent, Mr. MAGUIRE yielded his time to Mr. ROGERS.)

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I rise only to point out one special thing that I think adds fuel to the fire against the Dingell amendment. It is on page 50. It says:

"(g) Nothing in this section shall be construed to provide that any labor required to be provided at the cost of the manufacturer pursuant to warranty under regulations under subsection (b) (2) may be performed by any persons other than persons specified by the manufacturer or that any part required to be provided at the cost of the manufacturer under such warranty may be other than a part specified by the manufacturer."

Mr. Chairman, I rise to point out that in this connection the Staggers amendment does not include that in the Richardson Preyer substitute.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. PEPPER).

Mr. PEPPER. Mr. Chairman, last year when the Dingell amendment was up, I was invited one evening to a dinner given by some of my automobile dealer friends to urge me to support the amendment. On my way to the dinner I had my radio on, and the announcer said that the pollution in the District of Columbia was so bad that the people who were elderly or those susceptible to respiratory problems should stay off the street.

There are no big industries here in the District of Columbia, so I do not know of any other cause for our periods of pollution except the automobile emission.

As chairman of the Aging Committee, as a senior citizen myself, and as one who has a relative gasping for breath in a hospital today, I support the position of the National Retired Teachers Association, the American Association of Retired Persons, the Urban Elderly Coalition, the National Council of Senior Citizens, the National Caucus on the Black Aged, and the National Council on the Aging, in supporting the Preyer amendment and opposing the Dingell amendment. I do this for the simple reason that the time allowed for performance by the two is the same, but there will be more protection against cancer, respiratory diseases, and heart trouble for the older

people and the children of this country under that amendment than would be afforded them under the Dingell amendment.

I think the least we can do is to do what we can to preserve the health, and lengthen the lives of the people of this Nation.

The CHAIRMAN. The Chair recognizes the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL. Mr. Chairman, in spite of, or perhaps because of all the information which has been circulated regarding the Dingell-Broyhill amendment to H.R. 6161, there still is considerable confusion about the warranty section of our substitute and the effects it would have on clean air, consumers, and the automobile industry.

The purpose of the warranty provisions in our substitute is to protect independent parts manufacturers and service and repair outlets from a possible parts and service "monopoly" by auto manufacturers and their franchised dealers. The Dingell-Broyhill substitute amends the Clean Air Act to insure that automobiles may be serviced, maintained, and repaired by independent operators, using rebuilt or replacement parts, without danger of voiding the car owner's warranty.

There are two key differences between our amendment and the Rogers-committee bill. Dingell-Broyhill requires that any warranty work which is the responsibility of the automobile manufacturer be performed by the manufacturer or an authorized representative. This pertains only to repair work which is a direct result of a manufacturing defect either in parts or in workmanship. Our provision in no way restricts the ability of the independent parts, repair, or service outlet to service or maintain an automobile in order to keep a warranty valid, or to perform nonwarranty repair work.

As with any warranty, whether it relates to any large consumer product, the manufacturer has the right to specify who may do the work for which it bears both the cost and the responsibility for repair. This is not only consistent with the concepts of the Moss-Magnuson Warranty Act, but is also supported by the trade associations which represent more than 166,000 aftermarket repair firms.

Chairman ROGERS' bill would force auto manufacturers to pay independent garages and service stations for "recall" or warranty work. They would have absolutely no control over work cost or quality. On March 16, 1977, the Justice Department addressed this very question when it reported:

If the manufacturer were required to honor a performance guarantee regardless of the identity of the repair shop, supply costs of the warranty would be expected to inflate rapidly . . . the manufacturers would be put in a situation in which it could exercise no effective cost control . . . the repair shop could charge, in effect, anything it wanted for services rendered . . . and, at the very least under these conditions, the price of new vehicles would skyrocket.

The second difference between the Dingell-Broyhill amendment and the committee bill is perhaps even more essential to the survival of the independent repair service and the aftermarket industry as a whole. Because some of the anticompetitive effects of the warranty program are inevitable, Dingell-Broyhill reduces the length of the performance warranty from 5 years/50,000 miles to 18 months/18,000 miles. This type of reduction was recommended by both the Justice Department and the Small Business Committee in the 93d Congress.

Mr. ROGERS eventually recognized the anticompetitive and anticonsumer problems inherent in the 5-year and 50,000-mile warranty provisions contained in his bill, so he adjusted the committee bill accordingly. He reduced the warranty period to 18 months and 18,000 miles so as to conform to the Dingell-Broyhill amendment.

The committee bill, however, reduces the warranty period for 3 years only, after which time it reverts back to the anticompetitive 5 years and 50,000 miles warranty duration. The reduction in warranty length is essential to the aftermarket industry and to the survival of the small, independent businessman. I have worked for such a reduction for 3 years, and was pleased to see the Justice Department recommendations of March 16, 1977. By mandating a return to the longer warranty period after 3 years, the committee chairman contradicts himself, for he would have the law revert to a situation which he now realizes is anticompetitive, anticonsumer, and anti-small-business. It is difficult to understand why Mr. ROGERS asserts that he is attempting to protect the consumer and the automotive aftermarket industry, when his bill at best provides only very temporary relief.

There are two questions which are foremost in our minds when debating the warranty provisions. Unfortunately, these are the questions which have become most distorted. The first is whether Dingell-Broyhill will assure that vehicle manufacturers will continue to produce durable and consistently effective auto emissions systems. The second question is whether Dingell-Broyhill will really protect the automotive aftermarket industry and the consumer from the adverse effects which accompany implementation of some of the clean air provisions.

Under Dingell-Broyhill, vehicle manufacturers will still be required to produce a durable system in order to pass the 50,000-mile EPA certification test under the production warranty. We propose no change in the length of the production warranty. Under the production warranty, the EPA not only certifies that the car's emission control system will last for 50,000 miles, but if a substantial number of systems fail during their on-the-road operation, the EPA can recall the entire lot for repair at the manufacturers' expense. In order to assure that emissions control systems continue to meet standards throughout their effective life, the Dingell-Broyhill substitute

includes a mandatory vehicle inspection and maintenance provision, to be administered by the EPA. Our amendment also makes it a prohibited act, subject to civil penalty, for a manufacturer to refuse to honor its warranty.

In response to the second question, our amendment guarantees the automotive aftermarket the right to perform all routine service and maintenance, using replacement parts, without danger of voiding the manufacturers' warranty. Our amendment also permanently reduces the performance warranty to 18 months and 18,000 miles. This will not affect actual operation of the emissions system, but rather only the length of time for which the manufacturer is directly responsible for the actual repair of defects in parts or in workmanship. Both of these provisions are supported by virtually every aftermarket firm in the United States, and virtually every aftermarket firm in the United States supports the Dingell-Broyhill amendment.

In conclusion, the Rogers bill would result in additional costs to the consumer, additional burdens to the independent businessman, and little, if any, gain in repair quality or convenience. The Dingell-Broyhill amendment will insure that small repair facilities will continue to operate in a competitive environment and will enable the car owner to obtain reasonable, reliable, and effective auto servicing while automobiles continue to meet Federal emissions standards.

I urge my colleagues to support the Dingell-Broyhill substitute when it is offered to H.R. 6161 on the floor of the House.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I rise in strong support of the Dingell-Broyhill amendment to H.R. 6161. The auto emission standards proposed in this amendment provide a reasonable balance between our energy needs and environmental concerns.

I certainly agree on the importance of reducing auto pollution. This is an important step in moving us toward our goal of clean air.

At the same time, however, we must consider our need to save energy, hold down consumer costs and preserve jobs. We cannot afford to waste our scarce energy resources. We cannot afford to pile on excessive new costs that consumers will be unable to pay. Nor can we afford to wipe out jobs in the automotive industry.

The proposed auto emission standards in the Dingell-Broyhill amendment arrive at a reasonable balance between these competing values. It will help bring about cleaner air without the bad side effects of the overly strict committee version.

First, the Dingell-Broyhill amendment would achieve a substantial energy saving. The committee bill, according to Government analyses, would waste an estimated 140,000 barrels of oil per day. Other estimates go even higher.

Second, the amendment would mean major savings for consumers. The committee version would add approximately \$350 to the price of a new car. Another \$100 may be added in the form of maintenance costs. Such a large price increase would have a negative impact on car sales.

Third, the Dingell-Broyhill amendment would protect American jobs. Car sales would be higher, as more people would be inclined to purchase the lower-priced, fuel-efficient vehicles resulting from adoption of the amendment. And more car sales mean more jobs throughout the entire automotive industry. The committee version, on the other hand, would cause a decline in auto sales. Shutdowns, layoffs, surplus inventories, and spiraling unemployment would be the sad result.

I urge adoption of the auto emission standards proposed in the Dingell-Broyhill amendment. Adoption of these standards in lieu of the committee version will be far healthier for the American economy and the American consumer.

Mr. CRANE. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Illinois.

Mr. CRANE. Mr. Chairman, I rise in support of the Dingell-Broyhill amendment.

The emission control guidelines legislated in 1970 through the Clean Air Act are absurd and clearly present a problem not only to the auto industry but also the American consumer. The stringent controls which will be placed on automobiles, if the amendment offered by my esteemed colleagues is not passed, will have an adverse effect at a time when our President is asking all Americans to conserve as much energy as possible.

Mr. Chairman, the United States is going through a period of high energy consumption and lower than normal production of new energy sources. We cannot afford to settle for standards which will destroy our efforts for better fuel efficiency. We all want a clean environment, free of pollutants, but at the same time, we also want our cars and trucks to operate as economically as possible in the use of fuel.

The Commerce Committee passed emission controls which will place inflationary pressures on our citizens and impose burdensome regulations on business and industry. At present, Government regulations cost the American people at least \$125 billion a year and additional environmental regulations will certainly bring this cost up substantially. The American people look to the Congress to solve inflationary problems not create them.

I would just like to say that if we expect to reach our goals of becoming less dependent on foreign oil as a result of conserving energy, we had better give more consideration to the amendment being offered here today.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Chairman, the is-

sue before us is complex and has been, unfortunately, much clouded in the debate. First of all, it pains me to differ with my good friend from Florida (Mr. ROGERS) but I think that it is important that we look at all of the considerations which relate to the legislation before us on balance.

First, no complete or integrated information was made available to the President; no such information was made available to the committee; of health consequences, job employment, fuel waste or consumer costs or anything else in a quantifiable form until last week, at which time the President and the committee had already acted and taken a position. I required the information of the administration, and it was finally produced under threat of subpoena from the gentleman from California (Mr. MOSS).

I would point out to my colleagues that the impact on jobs is substantial and is very significant. I point out that somewhere between 77,000 and 99,000 jobs per year are lost; that the additional cost of automobiles is \$350, as opposed to \$170. This is all from statements by Douglas Costle, Administrator of EPA.

The total cost of automobiles by reason of Government actions has been increased by over a thousand dollars. I would point out that no quantifiable health benefits with regard to NO<sub>x</sub>, carbon monoxide or hydrocarbons can be demonstrated as between the two plans—no difference whatsoever. The EPA and other agencies of Government have so stated.

I would point out that I have here one of the suppressed documents from the administration, which they would not make available earlier, but EPA says that the additional cost of automobiles is going to be \$350, \$170 more over the proposal offered by the gentleman from North Carolina and myself. I would point out that in 1990, no less than four air quality regions will be out of conformity with regard to NO<sub>x</sub> under either proposal.

There is no quantifiable information available as to going to 0.4 NO<sub>x</sub> over 1.0. I would point out that it is highly doubtful, in the language of every single manufacturer, that diesels can be functional under the proposal offered by the gentleman from North Carolina (Mr. PREYER) or the gentleman from Florida (Mr. ROGERS).

Last of all, there is not enough rhodium in the world to insure that the Rogers-Preyer standards can be met. Indeed, the catalytic converter manufacturers pointed out to the subcommittee in the course of the hearings that they supported the standards authored by the gentleman from North Carolina and myself, and they had grave doubts that they could meet the standards prescribed by the gentleman from Florida (Mr. ROGERS) and the gentleman from North Carolina (Mr. PREYER).

My colleagues should know the differences between the Rogers proposal and the Preyer proposal are the differences between tweedle-dum and tweedle-dee. The compromise, if it in fact exists, is between two persons on the same side. So my colleagues should not be deceived

into believing that they are voting for a compromise. They are voting for precisely the same thing if they vote for PREYER or for ROGERS. The two are indistinguishable in their effect.

I would urge my colleagues to understand that what really is involved here is a very, very fine engineering difference, but that engineering difference shows up in enormous consumer impact, in enormous additional costs of automobiles, in enormous additional fuel waste.

The CHAIRMAN. The Chair recognizes the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. Mr. Chairman, I want to say that I rise in strong support of the Preyer amendment to the committee amendment, and my reasons for doing so are as follows:

We must do something to abate pollution in this country. Forty to sixty percent of the pollution is caused by automobiles. Seventy-five to 90 percent of cancers are caused by the environment, of which pollution unfortunately is a part. Therefore, one-half of the cancers could well be caused by automobile emissions. One thousand fifty-five people a day are dying from cancer.

Mr. Chairman, we should do everything in our power to abate this. I strongly support the Preyer amendment in an effort to diminish pollution and to stop the threat of cancer.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS. Mr. Chairman, I want to conclude by saying this:

The purpose of the clean air bill is to improve the health of the American people, as the gentleman from Kentucky (Mr. CARTER), a physician himself, has stated.

I would like to read the Members a telegram from Citizens Against Cancer:

Please support the clean air bill without Dingell-Broyhill amendment to fight cancer.

Furthermore, the elderly will be severely impacted, as brought out by our distinguished colleague, the gentleman from Florida (Mr. PEPPER), who is chairman of the Select Committee on Aging. That gentleman has taken a strong stand against the Dingell-Broyhill amendment, which will adversely affect the health of senior citizens; it would lock them up in their houses whenever there is an air pollution alert. We just had one of those here in Washington the other day.

Do the Members know what the American Lung Association study has shown? I have it here, and I can show it to the Members. The actual study shows the very large health effects differences in the NO<sub>x</sub> standards which could be permitted under the Dingell-Broyhill amendment and the NO<sub>x</sub> standards permitted under the bill. Those standards are scuttled under the Dingell-Broyhill amendment.

Mr. FORD of Michigan. Mr. Chairman, I rise in support of the Dingell-Broyhill amendment to the Clean Air Act. The Dingell-Broyhill amendment is sup-

ported by: the UAW, AFL-CIO, National Automobile Dealers Association, foreign and domestic car manufacturers, American Automobile Association, Importers Association of America, Rubber Manufacturers Association, and the Transportation Association of America.

When I reflect back on the first 4 months of the 95th Congress I am proud that Congress has begun to address the two critical issues of unemployment and the energy shortage. First, the Congress overwhelmingly approved a public works jobs bill to create approximately 600,000 jobs. Second, with the President taking the initiative, Congress is preparing to tackle the energy crisis. Even though not all of us support every provision the President has outlined in his energy policy, every Member of Congress recognized the potential energy crunch in our country's future. Yet I am amazed and puzzled to see some of my colleagues, who supported the public works bill and the push for the creation of an energy policy, planning to vote against the Dingell-Broyhill amendment to H.R. 6161—the Clean Air Act.

Jobs will be jeopardized if the auto industry cannot meet the more stringent requirements called for in H.R. 6161. The word stringent can be a broad term, so I will elaborate. Should H.R. 6161 become law without the Dingell-Broyhill amendment, the auto manufacturers will have to meet the full 90 percent reduction for hydrocarbons in 1979. The Environmental Protection Agency requires 18 months leadtime to approve the technology needed to reduce hydrocarbons. This would leave manufacturers just 3 months from the bill's enactment to get their applications into EPA to meet the deadline. The bill also requires a reduction to 1 gram per mile of nitrogen oxide in 1983, but the technology to reduce nitrogen oxide emissions does not exist and there is no way to assure that it will be developed in time.

It is projected, Mr. Chairman, that up to 70,000 jobs could be lost if the Dingell-Broyhill amendment is not approved. Naturally, as a representative of a district with a large constituency of auto workers and from a State with an unemployment rate of 8.1 percent, I am concerned over the potential loss of jobs. But, Mr. Chairman, the auto industry and the auto supply industry does not provide employment only in the Detroit area but in many States throughout the Nation. These widespread industries have tremendous impact on the Nation's economy. We are talking about 70,000 jobs—a significant figure especially after Congress has just spent approximately \$6 billion to create 600,000 jobs. The Dingell-Broyhill amendment, by comparison, protects jobs by allowing a more careful, well-timed phase-in of the emissions deadlines, while still being environmentally sound.

There are now numerous studies before Congress which indicate that our country does have an energy problem. The world faces possible oil shortages as early as 1981 and a dangerous energy shortage by the year 2000. One study

by the Workshop on Alternative Energy Studies—WAES—projected that demand for energy supplies will result in shortages of all conventional energy resources beginning after 1985. Dr. Carroll Wilson, director of WAES, recommends conservation, as do many of my colleagues, as an interim solution. Conservation, although not the complete answer, will give our country the time it needs to formulate the solutions to our energy problems. The unnecessarily stringent auto emission standards of H.R. 6161 would drive us further into dependence on unreliable foreign oil sources.

The emission schedule embodied in H.R. 6161 would waste 15 billion gallons of gasoline between 1978 and 1985, relative to the savings of energy of the Dingell-Broyhill standards. This figure is based in large part from the administration's February 1977, "Analysis of Effects of Several Specified Alternative Automobile Emission Control Schedules Upon Fuel Economy and Costs." We must not enact standards which would speed the oil depletion process.

The Dingell-Broyhill amendment will, in addition, result in more fuel-efficient vehicles and thus yield an overall energy savings of 2.41 billion gallons of gasoline a year, or 140,000 barrels of oil per day.

In summary, Mr. Chairman, I see no need to impose a more rigid emission schedule, not only because it would contradict much of the progress of the 95th Congress but because of the good faith shown by the auto industry to produce anti-pollutant, energy efficient autos.

The Dingell-Broyhill amendment will provide for continued emission control advances at a pace that is environmentally sound without seriously affecting the economic viability of the auto industry and the Nation.

Mr. BROOMFIELD. Mr. Chairman, I rise in support of the Dingell-Broyhill amendment to H.R. 6161, the Clean Air Act Amendments of 1977.

Seven years ago, with the passage of the Clean Air Act of 1970, Congress set out to protect and enhance the quality of our air. Passage of this act was in recognition of the continually worsening national air quality as the rate of pollutant outputs grew substantially from 1940 to 1970, and of our desire to pass on a clean, healthy environment to our future generations.

We have made significant strides during these 7 years. We have been able to appreciably slow, stop, or even decrease the rate of output of various air pollutants.

Now, in our consideration of the Dingell-Broyhill amendment, we must decide how we will complete this effort, because the issue of mobile emissions standards play an important part in enhancing air quality. In this consideration, however, we must look at the total impact of our effort. We must look at energy costs, consumer interests, and continued employment as well as environmental improvement; these are interrelated, and we cannot affect one without affecting the others.

The Dingell-Broyhill amendment pre-

sents the best balance of these inter-related factors. It will protect public health through the continued gradual improvement of the ambient air quality. It will avoid significant fuel penalties, limit costs to the consumer, and protect the jobs of 16 million Americans working in auto-related industries.

With the present energy crisis, conservation of our natural resources is an important element in our response to this problem. The Dingell-Broyhill emission standards are clearly consistent with this conservation effort. Based on an analysis by agencies of the Government, it is estimated that the presently proposed committee standards in H.R. 6161 would waste 2.41 billion gallons of gasoline a year between 1978 and 1985, when compared to the Dingell-Broyhill standards.

This waste in gasoline not only affects our efforts at energy conservation but also costs to the consumer. The Administrator of the Environmental Protection Agency has stated that the more stringent committee standards will increase the initial purchase price of a new car by \$350, as opposed to \$170 under Dingell-Broyhill, and it will increase maintenance costs by as much as \$100.

The emissions standards that are finally enacted will have a major impact on the national employment picture. The auto-related industries employ almost one out of every five working Americans. That is more than 16 million Americans. In 1974, the annual payroll of auto-related industries was \$10.4 billion. However, increased costs to the consumer associated with the committee's more stringent standards will directly influence how frequently new cars are purchased and this, in turn, will affect the people employed in the auto-related industries.

This employment relationship should be kept in mind while considering the comments of William V. Luneburg, president of American Motors, as he writes, in support of the Dingell-Broyhill standards. Mr. Luneburg states:

While there are high technological risks associated with this schedule as well as major increases of investment and piece costs, it represents the most stringent set of goals that we believe it is possible for us to attain in the time frame without unduly impairing the competitive position of American Motors as a domestic car manufacturer.

The Dingell-Broyhill emissions standards are clearly more fuel efficient, consumer protective, and employment oriented than the committee proposals. With these benefits, there is no statistically significant difference in the improvement of the Nation's ambient air quality between these two proposed emissions standards.

Mr. Chairman, it is clear that the Dingell-Broyhill mobile emissions standards are far superior to the committee-proposed standards in H.R. 6161. Both bills continue the progress toward cleaning the ambient air quality at approximately the same rate. However, the Dingell-Broyhill standards provide the necessary balance between improving air quality and the other interrelated factors. The

Dingell-Broyhill standards best serve our Nation's interest and, therefore, I strongly urge my colleagues to join me in supporting this amendment.

Mr. MIKVA. Mr. Chairman, I want to commend Chairman ROGERS and the members of the Health Subcommittee on their work, and to add my support for H.R. 6161. The Clean Air Act amendments represent a good compromise among many conflicting realities—the problem of achieving realistic levels of auto emissions in a limited time, and the difficulty of implementing stringent emission standards or stationary sources of pollution in both clean and polluted areas. The bill is a strong and balanced affirmation of the Nation's dedication to significant improvement of the quality of the air that we breathe.

The three major parts of the bill have been worked out through extensive deliberation in the committee, and represent the most acceptable approaches to the maintenance and improvement of air quality.

In the significant deterioration provisions, the States are given the responsibility for preventing deterioration of the air quality in areas that are cleaner than the national standards. The States will divide their clean air into three classes, with established limits on the amount of increased pollution that will be allowed. This section seeks to assure that air that is currently cleaner than the national standard always will remain clean, and that parks, wilderness, and recreation areas be kept free of additional air pollution.

The nonattainment provision actually makes more flexible the standards in the 1970 Clean Air Act for halting the further pollution of already unclean areas. Additionally, the bill allows some economic growth in areas not meeting the standards, by giving the States the option of using a new program which would be tied to the State's making "reasonable further progress to assure attainment of the standards by the delayed deadlines."

The auto emissions standards which are required by the bill are clearly a compromise and a slackening of the more strict requirement of the bill introduced in the 94th Congress. The Dingell-Broyhill amendment would significantly cut into those standards, and allow the environment to continue to deteriorate. Not only are the standards relaxed, but they can be dropped substantially "for fuel economy reasons."

The amendment would also allow the auto manufacturers to delay their efforts to find new emissions controls until the 1980's. I am not convinced, however, that the auto industry is sufficiently committed to the needs of the environment to regulate emissions without firm guidelines from the Federal and State governments in the next several years.

Further, Mr. Chairman, when my fellow Members consider voting for this amendment to delay again the implementation deadlines, they must also be aware of the other parts of the Dingell-Broyhill amendment, which are clearly not in the best interest of car owners or the environment. The amendment's pro-

visions dealing with motor vehicle warranties and inspection are patently pro-industry, as they provide an "out" for car manufacturers in paying for warranty work, and shift the burden of proof in honoring warranties from the manufacturer to the consumer. The additional provisions of the amendment concerning the high altitude performance adjustments protect the auto manufacturers from competition and give other breaks to the industry.

The arguments which have been made in favor of the Dingell-Broyhill amendment are not convincing. The point that jobs will be in jeopardy if the auto industry cannot meet the stringent requirements and deadlines in the bill is spurious. In fact, if the environment continues to deteriorate, especially in areas now heavily polluted, jobs will be lost through the nonattainment provisions of the original act, as growth in other industry is restricted. The trade-off here is between the narrow interests of the auto industry, versus broader industrial needs.

The additional argument that applying the more stringent emission standards will sacrifice fuel efficiency, and therefore cost more money, is questionable. The standards have been carefully considered by the committee in consultation with administration experts, and are consistent with the country's energy conservation policy. Even if it were the case that fuel efficiency would be lost, the health of Americans is far more important than maintaining the current cost of operating an automobile.

Therefore, Mr. Chairman, I urge the passage of the Clean Air Act amendments in the form in which they were reported from the Committee on Interstate and Foreign Commerce. We must preserve the condition of the air in those places in which it is relatively pure, and improve it in those localities where it is polluted.

Mr. SLACK. Mr. Chairman, no other issue surrounding the automobile is so complex or so badly misunderstood as emissions standards. The fact is that more than 80 percent of all tailpipe emissions have been removed from today's new cars. No other industry has done so complete a job of controlling emissions. As a result, the air in this country is becoming steadily cleaner, year by year, as new cars replace old. Those are facts.

It is also a fact that emissions controls have a direct and serious effect on fuel economy. For example, the State of California today has tighter emissions standards than the other 49 States. The average new car sold in California, including both domestic and foreign cars, according to official EPA tests, gets 12 to 20 percent worse fuel economy than the average new car in the other 49 States. That is a fact.

There is no magic, no law, no government pronouncement that can change the law of nature which causes a fuel penalty from tighter standards. The challenge facing this Nation is to stop pretending that by some magic we can repeal a law of nature, and to start mov-

ing to establish a set of emissions standards that will provide the best trade-offs between clean air, fuel economy, and jobs.

Mr. Chairman, that set of standards is contained in the Dingell-Broyhill amendment, and I urge their adoption by this House.

Mr. TRAXLER. Mr. Chairman, the recent report prepared by the CIA for President Carter about our rapidly dwindling energy supplies is most disturbing. By 1985 the Soviet Union may be competing with us for Mideast oil, and world supplies will be outstripped by rising world demand long before the end of this century. The MIT study concluded that even if energy prices rise 50 percent above current levels, demand will exceed supply between 1985 and 1995.

A drop of oil will soon be more precious than diamonds.

Failure to recognize this fact—and to act upon it—could lead us into a worldwide catastrophe of immense proportions. That is why President Carter has called us to wage a war on energy waste, right now, in any effective way possible, and to use energy more efficiently.

This Congress should consider the energy impact of every single action it takes. We simply cannot afford to waste even a drop of oil.

Mr. Chairman, we can immediately make better use of energy used by automobiles if we pass the Dingell-Broyhill amendment before us. Compared to the administration's bill, we would get an average of 3 miles per gallon better fuel economy for every new automobile in this country.

That is like matching a full third of the expected daily oil production from Alaska's North Slope—and with no real investment on our parts at all.

In terms of air quality, EPA studies show that there is no significant difference between the two proposals. Considering the imminent seriousness of our national energy problem, I think this Congress must stand up, be responsible, and enact Dingell-Broyhill.

In addition to energy considerations, Mr. Chairman, this Congress should give very careful attention to the economic impacts of its actions. Right now we are recovering from the worst recession in history. Unemployment is still at a national level of 7 percent, a completely intolerable level. We must be exceedingly careful that our actions do not slow our recovery, add to inflation, or put more Americans out of work.

But an internal EPA memorandum, Mr. Chairman, estimates that the administration's bill will indeed have adverse economic impacts compared to Dingell-Broyhill.

This EPA memo was made public last week, but it was like pulling teeth to get it released. Why? Because the memo concludes that the administration's stringent emission standards will indeed add to the Nation's unemployment.

Many analysts in my own State of Michigan consider EPA's projections about job losses to be understated. Still, it should be made clear that 2 full months ago EPA's internal documents acknowledged that the impact of EPA's

proposal would cost fully 15,000 to 20,000 jobs by 1985. Publicly, of course, they were saying that there would be no adverse economic effects of their bill.

The automobile industry will not be the only one hurt by the administration's bill. Related industries like steel, rubber, glass will also be impacted. In fact, the economic health of the entire country depends to some extent upon the health of the auto industry and we simply cannot afford to put more people out of work.

A loss of a minimum of 20,000 jobs is simply not tolerable, especially when the Dingell-Broyhill proposal will result in substantially the same air quality for this country as the current bill.

Mr. Chairman, we all want clean air and both proposals will give us clean air. But the more sensible Dingell-Broyhill standards will preserve jobs and save energy, and that is why this Congress must act responsibly and enact Dingell-Broyhill.

Mr. CEDERBERG. Mr. Chairman, I rise in support of the substitute language offered by my good colleagues JOHN DINGELL and JAMES BROYHILL. The Dingell-Broyhill schedule for controlling auto emission represents the best compromise between environmental, health, energy, and economic needs.

Since the enactment of original Clean Air Act legislation, significant progress has been made in reducing pollution. We must continue to insure that the strictest and most feasible clean air, environmental and consumer protection standards for automobile pollution be enacted. The Dingell-Broyhill amendment would implement such a set of emission standards, to provide more stringent control of auto emissions. I must point out that the emission schedule in the current Dingell-Broyhill substitute is even stricter than the version which the House adopted during consideration last summer.

Although it will require stricter pollution standards for automobiles, the Dingell-Broyhill substitute is feasible in terms of energy and consumer costs. The standards imposed by the committee language would result in an unacceptable fuel penalty of about 2 billion gallons a year, or 140,000 barrels of oil per day. Such a waste of valuable petroleum is hardly consistent with a comprehensive energy conservation plan.

Besides higher fuel costs, consumers would be faced with higher initial costs, under the committee's bill standards. According to EPA estimates, new car prices would be about \$350 per car higher with the committee standards, considerably more than the cost to meet the Dingell-Broyhill standards. In addition, I think we can safely say that consumers are tired of being forced to buy expensive equipment on their car which reduces performance and increases fuel consumption. The standards under the Dingell-Broyhill schedule could be met in a much more feasible manner, with far less expense and fuel penalty.

The standards contained in the Dingell-Broyhill substitute will result in cleaner air for our Nation in a feasible way, without penalizing consumers and wasting needed energy.

Mr. KEMP. Mr. Chairman, I was a member of the House Small Business Committee and participated in the hearings in which we carefully analyzed and studied for almost a year, the probable impact of the performance warranty on the Clean Air Act of 1970. It was our committee's unanimous conclusion, all 19 members agreed, that the performance warranty of the Clean Air Act when implemented would, and I quote from the committee report, be "anticompetitive, anticonsumer, and unnecessary to the maintenance of clean air." We did not come to this conclusion lightly, but after a great deal of testimony and long arduous sessions in discussion and analysis of the problem.

The Dingell-Broyhill amendment which I support, responds to our study by reducing the performance warranty of the Clean Air Act to 18 months, 18,000 miles permanently. This is the only solution found by our committee which would correct the problems we found inherent in the warranty. I am opposed to the committee bill and its proposals to only reduce that warranty for 3 years and mandating yet another study of the issue, which I feel confident would end up as did the Small Business Committee study. The committee bill would only reduce the warranty for 3 years and then it would automatically revert to 5 years, 50,000 miles unless Congress acted to the contrary.

I find it hard to believe that Congress would take up this issue again in 3 years and on top of that I would feel that such a move would be a waste of our time as the issue has been very carefully studied by the House Small Business Committee and as a matter of fact, by the Antitrust Division of the Justice Department. I believe the facts are clear and we should act upon those facts. That is, reduce, as is done in the Dingell-Broyhill amendment, the performance warranty of the Clean Air Act to 18 months, 18,000 miles permanently and solve the problem.

The committee bill only sweeps the problem under the rug for a short time span and then would force the small business independent garage and replacement parts industry to attempt to get congressional attention again to help solve their problems. I believe that is unnecessarily burdensome and we should act upon the carefully arrived at conclusions of the Small Business Committee and Justice Department and I am therefore, strongly supportive and would urge my fellow members to support the permanent warranty reduction contained in the Dingell-Broyhill amendment, which would give permanent relief to the over 400,000 small business independent garages in this Nation which currently do 75 to 80 percent of the service work done on vehicles. We must not let this small business industry be destroyed through an ill-conceived federally mandated warranty which would force the consumer to return his car to the franchised dealer for all parts and service for 5 years or 50,000 miles.

I appreciate the careful analysis that went into the development of the language in the Dingell-Broyhill amendment and I would urge my fellow mem-

bers to support it as the only equitable solution to the anticonsumer and anti-competitive problems of the performance warranty of the Clean Air Act of 1970.

Mr. McKINNEY. Mr. Chairman, again Congress is considering amendments to the Clean Air Act of 1970, and again I come here in support of the Interstate and Foreign Commerce Committee bill, H.R. 6161. I only hope I will not have to repeat this performance next year. As I said last year, the committee-endorsed provisions of the Clean Air Act amendments offer the most reasonable means to maintain and improve air quality while considering the demands of energy conservation and economic recovery. One year and a barrage of information later, I have not altered my position.

The Clean Air Act was passed in 1970 with one basic purpose—the protection of the public health. Both stationary source and automobile emissions reduction goals were established to minimize the demonstrated health risks posed by the presence of certain chemical and particulate pollutants in the air. However, the act was an ambitious product of a more energy abundant and economically vibrant period. Within the context of 1977 energy and economic realities, new strategies must be chosen to achieve our Clean Air Act goals. Toward meeting these new realities, H.R. 6161 chooses new techniques but maintains the essential goals of the 1970 Act—clean air.

The aim of this bill is to extend compliance dates to allow for minimal economic disruption or energy waste, and to replace Federal controls with State decisionmaking in many important areas. Sections 103, 106, 112, 115, and 202 give the States the proper authority to grant compliance extensions for various reasons including conversion from oil to coal as a power source, testing new emission control technology, continuing growth in still dirty areas and infeasibility of transportation control techniques. Further, the bill will strictly limit the availability of the controversial indirect source review authority which some view as part of the EPA "no-growth" policy in limiting shopping center and parking facility construction. Indirect source review is a secondary pollution control technique and the committee bill insures that it remains just that.

In clarifying the court-endorsed policy that the Clean Air Act contains an inherent authority to prevent significant deterioration of already clean air, the committee bill proposes a three-tier system of classification for cleaner than required areas. Only 2 percent of certain Federal wilderness lands would automatically be termed class I with strict limits on development which increases existing pollution levels. All remaining Federal lands and all State areas would then be classified by the States either class II or class III. These categories permit areas to be "dirtied up" by 25 and 50 percent, respectively, of the lowest ambient air quality standard for given pollutants. Only the States may establish and alter these classifications.

The advantages of a workable policy to promote the prevention of significant

deterioration of air quality are many. First, this section of the bill would provide congressional guidance as to how the policy of significant deterioration should be defined and implemented, replacing harsh EPA regulations and "no-growth" court orders. It would also permit long-range growth planning until the class II and class III increments were used up. In my view, however, the most compelling of these benefits is in reduced risk to the public health. Research since the ambient air quality standards were set has shown that even these levels may be too high to eliminate serious health dangers. The lack of a prevention policy may result in the nationwide attainment of air quality levels from which we may have to retreat still further. With this in mind, I would rather maintain an effort to permit planned growth while protecting the purity of already clean, healthy areas.

In response to the realization that industrialized areas are not going to meet the national air quality standards by mid-1977, provision has been made to allow reasonable economic growth to continue in an area while making reasonable further progress to assure attainment of the standards by a fixed date. States exceeding these standards may continue to follow EPA's trade-off policy—allowing new sources if there results a net reduction in pollution—or revise their implementation plans. The new plans must identify all nonattainment areas for each pollutant, and assure attainment no later than 1982. In the case of the photochemical oxidant standards, which are the most difficult to attain, areas could have up to another 5 years to comply. During the interim, new sources may locate in these areas, and existing sources expand, only if the State is making reasonable further progress to assure attainment of the standards by the deadlines. Reasonable further progress is defined to mean equal reductions in emissions every 2 years, taking into account uncontrolled sources, new source growth and expansions of existing sources.

It is argued that these provisions are so tough that they can not be met, resulting in economic stagnation in the Nation's industrialized areas. Seven years have already been given to meet the deadline, however, and this extension reflects these concerns while striking an equitable balance between public health concerns and industrial development. Any broader conditions on expansion in nonattainment areas would require more stringent automobile emission standards, to offset the increase in industrial pollution.

H.R. 6161 also provides for annual motor vehicle inspection in the 29 areas where transportation control measures apply. States must adopt a vehicle inspection system at least as stringent as New Jersey's, or must implement some system to attain and maintain primary air standards. This provision reflects the fact that the majority of people, left to their own devices, have little regard for their car's emissions. Only through some form of mandatory inspection will cars continue, after leaving the factory, to meet the necessary standards. While I support this provision, I would suggest

that inspections not be limited only to the transportation control areas. A wider use of this important technique will successfully help reduce automobile pollution.

In regard to the length of warranties on emission control devices, under current law automobile manufacturers will have to guarantee the performance of control devices for 5 years/50,000 miles. This strong warranty provision was included in the 1970 act to encourage the design and production of vehicles capable of meeting emission standards in use. A longer warranty would also attract both State governments and consumers toward in-use testing, since consumers whose vehicles fail the test would have recourse against the manufacturer.

However, this long warranty period could have anticompetitive impacts on so-called aftermarket parts manufacturers and the independent service industry who would be cut out of the repair market for the length of the warranty. In recognition of this, the committee bill would reduce the warranty to 18 months/18,000 miles for a three year period. Then the longer warranty would be restored unless an FTC study found it was in fact anticompetitive. I find this a reasonable approach, considering the need to reconcile these apparently conflicting interests.

As I mentioned previously, I think the committee is to be commended for their approach to this legislation. In the area of auto emission controls, they have admittedly taken a middle of the road position. I think this is a responsible approach in that it strikes a workable balance between the legitimate needs of the auto industry for time to develop clean, fuel efficient technology, and the equally compelling need to reduce the concentrated presence of these substances, particularly in our urban areas. After all, there is no scientific or technological reason for the emission standards in this bill to cause fuel economy losses. There are technological means to accomplish both goals economically.

For these reasons, I cannot support the Dingell amendment. Passage of this proposal would mean that once again the auto industry could walk away from Washington satisfied with having won another legislative victory at the expense of the American people. The Dingell proposal would freeze present HC and CO emission controls through 1979 and never permit the NO<sub>x</sub> emissions level to go below 1 NO<sub>x</sub>, even if NO<sub>x</sub> emissions were proven to be a major cause of urban cancer. While promising cheaper, thriftier cars and little overall degradation of ambient air quality, such an amendment would exact costs far beyond those alleged savings. EPA studies show that while many areas may still be able to achieve the Clean Air Act's primary air quality standards in spite of an emissions freeze, there will be 46 percent more occasions when urban air quality in 26 major cities will exceed healthy levels. These more frequent pollution alerts threaten the health and property of millions and need not be tolerated in the name of auto efficiency improvements which I feel could be achieved using pres-

ent engine technology and emission controls.

Over the years, it has become obvious that clean, healthy air cannot be achieved through the control of individual pollutants, but by reducing the frequency of the many possible chemical combinations and reactions which occur in the atmosphere. In that nitrogen oxides react with various other pollutants to produce smog and a variety of hazardous—even potentially carcinogenic—substances, I do not favor an indefinite suspension of the ambient air quality standards. Through the formulation of implementation plans, the States have counted on the auto emission reduction schedule in choosing various stationary source control techniques. Should we now abandon the NO<sub>x</sub> standards for cars, many States would have to revise the pollution controls now required for powerplants and major industrial facilities to pick up the slack. Since the auto industry has had since 1970 to develop the technology to control this pollutant and has shown a consistent reluctance to do so, I do not think the Dingell amendment is justified.

On the other hand, there is increasing pressure to support the amendment offered by Mr. WAXMAN and Mr. MAGUIRE to force the auto industry into earlier compliance with stricter auto emission standards. While I will not hesitate to condemn the automakers for failing to act in good faith, I think the point must be made that the committee bill and the Waxman-Maguire amendment share the same final goal. However, the committee is simply more realistic in advocating an extended graduated scale in which to meet these goals. The committee bill firmly clamps down on the open ended "dates certain" which we have all grown familiar with during the past few years.

It makes absolutely no sense to kid ourselves into thinking that the "big three" are going to accelerate development of auto emission controls when we are all too familiar with their past records. Once and for all, we are finally saying, "this is the last time we are going to trust you" in language which the automakers can understand, with provisions which the automakers can cope with, and in standards which the automakers can and must meet if we are ever going to realize our goals of cleaner air. Overall, I am hopeful that during continued discussion of the amendments to the clean air bill, my colleagues will keep in mind the fact that while attractive alternatives might be offered, the committee bill offers the most responsible solutions to the problems we face today.

Mr. HANSEN. Mr. Chairman, since fuel economy is a major topic not only as it relates to the auto emission standards we are discussing today, but also to the entire energy policy, I suggest that we examine this critical factor as it relates to the issue of high altitude certification of automobiles. The fact is that fuel economy is significantly impaired as a result of the high altitude requirements. This is determined in two ways.

First, a high altitude car gets lower fuel economy than the corresponding nonhigh altitude car. At least one manufacturer has sent a correspondence

to all high altitude dealers stating that the EPA MPG rating does not apply to high altitude vehicles, and that it should be altered to reflect the lower fuel economy. The decrease in fuel economy which is experienced as a result of the addition of high altitude emission control equipment is in the vicinity of 5 to 7 percent.

Second, due to limited availability of engine-transmission configurations, many of the most fuel efficient combinations are not offered for sale at high altitude. Standard transmissions on small cars and six-cylinder engines on full-size cars are often not certified by the manufacturers for high altitude use. This means that those customers seeking the most fuel efficient vehicles are precluded from purchasing these vehicles at high altitude.

The challenge of energy conservation has been called by the President the "moral equivalent of war." In the face of this tremendous challenge, can we afford to waste fuel on high altitude vehicles which can offer no corresponding gain in terms of air cleanup? I suggest that continuing to enforce this regulation would be foolhardy in light of the evidence which has been presented here today.

Mr. McKAY. Mr. Chairman, I rise to speak in support of the Staggers high altitude amendment. Consumers and automobile dealers in my district have been adversely and, I believe, unfairly affected by EPA regulations which went into effect last year with respect to light duty motor vehicles used in high altitude areas of the country. The regulations call for separate emission certification for vehicles which are sold for principal use in some 166 designated high altitude counties nationwide. All 18 counties I represent are affected.

The EPA regulations have had the effect of reducing the availability of many popular models of automobiles to Utah buyers. Items such as standard transmission and six-cylinder engines are often not certified by the manufacturers due to excessive costs for sale in high altitude areas.

I believe the EPA regulations are unfair and discriminate against persons who live in high altitude areas. The EPA regulations in no way restrict automobiles bought outside Utah to come into the State. Tourists or Utahans who may purchase their car in a low altitude area are allowed to bring their cars into the State and travel without restriction. The impact is inequitable and imposes a real hardship to automobile dealers in my district.

For these reasons, I strongly support the Staggers amendment to the clean air bill which would suspend the existing high altitude regulations and establish criteria to be considered by EPA prior to establishing any future regulations. I believe this approach will result in a more equitable solution to the very real problem of air quality deterioration from auto emissions. I strongly support the amendment of the gentleman from West Virginia and urge its adoption.

The CHAIRMAN. The question is on the amendment, as amended, offered by the gentleman from North Carolina (Mr. PREYER), as a substitute for the amend-

ment, as amended, offered by the gentleman from Michigan (Mr. DINGELL).

The question was taken; and the Chairman announced that the ayes appeared to have it.

## RECORDED VOTE

Mr. DINGELL. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 190, noes 202, not voting 41, as follows:

[Roll No. 289]

## AYES—190

## NOT VOTING—39

|                 |          |               |
|-----------------|----------|---------------|
| Abdnor          | Florio   | Roe           |
| Badham          | Forsythe | Runnels       |
| Beilenson       | Ginn     | Sawyer        |
| Brooks          | Glickman | Skubitz       |
| Burton, Phillip | Hamilton | Spence        |
| Caputo          | Holland  | Stangeland    |
| Clawson, Del    | Latta    | Steers        |
| Cornwell        | McEwen   | Teague        |
| Cunningham      | Mathis   | Watkins       |
| Dellums         | Metcalfe | Weaver        |
| Dent            | Poage    | Whitehurst    |
| Evans, Del.     | Pressler | Wiggins       |
| Findley         | Price    | Young, Alaska |

The Clerk announced the following pairs:

On this vote:

Mr. Hamilton for, with Mr. Florio against.  
Mr. Teague for, with Mr. Weaver against.  
Mr. Cornwell for, with Mr. Beilenson against.

Mr. Ginn for, with Mr. Dellums against.

So the amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

Mr. ROUSSELOT. Mr. Chairman, I rise in opposition to H.R. 6161, the Clean Air Act Amendments of 1977. This bill, as reported by the House Committee on Interstate and Foreign Commerce, is a prime example of the kind of "no growth" position which is being foisted on us by the very same advocates who complain about environmental quality and turn around vociferating against high unemployment. They do not realize that the kind of unrealistic standards which they are intent upon imposing through legislation such as the bill before us now are the very standards that will have the effect of stunting growth and eliminating jobs for the unemployed.

Despite hours of testimony cautioning against moving in a hasty, imprudent fashion, the Interstate and Foreign Commerce Committee has produced a bill that would tend to aggravate many of the economic and energy shortage difficulties that are facing our country today, all in the name of unrealistic and virtually impossible-to-attain air quality standards. Specially, the problems of the bill can be broken down into four main areas:

First. Nonattainment: Present law absolutely prohibits industrial growth in areas where the national air quality standards are not being met. There have been serious questions recently regarding the validity of the scientific data base used to set the standards. Rather than extending these provisions, as H.R. 6161

does, the law should be made flexible to allow States to decide whether a new industry should be allowed to locate in a given area and grant variances where appropriate.

Adherence to the nonattainment provisions of the current law has already cost the economy millions of dollars and thousands of jobs. The following is a sample of the kind of development that has been stopped by EPA's strict enforcement of the ban on new construction in nonattainment areas:

A \$500 million low-sulfur crude oil refinery in Hampton Roads, Virginia.

A General Motors plant—along with 5,000 new jobs—in Oklahoma City, Oklahoma.

A \$500 million Dow Chemical plant in San Jose, California.

A \$1 billion ARCO facility in the same locality.

The much-sought-after Volkswagen assembly plant in Pennsylvania.

The multi-billion dollar Seadock facility off Houston Texas, to unload super-tankers away from shoreline areas.

A power plant in Jacksonville, Florida, which would have provided at least \$125 million worth of construction jobs alone.

Second. Nondegradation: We are told that nondegradation provisions are necessary to protect the "pristine" quality of our national parks. But it goes much farther than that. The Clean Air Act Amendments of 1977 would set up a Federal land use control system, to control major industrial development in areas where the air quality is already much better than health and welfare standards require.

Third. "Best Available Control Technology": H.R. 6161 contains separate provisions which would require the most effective control technology possible, with little regard for cost or benefit, to be installed on any new or modified industrial facility which emits a pollutant. Needless to say, such a requirement will cost industry billions—billions that could otherwise be spent on productive, economic expansion, and job creation. The authors of this legislation seem to forget that there are many alternative control methods—such as tall stacks, use of clean fuels; that is, low sulfur or oil, intermittent controls—which will do the same job at far less cost.

Fourth. Noncompliance penalties: The Clean Air Act amendments set unreasonably stiff penalties for industrial plants which for any reason do not meet the June 30, 1977, emission control deadline. It is ironic to note that the committee insisted upon imposing these penalties even though testimony was received that such fines might well result in even dirtier air since companies would first have to pay the fine, then try to find capital to buy the required control equipment, thereby delaying clean up of the facility.

Fifth. Auto air emission: Perhaps the most controversial provisions of the Clean Air Act deal with the auto air emission section. In my view, the standards set in this section are far too stringent and unrealistic. Furthermore, they have serious long-range effects on significant national priorities such as energy production, conservation, and employment.

The 1978 model auto emission standards, by everyone's best estimate—including EPA—cannot be met by the auto manufacturers. Relief is needed quickly if auto companies hope to deliver 1978 models and they will be forced to shut down unless an extension is provided. Since one out of every six employees in the private sector is dependent upon the auto industry, the impacts of such a shutdown would, of course, be enormous.

In response to the problems presented by the auto emission section, I will support the Dingell-Broyhill amendment. In my opinion, it offers the most balanced and realistic approach to related environmental energy and economic concerns. The standards proposed in the Dingell-Broyhill amendment are technologically feasible and they acknowledge the time needed to perfect technology to meet both emission controls and mandated fuel economy standards, while at the same time protecting public health and welfare.

In summary, Mr. Chairman, I think it is necessary and important to point out that central to this whole debate are the original 1970 standards that were set in 90 days by EPA bureaucrats. The information available then and the scientific data available now is vastly different. The well-known CHESSE studies that were originally used to support the 1970 EPA standards were so poorly executed and interpreted that according to one foreign expert "they are largely discounted outside of the United States." Rather than imposing strict standards now on the basis of much disputed information and evidence, it seems obvious to me that it would be far more prudent to defer judgment for the moment until a more reasoned and informed evaluation can be made of all the relevant statistics. I think we would be far better advised, particularly in light of the President's recently announced energy program, to carefully consider the impact of the standards we are being asked to rule on today on energy supply, conservation, and the economy—factors that to date have not been properly considered.

Accordingly, Mr. Chairman, I would urge my colleagues to defer consideration of these important matters until a more thorough analysis of all important information can be made and vote against H.R. 6161.

The CHAIRMAN. The Clerk will read title III.

The Clerk read as follows:

#### TITLE III—MISCELLANEOUS AMENDMENTS

##### REDESIGNATION OF AIR QUALITY CONTROL REGIONS

SEC. 301. Section 107 of the Clean Air Act (relating to air quality control regions) is amended by adding at the end thereof the following new subsection:

"(d) (1) Except as otherwise provided in paragraph (2), the Governor of each State is authorized, with the approval of the Administrator, to redesignate from time to time the air quality control regions within such State.

"(2) In the case of an air quality control region in a State, or part of such region, which the Administrator finds may significantly affect air pollution concentrations in

another State, the Governor of the State in which such region, or part of a region, is located may redesignate from time to time the boundaries of so much of such air quality control region as is located within such State only with the approval of the Administrator and with the consent of all Governors of all States which the Administrator determines may be significantly affected.

"(3) No compliance date extension granted under section 119 (relating to coal conversion) shall cease to be effective by reason of the regional limitation provided in section 119(c) (2) (D) if the violation of such limitation is due solely to a redesignation of a region under this subsection.

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 301 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

Mr. DINGELL. Mr. Chairman, reserving the right to object, would the gentleman mind asking that all of title III be read?

Mr. ROGERS. If the gentleman will yield, I think we had agreed, if the gentleman does not mind, to go section by section. There are a few amendments here. I do not think we have any problems with the amendments.

Mr. DINGELL. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there amendments to section 301?

Mr. SCHEUER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, for many months, the New York City delegation has been wrestling with the problem of the bridge toll requirement contained in the New York State Environmental Protection Agency implementation plan for New York City.

In 1973, the State of New York submitted an implementation plan to the U.S. Environmental Protection Agency to reach and maintain the national primary and secondary ambient air quality standards set forth in the Clean Air Act of 1970.

The New York plan was deemed inadequate by the U.S. Environmental Protection Agency and was disapproved. As a result of that disapproval, New York agreed to reduce traffic in the downtown area, and one of the approaches to reduce traffic was a bridge toll requirement. An additional purpose of this requirement for bridge tolls was to provide funds for mass transit and to provide an alternative which would both reduce traffic and improve the quality of air in Manhattan.

The plan containing the toll measure was subsequently approved by the Environmental Protection Agency. New York did not take steps to implement the bridge toll measure. As a result, the State was sued by an environmental group known as Friend of Earth. In 1976, the U.S. Court of Appeals affirmed the district court order requiring the State to carry out this bridge toll requirement.

Thus far, the bridge toll requirement

has not been carried out. There is substantial opposition to tolling bridges from the citizens of New York because, among other things, of its questionable impact on air quality—backups of 20-minute duration extending more than a mile from the toll plazas may actually increase air pollution; vehicle miles traveled will decrease no more than 3 percent and bridge and tunnel traffic will decrease by less than 5 percent, the lack of an alternative method for transportation; and finally, the time to construct toll plazas and the cost involved which is estimated at a minimum of 3½ years at \$65 million respectively. For all of these reasons and the fact that there is no space to install bridge toll booths and collector systems, New York does not wish to implement this plan.

Mr. Speaker, the delegation has worked in close cooperation on this issue, and we are grateful to Chairman ROGERS and his staff for their patience and helpfulness in developing an acceptable compromise which would save us from the necessity of going through the expensive, destructive, and counterproductive exercise of proceeding with the tolling of the Harlem and East River bridges while at the same time preserving intact the benefits flowing from this legislation to the 20 million residents of the New York City metropolitan area.

The amendment that will be offered on the House floor will solve this problem. It will allow the Governor of the State of New York to request of the Environmental Protection Agency—and will direct the Environmental Protection Agency to grant the request—that the bridge toll requirement be eliminated from New York's plan.

The effect will be that, upon the request of the Governor, the bridge toll will be removed from the State plan. When the bridge toll requirement is removed, the State will nonetheless be required to provide another measure or measures which will protect the health of its citizens. Thus, New York still remains obligated to submit a plan adequate to maintain health standards. This amendment will require measures to be taken to assist public transportation and to assure that the State will use whatever funds were reasonably available to provide an alternative to the use of the private automobile and to encourage the use of public transportation, thus reducing air pollution.

But the basic choice of the method of compliance to substitute the bridge toll requirement would be up to the State. That is the effect of the amendment. Unless this amendment is adopted, the Governor of the State will be subject to potential liability for violation of a court order which becomes effective within the next month. I am delighted that through the collective efforts of the New York delegation, most especially our colleague from Brooklyn, Representative HOLTZMAN, who will offer the amendment later today, working closely with Chairman ROGERS and his staff, we are achieving the goals of the legislation without the inordinate waste, hardships, and inconvenience which the toll plan would have occasioned.

The CHAIRMAN. Are there amendments to section 301?

Mr. TSONGAS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman. I would like to address a number of questions to the gentleman from California (Mr. WAXMAN) if I may.

Since Congress, under the Resource Conservation and Recovery Act of 1976, Public Law 94-580, mandated the construction of resource recovery systems, does section 127 contradict the intent of Congress by restricting the construction of these facilities?

Mr. WAXMAN. No. There is nothing inconsistent in these provisions.

Mr. TSONGAS. Is it the intent of section 127 to permit the States to revise implementation plans for the attainment of air quality standards in a way that will give priority to the construction of resource recovery systems?

Mr. WAXMAN. Yes. States may do this.

Mr. TSONGAS. Is it the intent of section 127 to permit the States to grant priority to resource recovery systems when allowing the construction of new sources of hydrocarbon emissions under the offset policy?

Mr. WAXMAN. Yes. That is the intent.

Mr. TSONGAS. Is it the intent of section 127 that EPA and the States consider the environmental consequences of not building resource recovery systems and try to reconcile that with the need to improve the quality of air in non-attainment areas?

Mr. WAXMAN. The gentleman is correct.

The CHAIRMAN. The Clerk will read section 302.

The Clerk read as follows:

#### CONSULTATION

SEC. 302. (a) Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"CONSULTATION WITH LOCAL GOVERNMENTS, REGIONAL AGENCIES, AND COUNCILS OF GOVERNMENT

"SEC. 125 (a) An applicable implementation plan under section 110 shall provide a satisfactory process for consultation with general purpose units of local government, regional agencies, councils of government, and any Federal land manager having authority over Federal land to which such plan applies prior to the adoption of—

"(1) any transportation controls, air quality maintenance plans or preconstruction review of direct sources of air pollution, or

"(2) any measure referred to—

"(A) in section 110(a) (2) (I) (pertaining to indirect sources), or

"(B) in section 110(a) (2) (J) pertaining to prevention of significant deterioration)

adopted more than one year after the date of enactment of the Clean Air Act Amendments of 1977 as part of such plan. No such process shall be deemed satisfactory unless it meets the requirements of regulations promulgated by the Administrator to assure adequate consultation. Such regulations shall be promulgated after notice and opportunity for public hearing and not later than nine months after the date of the enactment of this section. The Administrator may disapprove any portion of a plan relating to any measure described in the first sentence of this subsection or to the consultation process required under this subsection if he determines that such plan does not meet the requirements of this section.

"(b) For purposes of section 307 or any other provision of law relating to judicial re-

view, only a general purpose unit of local government, regional agency, council of government, or State adversely affected by action of the Administrator approving or promulgating any portion of a plan referred to in this section may petition for review of such action or may intervene in any such action on the basis of a violation of the requirements of this section.

"(c) For purposes of this section, the term 'Federal land manager' has the same meaning as when used in section 160."

(b) Section 110(c)(1) of such Act is amended by adding the following new sentence at the end thereof: "Notwithstanding the preceding sentence, any portion of a plan relating to any measure described in the first sentence of section 125(a) or the consultation process required under section 125 shall not be required to be promulgated before the date eight months after such date required for submission."

Mr. BROTHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 302 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. Are there any amendments to section 302?

There being none, the Clerk will read section 303.

Mr. BROTHILL. Mr. Chairman, I ask unanimous consent that the remainder of title III be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. WAXMAN. Mr. Chairman, I reserve the right to object.

Mr. BROTHILL. Mr. Chairman, if the gentleman will yield, it is my understanding there are only two amendments at the desk, and they are both noncontroversial.

Mr. WAXMAN. Mr. Chairman, I am compelled to object to the gentleman's request, because the chairman of the subcommittee, who is not here right at the moment, has agreed to go through the title section by section, rather than to consider the complete title as read.

Mr. Chairman, unless the gentleman withholds his request, I must object.

The CHAIRMAN. Objection is heard.

The Clerk will read section 303.

The Clerk read as follows:

#### DELEGATION TO LOCAL GOVERNMENT UNDER FEDERAL PLAN

SEC. 303. Section 110(c) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(3) Upon application of the chief executive officer of any general purpose unit of local government, if the Administrator determines that such unit has adequate authority under State or local law, the Administrator may delegate to such unit the responsibility to implement and enforce within the jurisdiction of such unit any part of a plan promulgated under this subsection. Nothing in this paragraph shall prevent the Administrator from implementing or enforcing any applicable provision of a plan promulgated under this subsection."

Mr. BROTHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 303 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. WAXMAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the committee bill does not alter existing State-Indian relationships under the Clean Air Act. To the extent that States already have assumed jurisdiction over Indian lands under other Federal legislation, they may redesignate them in the same manner as other lands. Neither existing EPA regulations under the Clean Air Act of 1970, or this bill increase or decrease any State's authority over Indian lands. That would have to be accomplished by other, more explicit legislation. So the committee did not intend to alter either existing Indian-State relationships or existing EPA regulations under this section or under section 108 of the bill with respect to redesignation of Indian lands.

The CHAIRMAN. Are there further amendments to section 303?

There being none, the Clerk will read section 304.

The Clerk read as follows:

#### EMPLOYMENT EFFECTS

SEC. 304. The Clean Air Act is further amended by adding the following new section at the end thereof:

#### "EMPLOYMENT EFFECTS

"SEC. 319. (a) The Administrator shall conduct continuing evaluations of potential loss or shifts of employment which may result from the issuance of any requirements under this Act, including, where appropriate, investigating threatened plant closures or reductions in employment allegedly resulting from such requirements.

"(b) Any employee, or any representative of such employee, who is discharged or laid off, threatened with discharge or layoff, or whose employment is otherwise adversely affected or threatened to be adversely affected because of the alleged results of any requirement imposed or proposed to be imposed under this Act, including any requirement applicable to Federal facilities and any requirement imposed by a State or political subdivision thereof, may request the Administrator to conduct a full investigation of the matter. Any such request shall be reduced to writing, shall set forth with reasonable particularity the grounds for the request, and shall be signed by the employee, or representative of such employee, making the request. The Administrator shall thereupon investigate the matter and, at the request of any party, shall hold public hearings on not less than five days' notice. At such hearings, the Administrator shall require the parties, including the employer involved, to present information relating to the actual or potential effect of such requirements on employment and the detailed reasons or justification therefor. If the Administrator determines that there are no reasonable grounds for conducting a public hearing he shall notify (in writing) the party requesting such hearing of such a determination and the reasons therefor. If the Administrator does convene such a hearing, the hearing shall be on the record. Upon receiving the report of such investigation, the Administrator shall make findings of fact as to the effect of such requirements on employment and on the alleged actual or potential discharge, layoff, or other adverse effect on employment, and shall make such recommendations as he deems appropriate. Such report, findings, and recommendations shall be available to the public.

"(c) In connection with any investigation or public hearing conducted under subsec-

tion (b) of this section or as authorized in section 121(d)(1)(D), the Administrator may issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and he may administer oaths. Except for emission data, upon a showing satisfactory to the Administrator by such owner or operator that such papers, books, documents, or information or particular part thereof, if made public, would divulge trade secrets or secret processes of such owner, or operator, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such paper, book, document, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act, or when relevant in any proceeding under this Act. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In cases of contumacy or refusal to obey a subpoena served upon any person under this subparagraph, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and after notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Administrator, to appear and produce papers, books, and documents before the Administrator, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

"(d) Nothing in this section shall be construed to require or authorize the Administrator, the States, or political subdivisions thereof, to modify or withdraw any requirement imposed or proposed to be imposed under this Act."

Mr. BROYHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 304 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. Are there any amendments to section 304?

There being none, the Clerk will read section 305.

The Clerk read as follows:

#### ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

SEC. 305. (a) Section 307 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(d)(1) This subsection applies to—

"(A) the promulgation or revision of any national ambient air quality standard under section 109,

"(B) the approving or disapproving of any State implementation plan (or any revision thereof) under section 110 or 111(d),

"(C) the promulgation or revision of an implementation plan by the Administrator under section 110(c),

"(D) the promulgation or revision of any standard of performance under section 111 or emission standard under section 12,

"(E) the promulgation or revision of any regulation pertaining to any fuel or fuel additive under section 211,

"(F) the promulgation or revision of any aircraft emission standard under section 231,

"(G) promulgation or revision of regulations pertaining to compliance date extensions for coal conversion under section 119 (but not including orders granting or denying any compliance date extensions),

"(H) promulgation or revision of regulations pertaining to delayed compliance orders for stationary sources under section 121

(but not including orders granting or denying any delayed compliance orders),

"(I) promulgation or revision of regulations authorizing compliance date extensions for transportation control measures under section 123 (but not including orders granting or denying such extensions),

"(J) promulgation or revision of regulations requiring indirect source review programs under section 124,

"(K) promulgation or revision of regulations under subtitle B of title I (relating to stratosphere and ozone protection),

"(L) promulgation or revision of regulations under subtitle C of title I (relating to prevention of significant deterioration of air quality and protection of visibility),

"(M) promulgation or revision of regulations under section 202 and test procedures for new motor vehicles or engines under section 206, and the revision of a standard under section 202(a)(3)(B),

"(N) the approval or disapproval of any application for a State program grant and any deobligation of grant funds under section 105,

"(O) promulgation or revision of regulations for noncompliance penalties under section 122,

"(P) promulgation or revision of any regulations promulgated under section 207 (relating to warranties and compliance by vehicles in actual use),

"(Q) action of the Administrator under section 126 (relating to interstate pollution abatement), and

"(R) such other actions as the Administrator may determine.

The provisions of section 553 through 557 and section 706 of title 5 of the United States Code shall not, except as expressly provided in this subsection, apply to actions to which this subsection applies. This subsection shall not apply in the case of any rule or circumstance referred to in subparagraphs (A) or (B) of subsection 553(b) of title 5 of the United States Code.

"(2) Not later than the date of proposal of any action to which this subsection applies, the Administrator shall establish a rulemaking docket for such action (hereinafter in this subsection referred to as a 'rule'). Whenever a rule applies only within a particular State, a second (identical) docket shall be simultaneously established in the appropriate regional office of the Environmental Protection Agency.

"(3) In the case of any rule to which this subsection applies, notice of proposed rulemaking shall be published in the Federal Register, as provided under section 553(b) of title 5, United States Code, shall be accompanied by a statement of its basis and purpose and shall specify the period available for public comment (hereinafter referred to as the 'comment period'). The notice of proposed rulemaking shall also state the docket number, the location or locations of the docket, and the times it will be open to public inspection. The statement of basis and purpose shall include a summary of—

"(A) the factual data on which the proposed rule is based;

"(B) the methodology used in obtaining the data and in analyzing the data; and

"(C) the major legal interpretations, policy considerations, and evaluations of competing risks underlying the proposed rule.

The statement shall also set forth or summarize and provide a reference to any pertinent findings, recommendations, and comments by the Scientific Review Committee established under section 109(d) and the National Academy of Sciences, and, if the proposal differs in any important respect from any of these recommendations, an explanation of the reasons for such differences. All data, information, and documents referred to in this paragraph on which the proposed rule relies shall be included in the docket on the date of publication of the proposed rule.

"(4) (A) The rulemaking docket required

under paragraph (2) shall be open for inspection by the public at reasonable times specified in the notice of proposed rulemaking. Any person may copy documents contained in the docket. The Administrator shall provide copying facilities which may be used at the expense of the person seeking copies, but the Administrator may waive or reduce such expenses in such instances as the public interest requires. Any person may request copies by mail if the person pays the expenses, including personnel costs to do the copying.

"(B)(1) Promptly upon receipt by the agency, all written comments and documentary information on the proposed rule received from any person for inclusion in the docket during the comment period shall be placed in the docket. The transcript of public hearings, if any, on the proposed rule shall also be included in the docket promptly upon receipt from the person who transcribed such hearings. All documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rule-making shall be placed in the docket as soon as possible after their availability.

"(1) The drafts of proposed rules submitted by the Administrator to the Office of Management and Budget for any interagency review process prior to proposal of any such rule, all documents accompanying such drafts, and all written comments thereon by other agencies and all written responses to such written comments by the Administrator shall be placed in the docket no later than the date of proposal of the rule. The drafts of the final rule submitted for such review process prior to promulgation and all such written comments thereon, all documents accompanying such drafts, and written responses thereto shall be placed in the docket no later than the date of promulgation.

"(5)(A) In promulgating a rule to which this subsection applies (1) the Administrator shall allow any person to submit written comments, data, or documentary information; (2) the Administrator shall give interested persons an opportunity for the oral presentation of data, views, or arguments, in addition to an opportunity to make written submissions; (3) a transcript shall be kept of any oral presentation; and (4) during any such oral presentation, the Administrator shall include an opportunity for cross-examinations as provided in subparagraph (B).

"(B)(1) During any such oral presentation, the Administrator shall include an opportunity for cross-examination on any matter shown to be a disputed issue of material fact to such extent and in such manner as the Administrator considers necessary and appropriate in view of the nature of the issues involved, the number of participants and the nature of their interests, and any need for expedition, including that for meeting any statutory deadline for promulgation of the rule involved.

"(2) If only a single interested person seeks the opportunity for cross-examination or if the Administrator determines that all persons in a class who seek to avail themselves of such an opportunity share an identity of interest, the Administrator shall, upon the making of such a showing, afford such single interested person or representative of such class (as designated by the participants of such class) an opportunity to conduct cross-examination with respect to any such issue to the same extent that cross-examination is permitted under section 556 of title 5, United States Code, taking into account the need for expedition as provided in (1) above.

"(3) If all persons and classes of persons seeking to avail themselves of an opportunity to engage in cross-examination cannot agree upon one or more classes which, in

the discretion of the Administrator, reasonably afford representation of various interests and classes of persons potentially affected by the rule, the Administrator may deny cross-examination.

"(C) Any determination respecting the procedure provided for in subparagraph (A) or (B) may be held grounds for invalidating the Administrator's action only if such determination is arbitrary or capricious.

"(6)(A) The promulgated rule shall be accompanied by (i) a statement of basis and purpose like that referred to in paragraph (3) with respect to a proposed rule and (ii) an explanation of the reasons for any major changes in the promulgated rule from the proposed rule.

"(B) The promulgated rule shall also be accompanied by a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.

"(C) The promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.

"(7)(A) The record for judicial review shall consist exclusively of the material referred to in paragraph (3), clause (1) of paragraph (4)(B), and subparagraphs (A) and (B) of paragraph (6).

"(B) Only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment (including any public hearing) may be raised during judicial review. If the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within such time or if the grounds for such objection arose after the period for public comment and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed. If the Administrator refuses to convene such a proceeding, such person may seek review of such refusal in the United States court of appeals for the appropriate circuit. Such reconsideration shall not postpone the effectiveness of the rule. The effectiveness of the rule may be stayed during such reconsideration, however, by the Administrator or the court for a period not to exceed three months.

"(8) The sole forum for challenging procedural determinations made by the Administrator under this subsection shall be in the United States court of appeals for the appropriate circuit (as provided in subsection (b)) at the time of the substantive review of the rule. No interlocutory appeals shall be permitted with respect to such procedural determinations. In receiving alleged procedural errors, the court may invalidate the rule only if the errors were so serious and related to matters of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.

"(9) In the case of review of any action of the Administrator to which this subsection applies, such action shall be affirmed by the court unless the court finds that it is not supported by substantial evidence in the rulemaking record (as defined in paragraph (7)(A)) taken as a whole. In addition, the court may reverse any such action found to be—

"(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law;

"(B) contrary to constitutional right, power, privilege, or immunity;

"(C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; or

"(D) without observance of procedure required by law.

"(10) Each statutory deadline for promulgation of rules to which this subsection applies which requires promulgation less than six months after date of proposal may be extended to not more than six months after date of proposal by the Administrator upon a determination that such extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of this subsection.

"(11) The requirements of this subsection shall take effect with respect to any rule the proposal of which occurs after date of enactment of the Clean Air Act Amendments of 1977."

(b) Section 105 of such Act is amended by adding the following new subsection at the end thereof:

"(e) No application by a State for a grant under this section may be disapproved by the Administrator without prior notice and opportunity for a public hearing in the affected State, and no commitment or obligation of any funds under any such grant may be revoked or reduced without prior notice and opportunity for a public hearing in the affected State (or in one of the affected States if more than one State is affected)."

(c)(1) The first sentence of section 307(b)(1) of such Act is amended by striking out "or" after "211," and by inserting after "231" the following: ", any other nationally applicable regulations promulgated, or final action taken, by the Administrator under this Act".

(2) The second sentence of section 307(b)(1) of such Act is amended by inserting after "thereunder," the following: "or any other final action of the Administrator under this Act which is locally or regionally applicable".

(3) The last sentence of section 307(b)(1) of such Act is amended to read as follows: "Any petition for review under this subsection shall be filed within sixty days from the date notice of such promulgation, approval, or action appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review under this subsection shall be filed within sixty days after such grounds arise. No determination of the Administrator under section 122 shall be reversed by the court unless such determination is unsupported by substantial evidence on the record."

(4) Section 307(b)(1) of such Act is further amended by inserting the following after the second sentence thereof: "Notwithstanding the preceding sentence a petition for review of any action referred to in such sentence may be filed only in the United States Court of Appeals for the District of Columbia if such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination."

(d)(1) Clause (iii) of section 114(a) of such Act relating to inspection, monitoring, and entry, is amended by striking out "section 119 or 303" and inserting in lieu thereof the following: "any provision of this Act (except with respect to a manufacturer of motor vehicles or motor vehicle engines)".

(2) Section 114(a)(1) of such Act is amended by striking out "the owner or operator of any emission source" and inserting in lieu thereof "any person subject to any requirement of this Act (other than a manufacturer subject to the provisions of sections 206(c) or 208)".

(3) Section 114(a)(2)(A) of such Act is amended by striking out "in which an emission source is located" and by inserting in lieu thereof "of such person".

(4) Section 114(a)(2)(B) of such Act is amended by striking out "the owner or op-

erator of such source" and by inserting in lieu thereof "such person".

(e) (1) Section 301 of such Act is amended by inserting "(1)" after "(a)" and by inserting a new paragraph (2) to read:

"(2) Not later than one year after the date of enactment of this paragraph, the Administrator shall promulgate regulations establishing general applicable procedures and policies for regional officers and employees (including the Regional Administrator) to follow in carrying out a delegation under paragraph (1), if any. Such regulations shall be designed—

"(A) to assure fairness and uniformity in the criteria, procedures, and policies applied by the various regions in implementing and enforcing the Act;

"(B) to assure at least an adequate quality audit of each State's performance and adherence to the requirements of this Act in implementing and enforcing the Act, particularly in the review of new sources and in enforcement of the Act; and

"(C) to provide a mechanism for identifying and standardizing inconsistent or varying criteria, procedures, and policies being employed by such officers and employees in implementing and enforcing the Act."

(2) Section 301(a)(1) of such Act is amended by adding the following new sentence at the end thereof: "No legal interpretation of any provision of this Act or of any regulation thereunder by any officer or employee of the Environmental Protection Agency shall have any force and effect unless approved by the Administrator or by an officer or employee of the Office of General Counsel."

Mr. BROYHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 305 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The CHAIRMAN. Are there amendments to section 305?

There being none, the Clerk will read section 306.

The Clerk read as follows:

#### EMPLOYEE PROTECTION

SEC. 306. Title III of the Clean Air Act relating to general provisions, is amended by adding at the end thereof the following new section:

#### "EMPLOYEE PROTECTION"

"SEC. 317. (a) No employer may discharge any employee or otherwise discriminate against any employee with respect to his compensation, terms, conditions, or privileges of employment because the employee (or any person acting pursuant to a request of the employee) has—

"(1) commenced, caused to be commenced, or is about to commence or cause to be commenced a proceeding under this Act or a proceeding for the administration or enforcement of any requirement imposed under this Act or under any applicable implementation plan,

"(2) testified or is about to testify in any such proceeding, or

"(3) assisted or participated or is about to assist or participate in any manner in such a proceeding or in any other action to carry out the purposes of this Act.

"(b) (1) Any employee who believes that he has been discharged or otherwise discriminated against by any person in violation of subsection (a) may, within thirty days after such violation occurs, file (or have any person file on his behalf) a complaint with the Secretary of Labor (hereinafter in this subsection referred to as the 'Secretary') alleging such discharge or discrimination. Upon receipt of such a complaint, the Secretary shall notify the person named in the complaint of the filing of the complaint.

"(2) (A) Upon receipt of a complaint filed under paragraph (1), the Secretary shall conduct an investigation of the violation alleged in the complaint. Within thirty days of the receipt of such complaint, the Secretary shall complete such investigation and shall notify in writing the complainant (and any person acting in his behalf) and the person alleged to have committed such violation of the results of the investigation conducted pursuant to this subparagraph. Within ninety days of the receipt of such complaint the Secretary shall, unless the proceeding on the complaint is terminated by the Secretary on the basis of a settlement entered into by the Secretary and the person alleged to have committed such violation, issue an order either providing the relief prescribed by subparagraph (B) or denying the complaint. An order of the Secretary shall be made on the record after notice and opportunity for public hearing. The Secretary may not enter into a settlement (ii) such person to reinstate the complainant without the participation and consent of the complainant.

"(B) If, in response to a complaint filed under paragraph (1), the Secretary determines that a violation of subsection (a) has occurred, the Secretary shall order (i) the person who committed such violation to take affirmative action to abate the violation, (ii) such person to reinstate the complainant to his former position together with the compensation (including back pay), terms, conditions, and privileges of his employment, (iii) compensatory damages, and (iv) where appropriate, exemplary damages. If such an order is issued, the Secretary, at the request of the complainant, shall assess against the person against whom the order is issued a sum equal to the aggregate amount of all costs and expenses (including attorneys' and expert witness fees) reasonably incurred, as determined by the Secretary, by the complainant for, or in connection with, the bringing of the complaint upon which the order was issued.

"(c) (1) Any person adversely affected or aggrieved by an order issued under subsection (b) may obtain review of the order in the United States court of appeals for the circuit in which the violation, with respect to which the order was issued, allegedly occurred. The petition for review must be filed within sixty days from the issuance of the Secretary's order. Review shall conform to chapter 7 of title 5 of the United States Code. The commencement of proceedings under this subparagraph shall not, unless ordered by the court, operate as a stay of the Secretary's order.

"(2) An order of the Secretary with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in any criminal or other civil proceeding.

"(d) Whenever a person has failed to comply with an order issued under subsection (b) (2), the Secretary shall file a civil action in the United States district court for the district in which the violation was found to occur to enforce such order. In actions brought under this subsection, the district courts shall have jurisdiction to grant all appropriate relief including, but not limited to, injunctive relief, compensatory, and exemplary damages. Civil actions filed under this paragraph shall be heard and decided expeditiously.

"(e) Any nondiscretionary duty imposed by this section shall be enforceable in a mandamus proceeding brought under section 1361 of title 28 of the United States Code.

"(f) Subsection (a) shall not apply with respect to any employee who, acting without

direction from his employer (or the employer's agent), deliberately causes a violation of any requirement of this Act."

Mr. BROYHILL (during the reading). Mr. Chairman, I renew my request at this time.

Inasmuch as there are only two amendments at the desk, I ask unanimous consent that the remainder of title III be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. ROGERS. Mr. Chairman, reserving the right to object, may I say that I have had some concern expressed about this. I realize there are only two amendments left, but some Members have asked that the bill be read section by section, so I would have to object to the request.

The CHAIRMAN. Objection is heard.

The Clerk will continue to report section 306.

(The Clerk continued the reading of the section.)

Mr. BROYHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 306 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. WAXMAN. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk will continue to read section 306.

Mr. BROYHILL. Mr. Chairman, I move that the remainder of title III be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. The Chair will inform the gentleman that his motion is not in order.

The Clerk will continue to read section 306.

(The Clerk continued the reading of the section.)

Mr. BAUMAN (during the reading). Mr. Chairman, I move that section 306 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. The Chair will inform the gentleman from Maryland (Mr. BAUMAN) that his motion is not in order.

The Clerk will continue to read section 306.

(The Clerk continued the reading of the section.)

The CHAIRMAN. Are there any amendments to section 306?

Mr. BAUMAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do not really know what the reason is for the majority Members insisting that the bill be read in full but it is pretty obvious I believe that when a tactic like that is used, it is used for a purpose. I can only surmise that the purpose is that having lost, overwhelmingly, on a very key amendment, they are either trying to draft amendments to be offered somewhere down the line, or they are trying to take

up the time of the committee and then move to rise and pull the bill off. I would suggest in that case, Mr. Chairman, that the committee should vote not to rise but to finish the bill.

As I understand it, Mr. Chairman, there are very few amendments pending of any great import, that they could be taken care of and then we could vote on the bill.

In the meantime, Mr. Chairman, the majority of the Members of the House may be considerably inconvenienced, in view of the fact that we are about to recess for 5 days.

It seems to me, Mr. Chairman, that at the very least the managers of the bill should make clear to the members of the committee exactly what their plans are and why they are engaging in this delaying tactic.

Mr. SNYDER. If the gentleman from Maryland will yield, I appreciate what the gentleman has to say. I would suggest that we should not forget that this is not a one-way street. We will have other large bills coming up. There is not anything we can do about prolonging the reading of this bill, but when other big bills come up we, too, can object to dispensing with the reading and can require that they be read.

Mr. ROGERS. If the gentleman will yield, let me say that we are hoping we can move as expeditiously as we can.

Mr. BAUMAN. Then the gentleman from Florida has no plans to rise but wants to finish the bill today?

Mr. ROGERS. I would like to rise, if I can.

Mr. BAUMAN. Would the gentleman take the committee with him?

Mr. ROGERS. One never knows.

Mr. BAUMAN. Mr. Chairman, I would suggest that I believe we have the answer to what the plans are. It is exactly what I was saying before. I would hope that we would oppose any motion to rise but rather finish our deliberations on this bill. We have enough other legislation already on our calendar that has to be taken care of. After all, Mr. Chairman, the majority has worked its will. We should have the right as a majority of the body, to do just that.

#### AMENDMENT OFFERED BY MS. HOLTZMAN

Ms. HOLTZMAN. Mr. Chairman. I offer an amendment.

The Clerk read as follows:

Amendment offered by Ms. HOLTZMAN: Page 457, immediately after line 20, insert the following new section:

#### IMPLEMENTATION PLANS WHICH REQUIRE BRIDGE TOLLS

SEC. 306A. Section 110(c) (2) of such Act is amended by inserting at the end thereof the following new subparagraph:

"(F) (1) Any measure in an applicable implementation plan which requires a toll or other charge for the use of a bridge located entirely within one city shall be eliminated from such plan by the Administrator upon application by the Governor of the State, which application shall include a certification by the Governor that he will revise such plan in accordance with clause (1)."

"(1) In the case of any applicable implementation plan with respect to which a measure has been eliminated under clause (1), not later than one year after the date of the enactment of this subparagraph, such

plan shall be revised to include the provisions which would be required under section 123(b) (5) (B) and (6) (B) if an extension were granted under section 123.

"(ii) Any revision of an implementation plan for purposes of meeting the requirements of clause (1) shall be submitted in coordination with any plan revision required under section 123 (c) or (d)."

Ms. HOLTZMAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. WAXMAN. Mr. Chairman, reserving the right to object, it seems to me that the bulk of the committee expressed a desire, on the part of some Members, that we have the bill and all the amendments read, so I am constrained to object.

I believe if it is appropriate for the Members to hear the entire bill read, then they also should hear the amendments read.

Therefore, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Clerk completed the reading of the amendment.

Ms. HOLTZMAN. Mr. Chairman, with some trepidation, I ask unanimous consent that I may be permitted to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Ms. HOLTZMAN. I yield to the gentleman from Illinois.

Mr. MADIGAN. Mr. Chairman, I wish to thank the gentleman from New York for yielding.

May I say that we have had the opportunity to review this amendment, which I understand the gentleman from New York is offering on behalf of herself and the gentleman from New York (Mr. KEMP). It is my understanding that it deals with a local situation and that it solves the problem very well and that it causes absolutely no unfavorable environmental consequences.

So, Mr. Chairman, we on this side wish to congratulate the gentleman from New York on offering her amendment and wish to assure her of our support.

Ms. HOLTZMAN. I thank the gentleman for his comments. I would, however, like to say that there are other members of the delegation who have joined me in this amendment: Mr. SCHEUER, Mrs. CHISHOLM, Mr. RICHMOND, Mr. SOLARZ, Mr. ZEPERETTI, Mr. ADDABBO, Mr. DELANEY, Mr. WOLFF, Mr. ROSENTHAL, Mr. BIAGGI, Mr. BADILLO, Mr. BINGHAM, Mr. DOWNEY, Mr. MURPHY of New York, Mr. RANGEL, Mr. KOCH, Mr. NOWAK, and Mr. GILMAN. I am honored by the cooperation and support my colleagues from New York and especially from Brooklyn have given me on this issue.

This amendment requires the EPA Administrator to void a toll strategy upon the application of the Governor of the State, if the Governor certifies that the State will revise its transportation control plan within 1 year, and that the re-

vised plan will include measures to improve mass transit. I have discussed this amendment with the gentleman from Florida (Mr. ROGERS) who is the chairman of the subcommittee, and I believe it is agreeable to him. I would urge the adoption of this amendment.

Mr. WAXMAN. Mr. Chairman, I move to strike the requisite number of words.

I have some questions I would like to ask the gentleman from New York about her amendment. As I understand, the chairman of the subcommittee has no problems with it.

Is this restricted to New York City, or will this apply to bridge tolls across the country?

Ms. HOLTZMAN. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from New York.

Ms. HOLTZMAN. I thank the gentleman for yielding.

This applies to bridges that are wholly located within a city.

Mr. WAXMAN. Only located within a city.

Ms. HOLTZMAN. This only applies, as a practical matter at this point, to the city of New York since no other city in the country has a clean air plan which mandates tolls on bridges, I will tell the gentleman.

Mr. WAXMAN. If the State of California wanted to authorize legislation to allow the city-county of San Francisco to try to treat their bridge in the same manner, would this affect their ability to do so?

Ms. HOLTZMAN. I do not believe so, no.

Mr. WAXMAN. How would the State implementation plan affect this amendment?

Ms. HOLTZMAN. I would tell the gentleman that the amendment allows the Governor of the State to make an application to the Environmental Protection Administrator to void the strategy calling for the imposition of tolls. The Environmental Protection Administrator would have to void the tolls strategy if the Governor certified that he would, within 1 year, submit a revised plan that includes measures to improve mass transit.

Mr. WAXMAN. So the Administrator of EPA still has the authority to move in and reject the project if it is not satisfactory to him; is that correct?

Ms. HOLTZMAN. The Environmental Protection Administrator would have no discretion with respect to voiding the bridge tolls. The Environmental Protection Administrator would have, of course, whatever authority he has at the present time with respect to evaluating and enforcing a new proposal that would be offered by a Governor under my amendment. I will tell the gentleman from California that we have discussed this amendment with various environmental groups in New York who also support the amendment. I have discerned no opposition to the amendment.

Mr. WAXMAN. I thank the gentleman.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from New York.

Mr. WEISS. I thank the gentleman for yielding.

Mr. Chairman, I simply want to call to the attention of the House that because of the brilliance of the gentleman from New York in her conception of this particular amendment and her masterfulness in its execution, there is agreement by the committee on both sides of the aisle. I am particularly heartened by the amendment, if I may point out to the chairman and the gentleman from California, because what it does really is to underscore the capacity of the Environmental Protection Administrator, working with the Governor, in fact to effect a meaningful change of an implementation plan, which everybody agrees ought to in fact be changed, and which for administrative or bureaucratic reasons has not been done. At the same time all the environmental safeguards of the Clean Air Act are still mandated and, in fact, as the gentleman from New York has drafted in the legislation, within 1 year after the application is sought and a certification is filed, there has to be a plan submitted to EPA which in fact would outline exactly how the environment is going to be adhered to.

So that what it does really is to move us steps forward in getting cleaner air for the people of the city of New York.

I thank the gentleman for yielding.

Mr. WAXMAN. I appreciate the comments of the gentleman.

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Chairman, I am very pleased to be so closely associated with my colleague from New York, Ms. HOLTZMAN, in supporting this amendment to bar the imposition of tolls on 13 bridges spanning the East and Harlem Rivers in New York City. Passage of this amendment represents a significant victory for the rights of State and local governments; freedom from arbitrary and unfounded meddling in their affairs by the Federal Government.

The wisdom of this amendment far outweighs the folly of the Federal order requiring that tolls be imposed on the bridges by August 31, 1978. The amendment requires the Administrator of the EPA to eliminate the tolls upon application by the Governor, and further requires that New York State's clean air plan be revised to include measures for improving public transportation.

A comprehensive study conducted jointly by the New York State Departments of Transportation and Environmental Conservation, concluded that the tolls were not justified. From an environmental standpoint, the reductions in pollution would be minimal and in fact, would be offset by increased pollutant concentrations in and around the toll plazas.

Economically, the tolls would have an especially adverse effect, the city of New York derives much of its revenue from

the commercial, retail, and entertainment industries of Manhattan. It was estimated that the numbers of shopping and recreational trips into Manhattan would be reduced by almost 30 percent with the new tolls. This would constitute a significant revenue loss for the city at a time when she can ill afford it. In addition, it was estimated that it would cost some \$65 million to construct the new toll plazas. The brunt of this bill would have to be footed by the State of New York, placing a great strain on its resources.

But, the most compelling argument against the tolls is a human one. I ask you to give first and foremost consideration to the people of New York. These tolls could add as much as \$375 to the average New Yorkers' already high yearly commuting bill, if he or she uses one of the affected bridges. This would have an especially devastating effect on low-income persons. The tolls would be regressive and repressive in nature. They would tax most heavily those least able to afford it.

No matter how they are viewed, the tolls make no sense. New Yorkers pay exorbitant transportation costs as it is. A new and sizable expense would not be welcomed. The EPA may see the tolls as the antidote to New York City's environmental ills, but the people of New York view the tolls as the start of a new malady.

It is therefore essential that we provide the means to ban these tolls. This amendment provides the mechanisms and makes good environmental, economic, and humanitarian sense. It merits full support.

Mr. WAXMAN. I would like to ask a question of the gentleman from New York. Does this in any way affect the New York transport plan in any other respect?

Ms. HOLTZMAN. If the gentleman will yield, other than to eliminate the tolls, the answer is "No."

Mr. ZEPERETTI. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from New York (Mr. ZEPERETTI).

Mr. ZEPERETTI. Mr. Chairman, I too want to pay tribute to the gentleman from New York who has worked so effectively to get this amendment passed.

Mr. ADDABBO. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Chairman, I thank the gentleman for yielding. I rise in enthusiastic support of the amendment offered by the gentleman from New York (Ms. HOLTZMAN). This amendment is of vital importance to the city of New York and it represents an agreement between all the parties, which has been worked out through the diligent efforts of Congresswoman HOLTZMAN.

The tolls controversy points up a number of issues that we must consider in the House as we write this bill. It is of unquestionable importance that the dirty air in major cities be cleaned up. To do this we must impose effective measures that will control automobile emissions

which are the major source of much of urban pollution. But it is necessary that in doing so we have a reasonable approach to how these improvements are implemented.

The ruling of the Federal judge that New York impose within 1 year tolls on the bridges did not allow for any other plan to be implemented by the State. Recently, agreement between the court and the Governor has been reached and the Governor will revise a plan for certification that is required. That is basically what this amendment establishes as law. In the case of where a measure has been eliminated, the State will have 1 year to revise the plan to suit the local conditions.

Basically, what this amendment does is requires the EPA Administrator to eliminate tolls as a means of reducing air pollution, when the Governor of a State makes the request to be allowed to propose an alternate plan. It does require the State to produce within 12 months the means to do just that and it requires the State to certify that the revision plans will be in accordance with the statutes contained in this law.

In the case of New York City the tolls that would be imposed by the end of August next year, would seriously hurt small businesses in the city by discouraging shoppers from coming into the city, either to entertain themselves or to do basic shopping. It would particularly be unfair treatment for the residents outside of Manhattan, namely Brooklyn, Queens, the Bronx, and Staten Island and there is every indication that pollution might be increased in those boroughs.

In New York City we have a difficult enough time with 8 million people trying to operate as one city. What the judge's rule would force upon us would be a division of the city into five separate areas and it would encourage businesses and middle-class residents to flee from the center of our city.

As I said earlier, Congresswoman HOLTZMAN did a commendable job of working with all segments before devising the language for this amendment. She has the support of Governor Carey and Mayor Beame of New York City, the Automobile Club of New York, the business associations and the clean air groups in New York. Additionally, she has the support of the subcommittee chairman and I believe she ought to have your support. I would urge you to vote for this amendment.

Mr. KOCH. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do so simply to add my support to the gentleman from New York, and her amendment.

Mr. GILMAN. Mr. Chairman, will the gentleman yield?

Mr. KOCH. I yield to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Chairman, I too want to join in support of the gentleman's amendment, and congratulate her for bringing this worthy amendment forward to improve this legislation.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I hesitate to hold up the House here. I would hope we could finish and vote on this bill very promptly.

I would like to ask a few questions. What is the stall? I say to my colleague, the gentleman from California (Mr. WAXMAN) here, are we involved in a stall here? Would my colleague reply? I would like to hear from somebody who is suggesting that we have this bill read, why can we not go ahead with the bill?

Mr. WAXMAN. Mr. Chairman, if the gentleman will yield, the chairman of the subcommittee indicated there were some Members who were interested in having this read. I want to discuss this amendment with the gentleman. Is the gentleman aware of this amendment? Does he know what he is voting on?

Mr. SISK. Sure.

Mr. WAXMAN. I wanted to be sure everybody would understand what they were voting on.

Mr. SISK. Mr. Chairman, let me say I do not want to step on anybody's toes around here, but Members know we generally operate on the democratic principle of the majority rule.

Let me say just a couple of words as a member of the Rules Committee. This committee came before the Rules Committee and sought a rule. We had some discussion about the type of rule we would have. The normal procedure with any rule is to read a bill normally by sections. However a lot of the time we have them read by titles basically to save time. That was the type of rule we had set up on this bill. A discussion arose and so as a result of it we agreed that the bill would be read by sections, and the understanding was, and there was discussion, that this was not with any intent to hold up or to delay or obstruct the going ahead and handling of the Nation's business. All of a sudden here I am amazed to find some of my friends who are apparently creating a stall. I am not accusing the gentlemen, but if there is an understanding that somebody does not want to vote on this bill today, I want to know who it is.

Mr. WAXMAN. Mr. Chairman, if the gentleman will yield, I would ask him whether, as a member of the Rules Committee, he knows that the Members have a right to insist on the reading of the bill section by section consistent with the rule granted by his committee?

Mr. SISK. The gentleman is correct that under the rules of the House a Member can insist on a reading, but I am just a little bit curious.

Just a minute. I think, here we are well into the afternoon, Thursday afternoon, there is other legislation pending. The Committee on Rules has several bills pending here.

I understand next week we are going to have a short week. I just think there is no one here so naive as to not feel that something is going on, when we cannot get a unanimous consent request to consider the section read, where there is not even an amendment pending at all. I think everyone knows this particular

amendment is pending. As far as I am concerned personally, let me say, Mr. Chairman, I speak only for myself, but I am going to vote against any rising of this committee until we have completed action on this bill.

Let us go forward and vote the bill up or down.

Mrs. FENWICK. Mr. Chairman, I move to strike the requisite number of words.

I would like to speak to this amendment. The very able—in fact, the brilliant—legislator from New York has presented an amendment that, of course, is greatly in the interest of the gentleman's district and area; but I do question whether or not the suggestion that there should be tolls was not made for good reason by the Department of Environmental Protection. According to what my colleague has said, there is a provision that within a year a mass transit proposal will have to be submitted by the governor to the Department of Environmental Protection. I presume that if that plan is not proper or not appropriate that the right to impose tolls would then return to the Department of Environmental Protection?

We have sustained some serious defeats for the cause of clean air in the House today. I am not against this amendment, but I would like to feel there is a provision here that will protect the interests of clean air in the amendment that my colleague has offered.

Ms. HOLTZMAN. Mr. Chairman, if the gentleman will yield, I wish to thank her for her extremely kind remarks. I know the gentleman is deeply committed to the cause of environmental protection. My colleagues from New York and I share this concern. We have worked very hard on this amendment to reach a consensus among all interested parties, including environmental groups. The original impetus for the amendment was that the tolls themselves would not lower air pollution or help the city meet clean air standards, but would simply move air pollution from Manhattan to some of the outlying boros of the city.

Mrs. FENWICK. Well, we have found that, when the Hudson River tolls were up to \$1.50 to get into New York, people were more apt to double up, or to take buses into the city; but that is not the issue I would like to address.

Is there a provision which would enable the Department of Environmental Protection, if they find it necessary, to impose the tolls in the event the plan of the governor is unsatisfactory or undesirable?

Ms. HOLTZMAN. Mr. Chairman, if the gentleman will yield further, I will tell the gentleman that immediately when the governor applies to remove the tolls strategy, the tolls must be eliminated from the clean air plan by the Environmental Protection Administrator, if at the same time the governor certifies he will provide, within a year's time, a substitute plan to improve mass transit. If the governor does not submit a satisfactory plan within that year, then the Environmental Protection Administrator has the power to require compliance us-

ing authority granted under the Act. I do not believe there would be any power to reinstate the tolls strategy.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mrs. FENWICK was allowed to proceed for 1 additional minute.)

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mrs. FENWICK. I yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, I would like to point out that under the Clean Air Act the Administrator did not have the right on his own to impose the tolls. What happened was that the Governor and the mayor of the city of New York requested that that be included as one of the provisos of the transportation control plan.

So, by making that request at this point, they are simply doing that which they would have the right to do under any circumstances, but they simply got tied up in bureaucratic tangles.

Mrs. FENWICK. I thank my colleague.

Mr. SHUSTER. Mr. Chairman, I move to strike the requisite number of words.

I would like to direct an observation and question to the gentleman from New York (Ms. HOLTZMAN). I know that this involves bridge tolls, and I have heard reference repeatedly made to mass transit, which I believe comes under the jurisdiction of the Surface Transportation Subcommittee.

I would ask the gentleman if this amendment has been cleared with Chairman HOWARD, chairman of the Transportation Subcommittee.

Ms. HOLTZMAN. Mr. Chairman, if the gentleman will yield, I would say to the gentleman that, as he is very well aware, under the present amendments to the Clean Air Act, various transportation control strategies are in order. That is all we are talking about here. The purpose of the tolls strategy was originally to provide revenues to be used for mass transit. Therefore, in removing the toll strategy, we are requiring that substitute measures to improve mass transit be provided.

Mr. SHUSTER. Am I correct in inferring from the gentleman's statements that the amendment has not been discussed or cleared with the Surface Transportation Subcommittee?

Ms. HOLTZMAN. I do not believe there is any need to do so.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield to me?

Mr. SHUSTER. I am delighted to yield to the gentleman.

Mr. ECKHARDT. I am authorized to say for the chairman of the subcommittee that there is no objection to the amendment of the gentleman from New York.

Mr. SHUSTER. From Chairman HOWARD?

Mr. ECKHARDT. From Chairman ROGERS.

MOTION OFFERED BY MR. ANNUNZIO

Mr. ANNUNZIO. Mr. Chairman, I move that all debate on the amendment

offered by the gentlewoman from New York (Ms. HOLTZMAN) be limited to 5 minutes.

The motion was agreed to.

The Chair recognizes the gentleman from Oregon (Mr. AuCOIN).

Mr. AuCOIN. Mr. Chairman, I ask unanimous consent to yield my time to the gentleman from California (Mr. WAXMAN).

The CHAIRMAN. Is there objection to the request of the gentleman from Oregon?

Mr. BAUMAN. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Chair recognizes the gentleman from Illinois (Mr. ANNUNZIO).

Mr. ANNUNZIO. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SISK).

Mr. SISK. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentlewoman from New York (Ms. HOLTZMAN).

Ms. HOLTZMAN. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. All time has expired.

Mr. BINGHAM. Mr. Chairman, the committee bill has been so weakened by amendments that I am constrained to vote against it on final passage. However, I am gratified that the Holtzman amendment which would block the imposition of tolls on the East and Harlem River bridges in New York City was incorporated in the bill. I joined my colleagues from New York in this initiative because it has become apparent that tolling the bridges would fail in its stated purpose. It would not significantly improve the quality of air over New York City.

I must say that I feel no great sense of joy in blocking these tolls through congressional action. The bridge toll strategy was devised by the State of New York—with the cooperation of the city—in response to the Clean Air Act Amendments of 1970 which required municipalities with serious air pollution problems to draw up plans which could result in significant improvements in air quality. The New York plan, which was accepted by the Federal Government in 1973, included several different proposed actions to deal with the pollution problem—one of them was the bridge tolls.

It was believed by New York and Washington that the imposition of tolls on the free bridges would reduce the overall volume of traffic moving from the Bronx, Brooklyn, and Queens into Manhattan and also reduce unnecessary travel of cars going out of their way to avoid existing tolled crossings. A significant side benefit from the imposition of tolls would be increased revenues which could be used to improve the city's mass transit system. This too would have an indirect, but quite real, positive impact on the

condition of the city's air. Applying toll revenues to mass transit would improve subway and bus service and lead more and more commuters away from their cars and back into public transit. All this argued for the bridge tolls.

Unfortunately, since 1973 we have learned that the bridge toll strategy would simply not work. According to a report just issued by the New York State Departments of Transportation and Environmental Conservation, bridge tolls would result in only a modest improvement in air quality in the Manhattan central business district which would be more than offset by the doubling—and sometimes more than doubling—in carbon monoxide levels in the areas of the toll plazas which would have to be built. Traffic slowing down, and lining up, at the various toll booths would cause a serious new pollution problem which could not be rectified through any improvement in toll collecting technology. The bridge toll strategy is thus asking New Yorkers to accept a trade-off of higher air pollution in Brooklyn, the Bronx, and Queens for the minor improvement of conditions in mid-Manhattan. The bargain would be an especially bad one for the Bronx, since there are nine bridges over the Harlem river to upper Manhattan.

This is unacceptable. Beyond that, it could well be illegal. Environmental law, on the State and Federal level, has been increasingly moving in the direction of banning any deterioration of air quality standards anywhere. One of the provisions of H.R. 6161 would ban any new sources of industrial pollution in areas where health is already suffering because of dirty air. Certainly permitting air quality to further deteriorate in "dirty air" areas like Brooklyn, the Bronx, and Queens for the sake of minimal improvements in Manhattan is in violation of that spirit. This type of trade-off cannot be permitted.

Blocking the bridge tolls will not in itself cause any further deterioration in air quality over New York City but it will not improve it either. New York will continue to suffer from some of the dirtiest air in the United States. The people of New York will continue to suffer from the emphysema and other respiratory diseases which air pollution causes. Children and the elderly will especially be affected as "pollution alerts" force them back into their houses and apartments on those terrible gray days which make New York so unlivable in the summer.

Something must be done. A good first step would have been to maintain the emission standards on automobiles set forth in the committee bill. It is a shame that there will now be more delays in compliance, more extensions into the future. Detroit ought to meet emission standards for the rest of the United States as it has for California. Detroit's foot dragging is a national disgrace, especially since foreign car manufacturers are showing that decent emission standards can be met.

The Carter energy plan goes a step in the right direction in proposing tax

on large, wasteful, polluting automobiles. We must get those gas-guzzling polluters off the road through a prohibitive tax or an outright ban on production. But there is one area where the Carter proposal falls short to the detriment of both clean air and energy conservation: Mass transit.

The one benefit which bridge tolls would have would be the revenues they would bring in. It hurts to preclude the bridge tolls and, at the same time, preclude the \$160 million a year they would generate for mass transit. We must now be especially diligent in searching for new sources of mass transit aid. Unfortunately the President's energy plan omits any new aid proposal. I think that we in the Congress must add mass transit aid to the President's program. The gas standby tax or the guzzler tax could, and should, be used to aid mass transit systems like that in New York. Without that aid the transit system will continue to deteriorate and more and more people will virtually be forced into their cars. That must not be permitted to happen. It is especially incumbent on those of us from New York to fight for mass transit aid—in the energy bill, in the Williams mass transit bill, anywhere we can get it. Then and only then will we begin to remedy the air pollution problem in New York, and in fact around the country. Strict emissions control standards and mass transit aid will move us toward those air quality standards we all support.

The question is on the amendment offered by the gentlewoman from New York (Ms. HOLTZMAN).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments to section 306?

There being none, the Clerk will read section 307.

The Clerk read as follows:

NOTICE TO STATE IN CASE OF CERTAIN INSPECTIONS, ETC.

Sec. 307. Section 114(a)(2) of the Clean Air Act is amended by adding at the end thereof the following: "In the case of any emission standard or limitation or other requirement which is adopted by a State, as part of an applicable implementation plan or as part of a compliance date extension under section 119, before carrying out an entry, inspection, or monitoring under this paragraph with respect to such standard, limitation, or other requirement, the Administrator (or his representatives) shall provide the State air pollution control agency with reasonable prior notice of such action, including a statement of the reasons for such action. The Administrator shall, upon a showing by the State agency that such an action will be detrimental to the administration of the State's program of enforcement, take such showing into consideration in determining whether to take such action. No State agency which receives notice under this paragraph of an action proposed to be taken may use the information contained in the notice to inform the person whose property is proposed to be affected of the proposed action. If the Administrator has reasonable basis for believing that a State agency is so using or will so use such information, notice to the agency under this paragraph is not required until such time as the Administrator determines the agency will no longer so use information contained in a notice under this paragraph. Nothing in

this section shall be construed to require notification to any State agency of any action taken by the Administrator with respect to any standard, limitation, or other requirement which is not part of an applicable implementation plan."

Mr. BROYHILL (during the reading). Mr. Chairman, I ask unanimous consent that section 307 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. ROGERS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard. The Clerk will continue to read.

(The Clerk continued to read the section.)

The CHAIRMAN. Are there any amendments to section 307?

#### PARLIAMENTARY INQUIRY

Mr. ECKHART. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ECKHART. Mr. Chairman, if one would desire to place a new section immediately after section 307, would this be the time to offer an amendment?

The CHAIRMAN. This would be the time.

#### AMENDMENT OFFERED BY MR. GAMMAGE

Mr. GAMMAGE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GAMMAGE: Page 459, line 1, add the following: "Permits for Construction of New Sources Already Granted in Areas Violating Primary Air Quality Standards As Of the Enactment of the Clean Air Act Amendments of 1977, Provided Such Permits Were Issued Prior to the Date of Enactment of the Clean Air Act Amendments of 1977."

"Sec. 321. Operating permits may be issued to those applicants who were properly granted new sources construction permits, in accordance with law and applicable regulations in effect at the time granted, for construction of a new source in areas now violating primary air quality standards, *Provided*, That such construction permits were granted prior to the date of enactment of the Clean Air Act Amendments of 1977, *And provided further*, That the person issued any such permit is able to demonstrate that the emissions from the source are within the limitations set forth in such construction permit."

Mr. BROYHILL. Mr. Chairman, I reserve a point of order against the amendment.

The CHAIRMAN. The gentleman from North Carolina (Mr. BROYHILL) reserves a point of order against the amendment.

The gentleman from Texas (Mr. GAMMAGE) is recognized for 5 minutes in support of his amendment.

Mr. GAMMAGE. Mr. Chairman, yesterday during debate on section 117 of these amendments the chairman of the subcommittee, my distinguished colleague, the gentleman from Kentucky (Mr. CARTER), and the distinguished gentleman from Texas (Mr. ECKHART) agreed generally that some of the language I offered was acceptable, particularly that part relating to the issuance of operating permits for the purpose of

operating construction projects for which permits had already been issued prior to the effective date of these amendments.

At this time, Mr. Chairman, I offer this language, adding a new section, section 308, to the bill.

Basically, this allows operating permits to be issued to those applicants who were properly granted new source construction permits in nonattainment areas, prior to the effective date of these amendments, if these permits were issued in accordance with law and applicable regulations in effect at the time they were issued.

The amendment also provides that those operating permits require a demonstration by the person or facility issued the permit showing that the emissions which would come from this new construction comply with limitations set forth in his original construction permit. What this says is that we do not shut him down overnight; if they have complied with the law at this point, they can go ahead and complete their construction and conduct their operations.

Mr. BROYHILL. Mr. Chairman, I withdraw my reservation of a point of order against the amendment.

The CHAIRMAN. The gentleman from North Carolina (Mr. BROYHILL) withdraws his point of order.

Mr. ECKHART. Mr. Chairman, I rise in support of the amendment.

Although I am in favor of this amendment, Mr. Chairman, I would like to be clear with the gentleman from Texas (Mr. GAMMAGE) and make sure that we understand it in the same way.

As the gentleman knows, certain trade-off provisions went into effect in December of 1976. These trade-off provisions were proposed by EPA in order to create a certain degree of flexibility because the ceilings went into effect, as I recall, at the end of the month, actually at the end of the year, I believe, on December 31.

As I understand the gentleman's amendment, it is not intended to circumvent the trade-off regulations that went into effect in December of 1976, but it would require that the permits be in accordance with laws and applicable regulations, including those trade-off provisions in effect at that time.

Mr. GAMMAGE. Mr. Chairman, will the gentleman yield?

Mr. ECKHART. I yield to the gentleman from Texas.

Mr. GAMMAGE. Mr. Chairman, what the gentleman from Texas (Mr. ECKHART) has said is explicit in the amendment. The amendment contains the language that the gentleman and I discussed in consultation just a few moments before the amendment was introduced.

Mr. ECKHART. Mr. Chairman, I feel also that the language is clear in the amendment, and I want to congratulate the gentleman from Texas (Mr. GAMMAGE) for taking care of this matter, which is one, I think, that could have borne very heavily against industries in the district which he represents as well as in my district. This amendment is

offered, as the gentleman has said, in accordance with the discussion that the gentleman from Kentucky (Mr. CARTER), the gentleman from Texas (Mr. GAMMAGE), and I had in a three-cornered discussion on yesterday.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. ECKHART. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman for yielding.

This amendment would not permit the primary and secondary ambient air standards to be exceeded, would it?

Mr. ECKHART. It certainly would not, according to my understanding.

Is that the understanding of the gentleman from Texas (Mr. GAMMAGE)?

Mr. GAMMAGE. Mr. Chairman, if the gentleman will yield, that is generally my understanding.

I would add that this amendment is offered based on a presumption on my part that the State authorities who issued construction and operating permits are in compliance with existing Federal laws and regulations at the time the permits were issued.

Mr. CARTER. Mr. Chairman, throughout this discussion of this legislation and for the past several months I stood by the proposition that primary and secondary air quality standards should not be exceeded. In this case this is so, and they are not exceeded.

Therefore, Mr. Chairman, I would have no objection to this amendment.

Mr. GAMMAGE. Mr. Chairman, if the gentleman will yield further, I think it is critically important to those nonattainment areas seeking construction permits. This is all it applies to, not to significant deterioration of air quality standards, I say to the gentleman from Kentucky (Mr. CARTER), but to the nonattainment areas where we have existing construction under way, with, in some cases, construction permits issued by the licensing and permit authorities in the State charged with enforcing these regulations. I presume they are in compliance with these regulations, and this would remove any doubt that they can proceed with that construction and get those operating permits in those nonattainment areas.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman, and I am glad that this has been settled amicably between the two gentlemen from Texas.

Mr. ECKHART. Mr. Chairman, I thank the gentleman from Kentucky (Mr. CARTER) for his comments.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. ECKHART. I yield to the gentleman from Texas.

Mr. KRUEGER. Mr. Chairman, I simply rise in support of this amendment. It was part of the amendment offered yesterday. It seems to be quite a good amendment. I think that it may offer some relief, particularly to those industries which already have had construction permits granted and thus will be able to proceed with their construction projects. Perhaps they will have some assurance through this amendment.

Mr. ECKHARDT. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. GAMMAGE).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments to section 307?

If not, the Clerk will read section 308.

The Clerk read as follows:

#### EMERGENCY POWERS

SEC. 308. (a) Section 303 of the Clean Air Act is amended to read as follows:

#### "EMERGENCY POWERS

"Sec. 303. (a) Notwithstanding any other provision of this Act, upon receipt of evidence that a pollution source or combination of sources (including moving sources) is presenting an imminent and substantial endangerment to the health of persons, and that appropriate State or local authorities have not acted to abate such sources, the Administrator may, in order to protect the health of such persons, commence a civil action for appropriate relief, including a restraining order of permanent or temporary injunction. If it is not practicable to assure prompt protection of the health of persons solely by commencement of such a civil action, the Administrator may issue such orders as may be necessary to protect the health of persons who are, or may be, affected by such pollution source (or sources). Prior to taking any action under this section, the Administrator shall consult with the State and local authorities in order to confirm the correctness of the information on which action proposed to be taken is based and to ascertain the action which such authorities are or will be taking.

"(b) Any person who willfully violates or fails or refuses to comply with any order issued by the Administrator under subsection (a) may, in an action brought in the appropriate United States district court to enforce such order, be fined not more than \$5,000 for each day during which such violation occurs or failure to comply continues."

(b) Section 313 of the Clean Air Act is amended by striking out "and" at the end of clause (9) and adding after clause (10): "and (11) (A) the status of plan provisions developed by States as required under section 110(a) (2) (F) (v), and an accounting of States failing to develop suitable plans; (B) the number of annual incidents of air pollution reaching or exceeding levels determined to present an imminent and substantial endangerment to health (within the meaning of section 303), by location, date, pollution source, and the duration of the emergency; (C) measures taken pursuant to section 110 (a) (2) (F) (v), and an evaluation of their effectiveness in reducing pollution; and (D) an accounting of those instances in which an air pollution alert, warning, or emergency is declared as required under regulations of the Administrator and in which no action is taken by either the Administrator, State, or local officials, together with an explanation for the failure to take action."

#### INTERSTATE POLLUTION ABATEMENT

SEC. 309. (a) Section 110(a) (2) (E) of the Clean Air Act is amended to read as follows:

"(E) It contains provisions (i) prohibiting any stationary source within the State from emitting any air pollutant in amounts which will prevent attainment or maintenance by any other State or any such national primary or secondary ambient air quality standard after the attainment date for such standard or interfere with measures required to be included in the applicable implementation plan for any other State to implement subtitle C of this title and (ii) insuring compliance with the requirements of section 126;"

(b) Title I of such Act is amended by adding at the end thereof the following new section:

#### "INTERSTATE POLLUTION ABATEMENT

"Sec. 126. (a) Not later than nine months after date of enactment of this section, the Administrator shall promulgate regulations establishing a procedure for abating interstate air pollution in accordance with the requirements of this section.

"(b) Regulations promulgated under subsection (a) shall require each applicable implementation plan—

"(1) to require each major proposed new (or modified) source which may significantly contribute to air pollution in any air quality control region outside the State in which such source intends to locate (or make such modification) to obtain a permit to construct from the State of intended location at least ninety days prior to the date of commencement of construction,

"(2) to provide written notice to all nearby States the air pollution levels of which may be affected by such source at least sixty days prior to the date on which commencement of construction is to be permitted by the State providing notice, and

"(3) to review and identify all existing major stationary sources which may have the impact described in paragraph (1) and to provide notice to all nearby States of the identity of such sources not later than eighteen months after date of enactment of this section.

"(c) Regulations under subsection (a) shall authorize any State or political subdivision to petition the Administrator for a finding that any major source would emit any air pollution in violation of the prohibition of section 110(a) (2) (E) (1). Within sixty days after receipt of any petition under this subsection, the Administrator shall provide opportunity for a public hearing and shall grant or deny the petition.

"(d) Notwithstanding any permit which may have been granted by the State in which the source is located (or intends to locate), it shall be a violation of the applicable implementation plan in such State (1) for any major proposed new (or modified) stationary source with respect to which a petition has been granted under subsection (c) to operate more than sixty days after such petition has been granted, or (2) for any major existing source to operate more than six months after such petition has been granted with respect to it, except that the Administrator may permit the continued operation of such source beyond the expiration of such six-month period if such source complies with such emission limitations and compliance schedules (containing increments of progress) as may be provided by the Administrator to bring about compliance with the requirement contained in section 110(a) (2) (E) (1) as expeditiously as practicable."

#### INTERAGENCY COOPERATION ON PREVENTION OF ENVIRONMENTAL CANCER AND HEART AND LUNG DISEASE

SEC. 310. Title I of the Clean Air Act is amended by adding the following new subtitle at the end thereof:

#### "Subtitle D—Prevention of Environmental Cancer and Heart and Lung Disease

#### "PREVENTION OF ENVIRONMENTAL CANCER AND HEART AND LUNG DISEASE

"Sec. 170. (a) Not later than three months after date of enactment of this section, there shall be established a Task Force on Environmental Cancer and Heart and Lung Disease (hereinafter referred to as the "Task Force"). The Task Force shall include representatives of the Environmental Protection Agency, the National Cancer Institute, the National Heart, Lung, and Blood Institute, and the National Institute on Environmental Health

Sciences, and shall be chaired by the Administrator (or his delegate).

"(b) The Task Force shall—

"(1) develop and implement a comprehensive research program to determine and quantify the relationship between environmental pollution and human cancer and heart and lung disease;

"(2) make recommendations for comprehensive strategies to reduce or eliminate the risks of cancer (or such diseases) associated with environmental pollution;

"(3) engage in such other research and recommend such other measures as may be appropriate to prevent or reduce the incidence of environmentally related cancer and heart and lung diseases;

"(4) coordinate research and control efforts by, and stimulate cooperation between, the Environmental Protection Agency, the Department of Health, Education, and Welfare, and such other agencies as may be appropriate to prevent environmentally related cancer and heart and lung diseases; and

"(5) report to Congress, not later than January 31 of each year, on the problems and progress in carrying out this section.

"(c) In developing and implementing its research program and making its recommendations, the Task Force shall consider the impact of personal health habits, including tobacco smoking, on the relationship between environmental pollution and human cancer and heart and lung disease."

#### CIVIL LITIGATION

SEC. 311. (a) Section 305 of the Clean Air Act is amended to read as follows:

#### "CIVIL LITIGATION

"SEC. 305. (a) Except as otherwise provided in subsection (b), in any civil action under this Act (including any civil action brought by any person with respect to action taken by the Administrator under this Act), the Administrator shall have exclusive authority to commence or defend, and supervise the litigation of, such action and any appeal of such action in his own name by any attorney of the Environmental Protection Agency designated by him for such purpose, unless the Administrator authorizes the Attorney General to do so. The Administrator shall inform the Attorney General of the exercise of such authority and such exercise shall not preclude the Attorney General from intervening under any other authority of law on behalf of the United States in such action and any appeal of such action.

"(b) (1) Notwithstanding subsection (a) the Attorney General shall have exclusive authority to determine whether or not an appeal shall be made from the decision of any court in an action in which the Administrator represented himself pursuant to subsection (a).

"(2) The authority of the Administrator under subsection (a) shall not apply in the case of actions before the Supreme Court.

"(3) In any case where the Attorney General represents the Administrator before the Supreme Court in any civil action in which the Administrator represented himself pursuant to subsection (a), the Attorney General may not agree to any settlement, compromise, or dismissal of such action, or confess error in the Supreme Court with respect to such action, unless the Administrator concurs.

"(4) For purposes of this subsection (with respect to representation before the Supreme Court), the term "Attorney General" includes the Solicitor General.

"(c) The provisions of this section shall apply notwithstanding any other provision of law."

(b) Section 307 of such Act is amended by adding the following at the end thereof:

"(e) In any judicial proceeding under this

section, the court may award costs of litigation (including reasonable attorney and expert witness fees) whenever it determines that such award is appropriate."

#### FINE PARTICULATE STUDY

SEC. 312. (a) Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "FINE PARTICULATE STUDY

"SEC. 321. Not later than eighteen months after the date of the enactment of the Clean Air Act Amendments of 1977, the Administrator, in cooperation with the National Academy of Sciences, shall study and report to Congress on (1) the relationship between the size, weight, and chemical composition of suspended particulate matter and the nature and degree of the hazards to public health or welfare presented by such particulate matter (especially with respect to fine particulate matter) and (2) the availability of technology for controlling such particulate matter."

#### AIR QUALITY MONITORING BY ENVIRONMENTAL PROTECTION AGENCY

SEC. 313. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "AIR QUALITY MONITORING

"SEC. 322. Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977 and after notice and opportunity for public hearing, the Administrator shall promulgate regulations establishing an air quality monitoring system throughout the United States which—

"(1) utilizes uniform air quality monitoring criteria and methodology and measures such air quality according to a uniform air quality index,

"(2) provides for air quality monitoring stations in major urban areas and other appropriate areas throughout the United States to provide monitoring such as will supplement (but not duplicate) air quality monitoring carried out by the States required under any applicable implementation plan,

"(3) provides for daily analysis and reporting of air quality based upon such uniform air quality index, and

"(4) provides for recordkeeping with respect to such monitoring data and for periodic analysis and reporting to the general public by the Administrator with respect to air quality based upon such data.

The operation of such air quality monitoring system may be carried out by the Administrator or by such other departments, agencies, or entities of the Federal Government (including the National Weather Service) as the President may deem appropriate. Any air quality monitoring system required under any applicable implementation plan under section 110 shall, as soon as practicable following promulgation of regulations under this section, utilize the standard criteria and methodology, and measure air quality according to the standard index, established under such regulations."

#### CERTAIN MINOR AND TECHNICAL AND CONFORMING AMENDMENTS

SEC. 314. (a) Section 203(a)(2) of the Clean Air Act is amended by inserting the following before the semicolon: "or for any person to fail or refuse to permit entry, testing, or inspection authorized under section 206(c)".

(b) Section 204(a) is amended by striking out "paragraph (1), (2), (3), or (4) of".

(c) Section 302(d) of such Act is amended by inserting before the period at the end thereof the following: "and includes the Commonwealth of the Northern Mariana Islands".

(d) Section 203(b)(3) of such Act is amended by striking out "subsection (a)"

the second time it appears and inserting in lieu thereof "section 202" and by striking out "country of export" in each place it appears and inserting in lieu thereof "country which is to receive such vehicle or engine".

#### STUDY AND REPORT CONCERNING ECONOMIC APPROACHES TO CONTROLLING AIR POLLUTION

SEC. 315. Title III of the Clean Air Act is amended by inserting the following new section after section 313:

#### "ECONOMIC CONTROLS STUDY

"SEC. 313A. (a) The Council on Environmental Quality (hereinafter in this section referred to as 'the Council') shall undertake a study and assessment of economic measures for the control of air pollution which could—

"(1) strengthen the effectiveness of existing methods of controlling air pollution,

"(2) provide incentives to abate air pollution to a greater degree than is required by existing provisions of this Act (and regulations thereunder), and

"(3) serve as the primary incentive for controlling air pollution problems not addressed by any provision of this Act (or any regulation thereunder).

"(b) The study of measures referred to in paragraph (1) of subsection (a) shall concentrate on (1) identification of air pollution problems for which existing methods of control are not effective because of economic incentives to delay compliance and (2) formulation of economic measures which could be taken with respect to each such air pollution problem which would provide an incentive to comply without interfering with such existing methods of control.

"(c) The study of measures referred to in paragraph (2) of subsection (a) shall concentrate on (1) identification of air pollution problems for which existing methods of control may not be sufficiently extensive to achieve all desired environmental goals and (2) formulation of economic measures for each such air pollution problem which would provide additional incentives to reduce air pollution without—

"(A) interfering with the effectiveness of existing methods of control, or

"(B) creating problems similar to those which prevent alternative regulatory methods from being used to reach such environmental goals.

"(d) The study of the measures referred to in paragraph (3) of subsection (a) shall concentrate on (1) identification of air pollution problems for which no existing methods of control exist, (2) formulation of economic measures to reduce such pollution, and (3) comparison of the environmental and economic impacts of the economic measures with those of any alternative regulatory methods which can be identified.

"(e) In conducting the study under this section, a preliminary screening should be made of the problems referred to in subsections (b)(1), (c)(1), and (d)(1) and economic measures should be formulated under subsections (b)(2), (c)(2), and (d)(2) in the most promising cases, giving special attention to structural and administrative problems. In formulating any such measure which provides for a charge, the appropriate level of the charge should be determined, if possible, and the environmental and economic impacts should be identified.

"(f) Not later than two years after the date of the enactment of this section, the Council shall conclude the study and assessment under this section and submit a report containing the results thereof to the President and to the Congress. Interim reports on specific pollution problems and solutions recommended shall be made available to the President and the Congress by the Council whenever available."

#### ENVIRONMENTAL ADJUSTMENT ASSISTANCE STUDY

SEC. 315A. (a) The Administrator of the Environmental Protection Agency shall undertake a study of adjustment assistance for employees dislocated as a result of the implementation of laws administered by the Administrator. Such study shall, at a minimum—

(1) estimate the number of employees who have been subjected to such dislocation;

(2) estimate the annual cost of a dislocation assistance program for such employees; and

(3) recommend the best method of administering such a dislocation assistance program.

(b) For the purposes of the study under subsection (a), the term "adjustment assistance" shall include—

(1) wage readjustment assistance, employment services, job training, job search allowances and relocation allowances,

(2) mortgage and rent relief,

(3) home sale assistance, and

(4) such other types of assistance that the Administrator considers to be appropriate.

(c) The Administrator shall submit to Congress the results of the study conducted under subsection (a) not more than one year after the effective date of this section.

#### LOSS OF PAY PROHIBITED IN CERTAIN CASES

SEC. 316. Section 110(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(6) No State plan shall be treated as meeting the requirements of this section unless such plan provides that in the case of any source which uses a supplemental, or intermittent control system for purposes of meeting the requirements of section 121, the owner or operator of such source may not temporarily reduce the pay of any employee by reason of the use of such supplemental or intermittent or other dispersion dependent control system."

#### RULE REVIEW

SEC. 317. (a) Any rule or regulation prescribed by the Administrator pursuant to the Clean Air Act may, by resolution of either House of Congress, be disapproved, in whole or in part, if such resolution of disapproval is adopted not later than the end of the first period of sixty calendar days when Congress is in session (whether or not continuous) which period begins on the date such rule or regulation is finally adopted by the Administrator. The Administrator shall transmit such rule or regulation to each House of Congress immediately upon its final adoption. Upon adoption of such a resolution of disapproval by either House of Congress within said sixty-day period, such rule or regulation, or part thereof, as the case may be, shall cease to be in effect.

(b) Congressional inaction or rejection of a resolution of disapproval shall not be deemed an expression of approval of such rule.

#### REDUCTION OF PAPERWORK; SIMPLIFICATION OF ADMINISTRATION

SEC. 318. The Administrator shall, not later than one year after the date of enactment of this section, study and report to Congress on methods for reducing paperwork and simplifying administration under the Clean Air Act, including appropriate recommendations for achieving these purposes.

#### CONFLICTS OF INTEREST

SEC. 319. (a) Section 110(a)(2)(F) of the Clean Air Act is amended by striking out "and" before "(v)" and by inserting the following at the end thereof: "and (vi) requirements that the State comply with the conflict of interest regulations under section 128," after "such authority;"

(b) Title I of such Act is amended by adding the following at the end thereof:

**"CONFLICTS OF INTEREST**

"SEC. 128. (a) Not later than the date one year after the date of the enactment of this section, each applicable implementation plan shall, pursuant to regulations promulgated by the Administrator, contain requirements (1) respecting disclosure of financial interests, and (2) prohibiting conflicts of interests, in the case of agencies, boards, committees, councils, departments, or other instrumentalities of a State authorized and empowered to carry out duties and functions pursuant to this Act (or any applicable implementation plan).

"(b)(1) Regulations promulgated by the Administrator under subsection (a)(1) shall provide that any person who—

"(A) serves on, or is employed by, any board, committee, council or other department, agency, or entity of a State or local government in any capacity having regulatory, enforcement, or policymaking responsibilities under this Act (or any applicable implementation plan), and

"(B) has any known financial interest (1) in any person subject to such Act (or plan), or (2) in any person who applies for or receives any grant, contract, or other form of financial assistance pursuant to this Act (or such plan),

shall, beginning six months after the promulgation of regulations under this section, annually file with such board, committee, council, department, agency or entity a written statement concerning all such interests held by such person during the preceding calendar year. Such statement shall be required to be available to the public.

"(2) Regulations promulgated by the Administrator under this section shall—

"(A) define the term 'known financial interest' for purposes of paragraph (1); and

"(B) establish the methods by which the requirement to file written statements specified in paragraph (1) will be monitored and enforced by the State.

"(c) Regulations promulgated by the Administrator under subsection (a)(2) shall provide that no person who—

"(1) is employed by, serves as attorney for, acts as a consultant for, or holds any other official or contractual relationship to—

"(A) the owner or operator of any major stationary source or any stationary source which is subject to a standard of performance or emission standard under section 111 or 112,

"(B) any manufacturer of any class or category of mobile sources if such mobile sources are subject to regulations under this Act (or under any applicable implementation plan), or

"(C) any trade or business association of which such owner or operator referred to in subparagraph (A) or such manufacturer referred to in subparagraph (B) is a member, or

"(2) owns any stock, bonds, or other financial interest in any such owner or operator, manufacturer, or trade or business association,

may serve in any capacity having regulatory, enforcement, or policymaking responsibilities, or be employed in any such capacity, on any agency, board, committee, council, department, or other instrumentality of a State or local government authorized and empowered to carry out duties and functions pursuant to this Act (or any applicable implementation plan)."

(c) The Administrator shall promulgate regulations for purposes of carrying out the amendments made by this section not later than the date 180 days after the date of the enactment of this Act.

**SAVINGS PROVISION; EFFECTIVE DATES**

SEC. 320. (a) No suit, action, or other proceeding lawfully commenced by or against the Administrator or any other officer or employee of the United States in his official capacity or in relation to the discharge of his official duties under the Clean Air Act, as in effect immediately prior to the date of enactment of this Act shall abate by reason of the taking effect of the amendments made by this Act. The court may, on its own motion or that of any party made at any time within twelve months after such taking effect, allow the same to be maintained by or against the Administrator or such officer or employee.

(b) All rules, regulations, orders, determinations, contracts, certifications, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to the Clean Air Act as in effect immediately prior to the date of enactment of this Act, and pertaining to any functions, powers, requirements, and duties under the Clean Air Act, as in effect immediately prior to the date of enactment of this Act, and not suspended by the Administrator or the courts, shall continue in full force and effect after the date of enactment of this Act until modified or rescinded in accordance with the Clean Air Act as amended by this Act.

(c) Nothing in this Act nor any action taken pursuant to this Act shall in any way affect any requirement of an approved implementation plan in effect under section 110 of this Act or any other provision of the Act in effect under the Clean Air Act before the date of enactment of this section until modified or rescinded in accordance with the Clean Air Act as amended by this Act.

(d) (1) Except as otherwise expressly provided, the amendments made by this Act shall be effective on date of enactment.

(2) Except as otherwise expressly provided, each State required to revise its applicable implementation plan by reason of any amendment made by this Act shall adopt and submit to the Administrator such plan revision no later than one year after the date of enactment of this Act.

Mr. BROYHILL (during the reading). Mr. Chairman, I ask unanimous consent that the remainder of the title be considered as read, printed in the Record, and open to amendment at any point. I understand there is only one amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. ROGERS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. BROYHILL. Mr. Chairman, I ask unanimous consent that section 308 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. ROGERS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. BROYHILL. Mr. Chairman, I move that section 308 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. The Chair will advise the gentleman that the gentleman's motion is not in order.

The Clerk will read.

The Clerk continued to read section 308.

Mr. BROYHILL. Mr. Chairman, I ask unanimous consent that the rest of the

title be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. ROGERS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. ROGERS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am sorry we have had to inconvenience the House for a few minutes here in the last half hour; but Mr. Chairman, we are trying to work out plans and I think we are ready to proceed with the bill now and go ahead and try to finish it up quickly.

Mr. Chairman, I would now ask unanimous consent that title III be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to this title?

**AMENDMENT OFFERED BY MR. PREYER**

Mr. PREYER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PREYER: Page 465, strike out line 1 and all that follows down to the closing quotation marks in line 5.

Mr. PREYER. Mr. Chairman, I have supported virtually every provision in this bill since its drafting began some 3 years ago. I think it is a good bill. I even support the concept in this section of the bill which would set up a task force on environmental cancer and heart and lung disease. I can appreciate its concern with coordinating regulatory measures to reduce environmental exposure to pollutants which risk our health. However, Mr. Chairman, I cannot support the last add-on paragraph to this section, section 310(c), which deals with a study of personal health habits.

This is a bill which primarily addresses itself to conventional environmental pollutants, such as smoke stack and tail-pipe emissions, and does not in any way deal with the personal health habits of the American people.

There may be some merit in studying the personal health habits of the American people but it is not germane to this legislation. EPA totally lacks any sort of expertise to make such a study. If we want to make that sort of a study, then it should be done by the National Institute of Health, or the Center for Disease Control, or the Research Triangle in my State, where we have the Environmental Health Science Agency.

Fundamentally, the Environmental Protection Agency deals with the controlling of emissions in the air and with effluents into the water. Its responsibility is to make findings with regard to these environmental hazards. It is not charged with regulating personal behavior or lifestyles.

Furthermore, no hearings were held on this section of the bill whatever.

If we are going to set out some kind of national health policy for personal

behavior, then it should not be done casually in this fashion.

Furthermore, there is something about this provision that I believe is very troubling. We can call this the "You're another" section of this bill. The spirit behind it seems to be that if you are to restrict my steel plants, or if you are going to penalize my automobile companies, then I am going to show that your beef and your dairy products and tobacco also affect health and you ought to be punished also. And while smoking is spelled out in the wording of this provision, let me make it clear that "personal health habits" go far beyond just smoking. It covers a lot more than tobacco. It deals with beef, beer, caffeine, eggs, corn oil, milk, margarine, even peanut butter. All of these things can affect our health, many things do. But there is not any question that even if we get enough sleep at night and have a proper diet, and if we only use tobacco and alcohol in moderate amounts, get plenty of exercise and watch the cholesterol in our diets, this is not going to prevent dirty air from tailpipes or smoke stacks.

I am all for clean living, but this is a clean air bill. It is not a clean living bill. This bill deals with the dangers to our health that are imposed by society as a whole; it does not deal with the dangers that we do to ourselves. So it is a red herring. It simply diverts the public policy from improving the air we breathe to a discussion about our personal health habits, and it undercuts the health premises of the clean air legislation. It will just confuse EPA's mission with a whole lot of data and recommendations about our health and personal lifestyles. It does not belong in this bill, and I urge the adoption of my amendment which simply strikes out this last paragraph and does no violence to the environmental study which is in this section.

Mr. GARY A. MYERS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I would like to be brief. Last year I offered the amendment which is now included in the bill because of the fact that I think there is increasing evidence that there is a relationship between cancer which is associated with the environment and cancer which is the effect of cigarette smoking—a combination of both. I would not ask for additional information to be generated unless I thought there was good cause to do so.

Last year I presented to the House a letter from the American Cancer Society in which they made this statement:

Certainly where any legislation addresses research strategies as a basis for regulatory measures to prevent and reduce environmental exposures to pollutants which increase the risk of cancer, as does Section 310 of H.R. 10498, the American Cancer Society is in full accord with the specific mention of tobacco smoking as such a pollutant.

Further on I would like to quote from a 1975 study of the Department of Health, Education, and Welfare. It says:

In summary, if an increased risk of chronic obstructive pulmonary disease due to air pollution exists, it is small compared to that due to cigarette smoking under conditions of air pollution to which the average person is exposed. The possibility remains that the two

different kinds of exposure may interact to increase the total effect beyond that contributed by each exposure.

I would further like to quote from a study made on the basis of individuals who work in the asbestos industry. This is part of the statement that I made last year about how there is an interaction between those who work in asbestos industries and smoking in comparison to cancer. Briefly stated, a study was made from 1943 to 1963 and extended on to 1967. In the projection of the death rates from 1963 to 1967, they made certain projections, and I would like to quote from a portion of that study:

When Dr. Selikoff and colleagues continued the study to 1967, it was calculated, given their smoking habits, that of the 87 with no smoking, there should not have been any cancer of the lung.

And there was not. Not one of these men died of lung cancer. "They died of other things—asbestosis, or gastrointestinal cancer, et cetera. They had much asbestos in their lungs," but they did not die of lung cancer. I have paraphrased that part.

On the other hand, he said, there should have been three lung cancer deaths among the 283 with a history of smoking. There were actually 24. It was not the asbestos alone, none died of lung cancer; it was not the smoking alone, only three would have died of lung cancer.

So there is an increased amount of evidence that has been generated to link a combination of factors with respect to the development of cancer.

The section of the bill we are talking about is subtitled "Prevention of Environmental Cancer and Heart and Lung Disease." I would like to further quote from the study of the Medical School of the University of Birmingham, and these are some of the statements:

Complex carcinogenic mixtures such as cigarette smoke and coal tars are believed to contain large amounts of co-carcinogens and relatively minor quantities of primary or pro-carcinogens.

In this connection, it seems appropriate to mention that cancer found in man and animals is, in many instances, probably the result of the simultaneous or sequential action of mixtures of agents. This point will need to be considered when investigating the precise nature of agents responsible for cancer in man. Up to now many bioassays and safety assessments have been conducted on single agents. While such studies have led to the discovery of a number of different chemical carcinogens future studies must delineate the carcinogenic risk of specific and rationally selected mixtures which may affect man.

I think it would be irresponsible to remove from this bill the request for more information. We are asking industry, and it is not just the gentleman's industry in his district but industry all over the United States, to make a significant investment in trying to decrease the amount of pollution we have.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. GARY A. MYERS was allowed to proceed for 1 additional minute.)

Mr. GARY A. MYERS. Mr. Chairman, I do not think Congress wants to put

itself in the position of legislating in a way that they will have skewed the situation so that they absolutely cannot get the information they need for their basic decisions. All I ask and what the bill now provides is that there be consideration given to the health habits and particularly smoking and any others that might be identified which would be associated with cocarcinogens. I do not think the gentleman would want to go back to his constituency and say: "There is a hazard of cocarcinogens but I have asked Congress to ignore them on your behalf."

What we are all doing here is, first, to try to protect the health of the American people, and, second, to make this an acceptable bill.

This will not increase the cost greatly if we investigate the cocarcinogens but it will investigate the effect of smokestacks and smoking on health.

Mr. WAXMAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. EDWARDS of Oklahoma. Mr. Speaker, I object, most regretfully.

The CHAIRMAN. Objection is heard.

The gentleman from California (Mr. WAXMAN) is recognized for 5 minutes.

Mr. WAXMAN. Mr. Chairman, I would like to ask a question of the gentleman who offered this amendment, the gentleman from North Carolina (Mr. PREYER).

Mr. Chairman, as the gentleman from North Carolina (Mr. PREYER) has explained the purpose of this amendment, it seems to me there was a task force developed to develop and implement a research program and consider the health habits and tobacco smoking. The gentleman wants to strike the words "including tobacco smoking"; is that correct?

Mr. PREYER. No; I wish to strike the whole subsection (c).

Mr. WAXMAN. Oh, I see.

Mr. PREYER. Which deals with the impact on personal health habits. I have no objection and I agree with the task force idea that we should study environmental pollution. I think in the context of the bill and the EPA, we are talking about conventional environmental pollutants, such as asbestos. EPA deals with clean air, clean water, tailpipes and smoke stack emissions; but subsection (c) is an add-on that changes all that from conventional environmental pollutants into the area of regulating personal health habits; that means cholesterol, diet, too much fat in the diet, smoking, drinking, and so forth. That is just not an area in which the EPA has any expertise.

Mr. WAXMAN. How can the gentleman make a demarcation between those carcinogens in the environment that may cause cancer and those that come about through personal habits, such as smoking and drinking and those that cause problems like that? Is there not a synergistic effect between those? Is there not a rela-

tionship between carcinogens that enter the body through personal habits?

Mr. PREYER. Yes, surely; but this bill deals with environmental impacts imposed on us by society, things we cannot do anything about ourselves. This is what EPA is good at. NIH, or some such body, should study such things as synergistic effects.

Mr. WAXMAN. Well, if the gentleman will yield further, the bill finds that the National Cancer Institute, the National Heart, Blood and Lung Institute, to be involved in this subject. Would not they have expertise on these subjects that the EPA might not have?

Mr. PREYER. They might have more expertise, but the EPA Director calls them together. He presides and so he controls.

I think we can deal with this in a more considered way.

Incidentally, no hearings have been held on this.

If the reason behind this is to set a national policy on health habits, we ought not to be discussing that in a casual way by throwing in amendments.

Whether the Government ought to be helping us do what is good for us in our personal lives, that is a subject worthy of some discussion.

Mr. WAXMAN. Mr. Chairman, I am going to reluctantly oppose the gentleman's amendment. It seems to me we cannot isolate environmental factors that do cause cancer. We have a representation by the National Cancer Institute and the National Heart, Blood and Lung Institute, along with the EPA. If we are going to have a task force then to go into this problem and it is worth looking into, because we now learn that 90 percent of all cancer is caused by environmental factors, then I see no reason to delete that aspect of cancer from the task force.

Mr. Chairman, I must reluctantly oppose the amendment.

Mr. SCHEUER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, this House is going to move in the next year or two toward a comprehensive national health insurance program. The estimates of the cost go upward of \$100 billion. Sooner or later, the American people have to come to an understanding that if we are going to get a handle on astronomically climbing health costs, they are going to have to take some responsibility themselves for their own health outputs; that the answer to the state of our national health is not going to be determined by how many tertiary hospital beds we have or by how many CAT scanners we have or how many open heart surgery units we have.

On the contrary, the profile of our national health is going to be determined by how we organize our lives in terms of consumption of alcohol, use of tobacco, exercise, diet, consumption of drugs and, above all, our propensity to involve ourselves in violent situations.

The way we face up to this challenge, individually and collectively, is going to determine our national health results and the degree to which we can get a handle on the inordinate cost of ever-climbing hospital and health costs.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. SCHEUER. I yield to the gentleman from Florida.

Mr. ROGERS. I just want to say to the Members that this section was put in—and I would like to emphasize this—and intended here only that this task force be an advisory task force to study and make recommendations. It is not a regulatory body at all. I thank the gentleman for yielding to me.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent Mr. SCHEUER was allowed to proceed for 1 additional minute.)

Mr. SCHEUER. So, Mr. Chairman, the challenge facing this Congress as to how to get the American people to think about their own health outputs, to think about organizing their lives to produce a healthy, happy, sane population is an enormous one. We do not want to do it by compulsion, not by nonvoluntary ways, not by brainwashing. We want to do it in a voluntary way in what is essentially a voluntary, pluralistic society.

It seems to me that any opportunity that we can have scientifically and in a scholarly way to expose the American people of the results to them individually and collectively of consumption of alcohol, use of tobacco and drugs, improper diet, inadequate exercise, and unnecessary and irrational involvement in violence is all to the good; and, ultimately, if this collective effort is carried on systematically through all of the legislative products of this House, in a variety of different ways, we can save billions of dollars and millions of lives.

The CHAIRMAN. The question is on the amendment offered by the gentleman from North Carolina (Mr. PREYER).

The question was taken; and the Chairman announced that the ayes appeared to have it.

Mr. GARY A. MYERS. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the amendment was agreed to.

Mr. EDWARDS of California. Mr. Chairman, amendments to the Clean Air Act legislation have turned H.R. 6161 into a parody of the fine bill reported by the committee.

A favorable vote for final passage is a vote for dirty air for most areas of the United States well into the 1980's. By relaxing the standards for auto emissions, auto pollutants will "use up" the quota for numerous air basins, making it impossible to build factories and other job producing businesses.

I will vote against the bill as amended because it is bad for the public health, bad for the environment, and bad for employment.

Mrs. COLLINS of Illinois. Mr. Chairman, I rise to lend my support for H.R. 6161, as reported by the House Commerce Subcommittee on Health and the Environment. Although the growth of U.S. air pollutants has lessened since 1940, it is clear to me that as a forward thinking body we must anticipate the future and preclude the possibility of a Nation of polluted air.

The bill before us, the Clean Air Act, is a reasonable measure designed to meet

the inevitable air health safety problems that we will face as a modern technological society. Even though the proponents of the Dingell-Broyhill amendment would have us believe that the present state of our air warrants weaker emission standards over a longer period than proposed by H.R. 6161, I am not lulled into a sense of satisfaction by knowing that currently nitrogen oxide, a difficult-to-control cancer-causing component of nitrosamines, has been reduced by 43 percent. That is fine, but I would like to see it reduced by 90 or 95 percent.

The Dingell amendment, as we all know, is yet another attempt to delay for the fourth straight year compliance with automobile emission standards designed to make our air cleaner and to protect our health. The reality is that the 50 million citizens of the 29 air quality regions not meeting Federal ambient air quality standards reside in major urban areas, where manufacturing and industrial activity places burdens on the purity of the air that we all breathe. How can we, by delaying the implementation of congressionally mandated clean air standards, even think of not trying to eliminate the respiratory illnesses dirty air has caused our citizens to suffer.

To those who cry that the bill is "technology-forcing," I reply, foul. America has long been a technological giant in the world. Since when has this become a status of which we are not proud? Based on the results of independent studies that have revealed the failure of the auto industry to make maximum feasible efforts to develop new pollution control technology during the nearly 7 years since the passage of the original act, my reasoning tells me that H.R. 6161 is needed because it puts teeth into the original 1970 Clean Air Act. For these and other relevant reasons, I urge my colleagues to defeat the Dingell amendment and join me in supporting the committee bill.

The CHAIRMAN. Are there further amendments to title III? If not, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. DANIELSON, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes, pursuant to House Resolution 589, he referred the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on

the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

**MOTION TO RECOMMIT OFFERED BY MR. COLLINS OF TEXAS**

Mr. COLLINS of Texas. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. COLLINS of Texas. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. COLLINS of Texas moves to recommit the bill H.R. 6161 to the Committee on Interstate and Foreign Commerce.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROGERS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 326, nays 49, not voting 58, as follows:

**[Roll No. 291]**

**YEAS—326**

|                |                |                 |

Messrs. RICHMOND, SOLARZ, CAVA-  
NAUGH, and MOORE changed their  
votes from "yea" to "nay."

So the bill was passed.

The result of the vote was announced  
as above recorded.

A motion to reconsider was laid on the  
table.

**AUTHORIZING THE CLERK TO MAKE  
CORRECTIONS IN ENGROSSMENT  
OF H.R. 6161**

Mr. ROGERS. Mr. Speaker, I ask  
unanimous consent that in the engross-  
ment of the bill H.R. 6161 the Clerk be  
authorized to correct section numbers,  
the table of contents, punctuation, and  
cross-references to reflect the actions of  
the House in amending the bill H.R. 6161.

The SPEAKER. Is there objection to  
the request of the gentleman from  
Florida?

There was no objection.

**GENERAL LEAVE**

Mr. ROGERS. Mr. Speaker, I ask  
unanimous consent that all Members  
may have 5 legislative days in which to  
revise and extend their remarks, and to  
include extraneous material, on the bill  
just passed, H.R. 6161.

The SPEAKER. Is there objection to  
the request of the gentleman from  
Florida?

There was no objection.

**GENERAL LEAVE**

Ms. HOLTZMAN. Mr. Speaker, I ask  
unanimous consent that all Members  
may have 5 legislative days in which to  
revise and extend their remarks on the  
amendment I introduced to the bill H.R.  
6161.

The SPEAKER. Is there objection to  
the request of the gentlewoman from  
New York?

There was no objection.

The Clerk announced the following  
pairs:

On this vote:

Mr. Zeferetti for, with Mr. Dellums against.  
Mr. Hamilton for, with Mr. Teague against.

# REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF (H.R. 6990) MILITARY CONSTRUCTION AUTHORIZATION ACT, 1978

Mr. BOLLING, from the Committee on Rules, submitted a privileged report (Report No. 95-369) on the resolution (H. Res. 602) providing for the consideration of the bill (H.R. 6990) to authorize certain construction at military installations, and for other purposes, which was referred to the House Calendar and ordered to be printed.

# REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 6804, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. BOLLING, from the Committee on Rules, submitted a privileged report (Report No. 95-370) on the resolution (H. Res. 603) providing for the consideration of the bill (H.R. 6804) to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes, which was referred to the House Calendar and ordered to be printed.

# APPOINTMENT OF ADDITIONAL CONFEREES ON H.R. 2, SURFACE MINING CONTROL ACT

Mr. UDALL. Mr. Speaker, I ask unanimous consent that the Speaker be authorized to appoint three additional managers on the part of the House at the conference on the bill H.R. 2, the Surface Mining Control Act.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

Mr. RHODES. Mr. Speaker, reserving the right to object, would the gentleman explain why this request is made?

Mr. UDALL. Mr. Speaker, if the gentleman will yield, after the conferees were appointed, I conferred with the gentleman from Kansas, the ranking minority member. The gentleman from Michigan (Mr. RUPPE) had been involved in this for a long time and had been deeply interested in this bill, and we are enlarging the conference from 7 to 10 largely to accommodate the gentleman from Michigan (Mr. RUPPE) and to appoint two additional majority members.

Mr. RHODES. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Arizona? The Chair hears none and appoints the following additional conferees: Messrs. TSONGAS, RAHALL, and RUPPE.

# AUTHORIZING APPROPRIATIONS FOR SAN LUIS UNIT, CENTRAL VALLEY PROJECT, CALIFORNIA

Mr. MEEDS. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 4390) to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central

Valley Project, Calif., to mandate the extension and review of the project by the Secretary, and for other purposes, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 5, lines 12 and 13, strike out "interim contract on the San Luis Unit, or any".

Page 5, line 16, after "14-06-200-2020-A)" insert: ", or any temporary contract extending more than one hundred and eighty days beyond December 31, 1977,".

Mr. MEEDS (during the reading). Mr. Speaker, I ask unanimous consent that the amendments be considered as read and printed in the Record, and that I be allowed to explain them.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. MEEDS. Mr. Speaker, I am happy to explain the effect of the amendments of the Senate. First, there is no question but that the amendments are germane and they do not increase the cost of the measure to the Federal Government.

Their effect is actually to clarify the intent of Congress with respect to section 3 of the bill forbidding further contracting between the Secretary of the Interior and the Westlands Water District during the pendency of the Task Force report mandated by section 2 of the bill. The Senate amendment will make it possible for a temporary contract covering certain routine noncontroversial aspects of project management to be concluded while maintaining a moratorium on contracting in certain forbidden areas such as changes in water deliveries or altered repayment arrangements.

The Senate amendments have been considered by the original author of the bill in the House, the gentleman from California (Mr. SISK) the ranking minority member on the subcommittee, the gentleman from New Mexico (Mr. LUJAN) and the gentleman from California (Mr. MILLER) who offered section 3 to the bill as an amendment in committee.

Mr. SISK. Mr. Speaker, I believe that the Senate and House hearings, committee reports, and floor debates have well documented the urgent need for the enactment of H.R. 4390, a bill to amend the act of June 3, 1960, which authorized the Secretary of the Interior to construct the San Luis unit, Central Valley project, Calif.

I have no problem with the amendment to the bill adopted by the Senate and explained in its committee report. There is no reason why we should not accept the Senate modification and send the bill on to the White House for action by the President.

I am, however, concerned about a change which has been made in the bill and, were it not for the urgent need for its enactment forthwith, would seek to correct what I regard as a deficiency. I will explain my concern later in these remarks.

My purpose in introducing H.R. 4390 early in March was to address a critical

problem which, if not resolved, would have forced an abrupt halt of work on the distribution system and drains for providing surface water irrigation service to some 500,000 acres of prime agricultural land within the Federal San Luis Project on the west side of California's San Joaquin Valley. This problem arose because the 1960 act—through what I am confident was sheer inadvertence—failed to include the customary language covering adjustment of the authorized amount based on increase or decrease in the construction cost index.

At the time of authorization 5 years was represented as the optimum construction period for completion of these works. As of now the distribution system is approximately 75 percent complete. As a direct result of this ill advised and uneconomic stretched out construction period, the authorized amount will be used up in this year's construction program, and work must be halted unless H.R. 4390 is enacted.

Following introduction of H.R. 4390 I entered into discussions with our colleague GEORGE MILLER whose congressional district includes the Sacramento-San Joaquin delta area of California. I might pause at this point to salute Congressman MILLER as an able and fair-minded legislator. What impressed me most was his positive approach. He perceived the havoc that a work shutdown would cause. At the same time, he articulated the concerns of those who feel that the letter and the spirit of the San Luis enabling act and the basic Federal reclamation were being frustrated. While I personally do not agree with that assessment, I respect my colleague's conscientious concerns in the matter.

As the author, along with the late great Senator from California, Clair Engle, of the San Luis Act, I have kept in close touch with all aspects of the project during the protracted construction period. I believe firmly in the excess land limitations and other provisions of the Federal reclamation law. I further believe that existing law is being carried out in connection with development of the project. Like Congressman MILLER and others, I am most anxious to have all the facts pertaining to San Luis spread on the public record.

The version of H.R. 4390 pending before us today is a direct result of discussion between GEORGE MILLER and me and our staffs. Briefly, the bill would first authorize appropriation of \$31,050,000 for continuation of construction on the distribution and drain facilities during the fiscal year 1978. Secondly, it would establish a mechanism designed to secure an objective evaluation of the management, organization, and operation of the project in the light of provisions of the applicable law and commitments of the responsible local public entity, the Westlands Water District.

The legislation would establish a task force composed of the Commissioner of Reclamation, the Assistant Secretary of the Interior for Land and Water, the Solicitor of the Department of the Interior, the Comptroller General of the United States and representatives of the general public, the State of California, and of the Westlands Water District. No

later than January 1, 1978, the task force would be required to submit a report to the chairman of the House Committee on Interior and Insular Affairs and of the Senate Committee on Energy and National Resources. The bill designates 10 specific issues relating to the management and operation of San Luis which are to be analyzed, reviewed, or considered by the task force and included in its report.

Thus the enactment of H.R. 4390 will serve as a vehicle for not only averting an imminent shutdown of an important construction program, but also for ferreting out the basic facts in the long smoldering dispute over the San Luis project.

I might add that while the ten specific issues are presented in the framework of operations of the San Luis project several, if not all in one way or another, have implications which will have a bearing on Federal reclamation projects throughout the 17 Western States. In other words, I believe that if the task force functions as contemplated its findings and recommendations may well transcend San Luis and have a significant impact on the future direction of the Federal reclamation program.

I trust that my colleagues in this Chamber today will perceive from these remarks my enthusiasm over the promise which creation of the task force holds for the Federal reclamation program. Incidentally, that important program will celebrate its 75th birthday in the middle of next month. While enactment of the Reclamation Project Act of June 17, 1902, may go unheralded in the seemingly complex issues of today, its important contribution to development of the Western areas of our Nation cannot be gainsaid.

At the outset of these remarks I alluded to one change in the bill which is of concern to me. In the compromise developed by Mr. MILLER and myself and presented to the House Subcommittee on Water and Power Resources the task force was to be comprised on three high officials of the Department of the Interior and the Comptroller General of the United States. The Secretary of the Interior was given permission to select additional task force members from the general public, and from representatives of the State of California and the Westlands Water District.

An amendment offered in the subcommittee struck from the bill the discretionary authority of the Secretary to designate the non-Federal members of the task force and made such appointments mandatory. In my view that change was most unfortunate. I would have no objection whatsoever to the addition of a representative of the general public to the task force. In fact, the inclusion of such a member would be highly desirable providing the designee were endowed with characteristics of integrity, ability, and standing of the highest order, and had no previous connection with San Luis.

If the task force is to succeed in its difficult task of sorting out the facts and fiction in the dispute, its members must be detached from emotional involvement or preconception on the issues. In other

words, it is my strong conviction that none of the members of the task force should be a protagonist for any specific point of view related to San Luis. To me, the requirement that the Secretary appoint a representative of the State of California, the Westlands Water District, or any other special interest group to the task force is incompatible with the sine qua non of any fact finding body, namely, objectivity.

As stated earlier, having gone on record with respect to my stated concern, I nonetheless recommend approval of H.R. 4390 today so that the construction work now in progress may be continued without interruption.

I would, however, urge the Secretary of the Interior in the discharge of his responsibility to designate the "outside" members of the task force to select persons of unquestioned integrity. It is essential that he do so if the work product of the task force—its report—is to point the way for resolution of the controversy which has surrounded the San Luis project.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

A motion to reconsider was laid on the table.

#### GENERAL LEAVE

Mr. MEEDS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous matter on the bill H.R. 4390.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

#### LEGISLATIVE PROGRAM FOR WEEK OF MAY 30, 1977

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the distinguished acting majority leader as to the program for the balance of the week and for next week.

Mr. BRADEMAs. Mr. Speaker, if the distinguished minority leader will yield, I will respond.

Mr. RHODES. I yield to the gentleman from Indiana.

Mr. BRADEMAs. Mr. Speaker, Monday and Tuesday will be the Memorial Day district work period.

On Wednesday the House meets at noon and will consider the bill H.R. 6970, amendments to Marine Mammal Protection Act of 1972, under an open rule with 1 hour of debate.

That will be followed by H.R. 6967, Peace Corps authorization, under an open rule with 1 hour of debate.

Thursday and the balance of the week the House meets at 10 a.m. on H.R. 6804, the Department of Energy Organization Act, under an open rule with 3 hours of debate.

The House will adjourn by 3 p.m. on Fridays and by 5:30 p.m. on all other days except Wednesdays.

Conference reports may be brought up at any time.

Any further program may be announced later.

Mr. RHODES. Mr. Speaker, I take it that the Department of Energy Organization Act bill will be the only measure considered on Thursday?

Mr. BRADEMAs. The gentleman is correct and it is anticipated that that might take most of the day Thursday and, of course, could even go into Friday, depending on how the debate went.

Mr. RHODES. There is a possibility of a Friday session next week?

Mr. BRADEMAs. The answer to that is, of course, yes.

Mr. RHODES. Mr. Speaker, I thank the gentleman.

#### AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND THE SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS NOTWITHSTANDING ADJOURNMENT

Mr. BRADEMAs. Mr. Speaker, I ask unanimous consent that notwithstanding any adjournment of the House until Wednesday, June 1, 1977, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

#### DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. BRADEMAs. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday, June 1, 1977, be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

#### AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS AND TO APPOINT COMMISSIONS, BOARDS, AND COMMITTEES AUTHORIZED BY LAW OR BY THE HOUSE, NOTWITHSTANDING ADJOURNMENT

Mr. BRADEMAs. Mr. Speaker, I ask unanimous consent that notwithstanding any adjournment of the House until Wednesday, June 1, 1977, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

#### INTRODUCTION OF THE COAL SUBSTITUTION INCENTIVE ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from Pennsylvania (Mr. MOORHEAD) is recognized for 5 minutes.

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, this year, 1977, we will be spending at least \$83 billion for foreign oil. We must do so in order to keep our cars moving, our industry and utilities operating, and our homes warm and lighted. The most oft-quoted statistic, concerning our energy situation, stresses our growing dependence on imports which now exceed 40 percent of our total domestic oil demand.

It has become increasingly clear to the American people that such dependence is fraught with economic danger. The threat of increased prices and a restoration of the embargo, and all they imply in terms of economic disruption, are problems with which this Congress must deal. Indeed, in his energy message of April 29, President Carter pointed out in stark terms the degree of our commitment to oil and gas with which to operate our society, and equally so, our definite need to reduce such dependence as fast and as complete as the transition to other energy sources will permit.

For the record, it is important to note that industry and utilities used 4.8 million barrels of oil per day, and 5.9 million barrels of oil equivalent per day, in the form of natural gas, in 1976. The rate of consumption will probably be even higher this year. Both resources are, however, scarce in availability. Moreover, both are needed by other elements of our economy to as great a degree as industry and the utilities represent.

For that reason alone, it makes eminent good sense to promote conversion to other energy forms as quickly as possible. This can be done by turning to more abundant sources such as coal, which makes up 90 percent of our conventional energy reserves, but supplies only 18 percent of our energy consumed.

Mr. Speaker, we must ask ourselves how we can proceed to increase the demand for the use of our coal resources. Certainly, we should do all we can to remove those constraints which have held back such demand for this energy source in the past.

Mr. Speaker, one such constraint has been the obvious cost incurred by the user to meet necessary environmental standards, particularly those involving direct burning. The Clean Air Act of 1970 established high air quality requirements. The Edison Electric Institute has estimated the cost to utilities to be at least \$1.7 billion annually to meet those standards. These are imposing figures, but if we are to shift from oil- and gas-fired systems to those based on coal, it is clear to me that we must also provide suitable incentives and assistance to industry in its quest to accomplish such a massive undertaking.

Mr. Speaker, this is why I am introducing the Coal Substitution Incentive Act of 1977.

This bill, if enacted, would provide up to \$500 million annually in loan guarantees and \$100 million in low interest loans to companies shifting from oil and gas to coal. The funds made available would be for the acquisition of pollution control systems.

The legislation foresees a 10-year conversion effort, thus, the limits of these incentives could be \$5 billion in guarantees and \$1 billion in loans.

Mr. Speaker, as chairman of the House Banking Subcommittee on Economic Stabilization, I have devoted considerable effort to the review and examination of loan guarantees as forms of credit assistance, and as a means of reallocating our resources. This legislation I introduce today incorporates all of the acknowledged safeguards identified by our efforts that are intended to minimize the risk of Federal revenue loss should any default occur.

Mr. Speaker, President Carter has told us our energy problem has taken decades to grow, and may take decades to solve. I believe we can move toward that solution only if we recognize the nature of our problem, and only if we begin the task of its solution today. The equation is quite simple: We must reduce foreign oil and gas imports, and we must increase the use of our own resources. Our most abundant substitute is coal. I believe there is widespread support for incentives to go to coal substitution, and I believe that loans and loan guarantees should be considered in the range of incentives to be adopted.

Mr. Speaker, I urge my colleagues to support this measure, and I ask unanimous consent that the text of the bill appear at this point in the RECORD.

H.R. 7473

A bill to establish fiscal incentives for the conversion of existing petroleum-fired and natural gas-fired powerplants and fuel burning installations to coal as a primary energy source, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Coal Substitution Incentive Act of 1977".

SEC. 2. The Energy Supply and Environmental Coordination Act of 1974 is amended by adding the following new title.

#### "TITLE II

##### "FINDINGS AND PURPOSE

"SEC. 201. (a) The Congress finds that—

"(1) the United States is now and will increasingly be dependent on unreliable foreign sources of fossil fuel energy;

"(2) this dependency can be reduced by the use of domestic energy resources at existing major electric powerplants and fuel burning installations;

"(3) the only domestic energy sufficiently abundant to the primary energy source for such existing facilities is coal; and

"(4) the substitution of coal for petroleum or natural gas as the primary energy source in existing electric powerplants and fuel burning installations is expensive, and will not occur to a substantial degree without temporary Federal fiscal assistance.

"(b) The purposes of this title are—

"(1) to authorize the Federal Energy Administration to provide loan guarantees and low-interest rate loans for the purchase of pollution-abatement devices necessary to comply with applicable environmental requirements, thereby stimulating the conversion to coal as a primary energy source in existing electric powerplants and fuel burning installations now utilizing petroleum or natural gas; and

"(2) to ease the capital requirements temporarily imposed by a conversion to coal or other fuel as the primary energy source by existing electric powerplants and fuel burn-

ing installations now utilizing petroleum or natural gas as a primary energy source.

#### "DEFINITIONS

"SEC. 202. For the purposes of this Act:

"(a) The term 'Administrator' means the Administrator of the Federal Energy Administration.

"(b) The term 'natural gas' includes dry natural gas, casinghead gas, and synthetic natural gas derived from natural gas liquids and which is commingled with natural gas.

"(c) The term 'person' includes a Federal, State, or local agency, who owns, leases, operates, or controls any electric powerplant or fuel burning installation.

"(d) The term 'petroleum' includes crude oil, residual fuel oil, refined petroleum products, liquid petroleum gas or synthetic natural gas derived from petroleum.

"(e) The term 'coal or other fuel' means coal and any fuel other than natural gas or petroleum.

"(f) The term 'small electric powerplant' means a fossil-fuel fired electric generating unit, which is part of an electric utilities system with a total net generating capacity of less than one hundred and fifty megawatts, that produces electric power for the purposes of sale or exchange.

"(g) The term 'fuel burning installation' means an industrial installation, other than an electric powerplant, that contains a fossil-fuel fired boiler, a gas turbine unit, combined cycle unit, or diesel engine, that by design is capable of being fired for the generation of steam or heat and includes combinations of more than one such unit at the same site.

"(h) The term 'small industrial installation' means a fuel burning installation that by design is not capable of being operated at a total fuel heat input in excess of two hundred and fifty million British thermal units per hour.

"(i) The term 'primary energy source' means the fuel used by an electric powerplant or fuel burning installation for normal operation the minimum amounts of fuel required (1) for boiler start-up, testing, flame stabilization, control uses, and fuel preparation; (2) to alleviate or prevent acute short-term air quality emergencies; and (3) to alleviate or prevent any emergencies directly affecting the public health, safety, and welfare which would result from electric power outages.

"(j) The term 'air pollution control device' means equipment designed to reduce the quantity of atmospheric emissions by any electric powerplants and fuel burning installation using coal or other fuel as its primary energy source.

#### "LOAN GUARANTEES

"SEC. 203. (a) (1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee the bonds, debentures, notes, and other obligations issued by or on behalf of any person who owns, leases, operates, or controls any existing electric powerplant or fuel burning installation, for the specific purpose of financing the purchase and installation of air pollution control devices at such electric powerplants or fuel burning installations. The aggregate amount of outstanding indebtedness guaranteed under this section may at no time exceed \$5,000,000,000. No guarantee or commitment to guarantee shall be undertaken under this section after January 1, 1985.

"(2) An applicant for a guarantee under this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator deems necessary to protect the interest of the United States. Each guarantee and commitment to guarantee shall be extended in such form, under such

terms and conditions, and pursuant to such regulations as the Administrator deems appropriate.

"(b) The Administrator shall guarantee or make a commitment under subsection (a) of this section, with respect to air pollution control devices, subject to conditions and priorities pursuant to section 205 of this title, and if—

"(1) the Administrator is satisfied that the guarantee will significantly reduce the borrowing costs associated with acquisition of capital for the purchase of such pollution control devices;

"(2) the Administrator is satisfied that the acquisition of such air pollution control devices would be significantly delayed in the absence of a loan guarantee;

"(3) the amount guaranteed does not exceed 66⅔ per centum of such air pollution control device acquisition costs;

"(4) the Administrator is satisfied that the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 204 of this title has not been obtained for such air pollution control devices; and

"(5) the bonds, debentures, notes, or other obligations for which guarantees are made shall not have redemption dates or a maturity in excess of ten years from date of issuance.

"(c)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a guarantee, for the appraisal of properties offered as security for a guarantee, or for the issuance of commitments for a loan or other obligation guaranteed under this section, but such charge shall not exceed one-quarter of one per centum of the amount of the loan or other obligation.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan or other obligation guaranteed under this section, but such fee shall not exceed one-half of one per centum per annum of such guaranteed loan or other obligation during the twelve-month period following enactment of this title.

"(d) No guarantee or commitment to guarantee an obligation entered into by the Administrator shall be terminated, canceled, or otherwise revoked, except in accordance with reasonable terms and conditions prescribed by the Administrator. Such a guarantee or commitment to guarantee shall be conclusive evidence that the underlying obligation is in compliance with the provisions of this section and that such obligation has been approved and is legal as to principal interest, and other terms. Such a guarantee or commitment shall be valid and incontestable in the hands of a holder as of the date when the Administrator entered into the contract of guarantee or commitment to guarantee, except as to fraud, duress, mutual mistake of fact, or material misrepresentation by or involving such holder.

"(e)(1) If there is a default in any payment by the obligor of interest or principal due under an obligation guaranteed by the Administrator under this section and such default has continued for ninety days, the holder of such obligation or his agents has the right to demand payment by the Administrator of such unpaid amount. Within such period as may be specified in the guarantee or related agreements, but not later than forty-five days from the date of such demand, the Administrator shall promptly pay to the obligee or his agent the unpaid interest on an unpaid principal of the obligation guaranteed by the Administrator as to which the obligor has defaulted, using funds collected for such purpose as insurance fees pursuant to subsection (c), unless the Administrator finds that there was no default by the obligor in the payment of interest or

principal or that such default has been remedied.

"(2) If the Administrator makes a payment under paragraph (1) of this subsection, he shall have all rights specified in the guarantee or related agreements with respect to any security which he held with respect to the guarantee of such obligation, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements.

"(3) If there is a default under any guarantee or commitment to guarantee an obligation, the Administrator shall notify the Attorney General who shall take such action against the obligor or any other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such obligation shall make available to the United States all records and evidence necessary to prosecute any such suit.

#### "COAL CONVERSION LOANS

"Sec. 204. (a) (1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to make loans and to make commitments to loan to any person who owns, leases, operates, or controls any existing electric powerplant, or fuel-burning installation, for the specific purpose of financing the purchase and installation of air pollution control devices at such electric powerplants or such fuel-burning installations. The aggregate amount of loans outstanding under this section may at no time exceed \$1,000,000,000. No loan or commitment to loan shall be made under this section after January 1, 1985.

"(2) An applicant for a loan under this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator deems necessary to protect the interests of the United States.

"(3) Each loan shall be extended in such form, under such conditions and terms, and pursuant to such regulations as the Administrator deems appropriate: *Provided*, That the Administrator shall, from time to time as he deems appropriate and on advice of the Secretary of the Treasury, establish the interest rate or rates at which loans shall be made under this section: *Provided further*, That this interest rate shall be established at the current rate being paid by the Secretary of the Treasury on bonds, notes, and other obligations of comparable duration issued on behalf of the Federal Government, plus such fees and other charges as the Administrator may specify pursuant to subsection (c) of this section, not to exceed 1 per centum per annum.

"(b) The Administrator shall loan or make a commitment to loan under subsection (a) of this section with respect to air pollution control devices, subject to conditions and priorities pursuant to section 205 of this title, and if—

"(1) the Administrator is satisfied that the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 203 of this title has not been obtained for such air pollution control devices;

"(2) the Administrator is satisfied that the acquisition of such air pollution control devices would not occur in the absence of a loan;

"(3) the loan does not exceed 66⅔ per centum of the cost of acquiring and installing such air pollution control devices; and,

"(4) the loan does not have a maturity date in excess of ten years.

"(c)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a loan, for the appraisal of properties offered as

security for a loan, or for the issuance of a commitment: *Provided*, That such amounts shall not exceed one-half of one per centum of the loan amount authorized pursuant to subsection (a) of this section.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan made pursuant to this section. Such fee shall not exceed one-half of one per centum of such loan during the twelve-month period following enactment of this title.

"(d) No loan or commitment to loan entered into by the Administrator shall be terminated, canceled, or otherwise revoked, except in accordance with reasonable terms and conditions prescribed by the Administrator.

"(e)(1) If there is a default in any payment by the obligor of interest or principal due under a loan entered into by the Administrator under this section and such default has continued for ninety days, the Administrator has the right to demand payment of such unpaid amount, unless the Administrator finds that such default has been remedied, or a satisfactory plan to remedy such default by the obligor has been accepted by the Administrator.

"(2) In demanding payment of unpaid interest or principal by the obligor, the Administrator has all rights specified in the loan-related agreements with respect to any security which he held with respect to the loan, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such loan or related agreements.

"(3) If there is a default under any loan or commitment to loan, the Administrator shall notify the Attorney General who shall take such action against the obligor or other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such loan shall make available to the United States all records and evidence necessary to prosecute any such suit.

"(f) There are hereby authorized to be appropriated to the Administrator such sums as shall be sufficient for the purposes of this title, but which shall not exceed the sum of \$200,000,000 for each fiscal year 1978 through 1982.

#### "CONDITIONS AND PRIORITIES

"Sec. 205. (a) The Administrator shall guarantee or make a commitment to guarantee as authorized in section 203 of this title, or loan or make a commitment to loan as authorized in section 204 of this title, only when conditions set forth in such sections are satisfied, and if—

"(1) air pollution control devices to be acquired pursuant to this title shall satisfy any applicable environmental requirements;

"(2) the Administrator is satisfied that the acquisition of air pollution control devices will not create serious shortages in the supply of such items, or that temporary price increases will not occur as a result of such acquisitions;

"(3) the Administrator is satisfied that such air pollution control device is necessary to effect a substitution of coal for natural gas or petroleum as the primary energy source for an existing fuel-burning installation or electric powerplant;

"(4) the Administrator, in consultation with the Administrator of the Environmental Protection Agency, is satisfied that such air pollution control device does not duplicate or displace existing air pollution control devices with a remaining useful economic life in excess of two years and that such air pollution control devices being installed are—

"(A) being installed on or after the effective date of this title; or

"(B) being installed to replace an existing electric power plant or fuel-burning installation using natural gas or petroleum as its primary energy source; or

"(5) the Administrator has determined that there will be a continued reasonable assurance of full repayment of a loan, or that a realistic plan exists for redeeming all bonds, debentures, notes, or other obligations for which a guarantee is requested; and

"(6) the Administrator is satisfied that competition among private entities for the provision of air pollution control devices for any electric powerplants or fuel-burning installations using coal as their primary energy source to be assisted under this title will be in no way limited to or precluded.

"(b) In making guarantees or commitments to guarantee pursuant to section 203 of this title, or in making loans or commitments to loan pursuant to section 204 of this title, the Administrator is directed to—

"(1) allocate 25 per centum of available financial assistance, to the extent feasible and practicable, to existing small electric powerplants, and to small existing industrial installations; and

"(2) give priority consideration to requests for financial assistance by existing major fuel burning installations and electric powerplants subject to, and in receipt of, a coal conversion order issued by the Administrator pursuant to title I of the Energy Supply and Environmental Coordination Act of 1974.

"(c) (1) The Administrator shall require all persons receiving financial assistance or guarantees under this title whether in the form of loans, obligation guarantees, or other arrangements, to keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(2) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall, until the expiration of three years after completion of the project or undertaking referred to in subsection (a) of this section or full repayment of interest and principal on a loan made or guaranteed pursuant to provisions of this title, have access for the purpose of audit and examination to any books, documents, papers, and records of such receipts which in the opinion of the Administrator or the Comptroller General may be related or pertinent to the loans, obligation guarantees, or other arrangements referred to in such subsection."

#### YES VOTE URGED ON AGENCY FOR CONSUMER PROTECTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. TUCKER) is recognized for 1 minute.

Mr. TUCKER. Mr. Speaker, every Member who believes the small businessman and average citizens of America are satisfied with the way our bureaucracy currently proposes and passes regulations should vote against the Agency for Consumer Protection when it comes before the House soon.

But, if you think a little better thought, commonsense, and cross examination might make for a better bureaucracy then it is worth giving very careful consideration to the merits of the Agency for Consumer Protection.

Leon Jaworski, on behalf of his client, the Business Roundtable, recently voiced

his client's objection to this bill. The May 18 Washington Star printed an interesting reply to Mr. Jaworski's client and I ask that it be printed in the RECORD at this point.

#### A REPLY TO JAWORSKI

(By Ralph Nader and Mark Green)

(NOTE.—Ralph Nader is the consumer advocate, and Mark Green is the director of Public Citizen's Congress Watch. The part of Mr. Jaworski's letter citing his connection with the Business Roundtable was not included in the excerpt used by The Star, because of a space limitation.)

Leon Jaworski, on retainer from the Business Roundtable, recently sent a letter to the House Government Operations Committee arguing against the establishment of an Agency for Consumer Protection. This 11th hour effort was received after hearings had been held and right before subcommittee and full committee consideration of ACP legislation.

Since the House committee was unable to cross-examine him, and since *The Star* has excerpted his letter ("Can a consumer czar represent us all?" May 6), we think it appropriate to examine closely Jaworski's claims.

He repeats and repeats that the ACP has great potential for political abuse, that it "would be vested with authority so broad that it could be easily turned to the political advantage of those who control it." This agency is said to have "practically limitless statutory authority."

Did he even read the bill? His article refers to not one section nor one sentence from the bill, perhaps because none support his wild assertions. The ACP has no political power and no regulatory authority. All it may do is to advocate before other agencies and occasionally require agencies to defend the soundness of their rulings in court.

Thus, all his warnings about there being "no effective check against abuse" are just pure business propaganda. He conveniently ignores any role for congressional oversight—although John Moss, D-Calif., has shown how oversight can be a valuable monitor of delegated authority. At worst, if an ACP makes a dumb or even malicious argument, the host agency or federal court can simply ignore it. A malicious Justice Department, on the other hand, could inflict great damage on individuals.

His anxiety about how an administrator can determine what is the consumer interest for all Americans also misses the mark. What does the EPA administrator now do but attempt to represent the environmental interest of all Americans? The Commerce Department does the same for business in America, though there are competing business interests. So why does it so surprise Jaworski for the ACP administrator to advocate an interest of consumers? Especially since, unlike the EPA or Commerce Department, an ACP can only advocate, not decide anything.

In this context, his assertion that it is dangerous "to vest in one unelected person the authority to represent, legally and politically, the interests of all the people" is laughable. What is the attorney general but an unelected person who represents "the people" in court? And what was Jaworski as special prosecutor? Now there was power, and the potential for political abuse.

The ACP—which cannot send anyone to jail, which cannot regulate any business or person, which has a budget 1/150th that of the Justice Department—hardly compares. Perhaps Jaworski's principle is that no unelected official should have such power—other than himself.

It is Jaworski's right to represent any client he wants—but not to misrepresent an important piece of legislation for that client's benefit. And since he failed to tell readers

what the consumer agency would do, we will.

For 25 cents a taxpaying family or one hour's budget of the Pentagon, the ACP would help make all other agencies less wasteful and more consumer-minded. It will save lives and dollars by, for example, persuading an FAA to require cargo doors with safer latches, by urging the ICC and CAB to stop acting like a price-fixing cartel, by reminding the FEA to follow lawful procedures when pricing unleaded gasoline.

Special interests have spokesmen within the federal government. Farmers have Agriculture. Business has Commerce. It is therefore illogical and self-serving for big business to argue that a small \$15 million a year agency shouldn't raise the consumer voice in executive and regulatory agencies.

A consumer watchdog in Washington with the standing to intervene in agency proceedings and court, is an essential step to make federal agencies more fair and effective. It is an important part of regulatory reform. We are surprised that a lawyer of Jaworski's experience would not apparently understand that the adversary process requires both sides to be represented in decisionmaking forums—not merely his clients.

#### INSTANT VOTING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Alabama (Mr. EDWARDS) is recognized for 5 minutes.

Mr. EDWARDS of Alabama. Mr. Speaker, the fact that President Carter's election-day voter registration bill was pulled from the House calendar recently is a clear sign that this bill is a bad one and that support is lacking.

Hopefully we have heard the last of it for awhile, but there are signals that another try to gain support will be made in the future. If this is the case, it will be a mistake for the country.

Support for this proposed legislation is based on the false premise that poor voter turnout is due to the difficulty and delay in registration rules and procedures.

I agree that some of our voting registration and reidentification procedures could use some improvement. I know in my own case that it is difficult for me to get to the courthouse in Mobile, Ala., during the hours that the board of registrars is open. I think registrars should be available in the evenings and on weekends, for example, so working people can register more conveniently.

However, election-day, and post card registration for that matter, are not the answer.

The real culprit in poor turnouts is apathy—and that is a force which can not be countered by a law.

I sincerely want every eligible person to register and to vote, but election-day registration is an open invitation to fraud.

Election-day registration would allow a person to go to the polls on election day, show some type of identification, register on the spot, and then vote. The opportunities for fraud would be limitless.

Many close to voting procedures in Alabama and elsewhere throughout the country have said that registration at

least 30 days prior to an election is necessary to detect the common types of vote fraud. Justice Department officials have said that the signatures made on voter registration cards have been the principal basis for detection of recent voter fraud cases.

It would be almost impossible to locate someone who registers fictitiously on election day and then votes.

This election-day voter registration bill, in the opinion of many, amounts to a dangerous relaxation of the safeguards that presently exist.

It really does not seem to be asking too much to ask a citizen to take a few minutes to register in advance. But again, registrars should make it a lot easier.

This bill presents other problems as well. It would compel most States to rewrite their election laws and to train many new precinct workers to process instant registrations. It would amount to the Federal Government dictating how State and local elections would be run. States would have to either extend instant registration across the board or suffer the cost and confusion of running elections under two different sets of rules.

Finally, the Federal grants for administration of the new procedure and "voter outreach" campaigns strike me as virtually impossible to police without elaborate bureaucratic controls.

Good political organization, sound choice of issues, strong candidates, and vigorous campaigns still seem the best means to get more voters to the polls.

The truth is that there are still some jurisdictions where voter fraud is uncovered from time to time. But in my opinion, election-day registration would open the door to national fraud. I am surprised that the idea has even gotten this far.

#### HUGH A. HALL, ASSISTANT ADMINISTRATOR OF THE AMERICAN REVOLUTION BICENTENNIAL ADMINISTRATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BOB WILSON) is recognized for 5 minutes.

Mr. BOB WILSON. Mr. Speaker, Hugh A. Hall, the Assistant Administrator of the American Revolution Bicentennial Administration, is retiring from Government service to his home in San Diego. As he leaves, I would like to bid him an admiring farewell—admiring because Hugh Hall helped give our country the best birthday ever.

Hugh brought to our Bicentennial celebration the experience he gained from directing San Diego's 200th birthday, experience that was much needed and used. The result of his work speaks for itself.

We will miss him sorely, but he has earned rewards and commendations from his many friends as he moves onward and upward.

#### EXEMPTING BINGO AND RELATED GAMES FROM TAXATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRENZEL) is

recognized for 10 minutes.

Mr. FRENZEL. Mr. Speaker, today I am introducing for the entire Minnesota delegation a bill which would exempt from taxation the proceeds from bingo and related games which are conducted by tax-exempt organizations in accordance with State and local laws. I am pleased to note that the entire Minnesota delegation in the House is cosponsoring this bill.

In Minnesota, certain charitable and fraternal organizations have encountered severe problems because of an IRS ruling to tax bingo income as unrelated business income, retroactive to 1970. These bingo games are not competing with profitmaking operations because, under Minnesota law, bingo is only allowed to be conducted by charitable or fraternal organizations. The bingo workers in Minnesota are paid a flat \$8 per night, which amounts to less than the minimum wage. The \$8 is specifically allowed under State law, and is really intended to be a partial reimbursement for volunteer expenses rather than a form of compensation.

The proceeds from the games are spent by the organizations for charitable functions and community services, such as youth athletic activities. Furthermore, thousands of hours are put in by volunteers conducting these activities. If these back taxes are required to be paid, an estimated 50 percent to 70 percent of these activities will have to be curtailed, just to handle this new tax liability.

Other States which it appears may soon encounter similar audits and assessments by the IRS on proceeds from bingo operations include Florida, Massachusetts, Michigan, Illinois, New Jersey, and California.

In order to allow charitable, fraternal, religious, and other similar organizations to continue to use the funds generated by bingo or related games to provide beneficial services to their communities, I am introducing the following bill:

#### H.R. 7460

A bill to amend the Internal Revenue Code of 1954 to treat the conducting of certain games by tax-exempt organizations as not being an unrelated trade or business

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 513 of the Internal Revenue Code of 1954 (defining unrelated trade or business) is amended by adding at the end thereof the following new subsection:

"(f) CERTAIN GAMES.—

"(1) IN GENERAL.—The term 'unrelated trade or business' does not include any trade or business which consists of conducting qualified games.

"(2) QUALIFIED GAME.—For purposes of paragraph (1), the term 'qualified game' means any game—

"(A) of a type in which usually—

"(i) the wagers are placed,

"(ii) the winners are determined, and

"(iii) the distribution of prizes or other property is made, in the presence of all persons placing wagers in such game.

"(B) the conducting of which is not an activity ordinarily carried on on a commercial basis, and

"(C) the conducting of which does not violate any State or local law."

(b) The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1969.

#### WHITE MOUNTAIN NATIONAL FOREST ADVISORY COMMITTEE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Hampshire (Mr. CLEVELAND) is recognized for 10 minutes.

Mr. CLEVELAND. Mr. Speaker, last year during Jimmy Carter's successful bid for the Presidency, we heard a lot of talk about abolishing needless Federal agencies.

Apparently, shortly after his inauguration the determination to carry this out was conveyed to the various Cabinet members, and one of the first to respond was Secretary Bergland of the Department of Agriculture. He abolished 11 Department of Agriculture advisory White Mountain National Forest Advisory Committees, including the Peanut Advisory Board, as well as New Hampshire's sorry Committee.

I certainly have no quarrel with abolishing unnecessary advisory committees, but it makes no earthly sense to abolish bodies that are doing a good job.

The White Mountain National Forest Advisory Committee falls in the latter category. It has been serving its purpose exceptionally well and deserves to be continued. Unfortunately, it was carelessly swept into that group of committees to be abolished as part of the numbers games.

My support for the White Mountain National Forest Advisory Committee comes from a number of accomplishments. Perhaps the most important is that meetings of the committee find a representative of the Sierra Club, one from the snowmobilers organizations, and another from the trailbike riders organizations, all sitting down at the same table to discuss problems common to the National Forest. At a time when we have group fighting against group, and more rhetoric than rational discussion, the White Mountain National Forest Advisory Committee has been the scene of exactly the opposite—cooperation.

The case for the White Mountain National Forest Advisory Committee has been well stated by Paul Bofinger, executive director of the Society for the Protection of New Hampshire Forests, a highly regarded New Hampshire environmental organization. A copy of his letter to Secretary Bergland follows this statement, since I would like the Members of this body to know of the accomplishments of this one advisory committee, which was abolished apparently only to justify a news release announcing it.

Secretary Bergland has wisely decided to review the situation and consider whether this committee should be continued. If he looks at the facts dispassionately, I am confident he will decide to reverse his earlier decision, once again assuring that the various users of the White Mountain National Forest will

come together to discuss problems rather than fight over them.

I commend to the House the letter from Mr. Bofinger on an issue of great importance to the future of that national forest, which serves as a recreation area for so much of the northeastern part of the United States.

The letter follows:

SOCIETY FOR THE PROTECTION OF  
NEW HAMPSHIRE FORESTS,  
Concord, N.H., May 16, 1977.

Mr. BOB BERGLAND,  
Secretary of Agriculture, Department of Agriculture, Washington, D.C.

DEAR MR. SECRETARY: I understand you are conducting a review of USDA advisory committees including the recently-terminated White Mountain National Forest Advisory Committee.

As a member of this committee since its inception and as a long-time advocate of open planning and public input, I believe I can offer some comments that may aid you in your evaluation.

Over the past eleven years, I have worked with three forest administrators on advisory groups ranging from ad hoc to semi-formal to official. I have represented the Society for the Protection of New Hampshire Forests, the state's oldest and largest conservation organization. Our Society has been deeply interested in the White Mountain National Forest (WMNF) since our vital role in passage of the Weeks Act in 1911.

While I approve of your actions in reviewing the effectiveness of advisory committees, I respectfully urge your reconsideration of the discontinuation of the WMNF Committee. This group, operating as an official USDA body, has been the most effective, most representative and most efficient of all in my experience.

Effectiveness may be measured by the complexity and scope of WMNF planning and action programs which have been successfully completed and in which the Advisory Committee has played an important part.

Representation is both broad-based and meaningful. Any group which does its job, gets results and can balance the diverse interests of trailbikers and birdwatchers, wilderness purists and forest industry, local government and vacation travel industry (to name just a few) must be achieving real public involvement to the benefit of both the public and the resource.

Efficiency may be judged, not in the paper and staff expenditures related to this Committee, but rather in terms of the far greater expense that would be necessary to achieve equally effective representation in some other manner.

I and many other members of our former Advisory Committee feel strongly enough about value of what we were achieving that we have agreed to continue to meet on an ad hoc basis at our own expense. To some of us, the financial burden is acceptable but for others the cost of travel, meals and lost wages is difficult if not impossible. We find ourselves in a "Catch 22" situation. Without expense reimbursement, we cannot insure a truly balanced committee; yet we are told that we are not a USDA sanctioned body because we are not representative.

The staff of the WMNF, working closely with the former Advisory Committee, has developed an exemplary process for open planning and participation open to all citizens. The complexities of planning on a heavily-used, diversified forest such as this requires both the open-ended public process and the more structured but nevertheless representative Advisory Committee.

Finally, I respectfully direct you to the just-published Conservation Foundation Report on the eastern national forests, "The

Lands Nobody Wanted". In addition to recommending establishment of advisory committees based on the WMNF example, this objective analysis contains opinions on advisory committee value based on interviews taken more than a year ago.

Thank you for your attention.

Cordially,

PAUL O. BOFINGER,  
President/Forester.

#### YOUNG (NOT ANDREW) CALLS FOR NATIONAL DEBATE ON FOREIGN AID

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. YOUNG) is recognized for 15 minutes.

Mr. YOUNG of Florida. Mr. Speaker, I am calling for a national debate on the future of our foreign aid program. It is time to involve the people who pay the bills—the American taxpayers—in the very important decisions that are being made and are about to be made concerning the future of our foreign aid program.

In the past 10 years, the cost of our foreign aid program has more than doubled. In 1967 we invested \$2.9 billion in foreign aid. In 1977, the figure will be over \$7 billion—an increase of 141 percent.

Because of our complex foreign policy and leadership position in the world, we are inclined to feel that it cannot be changed, and that the best we can do is try to keep it from getting further out of hand. I submit, Mr. Speaker, that it is about to get considerably out of hand.

At a meeting that I attended yesterday morning, with Secretary of State Cyrus Vance and numerous Under Secretaries, I was informed that it is the intent of this administration to double our foreign aid contributions in the next 5 years. Our 1978 budget request for foreign aid was for more than \$7 billion—that means an annual foreign aid cost of more than \$14 billion in 1982. At the same time, our domestic budget request for preventing and controlling diseases is only \$126 million; our domestic budget request for elementary and secondary school education is only \$3.1 million; grants to States for social services only \$2.5 billion; highway construction only \$7.3 billion; law enforcement and justice only \$3.9 billion. So compare the projected foreign aid figure with some of our own domestic programs and you see that \$14 billion, Mr. Speaker, is a great deal of money.

This is the reason, Mr. Speaker, that I am calling for a national debate on the part of the American people on our foreign aid program. President Carter has promised that the people of America would be consulted on our foreign aid program. He promised that they could be involved in the decisionmaking, and he promised to keep them constantly aware of what is happening. Well, the time has come to do just that.

While our foreign aid program has never been very popular with the American people, they swallow the present foreign aid program and foot the bill because they are a generous people who have almost without question provided

assistance to the less fortunate people of the world, almost since our beginning as a nation. I doubt, however, Mr. Speaker, in spite of their generosity and humanitarian instincts, that they want to consent to doubling the program in the 5 years, especially with the increasing emphasis that is being placed on "multilateral" foreign aid. Through our "bilateral" program, which is distributed in the form of gifts, loans, or services to receiving nations directly from the United States, we can, at least, monitor the results of our investment. A major and growing portion of our foreign aid program, however, is distributed through "multilateral" organizations in the form of cash contributions or loan guarantees. While these international organizations, such as the United Nations or the World Bank are supported by contributions from a number of nations, in practically every instance, the United States is the major contributor.

The World Bank, and other international financial institutions, in turn, provide funding for development to organizations within "developing" countries, generally on a loan basis. Certain of these loans are called "soft loans" because the financial terms of the loan are so lenient. Generally these loans are granted on a 50-year basis with no repayment required for the first 10 years. During the succeeding 40 years, the loans are expected to be repaid at no interest, with only a small service charge. Although we are a major contributor to these international financial institutions, we have very little to say about how our money will be spent. Our vote is somewhat weighted, because of the size of our contribution to the organization; however, with only one minor exception, our vote is not large enough to veto an individual loan, and in that case we have never used that veto anyway. Because of this procedure, we often find ourselves in the awkward position of contributing funds for development within countries we would rather not support, such as Vietnam and Uganda, for example. And, we have very little control over how much of the money we contribute to those organizations goes to the organizations themselves for administrative expenditures. Employee salaries within the international financial institutions, which are tax free, are often very high when compared to comparable employee positions in our own Government. Our lack of control over expenditures, and terms of the loans offered by these organizations, which are so broad that they would better be termed "grants" than the loans they purport to be, make our continued investment in these multilateral spending programs a questionable practice. Especially in light of the fact that in one year, from fiscal year 1977 to fiscal year 1978, our contributions to the international financial institutions doubled—from \$1.1 billion to \$2.2 billion.

As Members of the House of Representatives, we are elected to represent the people. Therefore, as their Representatives, we are in the best position to tell them the whole truth about our foreign aid program and to ask their ad-

vice. It is time for each of us to inform our constituency of the lack of proof that much of the money expended by the United States in the foreign aid program ever gets to the people who need it. If they knew that we are committed to spending \$30 million in the next 5 years in Uganda, where under the rule of Idi Amin exists one of the most ruthless and corrupt governments in existence today, guilty of flagrant human rights violations including murder and assassinations; if they knew that over 40 percent of all U.S. loan commitments to the International Development Association—over \$4.3 billion—has gone to India, and that while India received the assistance to help with her economic problems, our investment freed her own capital to purchase Soviet weapons and develop and explode a nuclear device; if they were fully aware of how little knowledge our Government has of how the money we spend is actually used, and how little oversight of its use we have—there would, I believe, be something resembling a political revolution in the United States.

It is time for us to bring this matter directly to the American people in the form of a national debate, in every congressional district, and with every constituent who has an opinion to express. And the time is now, before we make this commitment to double our program. The American taxpayer, Mr. Speaker, works 3 months of every year just to pay his taxes, and he should be entitled to object, if he feels the money he pays the Government is being handed over to outside interests, with no control over how they spend it.

The question to be posed to the American people is not whether we will continue to help the less fortunate people of the world. Obviously we, as a nation of caring individuals, will always do that. The question is rather, how shall we go about it? To what extent can we, in the light of our own domestic problems such as energy shortages, environmental problems, unemployment levels, and so forth, afford to increase our generosity? Who shall we help—all of those in need simply because they are in need, including countries which are politically anti-American and pro-Communist; or shall we be selective to the point of helping only those countries with whom we are philosophically in tune, and on whom we could depend should we ever need their support? And how should we help—through direct bilateral aid between our country and the receiving country; or through the multilateral financial institutions which were described by one Under Secretary yesterday morning as "an umbrella" or "catalyst" for international financial affairs? These are some of the questions which should be presented to the American people for discussion.

As complex as our foreign aid program is, it is easy to understand from the standpoint of dollars and cents. It is expensive beyond belief, and there is a great deal of proof that much of it is wasteful, ineffective, and misdirected. There is also very little proof that it has accomplished a whole lot, either for the United States or for the hungry people

in other parts of the world. Whether you are convinced of the effectiveness of our foreign aid program, Mr. Speaker, or I am, is not really the most important factor. It is time that the American people are sure, and I feel strongly that it is our responsibility to tell them the truth about our foreign aid program. To tell them the truth about the administration's plans to double the program in the future, and give them—the ones who pay the bill—a chance to register their feelings.

#### VETERANS' BENEFITS PASS- THROUGH LEGISLATION INTRO- DUCED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. REGULA) is recognized for 5 minutes.

Mr. REGULA. Mr. Speaker, today I am reintroducing legislation to provide for veterans' benefits passthrough.

At the present time, our elderly citizens who are trying to get by on small social security and veterans' benefits checks are faced with a reduction in veterans' benefits every time there is an increase in social security payments. The net effect, therefore, is that there is no increase for those drawing veterans' benefits.

With the upcoming increase of 5.9 percent in social security payments, quick action on my bill or similar legislation takes on added importance. I understand that if some corrective action is not taken 18,000 pensioners now receiving veterans' benefits will be dropped from the veterans' pension program and others will face a reduction in their veterans' benefits.

This is not fair, because it deprives a large number of people of any help in meeting the increased cost of living. Congress should act quickly to avoid this injustice.

#### CONGRESSMAN WILLIAM D. FORD APPLAUDS EFFORTS OF HEW SEC- RETARY CALIFANO AND EDUCA- TION COMMISSIONER BOYER FOR SIMPLIFYING PAPERWORK IN FEDERAL EDUCATION PROGRAMS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. Ford) is recognized for 5 minutes.

Mr. FORD of Michigan. Mr. Speaker, as the new chairman of the Subcommittee on Postsecondary Education, I have for the past several months been meeting with members of the postsecondary education community to learn about their thoughts and concerns with respect to Federal education programs. Virtually everywhere I go, the No. 1 problem I hear about is the tremendous amount of paperwork and red tape associated with Federal higher education programs.

Today I would like to commend the Carter administration for its response to the concerns being articulated by educators throughout the country, and for its prompt followthrough on President Carter's pledge to make the Federal Government more competent and manageable.

On March 8 of this year, only weeks after taking office, Secretary of HEW Joseph A. Califano, Jr., announced the most far-reaching restructuring of the Department of Health, Education, and Welfare in its 24-year history. As part of this reorganization, a new Bureau of Student Financial Assistance was established to consolidate the management of Federal student assistance programs.

Only 1 month later, on April 11, Ernest L. Boyer, the U.S. Commissioner of Education, announced a major reorganization of the Office of Education to improve the functions of the Office of Education through more efficient management, increased accountability, and better service. This action consolidated into two new offices the functions previously assigned to eight separate units within the Commissioner's office.

In his announcement, Commissioner Boyer stated, "The Office of Education has a dramatically important job to do. This reorganization, which we believe creates today the most effective structure in the history of the Office of Education, will provide stronger leadership and tighter control."

He went on to say, "The ultimate goal, of course, is not a better bureaucratic structure but better service to our Nation's schools and colleges."

Mr. Speaker, I cannot think of anyone who could not endorse this commonsense approach to solving many of the problems presently related to Federal education programs, and the Commissioner is to be highly commended for his stated goals.

During this past week, we have seen even further evidence of this administration's commitment and determination to following through on its stated goals with action.

On Monday, May 23, Secretary Califano announced the implementation of a new, simplified procedure for applying for student financial aid. The new procedure is expected to eliminate the need for over 2.5 million families to file Federal forms. It will be in effect in time for the applications filed this coming year for the 1978-79 academic year.

The Secretary also announced the introduction of a common date for starting the processing of all student aid applications. This will include a feature to accommodate those colleges and universities which make early decisions on admissions and financial aid.

Further, Mr. Speaker, on Tuesday, May 24, Commissioner Boyer announced a new application procedure for institutions applying for federally funded campus-based student assistance programs. This innovation is expected to reduce from several weeks to several days the time required to prepare the applications. The new procedure would affect virtually all institutions that presently administer college work/study, supplemental education opportunity grants and national direct student loan programs. It will permit them to file a new short form each year instead of the 15-page application presently required.

Mr. Speaker, I would like to commend the efforts of both Secretary Califano and Commissioner Boyer, as well as the ef-

forts of the Coalition for the Coordination of Student Financial Assistance which worked closely with the administration in bringing about some of these changes. These are some of the most significant and positive steps ever taken to streamline the delivery system of Federal aid to education. They stand as excellent examples of this administration's commitment to fulfill President Carter's campaign promise to ease the paperwork burden on American people.

I strongly encourage Secretary Califano and Commissioner Boyer to continue their efforts and I would like to state, as chairman of the Subcommittee on Postsecondary Education, that I will do everything I can to cooperate with them and assist them.

At this point, I would like to insert in the RECORD the HEW news releases explaining the actions taken by the Secretary and the Commissioner earlier this week:

HEW NEWS, TUESDAY, MAY 24, 1977

A new application procedure for postsecondary educational institutions applying for student aid funds under Federal programs but administered by the institutions was announced today by U.S. Commissioner of Education Ernest L. Boyer.

The change is expected to reduce from several weeks to several days time it takes to prepare the applications.

At present, participating institutions must reapply every year to secure Federal assistance for three Federal-aid programs they administer: College Work-Study (CWS), Supplemental Educational Opportunity Grants (SEOG) and National Direct Student Loan (NDSL). This means filling out a complicated 15-page application form (which contains 17 pages of instruction) each year.

Under the new procedure, participating schools and colleges with no change in size or economic status of their student bodies will file a short form—four or five pages in length. This is expected to reduce the time for preparation of the applications by about two-thirds. Only those colleges participating in the programs for the first time or those which have major shifts in enrollment would be asked to file a longer form.

Proposed new regulations covering the change will be published in June, and the simplified arrangement will be in place by September, in time for use for the 1978-79 academic year.

In noting that postsecondary institutions have been asked to go through this complicated process every year even though some of them have been in these programs for more than 19 years, Dr. Boyer said:

"The current procedure is wasteful and time-consuming. The institutions should not have to devote weeks to filling out these bulky forms year after year. I am confident that the new procedures, though requiring so much less work, will nonetheless provide sufficient information to ensure that the Federal money will go to the right institutions and in the right amounts."

HEW NEWS, MONDAY, MAY 23, 1977

Secretary of Health, Education, and Welfare Joseph A. Califano, Jr. announced today a simplified student financial aid procedure which will eliminate the need for over 2.5 million families to file Federal forms.

"This action, which will eliminate duplicate paperwork for millions of students and their parents, is a start toward fulfilling President Carter's commitment to simplify Government procedures and to ease the pa-

perwork burden on the American people," Secretary Califano said. "Equally important, the new system is a first step toward consolidation of all student-aid forms into one single form and toward improving financial-aid procedures that have become very complicated and confusing."

"Dr. Ernest L. Boyer, Commissioner of Education, has moved swiftly with this first step in the wake of the reorganization of the Student Financial Assistance Bureau in the Office of Education," the Secretary continued. "The new program will be in effect in time for the applications that are filed this coming year for the academic year 1978-79."

The new system involves the U.S. Office of Education's Basic Education Opportunity Grants (BEOG) program, which currently provides approximately \$1.5 billion annually in grants to nearly two million needy students.

At present, most students applying for either campus-based Federal aid or direct Federal financial help, or both, must fill out two separate forms: one for the college and another for the Office of Education. Under the new plan, the second form, a separate Basic Grant application, will be eliminated. The Office of Education will use the information secured by the college—using either a College Scholarship Service (CSS), American College Testing (ACT) or a state scholarship form—to determine the student's financial need and to establish his or her eligibility to receive a Basic Grant.

A common date for starting the processing of all student-aid applications also will be introduced. Students and parents will be given the forms after December 1, with instructions that they are to be filled out and filed after January 1. This distribution date—which is currently used by BEOG—is later than the one now used by ACT and CSS. The new schedule is designed to make it possible for families to report actual annual income to establish need, rather than estimated annual income. Use of more precise income figures should help assure that grant money goes only to those students and families who actually need it, and in the proper amounts.

For those colleges and universities still wishing to make early decisions on admission and financial aid, an early application procedure is being developed by CSS and ACT. "We intend to accommodate those universities and colleges that need more flexibility," Califano said.

For the coming 1977-78 school year, the Basic Grant program has a budget of \$1.7 billion. Grants will average \$850 per student. Currently the average Basic Grant is \$750.

The program announced today has been developed jointly by the Department of Health, Education, and Welfare and the Coalition for the Coordination of Student Financial Assistance, a non-profit private organization representing the Nation's colleges and universities and student assistance organizations. The Coalition is an outgrowth of the 1974 National Task Force on Student Aid problems, which was chaired by former Commissioner of Education Francis Keppel.

#### 135TH ANNIVERSARY OF THE FIRST POLISH-AMERICAN PUBLICATION IN THE ENGLISH LANGUAGE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, this year marks the 135th anniversary of the first Polish-American publication in the

English language. Paul Sobolewski, the brilliant and creative founder of the monthly publication in 1842, was honored recently in Chicago with a float in the Polish Constitution Day parade, and it was with pride that I attended this outstanding event to commemorate Poland's democratic Constitution of May 3, 1791.

Dr. Edward C. Rozanski recently published an article on Paul Sobolewski in *Straz*, the official weekly of the Polish National Union, which has been printed continuously for the past 80 years. In that article, Dr. Rozanski says:

Around 1840, Sobolewski moved from Philadelphia to New York where, together with his friend, Eustach Wyszynski, he started a monthly publication about Poland under the name "Poland, Historical, Literary, Monumental and Picturesque." It was the first Polish periodical in America and was published in the English language from 1112 Pine Street in New York.

Mr. Speaker, an article on Paul Sobolewski follows, which was taken from "Zgoda," an official publication of the Polish National Alliance:

One of the illustrious, yet little known figures in Polonia's history is Paul Sobolewski (1818-1884), poet, lecturer and translator who "opened the gates of Polish poetry to American World"...

He was also the founder, with his friend Eustach Wyszynski of Polonia's first publication in the English language, under the title "Poland, Historical, Literary, Monumental and Picturesque" which began publication in 1842 in New York.

His chief attainment, however, was the translation of the masterpieces of Polish poets. He published them single handedly in a volume entitled "The Poets and Poetry in Poland" which had two successful editions in 1881 and 1883.

For the 300th anniversary of King Jan III Sobieski victory at Vienna, Sobolewski published a highly readable and informative pamphlet describing this, one of the most important battles in World history and the part Sobieski and his Polish legions played in it.

Sobolewski came to the United States at the age of 17, in 1834 as one of the 284 Poles deported from Austria for their participation in the ill-fated November Uprising of Poland in 1831 against Russia.

"Had he not been deported to America," states Polonia's historian Dr. Edward C. Rozanski, "but instead become a part of the Great Polish Emigration that settled in France, he might have been able to develop his talent in the dimension of Adam Mickiewicz, Juliusz Slowacki and Cyprian Norwid, as the fifth great poet of the Polish literature in the 19th Century."

In America, Polonia of his times was not in a position to support a developing literary talent.

Thus Sobolewski was forced by circumstances to do many manual tasks even as a farmer, near Belvidere, Ill.

His restless intellect, however, was not to be chained to mundane pursuits.

He was the co-founder of the first school to teach the Poles the English language in Philadelphia.

He soon mastered the literary English sufficiently to write articles and feature stories for American newspapers. In his later years this free-lancing was the primary source of his modest income.

Sobolewski suffered one of his greatest personal losses in the Chicago fire of 1871. His

biographer Mieczyslaw Halman writes:—"In this terrible catastrophe, he (Sobolewski) lost not only all his manuscripts, but his lectures on poetry, a valuable library, a collection of rare sketches and drawings, in a nutshell:—all the fruits of some 30 years of labor".

Luckily, one of his major works, "Napoleon and his Marshalls" was published just before the fire consumed all research and source materials for the book.

His volume on The Poets and Poetry of Poland was enthusiastically received in American newspapers and magazines, even in German publications in the United States. Contemporary literary critics in Poland lauded his work.

Sobolewski died on May 30, 1884 in Chicago, —a bright intellect who in adverse circumstances created his own life-style of a cultured man in a strange land.

And it was fitting, proper and highly commendable, that Dziennik Zwiastkowy, with the co-operation of the Zwarycz family, memorialized Paul Sobolewski with a float (see above) at Chicago Polonia's May 3rd Constitution observance.

#### THE FEDERAL RESERVE IS BACK TO STOP-GO AGAIN—WHAT IS NEEDED IS STABILITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, in recent weeks interest rates are up, the stock market is down, and business lending is sluggish.

This unhappy state of affairs is in large part due, in my judgment, to wrong-headed actions by the Federal Reserve Board and the Federal Open Market Committee, our monetary managers.

Last February 9 majority members of the House Committee on Banking, Finance, and Urban Affairs wrote the Federal Reserve System stating that the growth target for 1977 of 4½-6½ percent for M-1—demand deposits and cash outside banks—seemed "generally adequate," and that "monetary policy during 1977 should aim at reducing unemployment and fostering recovery, without rekindling demand inflation."

This task of monetary management was made easier by President Carter's action a month ago in discarding the tax rebate, thus reducing the proposed budget deficit by some \$13 billion.

Instead, however, look what has happened. Instead of pursuing a steady-as-you-go monetary policy, the Fed has committed two major errors, one in April and one in May:

First. The April error. This was the wholly unnecessary April burst in the growth of M-1 of some 19.7 percent. This compares with 5.75 percent in January, 0.76 percent in February, and 6.1 percent in March 1977. The 19.7-percent April explosion is simply uncalled for.

A large part of this excessive growth was due to the failure of the Fed to do what many of us have urged—return to the practice which existed for many years, up to 1968, of calculating the required reserves for banks on the basis of their current deposits. Following 1968, and for reasons which I find unsubstantial, the Fed takes bank deposits that are 2 weeks old in applying reserve require-

ments, and hence lets the money supply get away from it.

Had the Fed in April 1977 used the pre-1968 technique of calculating required reserves contemporaneously, instead of on a lagged basis, much of the 19.7-percent jump-up could have been avoided. And some additional percentage points of unnecessary April M-1 growth could have been avoided if the Fed had simply been a little more conservative in the reserves it was creating through its open market policy; only a marginal increase in the Federal funds—interbank lending—rate would have been necessary to achieve this.

Prof. Milton Friedman, testifying before the Senate Committee on Banking, Housing, and Urban Affairs on November 4, 1975—hearings, pages 40 to 41—had this to say about the trouble caused by the lagged reserve requirement:

The major mistake of this kind (inability to control M-1), in my opinion, was the introduction of lagged reserve requirements in 1968. I may say that that change was made for reasons that had nothing to do with monetary policy. It was made fundamentally because it was believed that it would be attractive to small banks and thus might reduce their tendency to leave the system. The change has not worked out that way. I do not know anybody who has a good thing to say for the lagged reserve requirements system. The small banks don't like it. The big banks don't like it. It has introduced variability into every dimension of Federal Reserve policy and yet you have the standard phenomenon that you are so familiar with, once a bureaucratic change has been made, it is the devil and all to get it changed. But the most important single step at the moment in the regulations the Fed could take would be to eliminate those lagged reserve requirements.

Second. The May error. Having created too much M-1 in April, the Fed has been proceeding in May to create too little. We don't have the final figures for May yet, but M-1 was apparently squeezed until the pips squeaked.

This is not the first time the Fed has overreacted to a monetary bulge in M-1. In the spring of 1975, the tax refund created a hypersupply of M-1 for a few weeks. This need have done no harm. But instead the Fed panicked and mercilessly tightened M-1. Confronted with a temporary bulge of 11.8 percent M-1 growth in May and 13.35 percent in June 1975 the Fed jammed on the brakes, squeezing M-1 growth to 4.13 percent in July, 4.52 percent in August, 3.28 percent in September, and minus 1.23 percent in October, with dreadful results for the economy. Acting with its traditional techniques, the Fed achieved this monetary squeeze by raising the Federal funds rate, which it directly controls, from 5.49 percent in April 1975 to 6.24 percent in September.

Horses can be excused for shying when a piece of newspaper blows across the street. The Fed should be made of sterner stuff.

In fact, no very material correction of the April 1977 M-1 bulge was really needed. If you look in retrospect at M-1 creation for the year ending with and including April 1977 M-1 was 6.46 percent—within their 7-percent target. If

you look at M-1 creation for the 6 months ending with April 1977 it was 7 percent—just a shade over the band, again just about on target.

And even giving the Fed the benefit of the doubt, and accepting that a moderate M-1 correction was in order, the correction should have occurred over a 3- or 4-month period, not jammed into one orgy of money-tightening in May.

To achieve the May 1977 M-1 tightening, the Fed allowed the Federal funds rate, which it closely controls, to rise from 4.6 percent on April 6 to the current 5.5 percent.

The major banks, almost immediately seized on this increase in the Federal funds rate to increase their prime rate. Last week they raised their prime rate from 6¼ to 6½ percent, and are threatening to raise it again.

The prime rate increase is unjustified. Loan demand is slack. Most of the big banks that raised the prime rate are rumored to be secretly offering loans below the prime. Recent articles in two respected business journals tell the tale.

Ben Weberman, economics editor of Forbes magazine, commented in his column in the June 1, 1977, issue (p. 82), headed "Business Is Lousy: Let's Raise Prices":

Last issue ("I Can Get It For You Wholesale"), I reported that banks were offering loans at rates below their own official prime rates. So, how come the banks have just raised the prime rate from 6¼ percent to 6½ percent? It's the old story: "The merchandise isn't moving at \$19.98; we might as well not sell it at \$29.98."

Whatever the official prime rate, the demand for money just isn't there. The banks are resorting to all sorts of expedients to move loans. It is true that businessmen have been shaken by recent signs that interest rates are heading higher and, as a result, they have been making inquiries. (Inquiries, however, are not loans.)

I continue to feel that this bulge in short-term interest rates will top out by midyear and will not start moving upward again until toward the end of 1977. Even then, I do not see drastic increases in interest rates; fractions maybe, but nothing like even 1 percent. I still expect long-term yields to ease from the current levels and to end the year at about one-half percent lower than now.

As for the current bulge in interest rates, we saw the same thing last year. Last spring, too, the Federal Reserve started to tighten up on the money supply at the close of April because it felt the supply had expanded much too rapidly earlier in the month. It subsequently loosened up, and the bulge flattened out. Interest rates subsided over the summer.

A consequence of last spring's tightening was that the prime eventually moved to 7¼ percent from 6¼ percent before resuming its decline. Then, as now, a good many people became hysterical and predicted that we were headed back toward double-digit interest rates. Forget it. This is just an upward wiggle. As I've said many times before, don't be a wiggle-watcher.

And Business Week magazine, in an article in the May 30, 1977, issue (pp. 79-80), entitled "Why the Prime May Rise Again," commented:

The nation's biggest banks appear to be taking a calculated gamble. Last week they raised their prime lending rate to 6½ percent from 6¼ percent, and they are threatening to raise it again, at a time when their loan demand re-

mains slack and their best customers can borrow for much less in the commercial paper market. Despite these apparent drawbacks, the big money center banks followed with astonishing haste when Citibank led the way to the higher prime on May 13.

The big banks insist that they had no choice but to follow Citibank. Bank profits were only so-so in the first quarter, the move toward tighter money by the Federal Reserve has escalated the cost of money to the banks, and there still is no sign of the sort of loan volume that would offset those reduced spreads. In fact, it is this very profit squeeze that all but guarantees another rise in the prime rate soon. "Even with last week's uptick," says one banker, "spreads are at their lowest level in the past year. That's why we need another bump in the prime rate."

**Regional demand.** Loan demand at the regional banks is fairly strong this year, and it is getting visibly stronger. But there is no pickup at all at the giant New York City banks. The reason for the upturn at the regionals is clear. Their primary customers—small to medium-size businesses—are once again seeking loans as a strong economy has them fattening inventories and doing a little capital investing. The reason for slack loan demand at big New York and Chicago banks is equally clear: Their best customers—large corporations—have deserted them in favor of the commercial paper market, which has grown by nearly \$5 billion since the start of 1977. That is equal to the paper market's growth in all of 1976—following an actual decline in 1975.

Certainly, commercial paper is highly attractive to those corporations big enough and sound enough to enter the market. Currently, the large corporations are borrowing from each other via commercial paper at rates 1.5% below the prime, or minimum, rate that the banks charge their biggest and most creditworthy customers.

And the spread between paper and prime seems certain to hold now that banks across the nation have raised their prime rates. The increase posted by the regionals came as no surprise, since demand for their money is gaining enough strength daily to prevent a one-quarter of 1% jump from driving business away. Totally unexpected, however, was the uniformity and speed with which the big New York banks boosted their rates. "It means the big banks don't believe loan demand will pick up later this year," says one bank analyst.

**Rate-cutting.** The Fed policy aimed at cutting last month's spurt in the money supply has intensified the squeeze on bank profits. In just five weeks the average weekly rate on federal funds (the excess reserves that banks lend each other overnight) has soared to 5.31%, an increase of 71 basis points. In addition, the rates banks pay on large certificates of deposit—a primary source of funds for most big banks—have also risen, as has the three-week average on 90-day commercial paper on which Citibank bases its prime rate formula.

An irony in the situation is that the competition for commercial loan business remains so intense that the higher prime may in fact do little for profits. Some of the big banks that followed Citibank last week are rumored to be secretly offering loans below prime. "There's more rate-cutting than ever before," says a bank analyst. Banks are also booking loans to U.S. corporations at foreign branches, where rates are lower. Still other banks are reducing the compensating balances they demand of borrowers. And some are even pushing fixed-rate term loans—something they have tried to avoid since they were burned by rising rates during the credit crunch of 1974.

While the big banks have been trying to

attract new business with such techniques, the regionals have lured some of their old customers away. John R. Bunten, vice-president of Republic National Bank of Dallas, says that nearly half of his bank's recent rise in loan demand has come from medium-sized companies that formerly borrowed from banks in New York, Chicago, or Los Angeles.

**Competing for the middle.** But the big banks are fighting back. "There's a tremendous amount of external competition. In the old days, for example, most money center banks looked only at the largest companies," says Peter H. McCormick, senior vice-president of New England Merchants National Bank of Boston. "Today they are looking at medium-size companies with sales of \$50 million or so. These companies were and are our bread and butter."

What the money center banks really want, though, is an upsurge in capital spending. "For our kind of bank to see much steam beneath loan demand," explains Charles M. Bliss, president of Chicago's Harris Trust and Savings Bank, "we have to have capital spending and a continual growth in sales volume."

The stock market, taking note of the increase in the prime rate, has recently had a sharp selloff, to the lowest level in 16 months. Partly, this is due to the feeling by investors that higher interest rates are going to hurt our recovery, and that higher interest rates simply indicate more inflation, currently poison for the stock market. Whatever the cause, the lack of stock market optimism chills the economy at just the point in which we owe it to ourselves and the world to keep the recovery going.

Enough is enough. The Federal Reserve System should cease its reckless money tightening. It should stop raising the Federal funds rate, and indeed try to lower it. It should use its moral suasion with the major banks not to increase their prime rate, and indeed to retract the increase they have just made. Finally, the Fed should end the stop-go policy of the recent past, and instead adopt a steady-as-you-go hand on the tiller.

### WILD GREEN YONDER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. ADDABBO) is recognized for 5 minutes.

Mr. ADDABBO. Mr. Speaker, the Washington Post of May 24 contained a column by Art Buchwald titled the "Wild Green Yonder" which is quite appropriate to the situation that we face in marking up the defense appropriations bill. Since the bill will be before the House within a matter of weeks and since the Members are to be asked to vote on the B-1 bomber, the most expensive, unneeded plane in American history, I include the column in the RECORD on the hope that the Members will take time to read this informative newspaper article:

[From the Washington Post, May 24, 1977]

#### THE WILD GREEN YONDER

(By Art Buchwald)

They said it couldn't be done, but the U.S. Air Force managed to do it. It developed an airplane that would cost more than \$100 million. The B-1 bomber, which will be ready

for production as soon as President Carter gives the word, will be the most expensive aircraft in history; and since the Air Force wants to build 244 of them, it will cost the taxpayers conservatively \$40 billion, including operating expenses.

I went to the Army-Navy Military Industrial Complex Club as soon as the announcement was made, and there was great rejoicing and excitement. Aircraft contractors were buying drinks for everyone.

"The Navy scoffed at us," an Air Force general said. "The Army laughed at us, and the civilians in the Pentagon said we were out of our minds. They claimed no matter what we put on the plane we could never break the \$100 million barrier."

"How on earth did you do it?" I asked in admiration.

"We got together with our contractors, and we told them we wanted the most expensive bomber that money could buy. We wanted every sophisticated electronic gimmick they could think of. We wanted a plane that could fly high, a plane that could fly low, a plane that could carry nuclear warheads, super-sonic missiles, cruise missiles, and anything else they could think of. We said we wanted the biggest buck for the bang."

"What did the contractors say?" I asked.

"They were thrilled," the general told me. "No one had ever challenged them to make \$100-million aircraft before. It wasn't easy to think up new ideas to add to the cost, but we promised to work with them closely."

"I'll never forget the day the chief engineer from the company came in and said, 'The best we can do is build you a \$75-million bomber. We can't think of another piece of equipment to put on it.'"

"Well, we really blew our stacks and told him if his company couldn't come up with a \$100-million plane we'd fine one that could. We explained to him that the B-1 bomber was the Air Force's baby and the most vital strategic deterrent we had. If we couldn't make it expensive enough, the Navy wouldn't take it seriously. The Navy has been trying to sink the B-1 ever since we thought of it. If we brought in our plane for less than \$100 million, the Navy could claim it wasn't a deterrent at all."

"That must have frightened the engineer," I said.

"Scared the pants off him. We sat down with him and asked if he had thought of windshield wipers and he said he hadn't. Then we asked him why the plane didn't have whitewall tires. He couldn't explain it. We pointed out we needed leather seats and not the vinyl ones he had decided on. He kept writing figures down. The big breakthrough came, though, when someone thought of rear-window defrosters. The engineer protested that if he put in rear-window defrosters they would have to completely redesign the plane. 'That's what you're paid for,' we told him."

"Well, it took some doing, but we got the price up to \$101.7 million, and now the Navy is fit to be tied."

"I wonder what their answer will be?" I said.

"They'll probably try to come up with a plane of their own to match it. But they're fighting among themselves. Half the Navy wants nuclear submarines and the other half wants nuclear carriers. There isn't anybody in the Air Force who doesn't want the B-1 bomber."

"Because you can fly it, boy. What's the sense of having an Air Force if you can't fly a plane? Sure, our missiles are more accurate, but that means you have to sit in a bunker 1,000 feet underground. What the hell does that have to do with the wild blue yonder?"

# GRIGORY VIGDOROV—STILL WAITING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mrs. SPELLMAN) is recognized for 10 minutes.

Mrs. SPELLMAN. Mr. Speaker, I addressed this body a year ago in behalf of a young Soviet Jew whose only desire was to be reunited with his family. It is with great sadness that I advise the Congress that this young man and his family are still waiting for permission from Soviet authorities.

Grigory Vigdorov was born in 1947, near Moscow. After serving in the Army, he entered the university and majored in economics. When his family discussed emigrating to Israel, he left the university, after having completed 3 years. In March 1973 an exit visa was applied for for the entire family. In June 1973 the parents received permission. The son was refused and was told further, that he must leave his job. At that time, Mr. Vigdorov was a pressmaker in a small button factory.

Since his parents emigrated, Mr. Vigdorov and his wife, Marina, have had a second child. If anything, this second child has deepened the sadness of the separated family. In a recent letter from Israel, the Vigdorovs said:

Our family should have left the USSR together in July, 1973, but our son was refused permission to emigrate. General Verveyin of the Ministry of Internal Affairs, the man whom we consulted prior to our departure, promised us at that time that our son would be given permission to emigrate in the near future. Soon we will enter our fifth year of separation. From the day our son was born, to the day of our departure, we lived together as one family.

Since our departure our son has been followed by the authorities, has had his phone disconnected and has not found employment in Moscow. In search of work, Grigory went North, but even there he was not able to find work. When he returned to Moscow he found work chopping wood.

Grigory was laid up in the hospital for nearly two months as his ulcerous condition was aggravated by this hard and back-breaking work. Meanwhile, his mother here in Israel has developed glaucoma, possibly as a result of excessive crying and grief. She also grieves the fact that she has not yet seen a grandson who was born after our departure. . . .

The Vigdorovs' letter beseeches us to help reunite this family. It is an ongoing tragedy, and I can't help but feel and share the grief of the senior Vigdorovs. No crime has been committed against the Soviet Government; yet, the desire of a young family to be reunited with their parents has been treated as a crime by Soviet authorities, in stark contrast to the terms of the Helsinki agreements.

I hope that all of my colleagues will heed this appeal and join me in seeking justice for this young family.

## HATCH ACT AMENDMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. RYAN) is recognized for 5 minutes.

Mr. RYAN. Mr. Speaker, when the House resumes consideration of H.R. 10, the Hatch Act reform bill, I will offer an amendment to define the definition of "restricted person." A similar amendment was extensively debated during our markup on the bill in the Post Office and Civil Service Committee, and it garnered substantial support. The gentleman from Missouri (Mr. CLAY), to whom much credit should be given for undertaking the mammoth job of reforming the Hatch Act, offered a substitute provision regarding restricted positions during the hearing which was finally adopted by the committee. It is my understanding that Mr. CLAY will have clarifying language to propose regarding this section when we again consider H.R. 10.

While I support Mr. CLAY's amendment, I respectfully submit that it is deficient in one respect. I think Mr. CLAY and myself are motivated to protect the same interest—the public's confidence in the integrity of our Government. However, as we cannot insure the public's confidence in the integrity of our Government by hatching individuals in supervisory positions of an auditing or investigative nature and not also restrict the individuals who are actually engaged in performing the audit or investigation of the average citizen.

My amendment would enlarge the definition of a "restricted position" to include employees who actually carry out the audit, investigation or inspection in the field.

Mr. CLAY has suggested that the restriction is unnecessary because investigators, auditors, or inspectors really have no authority with respect to the final outcome of the actions or with respect to who is the target of the actions.

I respectfully disagree. There is a distinction made in the law between what is actual authority and what is apparent authority. To the average taxpayer who is called in on an audit or the small businessman who is visited by an OSHA inspector, that Government employee has authority. I think we must give the public adequate assurances that the implied or apparent authority of these Federal employees will not be abused. Furthermore, the Federal auditor or investigator is charged with the responsibility to make formal findings and recommendations. That responsibility in and of itself vests substantial authority or power in the hands of the investigator or inspector.

The danger in not restricting the investigator, auditor or inspector can be best demonstrated by the following example:

The Cast Metal Federation is suing OSHA's national emphasis program. Among other legal challenges, the foundries have alleged that individual OSHA inspectors have threatened member foundries with reprisals for asserting legal rights.

I am also concerned with the effect of inference. If the name of well-known

tax auditor in my district is prominently displayed on my campaign stationery and campaign letters are coincidentally sent out to a number of businesses whose tax returns the auditor will be reviewing in the near future, there would be no violation, no hint of improper conduct under the law. And yet, by mere inference, political pressure is being brought to bear.

I think my amendment will go a long way toward protecting the public's interest in the integrity of our Government and, just as important, will serve to protect Government employees who are investigators, inspectors or auditors from any taint of impropriety in carrying out their duties.

## LOOK, LOVE, LAUGH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. LEDERER) is recognized for 5 minutes.

Mr. LEDERER. Mr. Speaker, I would like to take this opportunity to insert into the RECORD a speech delivered by the Reverend Walter J. Burghardt, S.J., at the commencement of the St. Joseph's College class of 1977. This commencement address was delivered on May 14, 1977.

Father Burghardt is a professor at the school of religious studies in the Department of Theology of the Catholic University. The address is entitled "Look, Love, Laugh." I am sure the Members of this House will benefit from Father's remarks:

### LOOK, LOVE, LAUGH

The next fifteen minutes could be painful minutes. You do not know me, and I do not know you. You know nothing about me—except the gentle white lies on your program. You don't even know I'm the only theologian in captivity who is acceptable in Rome and banned in Owensboro. And I know nothing about you. Except that you have been educated in the shadow of the Declaration of Independence, and have emerged from four years of undeclared dependence in better condition than most POW's.

More than that: you and I are very different people. You do not look at the world the way I do, do not use words the way I do, do not quite think the way I do, do not dream my dreams or sing my songs. Even your experience of God may be different from mine. And so I feel very much in tune with Rod McKuen when he sings:

I make words for people I've not met,  
Those who will not turn to follow after me.  
It is for me a kind of loving.  
A kind of loving, for me.

The words to come are "a kind of loving," for I want to share with you not abstract aphorisms ("the pen is mightier than the sword"), not sentimental slush ("love is never having to say you're sorry"), not eloquent exhortations ("do unto others as you would have them do unto you"). I want to share . . . myself. At this critical moment, when you are in process of deciding what it means for you to be alive, to live, to be human, to be a man or a woman, I am going to tell you what, after a half century and more, I feel it means to be human, to be alive. What I feel. Not a priest, but this priest. Not a theologian, but this theologian.

Not talking to just anybody, but talking to you. And I shall develop three ideas sketchily. I shall say that to be human has three facets: to be human is to look, to love, to laugh.

I

First, to be alive is to look. You see, I am not genuinely alive simply because there is life in me. Simply because I watch a time clock from nine to five, or a Late Show from eleven to one. Simply because my standard of living is high, my cholesterol low. Simply because I offer the Sacrifice of the Mass each day, or am perpetually poor, chaste, and obedient. Simply because I sit at a desk or dig a ditch, wash diapers or trump aces. Simply because I eat and drink, weep and laugh, rock and roll. Simply because I am going through the motions of living—all the routines that enable a man or woman to get through life without living it.

The point is, I am not genuinely alive simply because I am not medically dead. I am alive to the extent that I am looking. With my mind, of course. For with this mind I look into a microscope and am filled with the wonder of life the naked eye cannot see. With this mind I speed over oceans more swiftly than the jet and touch human persons from Siberia to Zaire, from Egypt to East Germany. With this mind I flee back into the past and rediscover a universe perhaps five billion years old, rediscover an America five centuries young. With this mind I pluck meaning from the strings of a harp and the whisper of the wind, from a sonnet or a sonata, from Michelangelo's *Pietà* and the Mona Lisa, from Beethoven's *Pastoral Symphony* and Tchaikovsky's *Swan Lake Ballet* and Verdi's *Aida*, yes from Aerosmith and Jethro Tull and the Grateful Dead. With this mind I look into the minds of philosophers from ancient Greece to modern Britain, from Plato's world of ideas to Whitehead's experience and process, to share their tortured search for what is real, for what is true. With this mind I look into the mind of God as He reveals Himself in creation, on a cross, and in the lines of His own book.

Indeed I look with my mind. And only if I look, only if my mind is open, do I come face to face with what makes life come alive, makes life not endurable but entrancing and enrapturing, bewildering and challenging, mind-blowing and soul-searing. I mean the experience of mystery. I mean the realization that reality, the real, is incredibly complex and perplexing, profound and open-ended. Whether it's the inner you or outer space, whether it's a blade of grass or the ocean floor, whether it's God in His heaven or the person sitting next to you, the real is a fascinating, frustrating wedding of what I can grasp and what is still beyond my grasp.

That is what a remarkable rabbi, Abraham Joshua Heschel, saw so clearly and lived so completely. Interviewed on NBC shortly before his death, he was asked: What is the essence of being? What does it mean to live a human life? He replied:

"Actually, the greatness of man is that he faces problems. I would judge a person by how many deep problems he's concerned with. A person who has no problems is an idiot. Because a man has problems. And the more complicated . . . he is, the deeper are his problems. I'm not against pleasure, but the greatness of life is the experience of facing a challenge.

"In a very deep sense, religion is two things. It's an answer to the ultimate problems of human existence, and it is a challenge to all answers. This is a deep ingredient of existence—problems. And the tragedy of our education today is that we are giving easy solutions: be complacent, have peace of mind, everything is fine. No! Wrestling is the issue. Facing the challenge is the issue."

To be alive is to look. But not merely

with my mind—I am not naked intellect. If I am really to respond to the real, my whole being must be alive, vibrating to every throb of the real. Not only mind but eyes; not only eyes but smell and taste, hearing and touch. For reality is not reducible to some far-off, abstract, intangible God-in-the-sky. Reality is pulsing people; reality is fire and water; reality is a rainbow after a summer storm, a gentle doe streaking through a forest; reality is a foaming mug of Michelob, Beethoven's Mass in D, a child lapping a chocolate ice-cream cone; reality is a striding woman with wind-blown hair, reality is Christ Jesus.

And your looking will be most real when you no longer analyze what you experience or argue it, no longer describe what you see or define it, but are *one* with it; when you no longer move around the real but enter into it; when you simply "see" and what you see you love.

II

Which brings me to my second point. To be alive, to be human, it is not enough to *know* the real; I must *love* it: God's people, God's things, God Himself. Thomas Aquinas summed it up splendidly:

"There are two ways of desiring knowledge. One way is to desire it as a perfection of myself; and that is the way philosophers desire it. The other way of desiring knowledge is to desire it not [merely] as a perfection of myself, but because through this knowledge the one I love becomes present to me; and that is the way saints desire it."

The point is, I am most human when I go out of my small self, when I share not what I have but who I am, when I am "for others." My life is genuinely divine, therefore utterly human, to the extent that it reflects the very Being of God, where to be Father is to be turned totally to His Son, and to be Son is to be turned totally to His Father. To be human as a Christian should be human, my existence should be Godward and manward: turned totally to God, totally to God's images on earth. This is what it means to be a person, to be a Christian; this is what it means to love.

But precisely here I am profoundly discouraged. Why? Because the gut issues of '77 are so hate-full and we are so loveless.

At this moment, four billion persons walk or lie on this earth. At least one billion go to bed hungry each night, at least one out of every four. Each day ten thousand of the hungry die; but for each one who dies, another takes his place—and soon two may take his place. Tonight ten million Americans will fall asleep hungry; twenty-five million more are undernourished; sixty million are poor; two out of every seven.

At this moment, human rights are being violated, human persons raped by injustice: the nonwhite eighty-two percent in South Africa, the political prisoners in the Philippines, twelve million Russians in any given year imprisoned or tortured or killed in the Gulag Archipelago, the world's women still largely second-class humans.

At this moment, human blood is reddening the earth, from Zaire to the north of Ireland to the streets of your home city.

If those facts and figures sound abstract to you, here is how many years you could expect to live if you grew up in certain other countries: Cambodia, 44; Kenya, 43; Burma, 42; Sudan, 40; Ghana, 39; Madagascar, 38; Libya, 37; Cameroon, 36; South Vietnam, 35; Togo, 34; Chad, 32; Nepal, 25 to 40. And beneath these naked figures smolder volcanoes of envy and resentment, of fury and frustration and hate.

War and race, poverty and politics—these issues are hate-full in large measure because we are loveless. Oh, not everyone. But so many of us, the community called Christian, we do not come across as a community of

love. Who looks at the barbed wire in Derry or the hot sands of Sinai, the stinking streets of Calcutta or the decaying schoolhouses in Appalachia, and thinks of Christians as a community "for others"? Who sees us as turned totally to God, totally to man?

Today's world tells me forcefully that no definition of love, no protestations of love, will touch the gut issues of '77. Only persons in love can do that. And you are not in love if your horizons are narrow, if your arms do not reach out beyond your own country, your own color, your own creed, your own college, your own private cell. You are not in love if you are unwilling to risk, if you clutch defensively all you have gained, if you build a fence around your home and your possessions, your dear ones and your love. You are not in love if you imprison the Spirit of Love.

For you graduates, the gut issue of '77 is not Belfast or Zaire, not Appalachia or Calcutta. The gut issue is you. Can you honestly define yourself, can you answer the question "Who are you?" with "I am 'for others'?" If you can, who are these "others"? Only those who look like you, who love you? Or are you turned toward every other—not only the white or the black, but the white and the black and the red and the brown and the yellow? Not only the clean and the love-laden and the respectable but the dirty and the hate-choked and the repulsive? The gut issue is: Whose hand can you touch in love? Answer that question and you will know how profoundly or how superficially the Holy Spirit has laid hold of you. Whose hand can you touch in love?

III

My third point may sound strange to you: to be alive, to be human, is to *laugh*. And yet it follows inescapably from points 1 and 2. For if you look and love, if you respond to the real with every fiber of your being and are turned totally to others, you will laugh. For laughter is not hysteria; laughter is not primarily a belly explosion over a vulgar joke; laughter is joy in living. And therefore laughter is splendidly human, utterly Christian. And conversely, sadly, half the human race is less than human because it cannot joy in its living, and it cannot joy in its living because that living is less than human.

Eugene O'Neill once wrote a play—a muddled play in many ways, but a play with a splendid insight. It dealt with the life of Lazarus after the Son of God summoned him from the grave. O'Neill called his play *Lazarus Laughed*. It is the story of a lover of Christ who has tasted death and sees it for what it is—the story of a man whose one invitation to men is his constant refrain:

Laugh with me!  
Death is dead!  
Fear is no more!  
There is only life!  
There is only laughter!

And O'Neill tells us: Lazarus "begins to laugh, softly at first," then full-throated—"a laugh so full of a complete acceptance of life, a profound assertion of joy in living, so devoid of all fear, that it is infectious with love," so infectious that, despite themselves, his listeners are caught by it and carried away.

This, I submit, is intelligent Christianity. It is not that you blind yourself to sin and war and disease and death. These will touch you as cruelly as they touch the man or woman who does not believe, who cannot hope, who refuses to love. And still you can laugh, can joy in living. Why? Because in the midst of death you are constantly discovering life: in a glance or a touch or a song, in a field of corn or a friend who cares, in the moon or an amoeba, in a lifeless loaf transformed into the body of Christ. But you will discover life only if you look and love,

only if you open your whole self to a whole world of experience, open your whole self to others. Otherwise you will see only death; and when you see nothing but death you are . . . dead.

Graduates of '77: I have said nothing about labs and languages, about basketball hoops and baseball bats, even about Mass and sacraments. Not that these are unimportant, unrelated to scholastic existence. But the fact remains: St. Joe's is not a factory for facts; it is not an annex of Vic Tanny, a steam room for overweight Christians; it is not even a chapel, where faith is fortified against infidelity. Please God, you have amassed facts, lost fat, kept faith. Please God, you will leave here learned slender believers.

But more to the point, you will leave here "educated" to the extent that a college guided by the Spirit has opened you to looking and loving. You will leave here "educated" in the measure that St. Joe's has revealed a world that excites you with its mystery and its promise, has disclosed the "other" without whom you are not quite a person, not quite human, not quite alive. Looking and loving, you can leave here . . . laughing.

#### THOSE WHO CAN'T HEAR WILL BE HEARD—AT HEARINGS ON KOCH/FINDLEY BILL FOR A "TELEPHONE FOR THE DEAF" ON CAPITOL HILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. Koch) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, every week our offices receive hundreds of telephone calls from our constituents who wish to discuss problems or certain pieces of legislation. But because deaf persons are unable to use normal telephone service, they are effectively denied the opportunity to express their views or contact their elected representatives expeditiously about difficulties they may be having.

Today, I am introducing legislation with my colleague Congressman PAUL FINDLEY of Illinois to provide for the establishment of a toll-free teletypewriter device in the Capitol to enable our hearing-impaired constituents to contact Members of Congress via telephone lines. In addition, I am very pleased to have recently learned that the House Administration Subcommittee on Accounts, to which our bill has been referred, hopes to hold hearings on the legislation sometime this summer. This bill, which Mr. FINDLEY and I are reintroducing with 31 House cosponsors, has also been introduced by Senator DOLE in the Senate. It calls for the placement of a TTY in the Capitol for the use of both the House and the Senate, so that people with hearing impairments would be able to place a toll-free call into this machine from one of the thousands of TTY's located across the country. A special operator would take the incoming call, and would then contact the appropriate congressional office to arrange for a reply. Members of Congress or staff members would then transmit the reply back to the constituent through this same installation.

This installation would not be the first TTY installed by the Federal Government. Offices such as the President's Commission for Employment of the

Handicapped, HEW's Office of Deafness and Communicative Disorders, and the Federal Communications Commission, as well as other agencies, have TTY installations. Perhaps the most exemplary use of this machinery has been made by the Internal Revenue Service. On December 1, 1976, the IRS installed a toll-free TTY so that deaf taxpayers from across the continental United States could call for information and answers to Federal tax questions. The system grew out of a series of pilot projects that began in Los Angeles in 1975, and was centralized in Indianapolis in 1976. Since the nationwide system became toll-free in December, the Indianapolis office has received over 1,000 calls on their TTY. The IRS system has become so responsive that in addition to calls on tax-related problems, they are receiving calls with regard to other problems. A recent IRS memo on the subject stated:

Taxpayer Service has provided the deaf community an access to the federal government. Taxpayers are beginning to call us seeking our assistance to help them contact other government agencies or general information as to what government agency they should contact to resolve a particular problem. The majority of these calls have been for Social Security information.

It is not the job of the IRS to handle constituent problems that are not tax-related, it is the job of Congressmen and Senators. It is absurd that the IRS is receiving these requests simply because the U.S. Congress does not have the equipment available to handle these communications. This legislation would remedy that situation.

I am appending to my statement an article describing the success of the Internal Revenue Service's program of customer service for the hearing-impaired:

[From the Garrett (Indiana) Clipper, Mar. 31, 1977]

#### IRS HOLDS VOICELESS TELEPHONE CONVERSATIONS

Their job is to answer the telephones, but when there's a voice on the other end, they get disturbed.

And when no voice answers back, they're pleased!

These are not "problem" employees in the Internal Revenue Service's Indianapolis Office, but instead specialists who use the phones to communicate with the nation's deaf and hearing impaired taxpayers.

The number is reserved for use with special equipment, but inevitably there are those who don't read the instructions and try to use the number for voice calls. These "talkies" are politely but quickly informed it's a special number for hearing impaired, and they're given another number for voice communication.

This is the first year that IRS has offered this nationwide, toll-free phone service for the hearing impaired. Centered in Indianapolis, the system uses ordinary telephones, which plug into electronics keyboard-TV set devices, or teletypewriters and allows printed communication over ordinary telephone lines. In use among the hearing impaired community for several years, the system is known as TTY, the abbreviation for "teletypewriter."

They've received about 700 TTY calls at IRS so far, and according to the IRS employees involved, the reactions have been good. Sally Skiles: "These people are very appreciative, they're beginning to be able to take advantage of free government services that have

been available to the hearing community for quite a while."

Cheryl Newton: "All I've talked with really appreciate it. We're providing a service they can't get anywhere else for free, so there's the satisfaction of knowing that you're providing something unique."

Debbie Moore: "They seem glad we're here. You get the definite idea that they haven't had too many services available to them like this."

Lisa Stone: "I have yet to have anyone who is rude."

Here's how a phone conversation works with a hearing impaired taxpayer: In the Indianapolis IRS office a telephone rings. Sally—or another of the TTY specialists—places the receiver in a special holder connected to the equipment, then types, "IRS, Sally Skiles, may I help you?" Then she types "GA" for "go ahead." Then, as Sally sits back, the teletype begins to clack by itself, or, if they're using the TV device, the words begin to silently appear by themselves across the screen, as the taxpayer asks the questions, and in turn types GA. Then it's Sally's turn again. The calls average 10-15 minutes each.

To Sally, communicating with the printed word over the telephone was new, but "when you do this long enough, you forget you're using a piece of equipment. I don't feel I'm communicating with a machine, but with people. This machine isn't a barrier . . . it actually breaks down the barrier between hearing impaired and the hearing."

What types of questions come in on TTY? According to Cheryl, they range from the easy-to-answer to the not-so-easy: "Mine go from deductibility of TTY equipment for the deaf, all the way to tax sheltered annuities and lump sum distribution!"

Any problems so far?

Dottie Gleich: "Many apologize for not being able to type well or fast, but we assure them it doesn't matter, it happens to us, too!"

Cheryl: Using written communication, I find it bothers me that I don't know for sure if they understand what I'm telling them. Nobody knows more than we do that the tax laws are complex, and I'm afraid that someone might be embarrassed to say they don't understand. But we urge callers, if they don't understand, to let us know and we'll be glad to go over it again. It doesn't bother us at all, that's what we're here for."

Taxes not being the most exciting subject, is it all tedious?

Sometimes, according to Cheryl, the caller will lace the conversation with humor, and "we try to give it right back to 'em, to let them know there's not some government 'monster' at the other end of the keyboard, just real people!"

Sally: In fact, I had one man call in and mention his income, so I routinely asked if this was his sole source of income for the year. He types back, "Yes . . . except for that \$16,000 I won in a Scrabble game!" I told him, now that I'd picked myself up off the floor, I'll try to answer his question!"

Is the program a success?

Cheryl: "We're getting repeaters, the same person calls back many times, so they must find it useful."

Dottie: "We have several people who invite others to their homes and call with several questions and we encourage this."

Sally: "We have a man in Chicago who calls regularly with a list of questions. He's probably doing the calling for friends, and we think this is great. Not everybody can afford their own TTY."

An official of a Rochester, New York deaf organization wrote to the IRS that while the agency is often the butt of sarcastic humor, its TTY program shows it to be "one of the government's most sensitive, aware and concerned agencies . . . (showing) exceptional tact, sensitivity, patience and efficiency."

For deaf and hearing impaired with access to TTY equipment, the numbers are: in Indiana, toll-free 800-382-4059. All other states (except Alaska and Hawaii) 800-428-4732. Calls on these lines will be answered only in TTY equipment, and not by voice.

#### LEGISLATION FACILITATING CONGRESSIONAL OVERSIGHT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. Moss) is recognized for 20 minutes.

Mr. MOSS. Mr. Speaker, I am today introducing legislation to limit questions reviewable by U.S. District Court judges in cases where the recipient of a congressional subpoena seeks to gain injunctive relief.

This bill would also institute procedures for expedited judicial review of controversies concerning the authority of congressional subpoenas.

The Supreme Court has held that where a congressional committee is authorized to issue a subpoena, and there is a legislative need for the information sought, then the courts will not question the matter further. The Court has based its decisions on the concept of separation of powers, stating that the "Speech or Debate" clause of the Constitution declaring that Congress "shall not be questioned in any other place" was intended by our Founders to be construed strictly.

Sadly, however, not all U.S. District Court judges have been willing to follow either the Speech or Debate clause or Supreme Court precedents in several very significant investigations involving the House Interstate and Foreign Commerce Subcommittee on Oversight and Investigations, which I chair.

In only one of our three controversies has the doctrine enumerated in Eastland versus U.S. Servicemen's Fund been followed. That case involved Gulf Oil Co.'s efforts to block the subcommittee from obtaining documents concerning an alleged uranium cartel. On May 4, 1977, U.S. District Court Judge George L. Hart, Jr. denied Gulf's request for a preliminary injunction and upheld the congressional powers of investigations.

Judge Hart wrote that:

Our subpoena was issued "pursuant to a properly authorized investigation [and] that the Subcommittee had a valid investigative purpose, [therefore] . . . under the case of *Eastland v. United States Servicemen's Fund*, 241 U.S. 491 (1975), the Subcommittee action may not be questioned in any other place."

In the case of two other subpoenas, one concerning an investigation of petroleum lease extensions and the other concerning warrantless wiretaps, our investigations have been delayed for unconscionably long periods of time because of judicial review on questions that have gone far beyond the scope of questions permitted under the Eastland doctrine.

The details of those controversies are reviewed in my letter to the Honorable PETER RODINO, chairman of the Judiciary

Committee. A copy of that letter, a bill to uphold the powers of Congress, and a technical explanation of the legislation are offered here for inclusion in the RECORD:

HOUSE OF REPRESENTATIVES,  
Washington, D.C., May 26, 1977.

Hon. PETER W. RODINO, JR.,  
Chairman, Judiciary Committee, U.S. House  
of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I have today introduced a bill which comes within the jurisdiction of your committee and with which you will therefore be dealing. Before you consider this proposed legislation, I think it may be helpful to advise you of the experiences of the Subcommittee on Oversight and Investigations, which I chair, during the 94th Congress and continuing until the present which, in my view, make enactment of the enclosed bill absolutely vital to the effective exercise of Congressional oversight authority.

In short, the bill on which I seek your assistance would limit the questions reviewable by the Federal judiciary in cases where the complainant seeks to restrain or avoid compliance with a Congressional subpoena. In this and the last Congress, bills have been introduced which would provide mechanisms by which the Congress can enforce its subpoenas against a recalcitrant individual, agency or organization. The sponsors of these bills recognize that both Congressional contempt proceedings and the criminal contempt process of the courts are cumbersome and not terribly effective methods of effectuating the subpoena process. Those bills therefore provide for civil contempt before the federal judiciary with a preliminary opportunity to show cause why the subject of the process believes he need not or should not comply. I applaud these efforts and believe that enactment of a measure of that type would afford an additional important tool to the Congress.

The bill which I am sponsoring addresses a different facet of the problem of achieving prompt compliance with a Congressional subpoena. The situation with which this Subcommittee has been faced involves the issuance of a subpoena to an agency or corporation which expresses willingness to supply the documents called for. However, before it has a chance to do so, a third party, asserting some interest in the documents to be delivered to the Congress, obtains a restraining order from a federal district court. The matter is then tied up in litigation for a year or 18 months or potentially even longer, the Subcommittee's investigation is stalled, and there is a strong danger that the documents, when they are finally obtained, have lost their currency.

This is a situation which this Subcommittee encountered on three separate occasions in the last Congress. In two of the cases, I sought and obtained a resolution of the House of Representatives authorizing my intervention in the litigation on behalf of the Interstate and Foreign Commerce Committee and the entire House of Representatives. These cases illustrate the inordinate delay which can be imposed upon legitimate and properly authorized Congressional investigations.

The first, *Ashland Oil Company v. Federal Trade Commission*, involved a subpoena of the Subcommittee to the Federal Trade Commission for specified reports it had required various corporations to file detailing natural gas reserve information. No subject could be of greater concern to the American people and hence to the Congress. While the Commission stated its intention to comply with the subpoena, it gave notice on November 18, 1975, to the affected companies and on November 24, 1975, just prior to the return date of the subpoena, Ashland obtained a temporary restraining order in

federal district court precluding the FTC's compliance. When the case was heard on the question of the granting of a permanent injunction, the Subcommittee having intervened on behalf of the Committee on Interstate and Foreign Commerce pursuant to H. Res. 899 (94th Congress), District Judge Corcoran on February 2, 1976, ordered the complaint dismissed. Thus, the result supported the Congress' constitutional right to investigate under its Article I legislative authority. However, the court granted a stay to permit Ashland to appeal. It did, the Court of Appeals issued its decision on September 20, 1976, almost 8 months later. The court's brief opinion affirmed the district court for the reasons set forth by Judge Corcoran. Again the propriety of the investigation and the Subcommittee's right to the information was upheld by the federal judiciary, and again its delivery was postponed. The Court of Appeals stayed its order to allow Ashland to seek review in the Supreme Court. Ashland chose instead to petition the Court of Appeals for rehearing *en banc*. The various supporting and opposing legal memoranda were filed but no action was taken by the court. Finally, on February 25, 1977, 15 months after the entry of the restraining order and a year after the district court had found that permanent injunctive relief was not proper, the Subcommittee filed a motion in the Court of Appeals requesting that the stay be vacated and the motion for rehearing be denied. There followed a short flurry of brief filing after which on March 2, 1977, the Court of Appeals entered orders terminating the stay, denying various other of Ashland's requests and allowing them two days to decide whether to appeal to the Supreme Court. When no further appeal was sought, the injunction was dissolved and the Subcommittee finally obtained the documents it sought.

The pernicious effect of this protracted litigation was not limited to the Subcommittee's investigation of natural gas reserves. Another Subcommittee investigation which was undertaken during approximately the same period pertained to the coal industry within the United States. Information was again sought from the Federal Trade Commission and the Union Carbide Corporation immediately went into court. Because of the superficial similarity of the fact patterns in the *Ashland* and *Union Carbide* cases, District Judge Pratt quickly enjoined the FTC ("upon plaintiff's motion for a temporary restraining order") from "releasing to any person outside the Commission any and all parts of the data, etc., until ten (10) days after a decision in *Ashland*" (Order, *Union Carbide Corp. v. Federal Trade Commission*, Civil Action No. 76-0793, May 7, 1976). Thus, the ripple effect of the *Ashland* suit and its dilatory handling by the judiciary impinged upon another Subcommittee inquiry into the national energy situation and caused nearly a year's delay in the receipt of information for our coal study.

The most troublesome case, one in which the Subcommittee is still involved, concerns its attempted oversight of the Federal Communications Act and the interception of telephone communications within the United States. The Subcommittee voted a subpoena on June 22, 1976, to the American Telephone and Telegraph Company, for records of wiretaps, upon request of the FBI, without any judicial order. The White House immediately contacted me and claimed that delivery of these letters to one place (the Subcommittee offices) would pose unacceptable security risks. (You should be aware that the Executive made this assertion with respect to documents that had been dispersed among the offices of the 24 subsidiaries of AT & T, had no security classification, and were handled by personnel of that private corporation who

had no security clearance.) The White House representatives offered instead the back-up memoranda in the case of these warrantless taps which had been prepared by the Federal Bureau of Investigation for the Attorney General. On the basis of the information contained in these memos, the Attorney General had decided to authorize the tap.

Subcommittee staff and members of the Justice Department then tried to develop a written memorandum of understanding which would detail what the staff would review and the procedures that would be followed. Perhaps the most difficult issue was that of access to at least a sample of unexpurgated memoranda so that the credibility and accuracy of the edited documents could be tested. When all the refinements appeared to have been agreed to by the staffs, and the signatures of the principals were sought, the White House disavowed the negotiated agreement, asserted that an agency relationship existed between AT & T and the U.S. Government, and claimed Executive Privilege over the papers of a private corporation. AT & T publicly denied any agency connection and reiterated its intention of complying with the Congressional subpoena. Thereupon, the Department of Justice went into District Court and on July 22 secured a temporary restraining order against AT & T. Because of the novelty of the Executive Privilege assertion, involving as it does, private papers, and in light of the fact that the Congress, rather than AT & T, was the real party in interest, I again sought (successfully) the adoption of a resolution by the House of Representatives authorizing my intervention and active participation through the representation of private counsel.

When the case was heard in the district court on the merits, an injunction was entered prohibiting AT & T from disclosing, either pursuant to subpoena or otherwise, the documents which the Subcommittee was seeking. The case was appealed, heard by the Court of Appeals on November 2, 1976, and a decision issued by Judge Levanthal on December 30, 1976.

Disappointingly, that opinion resolved nothing and the Subcommittee was still debarred from the AT & T records it sought. Judge Levanthal, speaking for the Court of Appeals, reviewed the issues raised by the litigation as well as the jurisdictional problems, but then backed away from reaching a decision. Instead, he reasoned that since the parties had come close to negotiating an agreement last summer, they might be able to do so now especially in light of the impending change in Administration and the fact that new representatives of the Executive Branch would now be at the negotiating table.

The Subcommittee made effort after effort to initiate and engage in the negotiating process. These steps are well documented in the correspondence and other materials filed with the district court which was charged by Judge Levanthal with keeping track of the parties' progress and reporting back to the appellate court. In the December 30 opinion, the appellate court had set a 90-day time limit for negotiations unless the parties agreed to further expansions. While we never agreed to any such prolongation of the time, various delays and court appearances stretched out that 90-day period until the present, although no fruitful or substantive negotiating has ever really occurred. On May 18, 1977, District Judge Gasch filed with the Court of Appeals his final report on the matter and the Court of Appeals has scheduled the matter for reargument there on June 3.

Thus, it is virtually certain that no resolution will be reached within the first year following issuance of the subpoena. As it

seems likely that the case will have to be heard by the Supreme Court, it will probably be substantially more than a year before the matter is decided.

The delays which this Subcommittee has undergone have substantially increased the burden of carrying on its functions. Indeed, all three investigations which I have described in this letter were initiated during the 94th Congress but their completion, in the manner in which the Subcommittee desired to fashion its work, was precluded by the protracted litigation.

I see legislation as offering the only effective solution to this problem. Therefore, I am introducing today the enclosed bill, which falls within the jurisdiction of your Committee. I have attached a brief technical description of the provisions of the bill and it therefore is unnecessary at this time to do more than describe its general thrust. The bill would expedite the process of judicial review of Congressional subpoenas through two means: (1) by prescribing procedures to minimize the layers of review and time for reviewing, and (2) by limiting (and in the process, defining) the questions which a court may consider. The three-pronged test recently enunciated by the Supreme Court in the *Eastland* case will be applied to determine the validity of the subpoena, the effect of which is sought to be avoided, and if it meets the *Eastland* criteria, only a substantial constitutional objection to compliance should stand in the way of the subpoena's immediate effectuation.

I believe that legislative action by the Congress is essential in order to permit it to effectively exercise its Article I authority. While some attention has been paid in recent years to the gradual accretion of power by the Executive Branch at the expense of the Congress, I fear that a comparable problem with regard to the judiciary has been neglected. The practical effect of that neglect is evidenced by the situations described above. Therefore, I would greatly appreciate your support in correcting this problem through prompt and, I hope, favorable consideration of my bill by your Committee.

Sincerely,

JOHN E. MOSS,  
Chairman, Subcommittee on Oversight  
and Investigations.

#### H.R. 7475

A bill to define the jurisdiction of the Federal courts with respect to challenges to Congressional subpoenas, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 85 of title 28, United States Code, is amended by adding at the end thereof the following new section:

"Sec. 1364. Actions to restrain the enforcement of Congressional subpoenas.

"(a) Any suit in which one party seeks injunctive relief to avoid compliance (either his own or that of any other person) with a subpoena issued by the Congress of the United States or any committee (including any joint committee or subcommittee) thereof shall be commenced in the United States Court of Appeals for the District of Columbia circuit.

"(b) (1) When a suit is brought to which this section applies, the scope of review by the court shall extend only to determining whether the following criteria are met:

"(A) there is a legislative purpose on behalf of which information is sought,

"(B) authority has been delegated by Congress for the committee (including any joint committee or subcommittee) issuing the subpoena to conduct the inquiry,

"(C) the committee (including any joint committee or subcommittee) has complied

with the applicable rules of the Senate and House of Representatives, and

"(D) the information sought, documentary or testimonial, is pertinent to the subject under inquiry.

If the court finds that each criterion has been met in connection with the issuance of the subpoena, it shall dismiss the complaint unless the complaint makes a clear and convincing showing that compliance with the subpoena would raise substantial constitutional issues.

"(2) If the Court of Appeals concludes that there are substantial issues of fact in dispute between the parties, the resolution of which is a prerequisite to the disposition of the suit, the court may make findings of fact or may refer specified questions to the district court for the making of such findings within such time as the Court of Appeals prescribes.

"(3) The decision of the Court of Appeals may be reviewed by the Supreme Court only if the appropriate notice of appeal is filed within 5 days after the entry of an order by the Court of Appeals, and the Supreme Court will only consider whether the Court of Appeals correctly applied the standards of paragraph (1) or correctly decided any constitutional issues which were before it.

"(4) The Court of Appeals (and the district court, where applicable) shall assign any action to which this section applies for hearing at the earliest practicable date and cause it to be expedited in every way. Any appeal or petition for review from any order or judgment in such action shall be expedited in the same manner.

"(c) The committee (including any joint committee or subcommittee) of Congress authorizing the issuance of the subpoena, compliance with which is the subject of the action under this section, shall be permitted by the court to intervene in such action (at its inception or at any time thereafter) if it is not named as a party thereto."

Sec. 2. The amendment made by section 1 shall be effective upon enactment.

#### TECHNICAL EXPLANATION

This bill addresses the issue of the appropriate scope of judicial review when the basic thrust of the action involves a challenge to a Congressional subpoena. The bill would add a new section to Title 28 of the United States defining the questions which are reviewable by the courts and the procedures to be followed in cases such as these.

Subsection (a) states that the section applies in any case in which the plaintiff is attempting to have the federal judiciary enjoin compliance with a Congressional subpoena or hold that that subpoena is invalid. The language is intended to apply to suits which may be initiated by a person (including a public or private agency or association) served with the subpoena or a third party who is trying to enjoin someone else's compliance. Also, the subsection contains no exclusion for suits brought either by or against an officer of the United States; such actions would be subject to the same rules as those involving non-Federal litigants.

Subsection (a) also requires that these suits be commenced in the United States Court of Appeals for the District of Columbia, in recognition of the need to streamline and expedite judicial review of these cases. Since these cases generally raise only questions of law, it is appropriate to initiate these cases in the Court of Appeals. Provision is made in paragraph 2 of subsection (b) for the exceptional case which raises factual issues.

Subsection (b) (1) defines the limits of the court's review. Its primary function in this type of suit must be to determine

whether the Congressional subpoena was validly issued. In making this assessment, the bill would require application of the three-point test enunciated by the Supreme Court in *Eastland v. U.S. Servicemen's Fund*, 421 U.S. 491 (1975). If the court finds that the committee was acting properly in issuing the subpoena, then it must dismiss the complaint and allow subpoena enforcement to go forward unhindered, with only one exception. If a clear and convincing case is made (and the court so rules) that to comply with the subpoena would raise a constitutional issue of major proportions, then the court would be authorized to retain jurisdiction and dispose of the case as may be appropriate.

Paragraph (2) expressly authorizes the Court of Appeals to make findings of fact if such findings are necessary to resolution of the legal issues before it, or, in its discretion, to refer specifically identified questions to the District Court for findings of fact. When the appellate court chooses the latter method of fact-finding, it must specify the date by which the District Court is to return the matter.

Paragraph (3) of this subsection provides the exclusive basis for review by the Supreme Court. It specifies that the Court will limit its consideration to whether the Court of Appeals correctly determined the issue of the validity of the subpoena or the constitutional issues which were properly before it.

Paragraph (4) directs that at all stages in the judicial proceedings to which this section applies shall be expedited.

Subsection (c) authorizes the Congressional committee issuing the subpoena which is the subject of the litigation to intervene in the litigation whenever the committee finds that action appropriate. Thus, this subsection both provides permanent authority for a committee to participate in the action and also establishes its right to intervene insofar as the court and other parties are concerned.

The legislation would be effective upon enactment.

#### FIRST AMENDMENT CONFRONTATION

**THE SPEAKER** pro tempore. Under a previous order of the House, the gentleman from California (Mr. VAN DEERLIN) is recognized for 5 minutes.

Mr. VAN DEERLIN. Mr. Speaker, in our House Subcommittee on Communications we have begun a review, looking toward possible rewrite, of the Communications Act of 1934—the basic communications law of the land. We feel that the onrush of technological change has left the law in many ways inadequate to probable needs of the next two decades, let alone the 21st century.

An aspect of the 1934 act receiving much attention is the manner in which it bears on the first amendment rights of broadcasters, particularly in their coverage of news and public events. It was therefore with special interest that many of us heard or read views on this subject from one of broadcasting's most respected figures, Eric Sevareid, as delivered to the recent convention of the National Association of Broadcasters.

It was a speech that set forth an insider's slant on the substantial change that has marked the quality of broadcast journalism in the years since Congress set tight regulatory limits over all phases of broadcasting, including news and opinion. The question it raises is whether

changing conditions should prompt Congress to ease this regulatory burden—not in the interest of broadcasters themselves, but toward assuring the freest flow of news and information to the American public.

Mr. Speaker, I commend Mr. Sevareid's words to the attention of my colleagues:

Thank you for this invitation and honor.

You have me here, I assume, because my days in the public eye, ear and nostril are numbered—on this year's calendar.

I was not present at the creation of electronic journalism, but almost. What CBS' first real managing editor, Paul White, called the fine, careless rapture of the early radio days is gone. The miracles of communication have become commonplace. The gaudy process is now more routinized, institutionalized. But much better, I do believe; more responsible, better educated, as well as more efficient. This has been the first truly new form of journalism, ever, and I have no regrets at having been part of the agony and the ecstasy almost from the start.

We began with no form sheet, no precedents, no comforting tradition like that of the printed press, no proved techniques, no standards. We had to invent them as we went along; like politicians and children we were educated at the public's expense.

And broadcasting as an industry began in its own special way. Most newspapers were started by men who wanted an outlet for their views, usually political. Most broadcasting stations were started by men who wanted an advertising medium, a business. They found themselves, in time, co-trustees of the first amendment, a positive challenge to some, a discomfiture to others. But that goes with the job, with the right and the privilege. Station or network owners and managers unwilling to fight for full constitutional freedoms ought not be in the business.

I am not a spokesman for broadcasting as an industry. I have never paid much attention to its technical, managerial or financial problems. My bosses don't tell me what to say on the air and I don't tell them—not often, anyway—how to run the network's business. I don't know, quite, whether I'm in the news end of the broadcasting business or in the broadcasting end of the news business. But I do represent news, the hasty, often improvised and unstructured, often agonizing attempt to give the world a little glimpse of itself every day. It is not a profession in any strict sense, not exactly a business or a trade. It is a calling. We have to try to live at the growing points of human society, at the cutting edges of history. Wits and resourcefulness play a bigger role than learning or intellectual disciplines. We are pinch hitters every other inning. All one can hope for is a respectable batting average. What saves us is that the news business, broadcast or print, is a self-correcting institution.

Public officials, private cause groups, many lawyers and quantifying sociologists who work by slide rule may not approve, but the fact is that the theory of the free press never was that the full truth of anything would be revealed in any one account or commentary. The theory is that with free reporting and free discussion, the truth will emerge. It is a process, and must be followed, day by day, by readers and listeners as well as by writers and speakers.

There is, of course, the Sevareid Solution. I have offered it before; there were no takers; that is, news every day. No newspapers or news broadcasts, except to warn of nuclear attack or bubonic plague, on Monday, Wednesday, Fridays. We would do a better job; the public's nerve ends would be rested. I could go fishing more often. Short of that, we are obliged to wing it. Our condition is no

different from that described a hundred years ago by James Russell Lowell.

"In a world of daily, nay, almost hourly journalism, every clever man, every man who thinks himself clever or whom anyone else thinks clever, is called upon to deliver his judgment, point-blank and at the word of command, upon every conceivable subject of human thought."

But that's the way it is, as a colleague of mine would say. I have been at this calling some thirty-eight years now and I am perfectly sure that the grave, built-in fault of the press is not really bias. It is haste, and, particularly in broadcasting, the severe compression of the material required.

A central point about the free press is not that it be fair, though it must try to be; not that it be accurate, though it must try to be that. But that it be free.

I don't even want it to be too respectable. I would rather it be at least a little bit irresponsible than over-cautious and timid. It is the press that makes the community weather and sounds the notes of the day. Slide rules can provide only poor measurement of its performance.

This city of Washington is the greatest single center of world news since ancient Rome. I incline to the notion that it contains at present, too many of two kinds of people. Lawyers and press people. The lawyers complicate and paralyze everything. The press chews everything to bits, or tries to; every reputation, new idea, policy line, before they have much chance to mature.

Whenever lawyers and journalists come together, sometimes even when they are on the same side of an issue, they tend to reach a separating point. The lawyers are obliged to keep their eyes on the rules of the game; the journalists must keep their eyes on the game.

I have tried to do that over many years of reading and hearing the arguments about broadcasting and the first amendment. The notions that occurred to my unscientific, un-legal mind early on are still my notions for whatever they are worth.

They seem to be mostly negatives.

I have never understood the basic, legally governing concept of "the people's airways." So far as I know there is only the atmosphere and space. There can be no airway in any practical sense, until somebody accumulates the capital, know-how and enterprise to put a signal into the atmosphere and space. I have never understood why government should be empowered to affect the content of the signals anymore than it should affect the content of the newspapers carried in the newspaper truck on the people's streets. I thought the traffic laws, in both cases, were enough.

I have never understood the concept of "the people's right to know"; they have the right to find out, but that depends upon the publishers' right to publish. Publishers, print or electronic, have no constitutional right to be read or to be listened to. That, they have to earn, as the people have to earn knowledge.

I could never understand why so basic a right as the first amendment could be diluted or abridged simply because of technological change in the dissemination and reception of information and ideas. Particularly when the new technologies are becoming, almost everywhere, the most pervasive technologies. Though not necessarily the most persuasive.

I could never understand the court's argument that the fairness doctrine for broadcasting enhances the first amendment. The first amendment is a prohibition. How do you enhance a negative? No means No.

I have never understood the reasoning of those critics who seem to be saying that broadcasting will enjoy full rights under the

first amendment, when it is worthy of them. Who could be the timekeeper? In any case constitutional rights do not have to be earned; we were all born with them.

I can understand those who say that three big commercial networks plus public broadcasting and smaller groupings are not enough, though I suspect they would say the same were there four. Four, or even five would be all right with me and, I think, all right with most broadcast journalists, assuming they would be economically viable; and if they could provide the marvelously superior and different kinds of program fare that is supposed to be out there, somewhere, then everybody would be happy indeed.

Because there are only three we are told their content must be monitored, guided by government at various points. Their alleged power is too concentrated, we're told. Suppose there were only three daily newspapers which everyone read. No doubt there would be official and officious types who would feel the need to lay hands upon them. But the great majority of people, I suspect, would insist that their very scarcity made even more imperative their absolute freedom from the power of government, if this is to remain a free society, as the first amendment commands.

I have never quite grasped the worry about the power of the press. It has influence, surely, and influence is a kind of power; but diffuse, hard to measure. The press, after all, speaks with a thousand voices, in constant dissonance. It has no power to arrest you, draft you, tax you or even make you fill out a form, except a subscription form if you're agreeable. It is the power of government, especially the federal government and more particularly its executive arm, that has increased in my time. Many politicians have come to power in many countries and put press people in jail. I can't think of any place where the reverse has occurred.

The censorious instinct is always present and it shifts its operating base from time to time. The federal government, under Nixon, tried prior restraint which not even the Alien and Sedition Acts permitted. The federal government went through a spasm of subpoenas against news people but has since tried to restrain itself. Courts have increased their gag rules on journalists and both prosecuting and defending attorneys increasingly try to compel journalists' disclosure, sometimes just to make their own work easier.

I can think of innumerable cases where the press has led authority to situations of crime and corruption. I can't think of any case where sins of commission or omission by the press have resulted in gross injustice, at least in the sense of innocent people going to jail. History, experience, has its claims, too; on the whole the freer relationship had worked well.

Now we have entered a period where the censorious instinct concentrates on another nebulous concept called the right to privacy. To quote one leading communications lawyer, "In five short years the Supreme Court has taken a number of confused steps backwards, leaving journalists, broadcasters and publishers at the mercy of unclear laws, inconsistent judges and subjective juries. As a result no one can say for sure what the law of libel is in this country, who constitutes a public figure, when malice must be proved, what standards of negligence will be applied to reporters making valiant efforts to untangle judicial cats' cradles, what incredibly expensive and time-consuming legal proceedings might threaten." Unquote.

One result of all this nervous confusion is clear—it will increase another nefarious form of censorship—self-censorship.

Thomas Jefferson said that for his time the biggest threat of oppression would come from

the legislature, but that the time would arrive when it would come from the executive. I don't believe he thought of the judiciary, which has had far too much responsibility thrown upon it and has asserted far too much, in the compulsory arrangements of our daily lives.

Most judges are un-elected. That, said Mr. Agnew, some eight years ago, is the trouble with those presumptuous characters, the network reporters and commentators. Literal election, of course, would mean that the majority would hear only commentary and see news reports agreeable to it. That is not quite the idea of the free press. But in a sense, we are the most elected people around. Every time a listener turns his dial to the right number, he elects me; every time he turns it to the wrong number, he un-elects me.

Still, this is not good enough. Many years ago some psychologist said the Achilles heel of television would prove to be the fact that people can't talk back to the little box. They can, but not enough. Here the networks are found wanting, more than most local stations. I have argued this for years, at some risk perhaps of arguing myself out of a job or into a diminished job. It has not been a policy problem, but a problem of program rigidities. I want to see network air time opened up a good deal more to listeners' rebuttal and to differing persuasions. That would be one advantage inherent in expanding the network evening news programs to an hour. There must be ways to do it, not, certainly, under legal compulsion but by the free decision of broadcasting's managers.

It has been, in considerable part because of this imbalance between speaker and listener—as well as because my own temperament is what it is—that I have tried, all these years, to use this privileged position with restraint. I have been much criticized for my approach, especially by the zealots of so-called "advocacy journalism". I have my evangelical moments at times, but on the whole I have tried to illuminate more than to advocate, to teach more than to preach.

I have tried to remain objective, always aware, however, that objectivity and neutrality are not the same thing. Objectivity is a way of thinking about an issue, not the summation of the thought.

Such an approach will not often excite the multitude or bring rave reviews. But it has seemed to me the best way, for all the seasons, for the long haul. And my haul has been a long one.

Broadcasting steadily evolves and changes. For the better, in my opinion. It must do so, on its own, with the help of private citizens and their groups, with the help of the printed press, tainted with self interest though it often is—not with the help of government and its powers.

The wonder of television is not that it is as bad as it is, but that it is as good as it is. It will get still better, in news and in entertainment, if we have enough confidence in ourselves. We must not just react, particularly to the printed press. We have to keep in mind that we are the only business—or the only one I can think of, anyway—that has its chief competitor as its chief critic. That set of dice is permanently loaded against us.

It is a long time since the night when I was sitting at a United Press desk in Paris and a fellow named Ed Murrow called me from London, and asked me to throw in my lot with him.

He said, in effect, that I would never be pressured to produce scoops, or drama (though those things transpired), never expected to inflate the news beyond its honest

dimensions. He said, "I have an idea people might like that."

So, in my unimaginative way, I did so and do so now. I conclude that by and large people have liked it.

If they hadn't, it would not have taken the Stanton retirement rule at CBS to envelop me in the blessing of silence, come the year's end.

I don't much fear it. Trout fishermen have an affinity for quiet places.

#### CLEAN AIR ACT AMENDMENTS OF 1977: ON ELIMINATING THE PRICE DIFFERENCE BETWEEN LEADED AND UNLEADED GAS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, in connection with the consideration of the Clean Air Act of 1977, we must not overlook the continued contamination of our environment through the widespread use of leaded gasoline, which is now used by almost one-half of American automobiles. The price variation between leaded and unleaded gas often results in greater economy through the use of leaded gas. I am preparing legislation to neutralize the price difference between leaded and unleaded gasoline. My bill will establish a tax on leaded "regular" gasoline equal to the difference in price between the two types of gas in order to remove the existing, substantial disincentive against buying the cleaner, unleaded gasoline.

Currently, the price difference between leaded and unleaded gasoline ranges anywhere from 3 to 10 cents per gallon. This difference, when multiplied by a tankful, amounts to a substantial and unwarranted savings for users of leaded gasoline. As we move to clean up our environment, it is inexcusable that we should be providing such an incentive to use dirtier burning fuel.

It is well known by buyers of cars with catalytic converters that they must use unleaded gasoline, and that they will ruin their emission control systems by using leaded gas. However, many cars that run on leaded gas will not be affected by using unleaded fuel, but will instead burn cleaner and not introduce the toxic lead into the atmosphere.

Most importantly, the elimination of this price differential will encourage new car purchases, whereas, the existing price structure encourages owners of old and less efficient cars to hold on to their gas guzzlers for as long as they can. By encouraging purchases of nonpolluting cars, we will speed up the national goals of clean air and improved gasoline mileage.

Mr. Speaker, I hope that the Congress can give serious consideration to this proposal when it takes up the President's energy tax package in the weeks ahead. I believe that it is in the best interests of the Nation to eliminate this present disincentive and to encourage conservation and a cleaner environment, rather than discouraging these goals on the basis of pocketbook choices.

## THE NEED FOR A NATIONAL CONSUMER COOPERATIVE BANK

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Rhode Island (Mr. ST GERMAIN) is recognized for 5 minutes.

Mr. ST GERMAIN. Mr. Speaker, the Banking Committee has reported out a bill to create a National Consumer Cooperative Bank and a self-help development fund and we anticipate that this will be brought to the floor in the near future.

The action of the committee, in reporting this legislation on a 28-to-11 vote, has brought new attention on the growing role of cooperatives in providing consumer benefits in a wide variety of fields.

Mr. Speaker, the Washington Star carried an excellent article by Goody L. Solomon in its editions of Wednesday, May 25, concerning the need for a National Consumer Cooperative Bank and the role of consumer cooperatives in urban areas. Mr. Speaker, I want to place in the RECORD at this point a copy of that article:

### STARTING A CO-OP (By Goody L. Solomon)

Less than two years ago, a few people living in Bethesda, Md., wanted to create a food cooperative. It was not to be an informal having club but a store selling basics such as grains, seeds, and nuts as well as fresh produce and cheeses, all unprocessed, unpackaged and at prices below the supermarkets!

Community interest posed no problem. Financing did: banks would not extend credit to the organization. Undaunted, the leaders scraped together the startup capital by getting numerous small loans, at low or no interest, from folks in the neighborhood. In addition, the cooperative sold food certificates valued at \$5, \$10, and \$20 that were redeemable one year later. "We were lucky to be in this community. People could afford to put up some capital," said Esther Kamkar, one of the founding members.

In contrast, in Fort Greene, Brooklyn, N.Y., the low-income, essentially black population couldn't spare even small membership fees to give a proposed food cooperative a financial base. Bank loans proved impossible to obtain. Fortunately, the Fort Greene community leaders found an organization that guarantees loans for minority groups, according to Art Danforth of the Cooperative League of America.

Large, established, supermarket-type cooperatives have also encountered red lining by banks. For example, the Berkeley Co-op in California, the largest in the country with 84,000 family members and 13 branches, sought a loan for expansion purposes and was turned down by banks.

Although some cooperatives obviously have been able to locate alternative sources of money, many can't and therefore never get launched. "No one maintains a list of cooperatives that can't get started for lack of funds," said Danforth. However, he added, "from inquiries we get, we can guess that there are lots . . . We never hear of them again."

A bill reported out by the House Banking Committee offers hope. It proposes financial and technical assistance for "user-owner cooperatives" that offer a variety of goods and services. This is how:

Loans through a National Consumer Cooperative Bank modeled after the Farm Credit Administration, which has fostered agricultural cooperatives. At first, the U.S. Treasury would give seed money—\$100 mil-

lion a year and up to \$400,000 for four more years. Eventually, all the money would be paid back and the consumer cooperative bank would be owned and controlled by cooperative members. For it would lend money at market interest rates and each cooperative receiving a loan would have to buy stock.

A Self-Help Development Fund, with an initial authorization of \$10 million and a maximum of \$250 million over four years. It would lend money to cooperatives that cannot meet the criteria for loans from the bank. The fund would be administered through an Office of Consumer Cooperatives to be part of Action, the federal agency geared to assist minority and inner-city groups.

Technical assistance, such as management training, also to be a function of the Office of Consumer Cooperatives.

The bill has not been free of controversy. In fact, the version approved by the full committee calls for considerably less federal seed money than was authorized in the first draft of the subcommittee on financial institutions.

The modifications followed testimony by Roger Altman, assistant treasury secretary, recommending a two-year pilot project and a task-force study. Altman's view, however, didn't quite register on committee members as the Administration's ironclad policy, since numerous top officials previously had endorsed the idea of a consumer cooperative bank—among them, assistant secretary of housing and urban development, Monsignor Geno Baroni; assistant secretary of agriculture, Carol Foreman; consumer adviser to the President, Esther Peterson; Sam Brown, director of Action, and vice president Walter Mondale, who had co-sponsored a similar bill in the Senate last session.

Although the bill has wide endorsement in the Senate as well as the House, enactment faces opposition from such business interests as financial institutions and food retailers.

Speaking for the Food Marketing Institute (FMI), an organization of 850 retailers and wholesalers, Harold R. Sullivan (who is also a paid lobbyist for Kroger stores) testified, in essence, that food retailing is already a highly competitive, low-profit business, therefore cooperatives cannot—and would not—offer lower prices than traditional corporate enterprise.

"Grocery retailers and wholesalers are concerned over food prices and believe that if any progress is to be made in holding prices down, it must come through greater efficiency of operation within the food processing and distribution system," he said.

Supporters of the measure counterargue that many successful cooperatives are indeed providing high quality goods and services at low prices. As an example, the Bethesda Co-op, which competes with three major chains within walking distance—Safeway, Giant and A&P—is thriving so well it had obtained the store next door, where a bookstore and cafe will open soon. And, according to Danforth of the Cooperative League, after the Fort Greene cooperative opened, the area's one supermarket was forced to lower its prices. Other cases are documented in a recently issued study, "Cooperatives at the Crossroads" by the Exploratory Project for Economic Alternatives, a Washington-based economic think tank.

Supporters also contend that:

Cooperatives are an important means of bringing effective, community-based enterprises into ghetto areas that have been abandoned by traditional businesses.

The cost to Uncle Sam would be minimal, since the bank in a short time would be independent and self-supporting.

Cooperatives often buy commodities direct from farmers, thus encouraging the development of direct farmer-to-consumer markets

which bypass middlemen's costs. A law to that end passed Congress last year. More about the subject next week.

## ANNOUNCEMENT OF HEARINGS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 5 minutes.

Mr. PREYER. Mr. Speaker, I am pleased to announce that the Select Committee on Ethics will hold hearings on Thursday, June 2, at 9:30 a.m. in room 2167, Rayburn House Office Building, on H.R. 7401, the Legislative Branch Disclosure Act of 1977. The committee will receive testimony from public and Government witnesses on that date.

I invite my colleagues to testify on this financial disclosure legislation on a subsequent day of hearings to be held on Tuesday, June 7, at 9:30 a.m. Members wishing to testify on that date or submit a statement for the record should address their requests to the Select Committee on Ethics, room 3506, House Annex No. 2. My introductory remarks and a summary of the bill appear in the RECORD of May 24, page H4993.

## LET THE SUN SHINE ON THE FEDERAL RESERVE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Nebraska (Mr. CAVANAUGH) is recognized for 5 minutes.

Mr. CAVANAUGH. Mr. Speaker, the distinguished chairman of the House Banking, Finance and Urban Affairs Committee is to be commended for his outstanding leadership in pursuit of one of the essential responsibilities of the committee, the oversight and review of the operations of the Federal Reserve System. Through the determined efforts of Chairman REUSS, the Congress and the public have, for the first time in the history of the Federal Reserve System, been provided an opportunity to review portions of the minutes of the meetings of the boards of directors of the 12 Federal Reserve banks for the years 1972, 1974, and 1975. Any reading of these minutes clearly demonstrates the dangers which invariably arise when any agency of Government is allowed to operate in total secrecy and free of any effective scrutiny by the American public or the U.S. Congress. A review of these heavily edited and incomplete records of the meetings of the boards of directors of the various Federal Reserve banks paint a very disturbing picture of an agency designed to serve the public interest but which has strayed very far from many of the recognized principles of public responsibility, propriety, and accountability. These records are filled with demonstrations of an insensitivity or total ignorance on the part of the various members of the boards of directors of the Federal Reserve banks for any standards concerning conflicts of interest. This sketchy but poignant record made available through the diligence of Chairman REUSS cries out for a thorough and complete review of the operations of the Federal Reserve System and

for a thorough explanation by the current Board of Governors of the Federal Reserve System of the policies and the procedures revealed in the minutes recently made public.

I therefore express my support and encouragement to Chairman Reuss that he pursue a more complete disclosure and full explanation from the Board of Governors of the Federal Reserve System.

#### NEW YORK STATE LEADERS SPEAK OUT AGAINST AN INCREASE IN TAXES

(Mr. KEMP asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KEMP. Mr. Speaker, the New York State Senate Labor Committee, under the outstanding leadership of Senator Norman J. Levy, recently conducted a survey of New York City's largest corporations. Business leaders were asked to comment on a recommendation by the mayor's temporary commission on city finances to increase the commuter tax on suburban residents who work in New York City. They were also asked to comment on the general impact of existing city and State taxes on the economic climate. Senator Levy is to be highly commended for standing up and focusing attention on the deplorable economic environment in New York City and New York State.

The response to an increase in taxes of any kind was uniformly negative. The consensus is that an increase in the commuter tax may be the final straw in many companies' decision to move out of New York City, as so many others have. Indeed, Leo Jaffe, chairman of Columbia Pictures, said that it is taxes like these that help businesses make up their minds to leave New York State.

I should emphasize that the problem here is entirely one of taxes on individuals, rather than on business as such. Companies have found that because of the high tax rates they cannot get top quality people to work in New York City. Typical was the comment made by Raymond C. Hagel, chairman of Macmillan, Inc.:

In our opinion, the cumulative effect of Federal, State and city taxes on individuals is counterproductive and is a significant factor in depriving business located in New York City of the services of outstanding graduates specializing in business administration and finance. We are expecting increasing difficulty in our college recruitment programs because these new graduates, seeing little advantage in assuming the heavy New York State/New York City tax burden, prefer to take other jobs offered to them for employment with large firms having headquarters out of New York.

Mr. Speaker, New York is being "Britishized" by excessive regulations and high taxes. The loss of jobs and businesses to other States is eroding our tax base and leading to a decline in State revenues. I mention that our State is being Britishized only to focus attention on the fact that in the United Kingdom more than 100,000 executives, middle managers, and entrepreneurs have left

the country in just the last 3 years, because of the crippling tax rates that discourage success and hard work.

In New York, as in Great Britain, the exodus of producing people is a direct result of high taxes. The only way to reverse the trend and encourage economic growth is to reduce tax rates across the board at the Federal, State, and local levels in order to stimulate production and investment. The irony is that at this point the only way to increase revenues and strengthen our tax base is to lower tax rates.

High personal income tax rates are impoverishing all New Yorkers and the sooner we reverse this trend the sooner we can get our State moving again, for as the late President Kennedy said, "A rising tide lifts all ships." We must, therefore, move in a bipartisan way to get the economic tide of New York moving again by reducing the tax barriers to work, production, investment, and entrepreneurship.

The following list of comments by business leaders compiled by Senator Levy is divided into three categories. Category I lists those corporations providing general negative responses to the proposed tax increase, including—but not limited to—possible relocation. Category II lists those corporations providing negative responses and which have announced partial corporate relocation. Category III lists those corporations providing negative responses and which are committed to remaining in New York City—at least for the time being.

Mr. Speaker, the fastest and surest way to help New York City and New York State as well as all Americans is to reduce the tax rates across the board so as to encourage production, jobs, and entrepreneurship:

#### CATEGORY I

Singer Corporation, J. B. Flavin, Chairman, Chief Executive Officer: "I am absolutely opposed to a 100 percent increase in the commuter tax. . . . I can say with certainty that this particular legislation—if eventually passed in Albany—would be a principal factor in the Singer Company's decision to move or stay."

Avnet, Inc., Simon Shelb, Chairman and President: "I am completely against it. It could well be a factor in the determination of my corporation to move its corporate headquarters out of New York State."

"The commuter tax is a perfect example of an irritant to cause a chief executive who lives in the suburbs to say: 'What do I need it for?' From the government's point of view those who can afford it, must be taxed. Don't keep taxing the people who can 'afford' to be taxed. You must keep in mind that the people who can 'afford' to be taxed usually have a choice—a choice of 50 states—many of which demonstrably are no worse as business locations than New York State or New York City."

Colt Industries, George A. Strickman, Chairman of the Board: ". . . I regard both New York State and City personal and business taxes so high that they are already causing us to look elsewhere, and any increases would be the straw that breaks the camel's back."

National Distillers and Chemical Corporation, Drummond C. Bell, Chairman of the Board: "I think it is entirely unfair that the state and city taxes nonresidents as they cannot vote. Originally, our revolution was fought on the basis of taxation without rep-

resentation and certainly New York does this. Any increase in non-resident taxes just aggravates the problem. The farther you go down this road, the more chances are that you will lose additional businesses . . . also, if you continue to increase taxes on individuals, particularly those not having a vote, it could be a major factor in the determination to move from the city."

Bristol-Myers Company, Richard L. Gelb, Chairman: "Let me answer the first question by saying there is no doubt in my mind that any consideration of moving from New York would be influenced by a substantial increase in the City's 'commuter tax.' I must expand on this statement by pointing out that this tax is only one of many New York State tax burdens which make it increasingly difficult to attract and keep good corporate people in New York City."

Anaconda Company, John B. M. Place, President: "I believe enactment of a higher Commuter Tax will cause many companies to re-examine the necessity and the wisdom of continuing to maintain their corporate headquarters in New York City, and in some cases it could be enough to trigger the decision to move out of the City."

United States Filter Corporation, Raymond A. Rich, Chairman of the Board: "Our Board of Directors has considered on a number of occasions the possibility of moving the headquarters of United States Filter out of New York City and New York State. If commuter taxes were to be increased 100% in New York City, and if additional taxes from New York State or New York City were to be loaded on business or the individual employee of this company, I am sure the directors would immediately consider getting the United States Filter headquarters out of New York City. . . . If further taxes are loaded on our commuting employees who live in surrounding counties or states, and if additional taxes are piled on the corporation, there is no question about immediate attention to the matter of change of location of headquarters."

American Standard, Inc., Benjamin F. Van Wormer, Vice President Public Affairs: "Certainly, a doubling of the 'Commuter Tax' would add to that burden and thereby be a factor in any determination to move a corporate headquarters."

Sun Chemical Corporation, Norman E. Alexander, Chairman of the Board, Chief Executive Officer: "The proposed 'Commuter Tax' would undoubtedly represent the final impetus to cause us to move our corporate headquarters out of the State of New York. . . . It is now exceedingly difficult because of the inequity of the tax structure in the State of New York to persuade promising and essential employees to move to corporate headquarters. . . . Accordingly, I can strongly recommend to you that the increase in the 'Commuter Tax' would undoubtedly have a negative effect on the intentions of any corporation to maintain its headquarters in the State of New York."

Collins & Aikman Corporation, Donald F. McCullough, Chairman of the Board: "In reply to your question regarding the commuter tax, there is no doubt about the fact that any increase in this area of taxation would have a negative impact in keeping our corporate headquarters in the City of New York."

Wallace-Murray Corporation, Franklin H. Kissner, Chairman of the Board: "I would not say that it alone, or any other single piece of tax legislation, would cause us to move our Corporation out of the City, but the successive impact of this kind of legislation is oppressive and obviously a motivating factor in the growing move to the suburbs."

Phelps Dodge Corporation, George M. Munroe, Chairman of the Board: "While an increase in this tax would not be the sole factor in determining whether Phelps Dodge Corporation would remain or move its head-

quarters outside of New York, it certainly could be a very negative factor in such determination."

St. Joe Minerals Corporation, John C. Duncan, President: "I appreciate your invitation to comment on the proposal that would result in a 100% increase in New York City's 'commuter tax.' The implementation of such an increase would most certainly be a factor in a decision to move our corporate headquarters out of New York."

Salant Corporation, Carl S. Forcheskie, Executive Vice President: "We at Salant Corporation view with grave seriousness any expansion of the 'Commuter Tax' rate. We feel businesses that are situated in New York City already are disadvantaged in providing adequate incentives to their people to attract qualified help. Any further imposition will cause a reassessment of our intention to stay in the City rather than relocate to some suburb."

Revlon Inc., Sander P. Alexander, Senior Vice President: "We would undoubtedly be concerned about a 100% increase in the New York City's Commuter Tax as this would affect many of our middle management people and would hope that this would not occur... Working and living in New York is, at the very least, expensive and we also would hope that any potential increase in either personal or business taxes would be seen from the point of view of the impact this would have on existing businesses in the City."

Combustion Equipment Associates, Inc., Robert M. Benington, President: "We would be against an increase in the New York City 'Commuter Tax,' as it would further tilt the balance against corporations such as ours remaining in New York State."

Bulova Watch Company, Inc., Harry B. Henshel, Chairman of the Board: "The constantly increasing taxation affecting people and corporations struggling to compete in the national and international marketplace from a New York City and State base, of which the proposed increase in commuter tax is only one, will make it increasingly difficult for business to remain in this City and State."

Norlin Corporation, Norton Stevens, "We've had a difficult time attracting key people to New York City and Buffalo recently specifically because of City and State taxes, which are apparently significantly higher than many other areas. This would seem to be counter productive for New York."

The Charter Company, Raymond K. Mason, President: "In this day and age, healthy economic activity is considered to be the source of all wealth and the place where that activity takes place will prosper. While a certain degree of taxation is necessary for the continuance of local government, taxes which 'go out of their way' to impose a burden upon persons who work in New York City and are residents outside, and who are often on a managerial level, will only serve to increase the pressure to move businesses, and, hence, the source of wealth, out of New York City. I am sure you see from my comments that I do not consider the proposed increase in taxes to be in the interests either of business or of New York City."

Sperry Rand Corporation, J. Paul Lyet, Chairman and Chief Executive Officer: "We agree with the Commission's statement that 'in order for New York City to experience economic resurgence, the aggregate level of taxation must be competitive with other states and regions'. Recognizing that we are already the highest taxed population in the nation, doubling the commuter tax will only worsen the non-competitive position we're in now. While the Commission made a very good case for holding the line on taxes, we think its advocacy of increasing the commuter tax is inconsistent and dangerous to the economic well-being of the City..."

With regard to your question about the effect of the proposed increase in the commuter tax on our intentions as to the location of our corporate headquarters, I cannot tell you that this proposal would, by itself, be a major factor in our decision. But, it would certainly add to the arguments for relocation when consideration is given to the heavy tax load the corporation and its employees now endure compared with other possible locations. As with any business, we must certainly question every item of cost to see if we're getting what we're paying for. And our employees have to do the same. They're already restive under the heavy personal income tax load they must carry, including the disincentives implicit in the New York State preference income tax, and local property taxes. . . . In our opinion, a start must be made toward reducing the tax burden on corporations and individuals in the State and City of New York. Otherwise, those of us who have so far resisted moving corporate headquarters to other locations, will be obliged to seriously consider that alternative despite the advantages that we see in keeping our headquarters in New York City."

Eltra Corporation, J. A. Keller, Chairman of the Board: "In fact, the taxes on personal incomes have reached a point where there is almost no turning of the tide of businesses leaving the State unless something is done to relieve the burden not increase it. The taxes on business comparatively are not as onerous but here again can hardly be called encouraging. . . . In our case, and in the case of many other companies, we continue to consider leaving this environment for one far more palatable for our key employees and the success of our business."

Pfizer, Inc., Edmund T. Pratt, Chairman of the Board: "... it is clear that I strongly oppose any increase in the commuter tax. Such a tax would increase the business exodus from New York, discourage business from coming in, and add to the unfavorable factors affecting the City's future, which so many of us are strenuously, and with modest success, seeking to reverse or remove."

Newmont Mining Corporation, Phillip C. Walsh, Vice President-Administration: "I view the current income tax on non-residents as a permanent feature of the City tax structure, but one that contains very destructive seeds. If the commuter tax level is materially increased, there will be a serious increase of pressure to consider self-help measures for relief. Moving a corporate headquarters does not involve a simple decision, but with all its difficulties and problems it can represent an increasingly attractive and eventually compelling alternative."

Westaco, David L. Luke, 3rd, President: "I do, however, feel quite strongly that the impact of the Commuter Tax (increase) would be negative insofar as the retention of business firms in New York City."

Dover Corporation, Thomas C. Sutton, Chairman of the Board: "Senator, Dover may move out even if the Commuter Tax is not raised. But passing the increase would look to us like a signal that the State and City cannot be expected to care about commuters any more in the future than they have in the past."

Colgate-Palmolive Company, Walter A. Hahn, President: "I think it would be fair to say on behalf of the Company that such an increase, while it would not constitute a sole factor for this Company to move its headquarters out of New York City or New York State, it would, nevertheless, be viewed negatively."

Burlington Industries, Inc., William A. Klopman, Chairman of the Board and President: "If we were considering the move of our sales headquarters out of New York

State, the burden on both the corporation and our employees of New York State and New York City would weigh heavily in the balance."

Macmillan, Raymond C. Hagel, Chairman: "In our opinion, the cumulative effect of Federal, State and City taxes on individuals is counterproductive and is a significant factor in depriving business located in New York City of the services of outstanding graduates specializing in business administration and finance. We are experiencing increasing difficulty in our college recruitment programs because these new graduates, seeing little advantage in assuming the heavy New York State/New York City tax burden, prefer to take other jobs offered to them for employment with large firms having headquarters out of New York."

"The difficulties employers face in attracting people to New York City are greater than ever before, and no let up is in sight. The proposed tax is, in my opinion, counterproductive and will accelerate further the movement of corporate headquarters from New York City and New York State."

Kennecott Copper Corporation, Frank R. Milliken, President: "Within the past few days, there have been press reports and resultant radio and television coverage bemoaning the fact that in the last year New York City has lost 117,000 jobs. This to me is not at all surprising in view of the general business environment in the City."

"New Yorkers are the most highly-taxed citizens in America. The individual income tax burden (City, State and Federal) is such that New York salaries for competent employees have to be considerably higher than salaries for similar jobs outside the State. This is further aggravated by other cost-of-living items in the City such as the expense of utilities, gasoline, housing, commutation, etc. . . . It is my belief that it is not only the taxes on business but also to an increasing extent the taxes on the individuals who manage the businesses that are governing factors in the decisions of corporations to leave New York City. Much as I feel that New York City is the logical place for the headquarters of a major organization, doubling of the commuter tax will likely give rise to still more such decisions."

Columbia Pictures Industries, Inc., Leo Jaffe, Chairman of the Board: "Many companies are considering an exodus from our great city and taxes of this type will only help them make up their minds to do so. We have been considering moving our corporation outside the confines of New York State. Our Studios are located in California and a good part of our organization is there today and we believe many economies may be effected by moving the balance of our company to California. We now occupy approximately 160 to 170 thousand square feet of space in the City."

Sterling Drug, Inc., W. Clarke Wescoe, M.D., Chairman of the Board: "An increase in the Commuter Tax would be particularly onerous. . . . Further increases in such taxes will make the burden intolerable not only for employees but for the company. . . . I have yet to see any action that would create a better business climate in New York as a State or in this City. Our company sees no incentive that would dictate our remaining here."

Revere Copper and Brass Incorporated, William F. Collins, President: "The City's existing commuter tax and the burden of New York State income tax are among the leading incentives inducing companies to move their offices out of the City to other States such as Connecticut and New Jersey. . . . The impact of the foregoing, plus the other New York State and City taxes on business, which are about as high as any I am aware of, provide a substantial disincentive for both new and existing in-

vestment and operations of any type in the City and State of New York."

United Merchants, Martin J. Schwab, Chairman of the Board: "Briefly, I oppose such taxes as New York City's Commuter Tax. Taxes like these are so terribly self-defeating and discouraging to the business community. It is another example of political expediency overriding sound economics. . . . Many companies, including ourselves, are experiencing substantial forced increases by virtue of being located in New York City. Unless the political leadership initiates legislation to redress some of these problems, the exodus of businesses will accelerate."

Amstar Corporation, John C. Reynolds, Vice President and General Counsel: "I think it would be unwise to increase the City's Commuter Tax, as I think it would be unwise at this juncture to increase any New York State or City taxes. . . . The New York tax burden on the Corporation is enormous. Periodically we must consider whether the state and local tax cost justifies our remaining at those locations."

American Brands, Inc., Robert K. Heimann, Chairman and Chief Executive Officer: "By this token, one would have to say that any move which increases the cumulative weight would have to make the City and State somewhat less attractive to individual residents, commuters and business firms."

M. Lowenstein & Sons, Inc., Robert Bendheim, Chairman, Chief Executive Officer: "I think that this would have very serious consequences to the City's economic health."

International Paper Company, J. Stanford Smith, Chairman: "My view is that New York cannot remain the State with the highest tax per capita and expect to attract and retain business. Clearly any increase in taxes would be counterproductive."

#### CATEGORY NO. II

SCM Corporation, Paul H. Elicker, President: "Our company is headquartered in New York City, and although one of the divisions currently housed with us is moving to Connecticut we have no present plans to move corporate headquarters. I say this despite the fact that there are a number of important arguments for doing so."

"Our costs in New York City are greater in almost every category than they would be elsewhere . . . given New York's work week and the necessities of commuting, the amount of productive time available is less."

"Most of the divisions of our company are located outside New York City, and it is natural for us to draw new headquarters personnel from these locations. It is getting harder and harder to persuade younger people to move here and the fact that in general they would be moving from lower taxed areas is one of the particular reasons. Although we do not want to move out of the city and have no intentions of doing so, the ever-increasing disparity in the individual tax burden forces us to reconsider the idea. Therefore, I urge you to oppose this increase."

Texaco, Inc., A. C. DeCrane, Jr., Senior Vice President and General Counsel: "Texaco's decision to relocate a substantial number of employees outside New York City was made well before the proposal for the latest increase of the city's commuter tax. A vast number of factors entered into the final decision but certainly the city's existing tax structure, the level of city and state personal income tax and the general difficulties of the city's financial situation and the prospect of interrupted services flowing from this situation are all important considerations. . . . we have experienced resistance on the part of company personnel when transfer to New York City has been proposed. This resistance, in part, has come from concern over the level of city and state taxes. Continuing increases in these taxes will gen-

erate additional resistance, we are sure. . . . we, like other companies, will have to continue to review the situation of our operations in New York City from time to time. A continuing record of increased taxation, particularly where the increases are at rates and to levels exceeding those of surrounding areas will certainly be an important factor in our formulation of plans for the future."

Mobil Oil Corporation, Anthony R. Corso, Public Affairs Manager: "One of Mobil's principal problems with a corporate headquarters in New York City is difficulty in inducing employees stationed in the field to accept transfers to New York City. . . . The very high New York State and City personal income taxes (including the commuter tax) when compared to such taxes in other states are a significant part of this problem because New York's high personal income tax contributes significantly to the high cost of living resulting from working in New York. Any increase in State or City personal income tax, including the New York City commuter tax, will further aggravate an already very serious problem by making New York income taxes further out of line with taxes in other areas."

St. Regis Paper Company, George J. Kneeland, Chairman of the Board and Chief Executive Officer: "It is my strong feeling that no attempt is being made to equate the Commuter Tax with the benefits or services provided to those who are asked to pay the tax. Rather, it would appear that this is viewed as an area where taxes can be raised with impunity to pay for services and fiscal excesses provided to others within the City's jurisdiction."

General Host Corporation, Harris J. Ashton, Chairman of the Board: "General Host Corporation has already made its decision to move to Stamford, Conn., which we intend to do so on May 1, 1977. . . . there is no question in my mind that an increase in New York City's commuter tax will force other management to come to a decision that they can no longer afford the luxury of doing business in the City of New York."

The Continental Group Inc., Thomas S. Thompson, Vice President-Public Affairs: "You asked how this (commuter tax increase) might affect a decision by Continental to move its corporate headquarters out of New York State. We have already announced that we are planning to move part of our headquarters group to Rowayton, Conn. The final arrangements for this move are not complete, and we can only comment that a further increase in the tax burden would be an added inducement to this action."

Grolier, Inc., William J. Murphy, Chairman of the Board: "Several years ago our mail order operations moved to Danbury because of the increasing New York City problems and rising taxes. This resulted in a loss of approximately 400 jobs in the area. Now, because of continued acceleration in expenses and taxes here, we have been forced to the decision to relocate all but a small staff in Connecticut. By the end of March, almost 200 jobs will be eliminated and by the end of the year another 200 or so. . . . The cost of doing business in New York is unrealistic, impractical and, in light of today's economy virtually impossible. It is regrettable that steps have not been taken over the years to maintain the attractions and benefits that New York City, in particular, once offered."

Chicago Pneumatic Tool Company, T. P. Latimer, President: "(we) have already transferred a number of jobs from New York City to other company locations and expects that such transfers will continue. These transfers have not yet involved company headquarters and to date, no decision has been made respecting a headquarters relocation. . . . The reasons for corporate transfers out of New York City have been well docu-

mented in articles and critical analysis appearing in the public press and need not be repeated here in detail. They are, in sum, the unfavorable financial and social atmosphere that makes New York City an expensive place in which to raise a family and enjoy amenities of life available elsewhere. While by no means the exclusive cause of such difficulties, the levels of both personal and business taxes without compensating services constitute a cause for relocation outside the City and State jurisdictions. . . . I am unable to comment specifically on the likely effect of the proposed increase in the "commuter tax." Nevertheless, to the extent that it represents a further increase in a level of taxation already the highest in the U.S., it would appear ill-advised."

Union Carbide Corporation, A. S. Hart, Vice President: "(Have announced a move to Connecticut) "It would appear that quantum increases in personal tax rates such as the proposed 100 percent increase in the commuter tax, would only tend to exacerbate the already deteriorating situation with respect to New York City's ability to attract and to retain business and the requisite labor force."

#### CATEGORY NO. III

Lever Brothers, Co., Lee H. Bloom, Administrative Vice President: "To talk of increasing that tax burden at City or State level, is to throw salt in the wounds of responsible corporate citizens like Lever Brothers Company who have stood up against the tide, supported the City in every reasonable way, and made the crucial decision to stick it out in New York. I hope that you and your colleagues will voice a strong negative vote on the proposals to increase the "Commuter Tax."

Avon, Robert J. Grimm, Director of Government Affairs: ". . . "It is unlikely that the imposition of a 100% increase in the Commuter Tax by itself would cause a reconsideration of that decision (Avon's decision to remain in NYC). . . . An increase in taxes on our employees who commute to New York City and who are already paying the highest state and local taxes in the country, only serves to make employment opportunities outside our State appear more attractive and compounds the difficulties we face in maintaining an appropriate work force."

GAF Corporation, Jesse Werner, Chairman and President: "While GAF, which traces the history of its operation in New York City back to 1842 has remained steadfast in its loyalty to the City, we find vast cause for concern. The proposal to double city income taxes on non-resident employees is another example of tax policies that penalize companies which remain in the City. . . . It is significant that, according to a recent study, corporate officials whose taxable income is \$100,000 would save \$18,835 in non-federal taxes if they had their companies moved from the city to Connecticut."

Exxon Corporation, H. C. Lang, Senior Tax Advisor: "A doubling of the New York City Earnings Tax on nonresidents would only serve to further aggravate this already serious matter."

Standard Brands, F. Ross Johnson, President and Chief Executive Officer: "The report by the State's Temporary Commission on City Finances, specifically its recommendation to double the commuter tax, puts questions in our minds as to whether or not there can be a consistency of business environment conducive to successful operation in this city and state. . . . with your help, Senator, we'd like to keep New York the exciting and unique business center it has always been. Increasing these taxes will do much to dampen the enthusiasm of those of us who have elected to stay in New York."

Gulf and Western, Henry F. Kelleher, Vice President, Employee Relations: "Gulf and Western has repeatedly expressed its com-

mitment to the City of New York. We are greatly concerned about the fiscal problems confronting the City, but we believe that any solution to these problems cannot lie in discouraging the growth of commerce by further increasing the cost of doing business in New York City."

McGraw Hill, Inc., Harold W. McGraw, Jr., Chairman and President: "In the late 60's we made our commitment to stay in New York, and the rationale we expressed in making that decision has been quoted frequently (and favorably) . . . thus, I don't think it is very likely that the commuter tax you mention would—of itself—lead us to change our minds. However, there have been times recently when those of us who have elected to stay in the city have felt we were being taken for granted. There is wide concern about companies which might move out; it seems equally important to us that the same concern be paid to making New York an attractive and efficient home for those of us who have elected to stay . . . As a commuter I am not enthusiastic about the proposed new tax, and as the chief executive officer of a company which employs thousands of commuters, I hesitate to endorse an action which would affect their paychecks. Yet, all of us, I am sure, would ultimately agree that there is a price which must be paid for creating a proper climate for where we make our living. What we would ask for, and what I think businessmen should demand, is an orderly and well-considered tax structure which will provide this desirable environment in the most economic manner. An increased commuter tax may be an answer; reductions in other forms of taxation may also need to be part of that answer. Until careful consideration is paid to the entire picture, I would not endorse an increase on any one aspect of the tax package."

RCA, Samuel M. Convisser, Staff Vice President—Education and Community Relations: "While the company has no formal position on this matter, I can tell you that any increase along the line of the recommended 100 percent would be self-defeating. As one who has been involved with many of New York City's activities and is a member of several committees working to improve the City, most businesses and employees recognize the need to provide some tax support to compensate the City for services rendered to employees, in particular those that commute from out-of-state. However, any increase would only encourage corporations both large and small to give serious consideration to leaving New York City."

Diamond International Corporation, V. M. Grout, Vice President—Finance: "Similarly, the addition of another, 45 percent on income of non-residents is not particularly burdensome and is unlikely to cause any corporation to move its headquarters out of New York. However, this is just one more example of a creeping tax burden with the passage of time and further increases might lead to consideration of another location."

American Home Products Corporation, Robert P. Greenlaw, Executive Vice President: "As you are certainly aware, the taxes appreciable to New York City and State residents are among the highest in the country. Many employees who work here and live out of state do have some tax advantage in comparison with residents. To obtain such advantage, they must commute which involves considerable inconvenience and expense. Doubtless, many would gladly work out of state if suitable employment opportunities were available. Any increase in commuter tax would make it more desirable for them to work in the state in which they live."

Reeves Brothers Inc., J. D. Moore, Chair-

man: "I would say that the added commuter tax along with problems already existing would not necessarily be the straw that broke the camel's back, but it certainly is getting closer to that point . . . it is my feeling that the added commuter tax, the existing City and State personal income tax (particularly for non-residents) as well as the other City and State taxes are so high on corporations have a great deal of bearing as to why corporations move."

#### BILL CABLE, STAFF DIRECTOR, COMMITTEE ON HOUSE ADMINISTRATION

(Mr. THOMPSON asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. THOMPSON. Mr. Speaker, as I am sure most of my colleagues will agree, rarely am I at a loss for words. Today, however, I find it particularly difficult to express my own personal feelings while properly paying tribute to a gentleman who leaves this body shortly to assume a new position downtown with the White House.

Many of you, and specifically you, Mr. Speaker, are well acquainted with Bill Cable who presently serves as the staff director and general counsel on the Committee on House Administration. Surely we will continue to see a great deal of Bill over the coming months and years, but I believe that some small tribute here on the House floor is necessary at this point to formally call attention to the accomplishments of a truly valuable, dedicated, reliable, and effective staff person.

Bill Cable came to the House of Representatives under the patronage of my distinguished colleague, CLEM ZABLOCKI, back in 1964 where he worked in the folding room—now our Publications Distribution Service. His home is Oconomowoc, Wis., and upon graduation from the University of Wisconsin he attended the George Washington University Law School while serving as a clerk to the Committee on Education and Labor. Many of you will remember his invaluable service to Chairman PERKINS—as well as the House as a whole—in the areas of education legislation, continued assessments of Great Society legislation, and House rules reform.

In addition to his brilliance professionally, Bill has served many of us well as a friend always willing to assist, analyze, and foresee in the solution of projects within the institution.

Bill is a fine young man whom I will personally miss. As we send him off to the other end of the avenue, I know we are fortunate to have his knowledge and understanding of the complexities of the House at hand in approaching the job he faces. To be sure, we will continue to have him within arm's reach as a part of the White House Office of Congressional Liaison. His service here, however, will not soon be forgotten and in my judgment will rarely be equaled.

I look forward to working with Bill in the future and feel confident that my colleagues share in my very best of wishes to him within the executive branch.

#### LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. ASHBROOK, for June 1 through June 10, on account of official business, attending ILO Conference in Geneva, Switzerland.

Mr. COLEMAN (at the request of Mr. RHODES), after 2 p.m. today, on account of death in family.

Mr. McEWEN (at the request of Mr. RHODES), after 11 a.m. today, on account of official business.

Mr. THOMPSON, for the period May 30 through June 10, on account of official business—attendance at the ILO Conference.

Mr. WHITEHURST (at the request of Mr. RHODES), for today through June 3, 1977, on account of official business.

Mr. YOUNG of Alaska (at the request of Mr. RHODES), for today through June 3, 1977, on account of official business.

#### SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. EDWARDS of Oklahoma) to revise and extend their remarks and include extraneous matter:)

Mr. KEMP, for 15 minutes, today.

Mr. EDWARDS of Alabama, for 5 minutes, today.

Mr. BOB WILSON, for 5 minutes, today.

Mr. FRENZEL, for 10 minutes, today.

Mr. CLEVELAND, for 10 minutes, today.

Mr. YOUNG of Florida, for 15 minutes, today.

Mr. REGULA, for 5 minutes, today.

Mr. MOORHEAD of Pennsylvania, for 5 minutes, today and to revise and extend his remarks and include extraneous matter.

Mr. TUCKER, for 1 minute, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. CAVANAUGH) to revise and extend their remarks and include extraneous material:)

Mr. FORD of Michigan, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. REUSS, for 30 minutes, today.

Mr. ADDABBO, for 5 minutes, today.

Ms. HOLTZMAN, for 30 minutes, today.

Mrs. SPELLMAN, for 10 minutes, today.

Mr. RYAN, for 5 minutes, today.

Mr. LEDERER, for 5 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. MOSS, for 20 minutes, today.

Mr. VAN DEERLIN, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. ST. GERMAIN, for 5 minutes, today.

Mr. PREYER, for 5 minutes, today.

Mr. CAVANAUGH, for 5 minutes, today.

Mr. VOLKMER, for 30 minutes, on June 1, 1977.

#### EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. ICHORD, to extend his remarks in two instances in the Extensions of Remarks today, and to include extraneous matter.

Mr. BROOMFIELD to revise and extend his remarks during debate on the Broyhill-Dingell amendment to H.R. 6161 in the Committee of the Whole today.

Mr. THONE to revise and extend his remarks just prior to passage of the amendment offered by Mrs. SMITH of Nebraska.

Mr. KEMP, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost \$1,046.50.

(The following Members (at the request of Mr. EDWARDS of Oklahoma) and to include extraneous matter:)

Mr. McKINNEY in two instances.

Mr. WALKER.

Mr. HARSHA.

Mr. VANDER JAGT.

Mr. MICHEL in two instances.

Mr. CRANE in two instances.

Mr. RUDD.

Mr. LAGOMARSINO in two instances.

Mr. DERWINSKI in two instances.

Mr. GILMAN.

Mr. BOB WILSON in three instances.

Mr. CONABLE.

Mr. HANSEN in three instances.

Mr. CORCORAN of Illinois.

Mr. HORTON.

Mr. KASTEN.

Mr. LUJAN in two instances.

Mr. GUYER.

Mr. KEMP in two instances.

Mr. LOTT.

Mr. MARTIN.

Mr. HAGEDORN.

Mr. WHALEN.

(The following Members (at the request of Mr. CAVANAUGH) and to include extraneous material:)

Mr. LEHMAN.

Mr. SISK.

Mr. MAZZOLI in two instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. GIALMO in five instances.

Mr. OTTINGER.

Mr. EILBERG in three instances.

Mr. MURTHA.

Mr. RODINO.

Mr. TEAGUE in six instances.

Mr. HEFTEL.

Mr. HARKIN.

Mr. ADDABBO in two instances.

Mr. MINETA.

Mr. FARY in two instances.

Ms. JORDAN.

Mr. CARR.

Mr. DOWNEY.

Mr. WOLFF.

Mr. RYAN.

Mr. MILLER of California.

Mr. LEDERER.

Mr. CARNEY in two instances.

Mr. MOORHEAD of Pennsylvania.

Mr. KOCH in six instances.

Mr. McDONALD in five instances.

Mr. EVANS of Indiana.

Mrs. MEYNER.

Mr. NICHOLS.

Mr. BRECKINRIDGE.

Mr. BARNARD.

Mr. ST GERMAIN.

CXXIII—1070—Part 14

Mrs. COLLINS of Illinois in five instances.

Mr. BADILLO.

Mr. MOAKLEY.

Mr. NOLAN.

Mr. SIMON.

Mr. AMMERMAN.

Mr. EDGAR.

#### SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 11. An act to provide for the appointment of additional district and circuit judges, for the creation of a new fifth judicial circuit and a new eleventh judicial circuit, and for other purposes; to the Committee on the Judiciary.

#### ADJOURNMENT

Mr. CAVANAUGH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER. In accordance with House Concurrent Resolution 229, 95th Congress, the Chair declares the House adjourned until 12 o'clock noon on Wednesday, June 1, 1977.

Thereupon (at 4 o'clock and 7 minutes p.m.), pursuant to House Concurrent Resolution 229, the House adjourned until Wednesday, June 1, 1977, at 12 o'clock noon.

#### EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1574. A letter from the Assistant Secretary of Defense (Comptroller), transmitting notice of the Defense Department's intention to obligate funds available in the DoD Stock Fund for war reserve inventory for the Marine Corps, pursuant to section 735 of Public Law 94-419; to the Committee on Appropriations.

1575. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a list of contract award dates for the period May 15 to August 15, 1977, pursuant to 10 U.S.C. 139 (b); to the Committee on Armed Services.

1576. A letter from the Deputy Secretary of Agriculture, transmitting a draft of proposed legislation to amend title V of the Housing Act of 1949; to the Committee on Banking, Finance and Urban Affairs.

1577. A letter from the Executive Secretary, Administrative Conference of the United States, transmitting a report on the agency's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1578. A letter from the Assistant Secretary of State for Congressional Relations, transmitting the 16th annual report of the Center for Cultural and Technical Exchange Between East and West, covering fiscal year 1976 and the transition quarter, pursuant to section 704(c) of the Mutual Security Act of 1960; to the Committee on International Relations.

1579. A letter from the Assistant Secretary of State for Congressional Relations, transmitting reports on political contributions made by Ambassadors-designate Herbert Salzman, John A. Linehan, and Arthur W. Hummel, Jr., and their families, pursuant to

section 6 of Public Law 93-126; to the Committee on International Relations.

1580. A letter from the Assistant Secretary of State for Congressional Relations, transmitting reports on political contributions made by Ambassadors-designate Albert W. Sherer, Jr. and John C. West, and their families, pursuant to section 6 of Public Law 93-126; to the Committee on International Relations.

1581. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

1582. A letter from the Administrator, Federal Energy Administration, transmitting an amendment to the Strategic Petroleum Reserve Plan accelerating the plan's development schedule (Energy Action No. 12), pursuant to sections 154(b) and 159(d) of the Energy Policy and Conservation Act (H. Doc. No. 95-165); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

1583. A letter from the Acting Assistant General Counsel for International, Conservation, and Resource Development Programs, Federal Energy Administration, transmitting notice of a meeting related to the International Energy Program to be held June 1 and 2, 1977, in Pittsburgh, Pa.; to the Committee on Interstate and Foreign Commerce.

#### REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DODD: Committee on Rules. House Resolution 600. Resolution providing for the consideration of H.R. 6967. A bill to authorize appropriations for the Peace Corps for fiscal year 1978 (Rept. No. 95-367). Referred to the House Calendar.

Mr. MOAKLEY: Committee on Rules. House Resolution 601. Resolution provides for the consideration of H.R. 7010. A bill to provide for grants to States for the payment of compensation to persons injured by certain criminal acts and omissions, and for other purposes (Rept. No. 95-368). Referred to the House Calendar.

Mr. DODD: Committee on Rules. House Resolution 602. Resolution providing for the consideration of H.R. 6990. A bill to authorize certain construction at military installations, and for other purposes (Rept. No. 95-369). Referred to the House Calendar.

Mr. BOLLING: Committee on Rules. House Resolution 603. Resolution providing for the consideration of H.R. 6804. A bill to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes (Rept. No. 95-370). Referred to the House Calendar.

Mr. LEHMAN: Committee on Post Office and Civil Service. H.R. 7012. A bill to provide for a 40 percent reduction of the burden on respondents in the censuses of agriculture, drainage, and irrigation taken in 1979 and thereafter, and for other purposes; with amendment (Rept. No. 95-371). Referred to the Committee of the Whole House on the State of the Union.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ALEXANDER (for himself, Mr. WATKINS, Mr. MOLLOHAN, Mr. HOLLAND, Mr. KREBS, Mr. JEFFORDS, Mr. OBERSTAR, Mr. RICHMOND, Mr. STEIGER, Mr. GINN, Mrs. LLOYD of Tennessee, Mr. JENNETTE, Mr. RAHALL, Mr. DE LUGO, Mr. MCCORMACK, and Mr. HARKIN):

H.R. 7444. A bill to amend section 306(a) of the Consolidated Farm and Rural Development Act to prescribe criteria for determining the amount of grants made under such section, to prescribe the priority of applicants for loans and grants under such section, and for other purposes; to the Committee on Agriculture.

By Mr. ANDREWS of North Dakota:

H.R. 7445. A bill to amend the Internal Revenue Code of 1954 to exempt certain farm vehicles from the highway use tax; to the Committee on Ways and Means.

By Mr. ARMSTRONG (for himself, Mr. CRANE, Mr. JOHNSON of Colorado, Mr. NOLAN, and Mr. PATTERSON of California):

H.R. 7446. A bill to amend title II of the Social Security Act to repeal the earnings limitation, to provide benefits for husbands, widowers, and fathers on the same basis as wives, widows, and mothers, to eliminate the 5-month waiting period for disability benefits, to provide for the payment of benefits to an individual through the month of his or her death, to provide an optional exemption from coverage for individuals 65 years of age and over, and to provide that a beneficiary's marriage or remarriage will not effect his or her benefits; and to amend title XVIII of such act to authorize direct payments to physicians and other providers at their option under the supplementary medical insurance program; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. BEDELL (for himself, Mr. AMMERMAN, Mr. HANLEY, and Mr. JENNETTE):

H.R. 7447. A bill to amend the Internal Revenue Code of 1954 to treat certain income derived by tax-exempt organizations from investments in farmland as unrelated business taxable income; to the Committee on Ways and Means.

By Mr. BENNETT (for himself, Mr. HARRINGTON, Mr. COHEN, Mr. BLANCHARD, Mr. GLICKMAN, Mr. RINALDO, Mr. LEGGETT, Mr. ETEL, Mr. LLOYD of California, Ms. KEYS, Mr. KREBS, Mr. PEASE, Mr. MOLLOHAN, Mr. SIMON, Mr. MANN, Mr. CHARLES WILSON of Texas, Mr. LAGOMARSINO, Mr. BINGHAM, and Mr. STUDDS):

H.R. 7448. A bill to amend the Defense Production Act of 1950, as amended; jointly, to the Committees on Banking, Finance and Urban Affairs, and Government Operations.

By Mr. BENNETT (for himself, Mr. TRIBLE, Mr. EDWARDS of California, Mrs. SPELLMAN, Mr. BLOUIN, Mr. CAVANAUGH, Mr. FORD of Tennessee, Mr. GILMAN, Mr. CAPUTO, Mr. FASCELL, Mr. MOFFETT, Mr. BURGNER, Mr. BAUCUS, Mr. BEDELL, Mr. NEAL, Mr. EDGAR, Mr. RICHMOND, Mr. EVANS of Delaware, Mr. D'AMOURS, and Mr. KOCH):

H.R. 7449. A bill to amend the Defense Production Act of 1950, as amended; jointly, to the Committees on Banking, Finance and Urban Affairs, and Government Operations.

By Mr. BENNETT (for himself, Mr. MURPHY of Pennsylvania, Mr. AU-

COIN, Mr. ST GERMAIN, Mr. SKUBITZ, Mr. OTTINGER, Mr. CHARLES H. WILSON of California, Mr. JACOBS, Mr. DUNCAN of Tennessee, Mr. ASHLEY, Mr. BEVILL, Mr. ELBERG, Mr. DRINAN, Mr. DELLUMS, Mr. LEHMAN, Mr. BADILLO, Mr. BUTLER, Mr. HUGHES, and Ms. HOLTZMAN):

H.R. 7450. A bill to amend the Defense Production Act of 1950, as amended; jointly, to the Committees on Banking, Finance and Urban Affairs, and Government Operations.

By Mrs. BOGGS (for herself, Mr. DORNAN, Mr. FOUNTAIN, Mr. JENNETTE, Mr. MURTHA, Mr. NICHOLS, Mr. PICKLE, Mr. ROONEY, Mr. SHIPLEY, Mr. SLACK, Mr. STAGGERS, Mr. STOKES, Mr. WALGREEN, Mr. YATRON, and Mr. ZEFERETTI):

H.R. 7451. A bill to provide recognition to the Women's Air Forces Service Pilots for their service to their country during World War II by deeming such service to have been active duty in the Armed Forces of the United States for purposes of laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mr. CORMAN (for himself, Mr. BOWEN, Mr. DICKS, Mr. DUNCAN of Oregon, Mr. FAUNTROY, Mr. KEMP, Mr. PURSELL, Mr. RAHALL, and Mr. RONCALIO):

H.R. 7452. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for optometric and medical vision care; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. CORMAN (for himself, Mr. BLANCHARD, Mrs. FENWICK, Mr. MAGUIRE, Mr. MIKVA, Mrs. SCHROEDER, Mr. TRAXLER, Mr. TSONGAS, and Mr. WAXMAN):

H.R. 7453. A bill to amend title XVIII of the Social Security Act to provide for the coverage of certain psychologists' services under the supplementary medical insurance benefits program established by part B of such title; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. CORMAN (for himself, Mr. BRODHEAD, Mr. DUNCAN of Tennessee, and Mrs. LLOYD of Tennessee):

H.R. 7454. A bill to amend title XVIII of the Social Security Act for the purpose of including community mental health centers among the entities which may be qualified providers of services for medicare purposes; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. CRANE (for himself, Mr. BARNARD, Mr. HANSEN, Mr. ADDABO, Mr. CEDERBERG, Mr. HIGHTOWER, Mr. TRIBLE, Mr. WINN, Mr. APPELEGATE, Mr. BAUCUS, Mr. ABDNOR, and Mr. GILMAN):

H.R. 7455. A bill to provide that in civil actions where the United States is a plaintiff, a prevailing defendant may recover a reasonable attorney's fee and other reasonable litigation costs; to the Committee on the Judiciary.

By Mr. DE LUGO:

A bill to provide that in compiling unemployment statistics, the Bureau of Labor Statistics shall include farmers reporting net income losses for the preceding taxable year and shall include certain of their dependents, and to provide that Federal assistance distributed on the basis of unemployment shall take into account such farmers and dependents; to the Committee on Education and Labor.

By Mr. REGULA:

H.R. 7492. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. RODINO:

H.R. 7493. A bill to improve access to the Federal courts by enlarging the civil and criminal jurisdiction of U.S. Magistrates, and for other purposes; to the Committee on the Judiciary.

By Mr. EILBERG:

H.J. Res. 489. Joint resolution granting the status of permanent residence to certain aliens; to the Committee on the Judiciary.

By Mr. RAILSBACK:

H.J. Res. 490. Joint resolution providing that residential subscriber interests, especially those of citizens in rural areas, be protected as competition is permitted in the telecommunications industry; to the Committee on Interstate and Foreign Commerce.

By Mr. ROBINSON (for himself, Mr. ABDNOR, Mr. BADHAM, Mr. BALDUS, Mr. BAUCUS, Mr. BUTLER, Mr. DERWINSKI, Mr. DICKINSON, Mr. DORNAN, Mr. ERTTEL, Mr. KETCHUM, Mr. LAGOMARSINO, Mr. LOTT, Mr. RAHALL, Mr. SATTERFIELD, Mrs. SPELLMAN, Mr. SPENCE, Mr. THONE, Mr. WHITEHURST, and Mr. WINN):

H.J. Res. 491. Joint resolution to authorize and request the President to issue a proclamation designating May 13 of each year as American Business Day; to the Committee on Post Office and Civil Service.

By Mr. HANSEN:

H. Con. Res. 231. Concurrent resolution disapproving the President's determination not to grant import relief to the U.S. sugar industry; to the Committee on Ways and Means.

By Mr. HYDE (for himself and Mr. EVANS of Delaware):

H. Con. Res. 232. Concurrent resolution directing the Secretary of Defense to inter a Vietnam Unknown Soldier at Arlington National Cemetery; to the Committee on Veterans' Affairs.

By Mr. WYLIE (for himself, Mr. DEVINE, Mr. FASCELL, Mrs. FENWICK, Mr. EILBERG, Mr. BINGHAM, Mr. BUCHANAN, Mr. SIMON, Mr. APPELGATE, Mr. GUYER, Mr. HARKIN, and Mr. ASHBROOK):

H. Con. Res. 233. Concurrent resolution to express the sense of the Congress that Galina Michelson and Olga Michelson should be granted exit visas by the Soviet Union; to the Committee on International Relations.

By Mr. RAILSBACK (for himself and Mr. VANDER JAGT):

H. Res. 604. Resolution expressing the sense of the House of Representatives that the effect on our society of the level of violence depicted on television requires more consideration and study; to the Committee on Interstate and Foreign Commerce.

## MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

169. By the SPEAKER: Memorial of the legislature of the State of Nevada, relative to completion of the Humboldt River and Tributaries project; to the Committee on Appropriations.

170. Also, memorial of the Legislature of the State of Nevada, relative to establishment of a veterans' hospital in Clark County, Nev.; to the Committee on Veterans' Affairs.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BADILLO:

H.R. 7494. A bill for the relief of Fernando Gutierrez Lazo and Dolores Moya Machado; to the Committee on the Judiciary.

By Mr. JACOBS:

H.R. 7495. A bill for the relief of See-Lon Cheng; to the Committee on the Judiciary.

By Ms. MIKULSKI (by request):

H.R. 7496. A bill for the relief of Rosario Bautista; to the Committee on the Judiciary.

By Mr. PIKE:

H.R. 7497. A bill for the relief of Elmeada Richards Winter and Amos Emanuel Winter; to the Committee on the Judiciary.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 10

By Mr. BAUMAN:

On page 34, lines 10 and 11, strike the words "with respect to whom such employee is a superior".

On page 35, after line 5, add the following new subsection:

"(c) Notwithstanding any other provisions of law or this subchapter, no employee may solicit a political contribution from any person he regulates, audits, investigates, or who is the recipient of or applicant for any license, grant, subsidy, contract, or benefit which said employee monitors, reviews, or has decisionmaking authority in respect thereof.

By Mr. DERWINSKI:

On page 27, strike all after the enacting clause and insert the following:

### "SUBCHAPTER III—POLITICAL ACTIVITIES

"§ 7361. Political participation

"It is the policy of the Congress that employees should be encouraged to fully exercise, to the extent not expressly prohibited by law, their rights of voluntary participation in the political processes of our Nation.

"§ 7362. Definitions

"For the purpose of this subchapter—

"(1) 'employee' means any individual, employed or holding office in the United States Postal Service;

"(2) 'candidate' means any individual who seeks nomination for election, or election, to any elective office, whether or not such individual is elected, and, for the purpose of this paragraph, an individual shall be deemed to seek nomination for election, or election, to an elective office, if such individual has—

"(A) taken the action required to qualify for nomination for election; or

"(B) received political contributions or made expenditures, or has given consent for any other person to receive political contributions or make expenditures, with a view to bringing about such individual's nomination for election, or election, to such office;

"(3) 'political contribution'—

"(A) means a gift, subscription, loan, advance, or deposit of money or anything of value, made for any political purpose;

"(B) includes a contract, promise, or agreement, express or implied, whether or not legally enforceable, to make a political contribution for any political purpose;

"(C) includes the payment by any person, other than a candidate or a political party or affiliated organization, of compensation for the personal services of another person which are rendered to such candidate or political party or affiliated organization without charge for any political purpose; and

"(D) includes the provision of personal services for any political purpose;

"(4) 'superior' means an employee who exercises supervision of, or control or administrative direction over, another employee;

"(5) 'elective office' means any elective

public office and any elective office of any political party or affiliated organization;

"(6) 'enforcing authority' means the general counsel of the Civil Service Commission or such other individual within the Commission as the Commissioners may designate to carry out investigation and enforcement activities under this subchapter;

"(7) 'State' means each of the several States and the District of Columbia;

"(8) 'person' means any individual, corporation, trust, association, any State, local, or foreign government, any territory or possession of the United States, or any agency or instrumentality of any of the foregoing; and

"(9) 'restricted position' means any position with respect to which there is in effect a determination by the Commission, by regulation, that—

"(A) the duties and responsibilities of such position require such employee, as a substantial part of his official activities, to engage in—

"(i) the enforcement of any civil or criminal law;

"(ii) the inspection or auditing of the activities of any person;

"(iii) the contracting for goods or services for the Government;

"(iv) the providing, administration, or monitoring of licenses, grants, subsidies, or other benefits; or

"(v) foreign intelligence or national security activities;

"(B) the duties and responsibilities of such position—

"(i) in the case of any inspection, audit, prosecution, or investigation under any civil or criminal law, employees holding such positions have the authority to make policy decisions binding on other employees under their control with regard to who shall be the subject of any such action; or

"(ii) in the case of any Government contract or any Government license, grant, subsidy, or other benefit, employees holding such positions have the authority to make binding decisions on other employees under their control with respect to such contract or benefit which involves any funds or other interest having a substantial monetary value; and

"(C) the restrictions on political activity imposed on such employee in such a position are justified in order to insure the integrity of the Government or the public's confidence in the integrity of the Government.

"§ 7363. Use of official influence or official information; prohibition

"(a) An employee may not directly or indirectly use or attempt to use the official authority or influence of such employee for the purpose of—

"(1) interfering with or affecting the result of any election; or

"(2) intimidating, threatening, coercing, commanding, influencing, or attempting to intimidate, threaten, coerce, command, or influence—

"(A) any individual for the purpose of interfering with the right of any individual to vote as such individual may choose, or of for any candidate or measure in any election;

"(B) any person to give or withhold any causing any individual to vote, or not to vote, political contribution; or

"(C) any person to engage, or not to engage, in any form of political activity whether or not such activity is prohibited by law.

"(b) An employee may not directly or indirectly use or attempt to use, or permit the

use of, any official information obtained through or in connection with his employment for any political purpose, unless such official information is available to the general public.

"(c) For the purpose of subsection (a) of this section, 'use of official authority or influence' includes—

"(1) promising to confer or conferring any benefit (such as any compensation, grant, contract, license, or ruling) or effecting or threatening to effect any reprisal (such as deprivation of any compensation, grant, contract, license, or ruling); or

"(2) taking, directing others to take, recommending, processing, or approving any personnel action (such as any appointment, promotion, transfer, assignment, reassignment, reinstatement, restoration, reemployment, performance evaluation or any adverse action under this title, suspension for 30 days or less, or other disciplinary action).

"(d) (1) No employee organization (including any national or international union, council, or department which includes such organization, or any affiliate of such organization), or officer, employee, or agent thereof, shall directly or indirectly intimidate, threaten, coerce, command, or directly or indirectly attempt to intimidate, threaten, coerce, or command—

"(A) any employee for the purpose of interfering with the right of any employee to vote as such employee may choose, or of causing an employee to vote, or not to vote, for any candidate or measure in any election;

"(B) any employee to give or withhold any political contribution; or

"(C) any employee to engage, or not to engage, in any form of political activity whether or not such activity is prohibited by law.

"(2) No portion of any dues, fees, or assessments levied on the membership, of any employee organization referred to in paragraph (1) of this subsection by such organization shall be used by such organization for any political purpose or by any political education or action committee of such organization for any purpose.

Page 40, line 17, strike out "or";

Page 40, line 19, insert "or" after "Columbia";

Page 40, after line 19, insert the following:

"(E) any entity or individual who is not an employee, with respect to any violation of section 7363(d);

"§ 7364. Solicitation; prohibition

"(a) An employee may not—

"(1) give or offer to give a political contribution to any individual either to vote or refrain from voting, or to vote for or against any candidate or measure, in any election;

"(2) solicit, accept, or receive a political contribution to vote or refrain from voting, or to vote for or against any candidate or measure, in any election;

"(3) knowingly give or hand over a political contribution to a superior of such employee; or

"(4) knowingly solicit, accept, or receive, or be in any manner concerned with soliciting, accepting, or receiving, a political contribution—

"(A) from another employee (or a member of another employee's immediate family) with respect to whom such employee is a superior; or

"(B) in any room or building occupied in the discharge of official duties by—

"(i) an individual employed or holding office in the Government of the United States,

in the government of the District of Columbia, or in any agency or instrumentality of the foregoing; or

"(ii) an individual receiving any salary or compensation for services from money derived from the Treasury of the United States.

"(b) In addition to the prohibitions of subsection (a) of this section, an employee holding a restricted position may not solicit, accept, or receive a political contribution from, or give a political contribution to, any individual who is an employee, a Member of Congress (or a candidate for such office), or a member of a uniformed service, or any agent of any such individual. The preceding sentence shall not be construed to prohibit an employee from giving a political contribution to a political committee.

"§ 7365. Political activities on duty, etc.; prohibition

"(a) An employee may not engage in political activity—

"(1) while such employee is on duty;

"(2) in any room or building occupied in the discharge of official duties by an individual employed or holding office in the Government of the United States, in the government of the District of Columbia, or in any agency or instrumentality of the foregoing; or

"(3) while wearing a uniform or official insignia identifying the office or position of such employee.

"(b) The provisions of subsection (a) of this section shall not apply to—

"(1) an individual—

"(A) paid from the appropriation for the White House Office;

"(B) paid from funds to enable the Vice President to provide assistance to the President; or

"(C) on special assignment to the White House Office;

"(2) the Mayor of the District of Columbia, the Chairman or a member of the Council of the District of Columbia; or

"(3) any activity of an individual which is not otherwise prohibited by or under law and which is part of such individual's official duties.

"(c) Nothing in this section shall be construed to authorize an individual designated in subsection (b) to engage in political activity otherwise prohibited by or under law.

"(d) (1) In addition to the prohibitions of subsection (a) of this section, an employee holding a restricted position may not take an active part in political management or political campaigns unless such part—

"(A) is in connection with (i) an election and preceding campaign if none of the candidates is to be nominated or elected at that election as representing a party any of whose candidates for Presidential elector received votes in the last preceding election at which Presidential electors were selected or (ii) a question which is not specifically identified with a National or State political party or political party of a territory or possession of the United States; or

"(B) is permitted by regulations prescribed by the Civil Service Commission and involves the municipality or political subdivision in which such employee resides, when—

"(i) the municipality or political subdivision is in Maryland or Virginia and in the immediate vicinity of the District of Columbia or is a municipality in which a majority of voters are employed by the Government of the United States; and

"(ii) the Commission determines that because of special or unusual circumstances which exist in the municipality or political

subdivision it is in the domestic interest of the employees to permit political participation.

"(2) For the purpose of this subsection, 'an active part in political management or in political campaigns' means those acts of political management or political campaigning which were prohibited on the part of employees in the competitive service before July 19, 1940, by the determinations of the Civil Service Commission under the rules prescribed by the President.

"§ 7366. Candidates for elective office; leave, notification by employees

"(a) An employee shall promptly notify the agency in which he is employed upon becoming a candidate for elective office and upon the termination of such candidacy.

"(b) An employee who is a candidate for elective office shall, upon the request of such employee, be granted leave without pay for the purpose of allowing such employee to engage in activities relating to such candidacy.

"(c) Notwithstanding section 6302(d) of this title, an employee who is a candidate for elective office shall, upon the request of such employee, be granted accrued annual leave for the purpose of allowing such employee to engage in activities relating to such candidacy. Such leave shall be in addition to leave without pay to which such employee may be entitled under subsection (b) of this section.

"(d) The foregoing provisions of this section shall not apply in the case of an individual who is an employee by reason of holding an elective public office.

"§ 7367. Investigation; procedures; hearing

"(a) The enforcing authority shall investigate reports and allegations of any activity prohibited by section 7363, 7364, or 7365 of this title. Any such investigation shall terminate not later than 90 days after the date of its commencement. If the enforcing authority does not make the notification required under subsection (c) of this section before the close of the period for investigation, subsections (c) (2) and (3) and (d) of this section, and section 7368 of this title, shall not apply thereafter to the employee involved with respect to the activities under investigation.

"(b) As a part of the investigation of the activities of an employee, the enforcing authority shall provide such employee an opportunity to make a statement concerning the matters under investigation and to support such statement with any documents the employee wishes to submit. An employee of the Commission lawfully assigned to investigate a violation of this subchapter may administer an oath to a witness attending to testify or depose in the course of the investigation.

"(c) (1) If it appears to the enforcing authority after investigation that a violation of section 7363, 7364, or 7365 of this title has occurred, it shall so notify the employee and the agency in which the employee is employed.

"(2) Except as provided in paragraph (3) of this subsection, if it appears to the enforcing authority after investigation that a violation of section 7363, 7364, or 7365 of this title has occurred, the enforcing authority shall serve upon the employee a notice by certified mail, return receipt requested (or if notice cannot be served in such manner, then by any method calculated to apprise the employee)—

"(A) setting forth specifically and in detail the charges of alleged prohibited activity;

"(B) advising the employee of the penalties provided under section 7368 of this title;

"(C) specifying a period of not less than 30 days within which the employee may file with the enforcing authority a written answer to the charges in the manner prescribed by rules issued by the Commissioners; and

"(D) advising the employee that unless the employee answers the charges, in writing, within the time allowed therefor, the Commissioners may treat such failure as an admission by the employee of the charges set forth in the notice and a waiver by the employee of the right to a hearing on the charges.

"(3) If it appears to the enforcing authority after investigation that a violation of section 7363, 7364, or 7365 of this title has been committed by—

"(A) an employee appointed by the President by and with the advice and consent of the Senate;

"(B) an employee whose appointment is expressly required by statute to be made by the President;

"(C) the Mayor of the District of Columbia; or

"(D) the Chairman or a member of the Council of the District of Columbia; the enforcing authority shall refer the case to the Attorney General for consideration of prosecution, if appropriate, under title 18, and shall report the nature and details of the apparent violation to the President and to the Congress.

"(d) (1) If a written answer is not filed within the time allowed therefor, the Commissioners may, without further proceedings, issue their final decision and order.

"(2) If an answer is filed within the time allowed therefor, the charges shall be determined by the Commissioners on the record after a hearing conducted by a hearing examiner appointed under section 3105 of this title, and, except as otherwise expressly provided under this subchapter, in accordance with the requirements of subchapter II of chapter 5 of this title, notwithstanding any exception therein for matters involving the tenure of an employee. The hearing shall be commenced within 30 days after the answer is filed with the enforcing authority and shall be conducted without unreasonable delay. As soon as practicable after the conclusion of the hearing, the examiner shall serve upon the Commissioners, the enforcing authority, and the employee such examiner's recommended decision with notice to the enforcing authority and the employee of opportunity to file with the Commissioners, within 30 days after the date of such notice, exceptions to the recommended decision. The Commissioners shall issue their final decision and order in the proceeding no later than 60 days after the date the recommended decision is served. The employee shall not be removed from active duty status by reason of the alleged violation of this subchapter at any time before the effective date specified by the Commissioners.

"(e) (1) At any stage of a proceeding or investigation under this subchapter, the Commissioners may, at the written request of the enforcing authority or the employee, require by subpoena the attendance and testimony of witnesses and the production of documentary or other evidence relating to the proceeding or investigation at any designated place, from any place in the United States or any territory or possession thereof, the Commonwealth of Puerto Rico, or the District of Columbia. Any Commissioner may issue subpoenas, and any Commissioner and any hearing examiner authorized by the Commissioners may administer oaths, examine witnesses, and receive evidence. In the case of contumacy or failure to obey a sub-

pena, the United States district court for the judicial district in which the person to whom the subpoena is addressed resides or is served may issue an order requiring such person to appear at any designated place to testify or to produce documentary or other evidence. Any failure to obey the order of the court may be punished by the court as a contempt thereof.

"(2) Any Commissioner may order the taking of depositions at any stage of a proceeding or investigation under this subchapter. Depositions shall be taken before an individual designated by the Commissioners and having the power to administer oaths. Testimony shall be reduced to writing by or under the direction of the individual taking the deposition and shall be subscribed by the deponent.

"(f) An employee upon whom a penalty is imposed by an order of the Commissioners under subsection (d) of this section may, within 30 days after the date on which the order was issued, institute an action for judicial review of the Commissioners' order in the United States Court of Appeals for the District of Columbia Circuit or in the United States court of appeals for the judicial circuit in which the employee resides or is employed. The institution of an action for judicial review shall not operate as a stay of the Commissioners' order. A copy of the summons and complaint shall be served as otherwise prescribed by law and, in addition, upon the Commissioners who shall then certify and file with the court the record upon which the Commissioners' order was based. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that the additional evidence may materially affect the result of the proceeding and that there were reasonable grounds for failure to adduce the evidence at the hearing conducted under subsection (d) (2) of this section, the court may direct that the additional evidence be taken before the Commissioners in the manner and on the terms and conditions fixed by the court. The Commissioners may modify their findings of fact or order, in the light of the additional evidence, and shall file with the court such modified findings or order. The Commissioners' findings of fact, if supported by substantial evidence, shall be conclusive. The court shall affirm the Commissioners' order if it determines that it is in accordance with law. If the court determines that the order is not in accordance with law—

"(1) it shall remand the proceeding to the Commissioners with directions either to enter an order determined by the court to be lawful (including an order for reinstatement with or without back pay) or to take such further proceedings as, in the opinion of the court, are required; and

"(2) it may assess against the United States reasonable attorney fees and other litigation costs reasonably incurred by the employee.

"(g) The enforcing authority or the Commissioners may proceed with any investigation or proceeding instituted under this subchapter notwithstanding that the enforcing authority or the head of an employing agency or department has reported the alleged violation to the Attorney General as required by section 535 of title 28.

"(h) (1) All decisions of the Commissioners with respect to the exercise of their duties and powers under the provisions of this subchapter shall be made by a majority vote of the Commissioners.

"(2) A Commissioner may not delegate to any person his vote nor, except as expressly provided by this subchapter, may any decisionmaking authority vested in the Commis-

sioners by the provisions of this subchapter be delegated to any Commissioner or other person.

#### "§ 7368. Penalties

"(a) An employee who is found under section 7367 of this title to have violated any provision of—

"(1) section 7363 of this title shall, upon a final order of the Commissioners, be suspended without pay from such employee's position for a period of not less than 30 days, or shall be removed in which event that employee may not thereafter hold any position (other than an elected position) as an employee (as defined in section 7362(1) of this title);

"(2) section 7364 or 7365 of this title shall, upon a final order of the Commissioners, be—

"(A) removed from such employee's position, in which event that employee may not thereafter hold any position (other than an elected position) as an employee (as defined in section 7362(1) of this title) for such period as the Commissioners may prescribe;

"(B) suspended without pay from such employee's position for such period as the Commissioners may prescribe; or

"(C) disciplined in such other manner as the Commissioners shall deem appropriate.

"(b) The Commissioners shall notify the enforcing authority, the employee, and the employing agency of any penalty they have imposed under this section. The employing agency shall certify to the Commissioners the measures undertaken to implement the penalty.

#### "§ 7369. Educational programs; reports

"(a) The Commission shall establish and conduct a continuing program to inform all employees of their rights of political participation and to educate employees with respect to those political activities which are prohibited.

"(b) The Commission shall designate an employee within the Commission who shall be responsible for the establishment and administration of the program described in subsection (a) of this section. Such employee may receive and answer questions relating to the provisions of this subchapter. Information received by such employee and the identity of the person who provided such information shall not be disclosed by such employee except with the consent of the person who provided such information.

"(c) On or before March 31 of each calendar year, the Commission shall submit a report covering the preceding calendar year to the Speaker of the House of Representatives and the President pro tempore of the Senate for referral to the appropriate committees of the Congress. The report shall include—

"(1) the number of investigations conducted under section 7367 of this title and the results of such investigations;

"(2) the name and position or title of each individual involved, and the funds expended by the Commission, in carrying out the program required under subsection (a) of this section; and

"(3) an evaluation which describes—

"(A) the manner in which such program is being carried out; and

"(B) the effectiveness of such program in carrying out the purposes set forth in subsection (a) of this section.

#### "§ 7370. Regulations

"(a) The Civil Service Commission shall prescribe such rules and regulations as may be necessary to carry out its responsibilities under this subchapter. Regulations shall be prescribed under this subchapter in accordance with section 553 of this title, notwithstanding any exception therein for matters relating to agency management or personnel.

"(b) The regulations referred to in section 7362(9) of this title shall be prescribed not later than 90 days after the effective date of such section. Thereafter any revision of such regulations shall be prescribed not later than March 1 of the calendar year in which such revision is to take effect. Any employee holding any position with respect to which any such regulation is prescribed may institute an action for judicial review of such regulation by filing a petition in the United States Court of Appeals for the District of Columbia Circuit, or in the United States court of appeals for the judicial circuit in which such employee resides or is employed, except that no such action may be instituted more than 30 days after the effective date of such regulation."

(b) (1) Section 3302 of title 5, United States Code, is amended by striking out "7153, 7321, and 7322" and inserting in lieu thereof "and 7153".

(2) Section 1308(a) of title 5, United States Code, is amended—

(A) by inserting "and" at the end of paragraph (2);

(B) by striking out paragraph (3); and

(C) by redesignating paragraph (4) as paragraph (3).

(3) The second sentence of section 8332 (k) (1) of title 5, United States Code, is amended by striking out "second" and inserting "last" in lieu thereof.

(4) The section analysis for subchapter III of chapter 73 of title 5, United States Code, is amended to read as follows:

**"SUBCHAPTER VI—POLITICAL ACTIVITIES**

"7361. Political participation.

"7362. Definitions.

"7363. Use of official influence or official information; prohibition.

"7364. Solicitation; prohibition.

"7365. Political activities on duty, etc.; prohibition.

"7366. Candidates for elective office; leave, notification by employees.

"7367. Investigation; procedures; hearing.

"7368. Penalties.

"7369. Educational program; reports.

"7370. Regulations."

(c) (1) Sections 602 and 607 of title 18, United States Code, relating to solicitations and making of political contributions, are each amended by adding at the end thereof the following new sentence: "This section does not apply to any activity of an employee, as defined in section 7362(1) of title 5, unless such activity is prohibited by section 7364 of that title."

(2) Chapter 29 of title 18 of the United States Code is amended—

(A) by adding at the end of the following new section:

"§ 608. Extortion of political contributions from Federal personnel

"Whoever, by the commission of or threat of physical violence to, or economic sanction against, any person, obtains, or endeavors to obtain, from an officer or employee of the United States or of any department or agency thereof, or from a person receiving any salary or compensation for services from money derived from the Treasury of the United States, any contribution for the promotion of a political object, shall be imprisoned not less than two nor more than three years, or fined not more than \$5,000, or both;" and

(B) by adding at the end of the table of sections for such chapter the following new item:

"608. Extortion of political contributions from Federal personnel."

(d) Section 6 of the Voting Rights Act of 1965 (42 U.S.C. 1973d) is amended by striking

ing out "the provisions of section 9 of the Act of August 2, 1939, as amended (5 U.S.C. 1181), prohibiting partisan political activity" and by inserting in lieu thereof "the provisions of subchapter III of chapter 73 of title 5, United States Code, relating to political activities".

(e) Sections 103(a) (4) (D) and 203(a) (4) (D) of the District of Columbia Public Education Act are each amended by striking out "sections 7324 through 7327 of title 5" and inserting in lieu thereof "section 7325 of title 5".

(f) Sections 8332(k) (1), 8706(e), and 8906 (e) (2) of title 5, United States Code are each amended by inserting immediately after "who enters on" the following: "leave without pay granted under section 7326(b) of this title, or who enters on".

Sec. 3. (a) The amendments made by this Act shall take effect 120 days after the date of the enactment of this Act, except that the authority to prescribe regulations granted under section 7370 of title 5, United States Code, as added by section 2 of this Act, shall take effect on the date of the enactment of this Act.

(b) Any repeal or amendment made by this Act of any provision of law shall not release or extinguish any penalty, forfeiture, or liability incurred under such provision, and such provision shall be treated as remaining in force for the purpose of sustaining any proper proceeding or action for the enforcement of such penalty, forfeiture, or liability.

(c) No provision of this Act shall affect any proceedings with respect to which the charges were filed on or before the effective date of the amendments made by this Act. Orders shall be issued in such proceedings and appeals shall be taken therefrom as if this Act had not been enacted.

Amend the title so as to read: "A bill to restore to Federal civilian and Postal Service employees their rights to participate voluntarily, as private citizens, in the political processes of the Nation, to protect such employees from improper political solicitations or influences, and for other purposes."

Page 30, line 12, strike out "and".

Page 32, line 3, strike out the period and insert "; and" in lieu thereof.

Page 32, after line 3, insert the following:

"(10) 'sick leave' means leave allowed under section 6307 of this title or any other leave or absence (other than annual leave) allowed an employee by reason of injury, illness, disease, or physical incapacity, or for medical or similar examination or treatment."

Page 34, line 23, after "holding a restricted position" insert ", or who is on sick leave,".

By Mr. RYAN:

Page 36, line 11, after "holding a restricted position" insert ", or who is on sick leave,".

Page 30, strike out section 7322(9) of title 5, United States Code, as proposed by the bill, beginning on line 13 and ending on line 3 of page 32 and insert in lieu thereof the following:

"(9) 'restricted position' means any position with respect to which there is in effect a determination by the Commission, by regulation, that—

"(A) the duties and responsibilities of such position requires such employee—

"(i) as a substantial part of his official activities, to engage in foreign intelligence activities relating to national security;

"(ii) in the normal course of carrying out such duties and responsibilities—

"(I) to make decisions binding on employees with respect to whom he is a superior with regard to who shall be the subject of any action which is to be taken by any such employee in connection with the enforce-

ment of any civil or criminal law (including any inspection or audit under any such law);

"(II) to actually carry out any such action; or

"(III) to make a final determination with respect to any such action; or

"(iii) in the normal course of carrying out such duties and responsibilities—

"(I) to make binding decisions on who shall be awarded contracts which are for the procurement of goods or services for the Government and which have substantial monetary value, or who shall be awarded licenses, grants, subsidies, or other benefits, which involve funds or other interests having a substantial monetary value; or

"(II) to supervise individuals engaged in the awarding, administering, or monitoring of such contracts, licenses, grants, subsidies, or benefits; and

"(B) the restrictions on political activity imposed on such employee in such position are justified in order to insure the integrity of the Government or the public's confidence in the integrity of the Government.

By Mr. TAYLOR:

On page 35, line 14, strike out "or", and in line 16, strike out the period and insert a semicolon and the word "or", and immediately following line 16, add the following:

"(4) In any geographic area outside the area encompassing the political subdivision of the elective office for which he is a candidate, or for which he is supporting the candidacy of any other person, provided however, that such political activity shall be limited to the political subdivision in which he is a resident."

H.R. 6761

By Mr. EDWARDS of Oklahoma:

On page 4, line 4, insert immediately after the period the following new clause:

"(g) any activity, including youth camp activities which are conducted by a religious organization as defined under section 501(c) (3) of the Internal Revenue Code of 1954 and is exempt from taxation under section 501(a) of such Code."

H.R. 6804

By Mr. MOSS:

On page 76, strike all on line 7 through the semicolon on and renumber succeeding paragraphs accordingly.

On page 77, line 3, strike the semicolon and the word "and" and insert a period, and on line 4 strike all through the period on line 7.

On page 77, between lines 7 and 8 insert the following new subsection and renumber succeeding subsections accordingly:

"(c) In carrying out the functions transferred to the Secretary by subsection (b) of this section, the Secretary may issue, prescribe, make, amend, and rescind rules, regulations, and statements of policy pursuant to the Federal Power Act and the Natural Gas Act, which are of general applicability. Whenever the Secretary proposes any such action, he shall notify the Commission and if the Commission determines within such period as the Secretary may prescribe that such proposal may significantly affect any function administered by the Commission pursuant to Title IV of this Act, the Secretary shall provide the Commission a minimum period of thirty days to consider and comment on such proposal. The Secretary shall take into account any comment or recommendation received from the Commission pursuant to this subsection before taking such action. If such action by the Secretary is inconsistent in any way with such comment or recommendation, the Secretary, when taking such final action, shall publicly state the reasons for such inconsistency."

## EXTENSIONS OF REMARKS

TRIBUTE TO CAPTAIN EDMUND A. MILLER, USN

**HON. GLENN M. ANDERSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ANDERSON of California. Mr. Speaker, the Long Beach Naval Shipyard has long been a vital economic force in the Los Angeles-Long Beach Harbor area. Since August of 1975, the shipyard has grown and flourished under the supervision of Capt. Edmund A. Miller, USN, whose performance as commander of the shipyard has been the epitome of professionalism and high quality.

When Captain Miller's retirement becomes effective in September of this year, the shipyard and the harbor area community will be without his energetic leadership and the example he has set through hard work and devotion to duty. Captain Miller will be remembered for the openness and fairness he brought to his position, as well as being one of the outstanding commanders in the shipyard's 34-year history.

Born in Booneville, Miss., on August 9, 1927, Edmund A. Miller grew up in the town of West Point, Miss. He attended Marion Military Institute in Alabama, and Mississippi State University. He was appointed to the U.S. Naval Academy in 1945; graduated and received a commission as an ensign in June 1949.

After spending 5 years at sea, Captain Miller was ordered to the Massachusetts Institute of Technology in 1954. He graduated in 1957 with a master of science degree in naval architecture and marine engineering, and a professional degree of naval engineer in naval construction.

While attending MIT, Ed—as he is known to his many friends—was elected to the honorary engineering fraternity of Tau Beta Pi and the honorary research fraternity Sigma Xi. In later years, Captain Miller received a master of science degree in administration from George Washington University.

Following his graduation from MIT, Captain Miller saw tours of duty at the Philadelphia Naval Shipyard—1957-59; supervisor of shipbuilding in Pascagoula, Miss.—1959-62; aboard the U.S.S. *Amphion* (AR-13), 1962-64; staff of Commander Cruiser Destroyer Force, U.S. Atlantic Fleet, 1964-67; Naval Ship Systems Command, 1967-72; and staff of the Chief of Naval Operations, 1973.

Captain Miller reported to the Long Beach Naval Shipyard in August, 1973, as production officer. Two years later, in August of 1975, Capt. Edmund A. Miller became commander of Long Beach Naval Shipyard and supervisor of shipbuilding, conversion, and repair.

During his tenure as commander, Captain Miller has been instrumental in the continued growth and development of the facility. His energetic leadership and ability to inspire others to perform to the best of their abilities has led to increased nationwide awareness of the ex-

cellent reputation earned by the Long Beach Naval Shipyard.

In addition, Captain Miller has been involved in community affairs. He is currently a member of the board of directors, Long Beach Chamber of Commerce; a member of the board of advisers of the School of Business and the Department of Industrial Technology at California State University, Long Beach; a member of the advisory board of the Harbor Occupational Center, Los Angeles Unified School District; and has twice served on career education policy seminars sponsored by the George Washington University Institute of Educational Leadership. Captain Miller is also an ordained deacon in the Southern Baptist Church, and has long served as a church school teacher.

His long and successful military career is reflected in his many decorations, which include the World War II Victory Medal, the European Occupational Medal, the United Nations Service Medal, the American Service Medal, the Korean Campaign Medal with one star, and the Korean Presidential Unit Citation.

Mr. Speaker, throughout his career Captain Edmund A. Miller, USN, has exemplified the qualities which make a person successful in life, both as a civilian and in the military. I would like to take this opportunity to extend by heartiest congratulations to him as he approaches the date of his retirement.

His lovely wife, Hannah, and their children, Edmund A., Jr., and Anita, must all be very proud of his outstanding career and many accomplishments.

#### THE LEGISLATIVE PRIORITIES OF NEW YORK'S PUERTO RICAN AND HISPANIC COMMUNITY: VI

**HON. HERMAN BADILLO**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BADILLO. Mr. Speaker, I am pleased to include in today's RECORD another in the series of position papers that were presented at the conference on the problems of Puerto Ricans and Hispanics in the New York metropolitan area that I sponsored last month.

This paper, on the problems of the Puerto Rican and other Hispanic elderly, is particularly important because it points up that where all elderly poor are disadvantaged, the Hispanic elderly suffer greater hardships and receive fewer benefits. As this Congress reassesses its approach to social service programs over the next years, I hope that the special considerations presented in this paper will be taken into account:

#### THE PUERTO RICAN AND OTHER HISPANIC ELDERLY

The Puerto Rican elderly population comprises a particularly vulnerable class of needy persons within the already disadvantaged population of elderly Americans. Due to linguistic and cultural barriers, the continu-

ing breakdown in the extended family, and the disadvantages endemic to their minority group status, the Spanish-speaking elderly find themselves in even more precarious circumstances than the majority of the American elderly population.

Although the Spanish-speaking population comprises the second largest minority group in this country, small commitment, even in rhetoric, has been made to address its unique needs. Funds allotted for services to the elderly are not equitably distributed by agencies to provide for the needs of the Puerto Rican and Other Hispanic elderly. The myth of the return migration of Puerto Rican elderly has been dispelled by findings in recent surveys conducted in New York City. In so basic a benefit as Social Security, only 50% of the Hispanic elderly receive benefits compared to 75% of the remaining elderly population.

Some of the crucial factors in the lag between available services and participation by the Puerto Rican and Other Hispanic elderly are: the lack of programs to train researchers and related personnel, the paucity of Hispanic-directed agencies, and the lack of bilingual, bicultural personnel at all levels in agencies responsible for providing services to the Spanish-speaking elderly. Outreach through the use of bilingual, bicultural personnel and bilingual literature (S.S.A. or S.S.I. application forms, information and referral literature, newsletters, etc.) must be more comprehensively developed so as to insure maximum utilization of benefits and entitlements by the Puerto Rican and Other Hispanic elderly. In addition, training programs must be established for the purpose of developing skills of Hispanic senior citizens to prepare them for serving on committees, staffing centers, and assuming the strong leadership needed to reach the objective of effective outreach to, and involvement of, the Spanish-speaking community. These programs would also have a recruitment component that would enlist personnel qualified to bring existing services to the Puerto Rican and Other Hispanic elderly. Puerto Rican and Other Hispanic elderly must be offered proper training to insure ongoing, creative and meaningful employment.

Although there are services available to the Puerto Rican and Other Hispanic elderly, they are alarmingly inadequate. Therefore, we further recommend that the federal level of S.S.I. benefits be immediately increased at a rate which catches up to the Bureau of Labor Statistics' lower level of living standard and be adjusted to the middle level as soon as possible on a regional basis. We urge the Legislature to stand firm in their conviction that when cuts are projected they not be at the expense of the level of basic income for our poorest elderly citizens. We further recommend that the full amount of federal S.S.I. cost-of-living increases be passed on to S.S.I. recipients. We strongly urge the federal government to assume the responsibility of administering the Emergency Assistance to Adults Program on a permanent basis. Programs to train bilingual, bicultural personnel and Hispanic committees should be developed to alert the Hispanic elderly of their rights and to interpret complicated welfare reforms to the Spanish-speaking community.

We recommend that Supplementary Security Income benefits be extended to all citizens, including those in Puerto Rico and the Virgin Islands, and that the existing law be so amended. Puerto Rico presently does not receive S.S.I. benefits. In addition, we further recommend the expansion of services for the Puerto Rican and Other Hispanic elderly in their homes. An extended family approach is needed and must be

initiated and implemented by personnel representative of the clients who will be served if the rights of the Hispanic elderly are to be preserved. The Puerto Rican and Other Hispanic elderly must be apprised of the alternatives to institutionalization and how to pursue these alternatives. Again, this involves Puerto Rican and Other Hispanic persons at the policymaking level as well as at the providing level.

We recommend a universal, comprehensive health security program for all, as proposed in the Kennedy-Corman bill. Furthermore, such a program should be administered by a proportionate representation of the Hispanic elderly population. This bill represents the best of the current legislation and should be expanded. We recommend the funding and development of innovative senior centers in Puerto Rican and Other Hispanic communities under the guidance of Puerto Rican and Other Hispanic elderly and with Boards of Directors and staff sensitive to the Puerto Rican and Other Hispanic cultural heritage. Puerto Rican and Other Hispanic community persons should be given the responsibility of outreach and publicity regarding these services. Nutrition services should include such programs as home-based programs, meal-on-wheels, congregate meal programs, etc., and should reflect the Puerto Rican and Other Hispanic elderly's roots. The prevalence of the role of the "abuelita" among the Puerto Rican and Other Hispanic elderly indicates that child-care facilities must be provided in conjunction with senior centers in the Spanish-speaking communities.

To respond to the lack of information on the Puerto Rican and Other Hispanic elderly, we recommend that funds be allocated for research and for the training of Puerto Rican and Hispanic personnel to conduct this research.

To enter into the subjects of the effects of inflation on incomes of older persons, housing, transportation, security, age discrimination—all very complicated and complex issues, all affecting the life style and existence of Puerto Rican and Hispanic elderly persons—is beyond the limits of this paper. They are problems affecting all citizens and require broad, forthright city, state, and federal legislation. However, regardless of the changes made, humane and universal legislation must be developed at least in the interest of all senior citizens respecting the special needs of the Puerto Rican and Hispanic elderly.

#### THE PAPERWORK DISASTER

**HON. HAROLD E. FORD**

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. FORD of Tennessee. Mr. Speaker, I rise today to express my deep concern about the morass of redtape and government forms that are stifling the citizens of this country. As a former small businessman, I am all too familiar with battles being waged by honest Americans who are making every effort to comply with the rules and regulations of the U.S. Government.

When I came to Congress in 1975, I had great hopes and aspirations about cleaning-up the bureaucracy and achieving meaningful reductions in the seemingly endless number of forms and pa-

perwork generated by the Federal Government. At that time, I placed my faith in the newly created Federal Paperwork Commission and had high expectations that relief from the onerous paperwork burden being borne by the American people would soon be on the way. An editorial which recently appeared in the Memphis Press-Scimitar newspaper captured my sense of disappointment and the feelings of millions of people across the country. I would like to insert it at this point in the RECORD for the benefit of the distinguished Members of this body:

#### THE PAPERWORK DISASTER

As Lewis Carroll put it, the walrus and the carpenter were walking on the beach and wept to see such quantities of sand.

The walrus, in his innocence, asked, "If seven maids with seven mops swept it for half a year, do you suppose that they could get it clear?"

The carpenter, obviously a realist, replied, "I doubt it," and shed a bitter tear.

Substitute federal government paperwork for Carroll's quantities of sand and you begin to get an idea of the utter improbability that the Federal Paperwork Commission will fulfill its mission.

The commission was set up in 1975 by former President Ford, and its aim—to cut down on paperwork, especially forms private citizens and businesses must fill out—is heartily endorsed by President Carter.

The federal bureaucracy being what it is, the commission didn't limit itself to a mere seven maids. The first thing it did was to hire 208 employees, buy three sophisticated copying machines and has now succeeded in digesting its entire \$11 million budget while producing a massive new dune of paperwork of its own to add to the mountain it's supposed to cut down to workable size.

One public member, an accountant from California who represents small businessmen, says this year and a half on the commission is "the most frustrating experience I've ever had. He's had to acquire an extra four-drawer filing cabinet just to store the paperwork generated internally by the commission."

A few months ago, the Office of Management and Budget reported that, although the number of forms citizens must fill out had dropped, the amount of paperwork had increased. At that time is required 143 million man-hours per year to do the work—13 million more than before the drive to eliminate unnecessary paperwork began. The reasons: New programs, more people in old programs and—worst of all—consolidation of some relatively simple forms into fewer but far more time-consuming longer ones.

The commission is due to go out of business in October. Based on the record to date, will it have made much of a dent in the paperwork dune? Like the carpenter, we doubt it, and join him in shedding a bitter tear about the way things are done in Washington.

#### SOCIAL SECURITY RIGHTS ACT

**HON. CHARLES W. WHALEN, JR.**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. WHALEN. Mr. Speaker, today my friend, the gentleman from Ohio, Mr.

SEIBERLING, is reintroducing the Social Security Rights Act along with 49 cosponsors. As a former cosponsor in the 94th Congress, I am pleased again to be associated with this legislation.

Recently, the Chairman of the House Subcommittee on Social Security circulated a questionnaire to Members and their caseworkers who deal with social security matters. In replying, my staff and I noted considerable improvement in the responsiveness of the Social Security Administration—SSA—over the past 5 years. Indeed, the actual processing of claims and the appeals process has improved over the same time period, largely due to legislation passed in December 1975.

Yet I continue to receive more legitimate complaints from constituents about social security programs—and in particular about the disability insurance program—than about any other Federal program. These concerns continue to deal with the long delays in disability claim determination; with the appeals process; and with the complicated, lengthy procedures involved in replacing missing benefit checks. Claims are still not processed promptly, often because of lack of adequate experienced and trained representatives in the district offices. In fact, in January of 1977 the median processing time was 220 days.

The Social Security Rights Act would insure that the SSA take the necessary steps to eliminate its hearing backlog—81,592 cases in January 1977—and to expedite benefit claim processing delays. It requires that initial and reconsideration decisions be made within 90 days. Hearing and appeals decisions on all social security claims must be made within 120 days. Claimants would have the right to receive benefit payments if their claims were not decided within these time limits.

The bill would enable benefit recipients to submit a request to replace a missing check if the regular payment were not received within 5 days of the regular delivery date. The SSA would be required to provide a duplicate check within 10 days or an explanation as to why the recipient is not entitled to it. This provision is directed at the often devastating effect of a lost check upon persons whose sole source of income is social security.

With increasing SSA responsibilities to administer not only social security, but supplemental security income—SSI—and now aid for families with dependent children—AFDC—Congress must not ignore the existing inadequate level of service to persons who have contributed regularly to their social insurance. This bill is well named. Americans who are eligible for social security have rights \* \* \* and these rights are earned. I believe the Social Security Rights Act will force both the SSA and the Congress to address in a realistic manner how new programs or program revisions can be administered by the SSA. I believe enactment will go a long way toward mak-

ing the SSA work for the people it was established to serve.

# SPERRY SOFTBALL LEAGUE

## HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. WOLFF. Mr. Speaker, I had the privilege on Saturday, May 21 to participate in a presentation made to the Sperry Softball League, in light of their outstanding achievement on behalf of the field of mental health and their warm and generous contribution to the Rehabilitation Institute, located in Mineola, Long Island.

In 1974, a small group of Sperry employees met to discuss how they might help local agencies which serve the handicapped. The idea which came out of this meeting was to hold a softball marathon which would raise funds to help one agency aiding the handicapped. The idea mushroomed within Sperry, and the first year over 350 employees participated in a game that lasted 29 consecutive hours, with 17 of those hours played in a torrential downpour.

Each year since that time, the community minded spirit within Sperry, and their deep compassion for the handicapped has built a larger and better Marathon. Each year, the concept behind the Marathon—concern and compassion for the handicapped—has been carried to more and more Long Island residents and has brought about greater understanding and acceptance of our handicapped neighbors.

The Sperry Softball League has shown others what caring for people is all about. They have helped to foster a more accepting environment on Long Island, in which the handicapped can live and work.

The Rehabilitation Institute—TRI—is a voluntary nonprofit organization founded in 1965. Its founders, Dr. Edmund Neuhaus and Mrs. Louise Friedman, whose diligence and hardwork have spurred the blossoms of the institute, have thus far placed over 1,300 rehabilitated clients in competitive employment and have returned hundreds more to healthy productive lives as homemakers. By virtue of its exemplary achievement, TRI has garnered the respect of its peers. TRI was awarded the 1976 program of the year award by the Long Island Rehabilitation and Counseling Association—the first award of its kind ever given.

Accepting the award for Sperry were vice president of personnel, Mr. Harold Dahl, and the commissioner of the Sperry Softball League, Mr. Lou Jaklitsch. Although both of these men work at full time jobs, they have evinced that there is always time to work and care for others. Other distinguished members of the marathon committee representing Sperry at the ball were Jim McDonald, Art Rommel, and Ms. Chris Lynch.

## CONSUMER ADVOCACY BILL

### HON. TRENT LOTT

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LOTT. Mr. Speaker, please permit me to call to the attention of my colleagues an editorial which recently appeared in the Laurel Leader-Call, an excellent newspaper serving south Mississippi. I think that this commentary states quite well my own reasons for feeling that the very last thing this Nation needs is an Agency for Consumer Advocacy.

The article follows:

#### CONSUMER ADVOCACY BILL

Along with the first crabgrass and dandelions of spring, that hardy perennial the Agency for Consumer Advocacy bill is popping up again. This year, the idea is to railroad it through Congress so fast that effective opposition won't have time to develop.

The ACA is an idea whose time has come and gone. Since its proposal eight years ago—when it was called the Consumer Protection Agency—there has been a revolution in consumer protection acts and regulatory reorganization. These new developments include the establishment of the Consumer Product Safety Commission, the Federal Energy Agency, the Occupational Safety and Health Administration, the National Highway Traffic Safety Administration, the Environmental Protection Agency, the Magnuson-Moss Federal Trade Commission Improvements Act, the Hart-Scott Antitrust Improvements Act, the Toxic Substances Control Act, the Medical Devices Amendments of 1976, the "Government in the Sunshine" Act, the Freedom of Information Act Amendments, and countless other consumer protection bills.

Consumer "advocacy" sounds like a great idea, in the abstract. It isn't until you get beneath the label that you learn what a bureaucratic farce the sponsors have in mind.

Consider the following list of functions for the agency, to which has been added, in parentheses, the existing governmental bodies responsible for the same function:

Plead the consumer's case within the government. (White House Consumers Advisor.)

Improve the ways rules and regulations are made. (Commission on Federal Paperwork; Office of Management and Budget; General Accounting Office)

Aid the President and Congress in identifying inefficient government programs. (All of the above.)

Help correct inequities in those programs that are designed to protect consumers. (Consumer Advisor; Paperwork Commission; Ombudsmen and Consumer Advocates in the various federal agencies and departments; senators and representatives)

Help fight inflation by monitoring governmental actions that unnecessarily raise costs for consumers. (Council on Wage and Price Stability)

Litigate on behalf of consumers in court. (Federal Trade Commission; Justice Department; Consumer Product Safety Commission; others)

The truth is, the ACA would have nothing to do with individual consumers. Rather, it would function as a taxpayer-financed mouthpiece and lawyer for self-appointed consumer activists.

The ACA would also have a license to in-

terfere in the proceedings of other federal regulatory agencies, which were themselves established to represent the consumer.

## MAHONING COUNTY COURTHOUSE "HISTORY OF LAW" MURALS TO BE HONORED IN EXHIBITION

### HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CARNEY. Mr. Speaker, the "spirit of the law" has never been more magnificently captured than through the four murals displayed in the Rotunda of the Mahoning County Courthouse in Youngstown, Ohio.

I am pleased to announce that the Williams College Graduate School of Art History in Williamstown, Mass., will be honoring the four murals in the Mahoning County Courthouse as well as other famous paintings by Edwin Howland Blashfield—1848-1936—during an exhibition in its museum of art in the month of February 1978.

Mr. Blashfield was a student of Bonnat in Paris and a member of all the leading painting societies in America and abroad. He was also the president of the American Federation of Fine Arts. Mr. Blashfield was given the place of honor in the Rotunda of the Library of Congress in Washington, D.C., and his paintings hang in some of the country's most notable buildings.

The paintings in the Mahoning County Courthouse were painted at the suggestion and under the direction of Charles F. Owsley, architect, in 1911, and with the cooperation of the building commission. The commission believed that the erection of this monumental building, expressing one of the highest forms of architecture, should include some recognition of the sister art, painting.

The four phases in the "history of law" are depicted in these paintings: The law of classical antiquity, the law of the Bible, the law of the Middle Ages, and modern law.

The first period is a picture showing the Shepherdess symbolizing the ruling force in the time of antiquity, which was "love and tenderness," as further expressed by the child holding the lamb.

The second painting shows the law of force by arms, during the Roman domination of the world. The next painting shows the "law of faith" during the medieval period when the church was the dominant force of law.

The final painting, and perhaps the most interesting one, shows "modern law," which is created by the people and for the people. This idea is forcibly brought out by the copy of the Declaration of Independence held up as a model for all nations, and under the right arm of the figure is the ballot box.

The small figure in this picture, standing next to a telephone and machinery,

conveys the fact that laws of all nations over all ages are fast becoming reduced to a common standard by reason of rapid communication and understanding among them.

Mr. Speaker, these paintings have served as an inspiration to all who have passed through the halls of the Mahoning County Courthouse. It is my pleasure to bring public recognition of these excellent works of art.

#### UNITED STATES BACKS DOWN AT SUGAR NEGOTIATIONS

**HON. ROBERT F. DRINAN**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. DRINAN. Mr. Speaker, the international negotiations between sugar producing and consuming nations in Geneva, which opened 6 weeks ago, are scheduled to end tomorrow. The purpose of this conference was the formulation of a new international sugar agreement to insure stable and fair prices for producers and consumers alike.

According to reports relayed to me from Dr. Lee Richardson, president of the Consumer Federation of America, who is serving as a consumer representative at the conference, it appears unlikely that an agreement will be reached before adjournment. In an effort to reach an accord, however, the United States has retreated substantially from its earlier bargaining position in the talks. The American delegation is now willing to agree to a floor price for sugar of 11 cents per pound, well above the current market price. Even more significantly, our delegation has compromised its demand that an extensive reserve supply of sugar be maintained to protect against sharply escalating prices. Early in the conference, the United States had proposed a reserve of four million tons; our delegates have now suggested 2.5 million tons, 37 percent less.

I realize, Mr. Speaker, that international commodity negotiations such as these require careful diplomacy and judicious compromises to obtain an accord acceptable to all parties. I am concerned, however, that the American representatives appear willing to make numerous concessions to the sugar producing states while receiving little in return to protect the American consumer against a repetition of the 1974 sugar boom when prices soared to more than 60 cents per pound. We should not agree to a price floor unless we obtain an accompanying price ceiling in return. I would prefer to see no international sugar agreement at all than to acquiesce in an accord which fails to represent adequately the interests of the American retail consumer.

I look forward to receiving the reports of Dr. Richardson and the other two consumer representatives who attended the Geneva negotiations when they re-

turn to the United States next week. I am hopeful that the contribution made by these consumer spokespersons will encourage the State Department to continue the practice of inviting qualified consumer representatives to attend future commodity conferences which relate to the interests of the American retail consumer.

#### U.S. COVERUP OF ARGENTINIAN TERRORIST INVESTMENT IN NEW YORK BANK?

**HON. LARRY McDONALD**

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. McDONALD. Mr. Speaker, recent investigations in Argentina have revealed that a group of Argentinian financiers, the Graiver group, which owned two banks in New York City and others in Latin America and Europe, used their banks and dummy accounts to transfer out of Argentina millions of dollars in kidnapping ransoms extorted by the Peronist Montoneros terrorist organization, and additional millions embezzled from the Argentinian treasury by deposed President Isabel Peron and her Finance Minister, Jose Gelbard, a member of the Graiver group now living in Washington, D.C., and resisting extradition. The Peronist Movement is broad enough to include the leftist Montoneros which collaborated with the Trotskyite Communist ERP terrorists, as well as unrepentant Nazis who fled to Argentina after World War II.

In this country the Graivers operated flamboyantly, gaining introductions to high level business and political circles by paying political figures large "consulting fees." Again, the involvement of Sol M. Linowitz, friend and adviser to Mr. Gelbard, with Latin American leftists is noted.

And I submit the following article exposing the current known facts of this affair for the particular consideration of my colleagues on the Banking Committee:

[From the Review of the News, May 25, 1977]

#### BANKING FOR TERRORISTS

(By John Rees)

Early this month the press of Argentina and Uruguay broke news of an enormous scandal involving an Argentinian international banking group (the Graivers) which invested millions of dollars obtained from kidnappings and extortion by the Montoneros terrorists, along with untold millions in public funds embezzled by a former Argentine President and her Minister of Finance, who were secretly in league with the Leftist terrorists. A New York bank was bought and used to provide the terrorists and their criminal allies with a "laundered" monthly income from the interest on their loot.

As a result of these manipulations, the American Bank and Trust Company failed—the fourth largest bank failure in U.S. history. David Graiver and his father, Juan, the leaders of the investment group, are reported dead. The larcenous President Isabel Peron

was deposed in March 1976 and is in jail awaiting trial; her Minister of Finance, Jose Gelbard, has taken refuge in Washington, D.C., and is resisting extradition with the help of influential figures in the Carter Administration.

Federal and state authorities have investigated the collapse of the bank and simply closed their investigations. Neither is anything likely to be done about the high-level political figures who were involved on the New York end of the Graivers' "terrorist investment service." Nevertheless, the public interest requires an examination of the evidence linking U.S. citizens to millions of dollars worth of assets belonging to Marxist-Leninist assassins.

The Graiver fortune was founded by Juan Graiver (father of David and Isidoro) and his brother Pedro, who emigrated to Argentina from Poland as boys. The Graiver brothers were backers of dictator Juan Peron and made their first millions in the early 1950s in real-estate speculation and construction before moving into banking in partnership with Juan's brilliant son David in the 1960s. In 1973, the Graivers and Jose Ber Gelbard were financial backers of Peronist President Hector Campora, who prepared the way for the return of Juan and Isabel Peron later in the year by legalizing the various Communist parties and releasing hundreds of jailed terrorists.

Peron's appeal for support was to the revolutionary Left, the radical student sector and the frenetic labor unions. During Juan Peron's exile (1956-1973), the Peronists had encouraged formation of the Montoneros terrorist organization, the armed wing of the Peronist Youth, which carried out vicious attacks on the Argentine military and on American-owned businesses and their executives. Key Montoneros received terrorist training in Cuba, as well as indoctrination in Marxism-Leninism. These terrorists soon criticized Peron for being too "moderate," and when Juan Peron chided them at his 1974 May Day rally, 30,000 Montoneros and their supporters stalked out of a mass rally in Buenos Aires.

After Peron died on July 1, 1974, the Montoneros and their crypto-Communist supporters among the Peronists planned to take absolute power via "popular struggle" and utterly defeat the Argentine conservatives and the military.

Meanwhile, the Montoneros-connected Jose Gelbard was Finance Minister in the Campora and the Peron Governments. He was also neck-deep in the Graiver banking operation. On Gelbard's advice, Isabel Peron established an account in Juan and David Graiver's Banco Comercial de la Plata in November 1972, six months before she and her husband returned to Argentina. In the name of the "Isabel Peron Cruzada de la Solidaridad." Then, as the Argentine newspaper La Nueva Provincia reported:

"Apparently in the spring of 1974, through the help of Jose Ber Gelbard, the Montoneros organizations deposited a \$17 million check of the United Swiss Bank in the La Plata Comercial Bank. Later this money, a product of kidnappings and robberies by Peronist armed bands, was deposited in two banks belonging to Graiver—the Banco de America del Sud and the Bank Pour l'Amérique du Sud of Belgium, and a third bank, the Suisse-Israel Bank, with which Gelbard, Broner and Graiver and other leaders of the group constantly worked."

These banks were closely linked with the American Bank and Trust Company (A.B.T.) in which David Graiver and his father soon purchased controlling interest for \$14 million, of which \$9 million was in cash. The

Montoneros terrorists, you see, had received a reported \$60 million ransom from the 1974 kidnappings of the Born brothers, Argentinian grain magnates, and there was need for serious cash management. The \$17 million Montoneros "investment," handled by the Graiver group, brought the terrorists a monthly income from interest of \$130,000.

In a May 4, 1977, press conference, Argentine President Jorge Videla said that the investigation of the Graiver group had been initiated by the Buenos Aires Provincial Police, who were conducting an investigation of illegal currency traffic. The investigation led to operations of the Graiver group and developed two aspects, one of them purely criminal and related to illegal currency traffic. "The second aspect, the most significant one," said President Videla, "is that this so-called Graiver group was working for subversion. It had received several million dollars to operate, both inside the country and abroad, for the benefit of subversion and with complete awareness of the origin of this capital."

The Argentinian government charges that deposed President Isabel Peron, with the assistance of José Gelbard, also diverted huge sums of public funds through the "Cruzada" account. It is believed that money from this account was in fact used by David Graiver in purchasing the American Bank and Trust Company; and that the New York bank was one of the means used to transfer the terrorists' ransom to other Graiver-owned banks in Belgium and Switzerland for exchange into "usable" currency.

As reporter Richard Karp observed in his meticulously researched articles on the collapse of the A.B.T. published by *Barron's* in December 1976: "How much money filtered out of the Argentine treasury into Isabel's account is anyone's guess. When the generals moved in on Isabel last spring, Economic Minister Gelbard fled to the U.S."

"El Grupo Graiver" did not operate in our country in a vacuum. When David Graiver, the portly, 35-year old Argentinian operator, moved to New York in 1975 to buy controlling interest in the American Bank and Trust Company, he had the help of many prominent political and financial figures from the "Liberal" Establishment. Papers obtained by our investigative news team establish links between one or more members of the Graiver group and Sol M. Linowitz, President Carter's Panama Canal giveaway architect; Mario Noto, the recently appointed Deputy Commissioner of the Immigration and Naturalization Service; New York City Mayor Abraham Beame; New York City campaign treasurer Howard Samuels, who placed the Carter campaign funds in Graiver's American Bank and Trust; New York City Democratic Party political bosses Mead Esposito and Patrick Cunningham; and, Theodore W. Kheel, a well-known labor negotiator who was on Graiver's payroll as a "consultant" at \$100,000 a year.

Others involved include Abraham Feinberg of New York and Phillip Klutznick of Chicago, both well-known Democratic Party fundraisers.

According to published reports, Graiver and his Banco Comercial de la Plata were provided with a letter of recommendation from U.S. Ambassador John P. Hill; from O.A.S. Secretary-General Alejandro Orfila, who received a large loan from A.B.T.; from former Secretary of State William P. Rogers; and, from former Citibank chairman George Moore.

Apparently no one publicly expressed curiosity about the origins of the \$9 million cash and the additional \$5 million in various securities with which the Argentinian banker bought controlling interest in American Bank and Trust. After all, such well-known

"Liberals" as Theodore Kheel were introducing Graiver into New York City political and financial circles.

Once in control of A.B.T. and its assets, Graiver began making heavy loans to his other ventures in Belgium, Switzerland, and Argentina. Graiver's New York political friends received loans, some of which were highly questionable, and received various "consulting fees." At the same time, A.B.T. received such plums as the Carter campaign account—which may or may not have been augmented as a means of purchasing political favor.

The bubble did not burst until August 1976, after the Montoneros, harried by the Argentine military Government which deposed Isabel Peron in March 1976, demanded the return of their illicit millions.

On August 6, 1976, a few days before the total collapse of the Graiver financial empire, David Graiver left New York's LaGuardia Airport with a pilot and copilot in a chartered Falcon jet. Headed for Acapulco, Mexico, Graiver was reportedly carrying \$28 million in negotiable securities. Around 2 A.M. on the following day, the jet went down in Mexico. The bodies of three occupants were burned beyond recognition. No flight recorder and no voice recorder were found at the crash site. A Mexican report refers to "tape transcriptions" of a pilot-to-tower conversation—but the tapes were erased before they could be audited by investigators, and the near automatic participation by the U.S. National Transportation Safety Board in the investigation of the crash of a flight which originated in the United States was curiously omitted.

Most damaging to the official Mexican report of the Graiver crash is a photo of the wreckage which shows part of the aircraft sitting amidst upright trees. As *Barron's* commented: "If the Falcon had careened into the wooded mountainside, it would have plowed those trees under like so many matchsticks. In other words, Falcon Jet 888 AR did not collide with a mountain, but simply fell out of the sky, possibly the result of an explosion in the air."

Relatives of David Graiver went to the accident site and "positively" identified the remains, which they quickly had cremated in violation of their religion. David Graiver had officially ceased to exist, but the possibility remains that he may have staged the crash and vanished (perhaps) during a refueling stop.

With David Graiver declared dead, the investigations into the operations of the American Bank and Trust Company commenced. In its December articles, *Barron's* informed the American financial community that the Graiver-controlled A.B.T. had been "robbed of its assets via massive borrowing on behalf of dummy companies" and that the Graivers had stolen depositors' money by diverting it into fake investments. The article concluded, "the ingenuity of those who looted the bank was matched only by the laxity of those charged with watching it."

In Argentina, where the investigation of the Graiver group's operations is continuing, many of its members are under arrest. These include Lidia Papaleo de Graiver, David's wife or widow; Isidoro Graiver, his brother; and David's uncle, Pedro Graiver. Their assets, and those of other Graiver group members including Eva Gtznacht de Graiver, Enrique Brodsky, and Jorge Rubinstein, have been frozen by the Argentinian authorities.

Since it is now apparent that a major criminal network and terrorist support apparatus was operating via the Graivers' banking interests in New York, Buenos Aires, Belgium, and Switzerland, it is appropriate

to examine those who were associated with them. They include:

Sol M. Linowitz, who according to a January account in the Buenos Aires daily, *La Nacion*, has acted as José Gelbard's U.S. attorney, claiming that Argentina's request for his extradition is part of an anti-Semitic plot. This has since been denied by a spokesman for Mr. Linowitz, who stated that although Ambassador Linowitz knew Sr. Gelbard, they had no professional relationship.

Maybe so, maybe not. When the Argentinian Government made its formal request for Gelbard's extradition in December 1976, the radical Council on Hemispheric Affairs (C.O.H.A.), directed by New School professor Larry Birns who has been active in pro-Castro endeavors, rallied to Gelbard's support. Since a number of those involved with C.O.H.A. have in the past acted as "Linowitz surrogates" in producing distillations of the Linowitz Commission recommendations (financed by the Ford Foundation), C.O.H.A. may reasonably be thought to have acted as a "Linowitz surrogate" in aiding Gelbard.

Castroite Birns charged that the extradition request was "an act of political subterfuge" and suggested that anti-Semitism was involved. Meanwhile *Argentine Outlook*, a newsletter with which Birns is connected, has been supporting revolutionary "political prisoners" in Argentina and has charged that the Argentina anti-Communist military Government is "fascist," "reactionary," and deliberately anti-Semitic.

Mario Noto, prior to his taking office as Deputy General Counsel of the Immigration and Naturalization Service on May 16, 1977, was José Gelbard's Washington, D.C., attorney.

Mayor Abraham Beame of New York, between his terms as City comptroller and mayor, was a director of Graiver's American Bank and Trust and head of the bank's finance committee.

New York City Democratic Party political bosses Mead Esposito and Patrick Cunningham both received fees from Graiver's A.B.T.

Former Secretary of State William P. Rogers, former Citibank chairman George Moore, and Organization of American States Secretary-General Alejandro Orfila provided friendly references as to David Graiver's integrity. Perhaps coincidentally, Secretary-General Orfila received a \$300,000 loan from A.B.T.

Theodore W. Kheel, the prominent New York labor negotiator, received a \$25,000 quarterly stipend from David Graiver for "advice and consultation." He also helped, and was helped by, the Graivers in making several major investments.

Howard Samuels, a former New York State gubernatorial candidate, former head of the Off-Track Betting operation in New York, and Jimmy Carter's state finance chairman, used the A.B.T. for the safekeeping of Carter campaign contributions. This may be one reason why the Argentinian press has speculated that the Graivers or their bank were themselves contributors to the Presidential campaign of James Earl Carter Jr.

Republican Party political boss Vincent Albano received from the Graivers some \$7 million in cash for his controlling stock in the Century National Bank and Trust Company. Graiver subsequently borrowed \$500,000 from Century and pledged his Century interest against some of his massive borrowings from A.B.T.

Abraham Feinberg was chairman of A.B.T. when it closed its doors last September. Phillip Klutznick was A.B.T.'s chairman from 1963 to 1972, and was also chairman of the Swiss holding company that sold A.B.T. to Graiver. As Richard Karp commented in *Barron's*:

"All of these big loans to Graiver had to be approved by ABT's board of directors or its executive committee, or at the very least by some high officer or a director such as Abe Feinberg, Stanley Kreitman, Saul Kagan, Jose Klein (who kept his seat) and Alexander Szasz (Klein's right-hand man)."

"Even if one grants that David Graiver simply hoodwinked the officers and directors of ABT into lending him large sums of money, it is unlikely that he could have acted alone in diverting deposits in ABT to his numerous dummy operations overseas. Huge sums flowed through ABT as time deposits and wound up as 'investments' in Graiver's deep pockets in other countries. Who were his accomplices? That remains a mystery."

But, of course, that is not the only mystery, or the only unanswered question. Others of paramount concern are:

Why was the F.B.I. investigation of the Graivers' New York operation closed?

Was José Gelbard the contact between American Bank and Trust and the Argentinian terrorists?

How did José Gelbard achieve "political refugee" status in the United States, and why was this extended to his son, Fernando?

Were Fernando Gelbard and David Graiver partners, and are Fernando Gelbard's recent trips to Switzerland related to Graiver family businesses?

What investments are the Gelbards now making in the Los Angeles area? With whose money?

What is the status of the F.D.I.C. report on these outrages, and how will investors in American Bank and Trust be reimbursed?

Did the Graivers and Gelbard hold a meeting in mid-1976 with Robert Vesco in Santa Domingo to form Overseas International Services?

What is being covered up and who is being protected?

The answers to these and other questions are known to a small and decreasing number of people. David Graiver has vanished and is presumed dead; his father, Juan Graiver, has now been reported dead; two lawyers intimately involved in the Graiver-Gelbard relationships have died mysteriously.

Fortunately others who know this story, and who have documentary evidence, are alive. Now that well-organized terrorists have learned how to operate through our banking system, it is imperative that those who know the full details of these transactions provide public testimony. Conservatives are urging Senators William Proxmire and Congressman Henry Reuss, respective Chairmen of the Senate and House Banking Committees, to look into these matters at once.

ROBBIE FTOREK

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MOAKLEY. Mr. Speaker, this week, Robbie Ftorek, a 152-pound, wiry, towheaded young man from Needham, Mass., was named the most valuable player in the World Hockey League. The smallest player in the entire WHL, Ftorek has earned the same trophy which in past years had belonged to other hockey greats such as Gordie Howe, Bobby Hull, and Marc Tardiff.

Ftorek's story begins back at Needham

High School and continues through a spectacular performance at the 1972 Olympics. Rejected by the National Hockey League because of his weight, he emerged in the past 2 years as one of the Nation's premier players. His determination, talent, and assertiveness was especially visible during his team's performance in the Canada Cup when he was Team U.S.A.'s most valuable player.

Gordie Howe, during the presentation of the award at The Club in New York's World Trade Center, said that Ftorek, "had been an inspiration" to all of New England's upcoming crop of junior hockey players. More than that, Ftorek's accomplishments on the ice have done a good deal in promoting New England's already burgeoning reputation as the home of tremendous high school and college hockey talent. Recruiters no longer have to spend months exclusively in Canada evaluating just Canadian talent. New England high schools and colleges are offering the best competitive hockey programs in the Nation.

I salute Robbie Ftorek; his determination, skill, perseverance, and professionalism have done a great deal in bringing New England to the forefront in American hockey.

#### FOREIGN OIL TANKERS HURT THE AMERICAN ECONOMY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. EILBERG. Mr. Speaker, in recent days I have taken the opportunity to acquaint my colleagues in the Congress with the problems which are caused to the United States by foreign oil tankers.

The damage being done to the American economy by the carriage of so much of our oil imports in ships flying the flags of other nations is one of the most serious aspects of this problem.

So that my colleagues will be aware of the gravity of the situation, I am placing in the RECORD a copy of a fact sheet which has been provided to me by the U.S. Maritime Committee to Turn the Tide—a committee composed of shipping companies, unions and land-based industries which support our merchant marine:

#### FOREIGN OIL TANKERS HURT THE AMERICAN ECONOMY

While the United States strives for domestic energy independence, we rely greatly on imported oil transported in foreign flag tankers. We are producing about one million fewer barrels of oil a day than in 1973, and importing a million more. Our dependence on foreign oil imports is growing daily.

The U.S. is now importing 45% of its oil. 96% is carried on foreign flag tankers.

Next year our oil bill to foreign nations will come to perhaps \$40 billion. We pay \$1 billion alone to foreign flag tankers to carry our imported oil. By contrast, U.S. flag tankers return 71¢ of every dollar they receive back to our economy. This negative balance of payments position has recently effected the worst trade deficit in our nation's history.

Foreign flag oil tankers are used by multi-

national companies to shelter earnings from petroleum production, refining and distribution.

No one knows what it actually costs multinational companies to ship oil to the U.S. on foreign flag tankers. Rather than reflecting true operating costs, it appears that transportation prices are no more than artificial numbers set to enable multi-nationals to transfer the greatest possible profits to their foreign flag of convenience shipping subsidiaries. These enormous profits basically are beyond the reach of American taxation.

Most other maritime nations have recognized the economic benefits to be derived from a cargo preference policy, as evidenced by the adoption of various forms of cargo preference by 38 nations. Among them are France, Spain, Japan, Venezuela and the Arab oil exporting nations.

It's time to turn the tide in favor of the U.S. economy and the U.S. taxpayer. We need to support a cargo preference program that would give U.S. tankers a greater share in the transportation of our oil imports.

#### WHY IS THE MIGHTY SOVIET UNION AFRAID OF THE FRAIL SEMYON GLUZMAN?

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. KOCH. Mr. Speaker, on numerous occasions one after another of my colleagues has stood up and asked why the Soviet Union will not let Soviet Jews emigrate to Israel. Why does the mighty Soviet government expend so much energy harassing and repressing Jews who request permission to leave? Today I rise on behalf of a Soviet prisoner of conscience, Semyon Gluzman, who dreams of going to Israel but who languishes in a Soviet strict-regime labor camp for his decency and his dreams, and I again ask the same questions.

Dr. Gluzman is a 29-year-old psychiatrist who graduated from Kiev Medical School in 1968 and was offered a position as a psychiatrist at the Dnepropetrovsk Special Psychiatric Hospital, where Leonid Plyusch was being held at the time. Because he recognized and refused to be associated with the morally depraved Soviet practice of committing healthy political prisoners to psychiatric hospitals and medically treating them for insanity, Dr. Gluzman declined the position.

In 1971, Gluzman joined two fellow psychiatrists, who remain anonymous, in writing an alternative psychiatric diagnosis in absentia for Gen. Pyotr Grigorenko in which they rejected the official finding that Grigorenko was mentally ill. For this action motivated by human decency, Gluzman was convicted of "anti-Soviet agitation and propaganda," a standard catch-all charge commonly leveled at political dissenters, and sentenced to 7 years in a strict regime corrective labor camp.

While incarcerated, Dr. Gluzman has been strongly influenced by his fellow Jewish prisoners and ardent Zionists Anatoly Altman, Hillel Butman, Leib Knokh, and Lev Yagman, from whom came his dream of becoming a resident

and citizen of Israel. In October 1975 Gluzman wrote to his parents:

I am a Jew, and my Judaism speaks for more than memory—memory of the victims of genocide and of the persecutions caused by prejudice become dogma. My Judaism lies in the knowledge of our people as they are today, with their own State, their own history and, happily their own weapons. My Uncle Abram who was shot at Babi Yar did not grant me any "reconsiderations." Every September my spirit seethes with indignation for him. You know why.

In denying its citizens, Jewish and people of other faiths alike, the freedom to emigrate, the Soviet Union not only violates the Helsinki accord, to which it is a signatory, but it violates a fundamental and universal right, for without freedom to emigrate, the individual does not have a choice between embracing the principles of government under which he was born and seeking a different form of government elsewhere. Without that choice, there can be no genuine freedom, democracy, or legitimacy to a nation.

Again, I ask, why is the mighty Soviet Government afraid of a handful of people who wish to leave, who would no longer be in the U.S.S.R.? Perhaps the Soviet rulers are not afraid of them, as such, but of the influence they might have over the millions who remain—of the massive discontent that is locked away in their hearts and of the widespread protest that would erupt if that discontent came to the surface.

If the Soviet Union is the mighty world power it purports to be, then it should not be afraid of people like Semyon Gluzman. We cannot rest until all the people who wish to leave the Soviet Union are allowed to go.

#### HATCH ACT

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. DERWINSKI. Mr. Speaker, one of the obvious factors in the debate and ultimate vote in the House on the Hatch Act issue is the great preponderance of editorial opposition to H.R. 10.

In fact, outside of the Washington Post whose support of the bill is conditional, editorials across the country have been appearing in one voice against the emasculating of the Hatch Act.

Typical of the editorial commentary is one broadcast by WBBM, CBS Radio, Chicago, on May 18, in opposition to changes in the Hatch Act. The editorial follows for the review of the Members:

#### HATCH ACT

We are opposed to changes in the Hatch Act that would allow federal employees to participate in political campaigns by working directly for candidates or seeking office themselves. Changing the current restrictions on the political activity of civil servants would open the door to too many chances for abuse.

The House of Representatives is ready to vote on a bill allowing civil servants to participate more fully in the political process. But they have enough access to the process right now. They can contribute to cam-

paigns and they can, of course, vote. But they can't have a working involvement in campaigns and they shouldn't.

The Hatch Act was written to protect civil servants from political abuse but these changes could let them in for terrible trouble. Although the bill includes provisions prohibiting bosses from coercing employees or conducting political business on government time, it would be very difficult to prove that anyone had broken the law. As all of us who have ever worked in an office know, it's easy to exert pressure on co-workers very subtly.

Some civil servants might indeed have a better understanding of who should be elected to office and why. But their first job is to keep the government running smoothly in spite of the changes in political leadership at the top. And that's the way it should stay.

#### USDA HONORS POWELL COUNTY RURAL DEVELOPMENT COMMITTEE

### HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BRECKINRIDGE. Mr. Speaker, I rise today to honor a select group of fellow Kentuckians from neighboring Powell County, Ky. The Powell County Rural Development Committee has been singled out by the U.S. Department of Agriculture to receive a Superior Service Award at the 31st Honor Awards Ceremony presented by our friend, the Secretary of Agriculture, Bob Bergland.

This national recognition for the Powell County Rural Development Committee is being presented for the committee's service as a dynamic catalyst and a followup resource in stimulating involvement, by many Kentuckians, in projects which have dramatically improved the social and economic well-being of Powell County, Ky.

As chairman of the Congressional Rural Caucus, a member of the Family Farms and Rural Development, and Special Studies Subcommittee of the House Agriculture Committee, and one who is deeply interested in rural development, I am honored that my neighbors in Powell County have been singled out by Secretary of Agriculture Bob Bergland to receive this award. The Powell County Rural Development Committee has had a long record of involvement in rural development since its beginnings in January of 1962. One of the main reasons for its effectiveness, in a rural county in the Appalachian foothills with a total population of over 7,700, lies in the fact that its members have been an integral part of every community development effort in the county during the last 14 years.

I understand that the achievements of the committee are long and varied, its activities including the construction of an 80-bed nursing home; the development of a dental health education program; the establishment of a well-baby clinic and a rescue squad, enrolling over 30 volunteers in an emergency medical technicians school; support of the annual Red-Reiver clean-up program; en-

couragement of the fiscal court to purchase the necessary equipment to meet State landfill standards; the preparation of an environmental inventory for a sewer and water plan for the community; the planning of a nature study center and the organizing of a successful effort in establishing a city park; work with local leaders in improving community water systems and better sewage disposals; pushed for and established a local radio station, adult education classes at local schools, vocational education classes, and local craftsmen classes, for local forest products.

As you can see from this impressive record, Mr. Speaker, the Powell County Rural Development Committee has distinguished its citizens, the State, and the Nation, in their worth-while endeavors on behalf of their community. I am pleased to recognize the members of the committee, a list of which is attached below, for their fine work and outstanding achievements—exemplary achievements which should constitute a challenge to us all:

#### POWELL COUNTY RURAL DEVELOPMENT (INTER-AGENCY) COMMITTEE

Barbara Crabtree, Ky. Dept. Human Resources.

Doug Fig, U.S. Forest Service.

Robert Friel, Powell County School.

Dan Grigson, Coop. Ext. Ser.

Grace Marsh, Bur. Rehab.

John Moore, U.S. Forest Service.

Ronald Ray, FmHa.

Rae Rogers, Comp. Care Ctr.

Glyn Skidmore, Ag Stab. & Conserv. Ser.

Rose Swope, Coop. Ext. Ser.

Jackson Taylor, Coop. Ext. Ser.

Roger Wiedeberg, Soil Conserv. Ser.

Ann May Howard, Ky. River Foothills Council.

Mary Lavin, Powell Co. Manpower Office.

#### THE FOUNTAIN SQUARE SENIOR CITIZENS CENTER

### HON. DAVID W. EVANS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. EVANS of Indiana. Mr. Speaker, the Fountain Square Senior Citizens Center which is located in the Sixth Congressional District at 901 Shelby Street in Indianapolis celebrated its fourth anniversary on May 21, 1977.

Since the center opened in 1973, it has provided senior citizens on the southside of Indianapolis a place to relax, meet their friends and share the companionship of other senior citizens through various activities.

There are two individuals associated with the center who deserve special recognition for their commitment and dedication to the success of the center.

As director, Mrs. Betty Sexson has given above and beyond the call of duty to assure the Fountain Square Senior Citizens Center never closes to those who need its services.

Another person who must be commended for their work with the center, is Mr. George Cafouros, who publishes the Southside Spotlight, a weekly community

newspaper. Mr. Cafouros has used his newspaper as a vehicle for community service by publicizing the center and when it was short on funds he assisted in raising several thousand dollars so the center could stay open.

As a member of the Select Committee on Aging in the House of Representatives, I am committed to helping our older Americans and will continue to be of assistance to the Fountain Square Senior Citizens Center.

Mr. Speaker, while congressional business prevented me from attending the fourth anniversary celebration of the Fountain Square Senior Citizens Center, I wanted to make my colleagues aware of the dedicated and hardworking people which reside in Indiana's Sixth Congressional District.

#### THE GREAT TUNA-PORPOISE WAR

### HON. HELEN S. MEYNER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mrs. MEYNER. Mr. Speaker, the "great tuna-porpoise war" has been in progress now for over 5 years. Its earliest beginnings go back some 25 years when the Japanese tuna industry was offering such stiff competition that our tuna fleet decided to switch to the purse seine method of "on porpoise" fishing from large netboats costing about \$5 million each. The rewards for this capital investment were great: Just one of these sleek vessels returning from a 3-month cruise can expect to sell a full load of tuna for about \$1 million. The lucrative profits, reminiscent of those earned by New England whalers in the 19th century, have drawn giant, multinational corporations into the business. Today, in the tuna fishing waters of the eastern tropical Pacific, few foreign boats can compete successfully with our efficient fleet.

But at what environmental cost. Since the introduction of the new method, approximately 6 million porpoises have been drowned in the great purse seine nets of the American tunaboats.

Five years ago, the tuna-porpoise controversy began in earnest with the passage of the Marine Mammal Protection Act. The Federal Government then gave notice to the industry that the slaughter of porpoises would have to be "ratcheted" downward, with zero incidental mortality the ultimate goal.

Progress in enforcing compliance with the act has been less than encouraging. Since 1972, with a 1-year grace period granted by Congress and 3 years of an indulgent, dilatory administration, tuna boats have drowned an estimated 800,000 porpoises.

Encouraged by their success in delaying the enforcement of the act, the tuna industry has now repeated its insistence that more time is needed for compliance. We have a bill before us (H.R. 6970) that would further extend the over 100,000 per year allowable kill.

The March 1 quotas released by the Department of Commerce of the new

administration provoked the tuna industry. Tunaboat owners "beached" their boats and threatened to transfer their vessels to foreign flags. Cannery employees, pawns in the struggle, have been laid off by the thousands in California and Puerto Rico. Price increases of 20 to 50 percent for a can of tuna have been predicted by the industry. On the other side, environmentalists have called for a consumer boycott of tuna.

While I am deeply concerned about the supermarket cost of a can of tuna in America this summer, I am more worried about another aspect which in the heat of this internal struggle we tend to overlook. How does American permissiveness of the slaughter of porpoise look to other countries? Porpoise, a cheap source of protein, is needed and used by other countries for human consumption. We talk with compassion of feeding the world's starving people, but we leave 6 million porpoise for the sharks.

Crucial diplomatic negotiations are scheduled this month for the protection of marine mammals. In Australia, the International Whaling Commission meets shortly. What of our insistence to Japan and the U.S.S.R. that they adhere to strict "management procedures" in bringing about the replenishing of the world's depleted stocks of whales? Can we expect them to comply when we ourselves refuse to "back off" of another cetacean? In California, the Inter-America Tropical Tuna Commission convenes in June. Can the United States expect Central and South American members to accept tough restrictions on the killing of porpoise if we ourselves refuse to improve our record?

Legislation is before us, Mr. Speaker, which would undercut the Marine Mammal Protection Act, extending for 2 more years the indulgence which the tuna industry has used to excellent advantage for the last 5. The passage of this bill would simply indicate to other nations whom we face at the negotiating tables that we do not take seriously our talk about protecting marine mammals. If we do not, why should they?

#### PRESIDENT CARTER'S NEW ARMS TRANSFER POLICY

### HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. SIMON. Mr. Speaker, President Carter's new arms sales policy which is based on a presumption against such transactions is a step in the right direction.

I am particularly pleased to note that the President is committed to a reduction in the sale of our arms export business, to limiting the transfer of advanced weapons and their technology, to curbing the sales promotion activities of American arms merchants—Government and private—and to convening an arms suppliers' conference to discuss multilateral action in this field.

I strongly support this new policy. It

deserves the commendation and support of the Congress.

This new policy is a great advance. But we need to consider going further in some areas. Specifically we should look into setting an overall limit annually for all our arms transfers, perhaps around \$9 billion as a starter; setting regional sublimits within the overall figure; and confirming arms transfers exclusively to official channels.

#### REPRESENTATIVE LINDY BOGGS RECEIVES HONORARY DEGREE FROM SAINT MARY-OF-THE-WOODS COLLEGE

### HON. JOHN BRADEMÁS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BRADEMÁS. Mr. Speaker, one of the most popular and respected Members of the House of Representatives is our distinguished colleague, CORINNE C. Boggs, better known as LINDY, representing in Congress the Second District of Louisiana.

Many of us in the House of Representatives have known LINDY and knew her late husband, the distinguished majority leader of the House, Hale, for many, many years and few persons have contributed so much to the service of the House and to their country than Hale and LINDY Boggs.

Since coming to Congress in 1973 to succeed Hale, LINDY has been an outstanding leader in a wide variety of areas of concern.

I am delighted therefore, Mr. Speaker—and not at all surprised—to note that on May 8, 1977, LINDY Boggs was awarded an honorary degree by Saint Mary-of-the-Woods College, Ind.

I insert at this point in the RECORD the remarks of Mrs. Thomas Walsh, a graduate of Saint Mary-of-the-Woods College, who lives in Washington, D.C., on the presentation of this honorary degree to our distinguished colleague.

TESTIMONIAL FOR CORINNE CLAIBORNE BOGGS, MEMBER OF CONGRESS, SAINT MARY-OF-THE-WOODS COLLEGE COMMENCEMENT EXERCISES, MAY 8, 1977

Lindy Boggs, the first woman to chair the national convention of a major American political party, has compiled an impressive record on behalf of justice in the political forum.

Born to a politically active Louisiana family, Corinne Claiborne met her future husband, Hale Boggs, at Tulane University. With their marriage and his subsequent election to Congress, Lindy Boggs was thrown into grass roots political activity, becoming an active campaigner for causes and candidates at local, state and national levels.

Her years of volunteer activity and the political savvy that developed with them were recognized in March, 1973 when—following the disappearance of her husband's plane over Alaska the previous October—Lindy Boggs was elected to his seat in Congress by 81 per cent of the voters in the second district of Louisiana. She was overwhelmingly elected to a full term the next year.

During her four years in the House of Representatives, Congresswoman Boggs has

sponsored measures in the fields of housing, health, energy research, credit rights and education. While justice for all Americans is her primary interest, she has had a special concern for the advancement of women.

Significant activities in the area of women's rights include votes—in the 93d and 94th Congress:

For the Federal Aid to Education amendments, including Title IX;

Against the Casey amendment which would have weakened Title IX provisions;

For an amendment which allowed women to enter the service academies;

For the Equal Credit Act (which she co-sponsored);

For both the initial passage and override of the National Health Revenue Sharing Bill, which she co-sponsored and which provided for a National Center for the Prevention and Control of Rape;

For the passage of an override of the School Lunch Amendment which provided for continued support of the Women, Infants and Children feeding program; and

For the Small Business Administration Amendments, which prohibit discrimination against women in the granting of small business loans.

Her current House appointment is a seat on the Appropriations Committee, which is designated an "exclusive committee" requiring resignation from any other committee appointment. Previously, Rep. Boggs served on the Banking and Currency and House Administration committees. The Joint Committee on Bicentennial Arrangements, which she chaired, expired at the end of 1976. Congresswoman Boggs is also a member of the Board of Regents of the Smithsonian Institution.

The Democratic Party recognized Lindy Boggs' many contributions in 1976 when she was named Chairwoman of the Democratic National Convention in New York, the first woman to hold that position in the history of major American political conventions.

A number of distinguished institutions have also honored Lindy Boggs for her contributions. She was named one of ten outstanding persons for 1976 by the New Orleans Institute for Human Understanding and was the first recipient of the AMVETS National Auxiliary Humanitarian Award. In 1976, St. Mary's Dominican College of New Orleans awarded her its Distinguished Service Medal, and, in 1975, Trinity College of Washington conferred upon her an honorary doctorate of public service. She has also received the Weiss Memorial Award from the National Conference of Christians and Jews and the Mother Gerard Philan Gold Medal given annually to an outstanding woman by Virginia's Marymount College.

From grass roots organizing to national prominence, Congresswoman Lindy Boggs, an active and dedicated Catholic woman, has served her country with vigor and distinction. It is in recognition of her service and her dedication to justice that I proudly present U.S. Rep. Lindy Boggs as a candidate for an honorary degree from Saint Mary-of-the-Woods College.

#### PROPOSED AGENCY NOT NEEDED TO PROTECT CONSUMERS

**HON. TOM HAGEDORN**

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. HAGEDORN. Mr. Speaker, a perceptive article on the proposed Consumer Protection Agency in today's Wall Street Journal points out, quite correctly in my opinion, that the critical issue for

debate is whether or not the taxpayer should be made to support another Federal agency simply because the ones that are already being supported have not fulfilled their legislative mandates. As James G. Reynolds, the vice president of American Bakeries Co., notes, every existing Federal agency was originally charged, in most cases explicitly, with upholding the very "public interest" that the CPA is now supposed to uphold.

Why, if these agencies have failed to perform their functions properly, is it to be expected that a new agency will do any better? What are the structural differences between the CPA and other less rarefied agencies that would suggest that they will succeed where others have failed? Why not reform existing agencies rather than attaching a new one to the Federal bureaucracy? Until some of these questions can be answered satisfactorily, it is incomprehensible to me that Congress could blithely create a new governmental body certain to inflict new burdens upon the people. As Mr. Reynolds aptly puts it—

No organization in possession of even half its senses would conceive of solving such a problem by hiring another permanent staff with authority to advocate the interests of the organization and force the responsible employees to do their jobs properly.

In other words, the whole business of Government is supposedly the public interest. If our elected and appointed officials are not performing properly, replace them. Do not punish the public further by yoking upon them a new body. At this point in the RECORD, I include the full text of Mr. Reynolds' remarks:

#### PROPOSED AGENCY NOT NEEDED TO PROTECT CONSUMERS

(By James G. Reynolds)

Arguments against a Consumer Protection Agency have largely centered on the practical problems of implementation, i.e., how the agency would determine who is the consumer and how is he to be protected. These arguments are all well and good, but they miss the larger and more fundamental reason why Americans should oppose creation of this agency.

The express purpose of the proposed law, as announced by its sponsors, is to establish a federal agency to represent the interests of the consumer in federal agency proceedings. If the purpose is sound (it rings bells of Catch-22 to me), then the malaise is the failure of federal agencies to perform their legal and constitutional mandates.

In general, each federal agency was created for the express purpose of assuring that transactions which were to be the subject of such agency's power be conducted in the public interest to promote the greatest public justice in an area that might otherwise be subject to abuse if left in unfettered private hands.

This purpose is necessary to justify the birth of a government agency and to support its continued existence at the taxpayers' expense.

Taxpayers and consumers are identical. Tax-paying citizens are the same people who buy goods from businesses regulated by the FTC. What purchaser of securities is not already supposed to be represented by the mandate of the SEC? Is there a consumer of foods and drugs who is not now paying taxes to support a huge FDA staff whose legal duty is to regulate foods and drugs in his interest? The FTC and the FCC are there to assure that utilities and broadcasters provide full, fair and efficient service

under monopolistic conditions. For whose benefit? Consumers. Taxpayers. You and me.

From a tactical point of view it may seem logical to establish a federal agency to represent the consumer in federal agency proceedings. But philosophically, it's wrong. Maybe the agencies aren't doing their jobs. Perhaps they are influenced too much by special interests, and another system is required to channel the special interest of the consumer.

But why are taxpayers being told they need to pay for another agency just because the ones they are already paying for are not fulfilling their legal mandates, their constitutional purposes?

I suggest the people be told that another layer of government is required because the bureaucratic layer is out of control. The people should be told that our administration and our Congress do not know how to solve this problem from within the agencies. We don't know how to constitute our agencies so that they will perform their legal mandates.

The people should be advised that the purpose of this proposed agency is conceptually different from the normal management control functions of auditing and review necessary to assure continued performance by people we believe to be doing a good job right along. The purpose of the new agency is to cause (force) the responsible agency officials to do the job they are already supposed to be doing. The bill approved by the House Government Operations Committee would permit this proposed agency to sue other federal agencies.

It is inconceivable that a private organization would seek to solve a problem in one department by hiring a separate staff to force that department's employees to do their jobs properly. If a breakdown in performance were perceived to be complex or widespread, management might commission an outside group to study the situation.

And suppose this hypothetical outside group were to report that the purchasing department was overly influenced by suppliers bearing Super Bowl tickets, that the finance department was being swayed by bankers bearing low-interest personal loans, that production and engineering staffs were beset by equipment dealers offering free color TVs on the side?

No organization in possession of even half its senses would conceive of solving such a problem by hiring another permanent staff with authority to advocate the interests of the organization and force the responsible employees to do their jobs properly.

The responsible employees in purchasing, for example, know their job is to obtain high quality goods and services at the lowest cost, and to ignore suppliers bearing gifts. If a private organization were to pay people for not performing their jobs and also pay another group to force them to do their jobs, the inevitable result would be the deterioration and eventual ruin of the organization. Maintaining the organization would become too costly, and maintaining employee attitudes and spirit so necessary to continuing vitality would be impossible in light of management's acquiescence to large-scale non-performance.

Federal agencies are no different. Responsible agency employees know their jobs and their duties. The administration and the Congress, through existing offices and monitoring committees, should force the agencies to perform their duties in the first instance through proper budgeting, auditing, performance standards review and by firing people who are not doing their jobs properly.

Or have the federal agencies become so large, cumbersome and otherwise entrenched that we have several very expensive, uncontrollable monsters on our hands? Are matters so irreversible that what we really need for effective control is a regulatory advocacy

agency to regulate the regulators? And in due time, who regulates the regulatory advocacy agency?

The Consumer Protection Agency is wrong, not so much for what it would try to do, but because it admits to an incurable state of affairs within our government. We cannot as a nation afford to support a government that cannot control itself.

#### INTRODUCTION OF THE COAL SUBSTITUTION INCENTIVE ACT OF 1977

**HON. WILLIAM S. MOORHEAD**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, this year, 1977, we will be spending at least \$38 billion for foreign oil. We must do so in order to keep our cars moving, our industry and utilities operating, and our homes warm and lighted. The most oft-quoted statistic, concerning our energy situation, stresses our growing dependence on imports which now exceed 40 percent of our total domestic oil demand.

It has become increasingly clear to the American people that such dependence is fraught with economic danger. The threat of increased prices and a restoration of the embargo, and all they imply in terms of economic disruption, are problems with which this Congress must deal. Indeed, in his energy message of April 29, President Carter pointed out in stark terms the degree of our commitment to oil and gas with which to operate our society, and equally so, our definite need to reduce such dependence as fast and as complete as the transition to other energy sources will permit.

For the record, it is important to note that industry and utilities used 4.8 million barrels of oil per day, and 5.9 million barrels of oil equivalent per day, in the form of natural gas, in 1976. The rate of consumption will probably be even higher this year. Both resources are, however, scarce in availability. Moreover, both are needed by other elements of our economy to as great a degree as industry and the utilities represent. For that reason alone, it makes eminent good sense to promote conversion to other energy forms as quickly as possible. This can be done by turning to more abundant sources such as coal, which makes up 90 percent of our conventional energy reserves, but supplies only 18 percent of our energy consumed.

Mr. Speaker, we must ask ourselves how we can proceed to increase the demand for the use of our coal resources. Certainly, we should do all we can to remove those constraints which have held back such demand for this energy source in the past.

Mr. Speaker, one such constraint has been the obvious cost incurred by the user to meet necessary environmental standards, particularly those involving direct burning. The Clean Air Act of 1970 established high air quality requirements. The Edison Electric Institute has estimated the cost to utilities to be at

least \$1.7 billion annually to meet those standards. These are imposing figures, but if we are to shift from oil- and gas-fired systems to those based on coal, it is clear to me that we must also provide suitable incentives and assistance to industry in its quest to accomplish such a massive undertaking.

Mr. Speaker, this is why I am introducing the Coal Substitution Incentive Act of 1977.

This bill, if enacted, would provide up to \$500 million annually in loan guarantees and \$100 million in low interest loans to companies shifting from oil and gas to coal. The funds made available would be for the acquisition of pollution control systems.

The legislation foresees a 10-year conversion effort, thus, the limits of these incentives could be \$5 billion in guarantees and \$1 billion in loans.

Mr. Speaker, as chairman of the House Banking Subcommittee on Economic Stabilization, I have devoted considerable effort to the review and examination of loan guarantees as forms of credit assistance, and as a means of reallocating our resources. This legislation I introduce today incorporates all of the acknowledged safeguards identified by our efforts that are intended to minimize the risk of Federal revenue loss should any default occur.

Mr. Speaker, President Carter has told us our energy problem has taken decades to grow, and may take decades to solve. I believe we can move toward that solution only if we recognize the nature of our problem, and only if we begin the task of its solution today. The equation is quite simple: We must reduce foreign oil and gas imports, and we must increase the use of our own resources. Our most abundant substitute is coal. I believe there is widespread support for incentives to go to coal substitution, and I believe that loans and loan guarantees should be considered in the range of incentives to be adopted.

**PRESIDENT CARTER: HARD-NOSED WITH FARMERS—SOFT-NOSED WITH FOOD STAMP RECIPIENTS**

**HON. KEITH G. SEBELIUS**

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. SEBELIUS. Mr. Speaker, the House Committee on Agriculture this morning began the markup of a food stamp bill which is to become part of the farm bill (H.R. 7171) when the latter is considered on the floor of the House. Congressman JAMES JOHNSON of Colorado offered an amendment to the food stamp bill which incorporated a provision contained in the Carter administration food stamp proposal forwarded to the Congress and printed by the Senate as a committee print on April 15, 1977.

This administration provision on standard deductions—offered by Mr. JOHNSON—would have saved \$103 million in food stamp expenditures in fiscal year 1978.

The administration-Johnson proposal

included a \$80 standard deduction, but it did not include a separate shelter deduction or a separate child care deduction—as does the food stamp bill before the committee—because the standard deduction itself incorporates costs for these two items.

Secretary Bergland in testifying before the Subcommittee on Domestic Marketing, Consumer Relations and Nutrition, chaired by Congressman RICHMOND of New York, on April 5, 1977, had great praise for the Carter administration's food stamp proposal:

I come before you today with a major reform proposal. It is designed to tighten up the program, to eliminate or reduce benefits to the households with the highest incomes, to reduce errors, and to curb possibilities for abuse.

In addition, this proposal will vastly simplify and streamline the program. Finally, our proposal is designed to increase access to the program by those most in need.

Two, we would also place firm gross income limits on the program by replacing the many complicated itemized deductions in the current program with two simple standard deductions—a deduction of \$80 for all households, plus a deduction for working families in the amount of 20 percent of earned income to compensate for taxes, other mandatory deductions from salary, and work expenses.

Our new proposed legislation, which we will present to the committee within the next two days so that it can be incorporated as a title of the farm bill, is over 30 pages in length, and, in preparing it, we scrutinized all aspects of this program's operation.

I turn now to measures to simplify the program. First, standard deductions. As I mentioned previously, the Department is proposing to substitute two basic, simple standard deductions in place of the current itemized deductions.

This will greatly simplify administration of the program, and will also reduce errors. About 30 percent of all errors now stem from errors in determining the proper level of itemized deductions.

In addition, the time now used in calculating itemized deductions can be spent in the more important area of verifying income. This should further reduce errors.

I should note that the various aspects of our proposal cannot be divorced from each other. Our income limits and standard deductions reduce costs by over \$400 million a year, and balance off most or all of the cost of providing benefits to the new participants who enter the program due to the elimination of the purchase requirement.

If our income limit and standard deduction proposals are not adopted and higher eligibility and benefit levels are substituted in their place, then the cost of the food stamp program will increase in a manner that is unacceptable to this Administration.

In the consideration of the Johnson amendment today, Mr. Robert Greenstein, special assistant to Secretary Bergland, after supporting the administration's \$80 standard deduction proposal on April 5, 1977, indicated that the Carter administration could accept the more costly—by \$103 million—provision in the committee bill:

Mr. Greenstein, special assistant to Secretary Bergland:

In working on the food stamp proposal, we did not have a great deal of time as a new administration. Actually at one point very near submission of the bill to the Congress, the Secretary sent a proposal to the White House that included a shelter allowance and a child care deduction. Then after some con-

sideration, we went with the \$80 standard deduction. It was a close call on our part.

There were a couple of things that we were not aware of at that point. We did not until after the bill came out have the figure that there were over 700,000 households that lost over \$20 a month in benefits under our bill.

When the shelter allowance and the child care deduction began to get some support and we heard they were coming up, we had internal discussions with the White House and other agencies, and the general Administration position was that we were not going to be extremely hard-nosed about this—that we could live with the shelter approach, provided that it remained within the general cost frame that the Administration came up with. That was the real concern, as I said during the Subcommittee markup. When these issues came up again, the cost was one of our concerns.

Now the Congressional Budget Office figures indicate that due to the shelter deduction, etc., that the Subcommittee bill is about \$45 million more costly than the Administration proposal during its first year. However, the CBO figures also indicate that by the third year, the costs are roughly the same and that by the fourth year, the Subcommittee bill is actually less expensive and cheaper than the Administration proposal.

So we find the general costs of the overall package of the bill to be indeed within the cost frame the Administration has provided. And that being the case, we really should live with the Subcommittee approach, and we really do not have a strong position one way or the other.

At the same time Mr. Greenstein was testifying before the House Committee on Agriculture and stating that the Carter administration would not be hard-nosed—in fact, would be “soft-nosed”—about the \$103 million additional costs of the committee's shelter and child care deductions, President Carter was holding a press conference at the White House threatening a veto of the farm bill.

It is clear that President Carter is going to be hard-nosed in giving help to the farmers—but “soft-nosed” and generous to strikers and other individuals who receive food stamps.

In October 1976, in Wichita, Kans., Vice President MONDALE was campaigning and criticizing President Ford and his vetoes of farm bills and claiming that “Even those—wheat loans—at \$2.75 are too low.”

Vice President MONDALE also said at that time that if elected:

I will tell you who runs the Department of Agriculture fundamentally—it is the President.

Well, President Carter—the real Secretary of Agriculture—as Vice President MONDALE apparently refers to him—has made it clear who he is going to be hard-nosed with during his administration. It is the farmer. Perhaps when our wheat farmers go broke and get in the food stamp lines, they will start getting some “soft-nosed” generous treatment from President Carter.

#### WASHINGTON'S UNCIVIL SERVANTS

**HON. EDWARD J. DERWINSKI**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. DERWINSKI. Mr. Speaker once again die-hard advocates of the measure

to allow the politicizing of government employees are trying to pass H.R. 10.

Nicholas von Hoffman the reputable card-carrying liberal takes a look at the repeal of the Hatch Act of his column appearing in the May 21 Chicago Tribune. I insert his article in the RECORD for the benefit of the Members from the other side of the aisle:

#### WASHINGTON'S UNCIVIL SERVANTS

(By Nicholas von Hoffman)

WASHINGTON.—Under the label of reform, a bill repealing most of the Hatch Act is making its way through Congress toward the Oval Office where the President has said he'll sign it. Oddly enough, the Hatch Act, which prohibits government employees from taking part in partisan, electoral politics, was considered a reform measure when it was passed in 1939.

Its purpose was to prevent a President from using the large numbers of recently hired government employees as campaign workers. The Roosevelt administration was often accused of winning elections via this route, but national administrations weren't set up to run huge battalions of campaign workers at the precinct level; unless the patronage could be turned over to state and local officials it was not very useful for winning elections.

Despite his enemies' accusations, FDR didn't try this use of federal employees so he had no trouble living with the Hatch Act. In actuality, the law was superfluous because the protections and job securities afforded by the civil service robbed politicians of the weapons of coercion to make employees into campaign workers. How can you force a postal clerk to work for Gruntz for President if the clerk knows you can't fire him?

In the years after the passage of the Hatch Act, electoral politics underwent a change. In the language of economics it swung from being labor intensive to capital intensive. The costly armies of precinct workers were replaced by television campaigning, which allows a candidate to reach more people per dollar spent than the knock-on-the-door method. Thus it's questionable these federal employees would have been used by presidential incumbents even if there had been no law.

Nevertheless, the Hatch Act has been accomplishing another unintended good. If the political use of federal employees by Presidents was never likely, the use of the same employees by labor unions is a much more real possibility.

Without the right to strike or take part in political campaigns, federal employees are already among the highest paid in the country. Without a Hatch Act they would have long since extorted the right to strike from Congress and along with it even greater advantages in pay, pensions, and other fringe benefits. That's not mere supposition, as the record of the county and municipal workers' unions attests.

When public employees are given the right to strike, as well as the right to engage in partisan political activity, there is delivered into their hands a combination of levers no other group of workers gets.

The members of the automobile workers union can strike to enforce their wage demands, but what would the price of cars look like if the union could also participate in the election of the auto manufacturers' boards of directors?

In addition, for many years public employees have had to negotiate with a pussy cat management; to wit, public officials who weren't spending their own money when they voted wage increases and productivity decreases.

In the last few years the pussy cats have stiffened somewhat because the rest of organized labor, the part that works in the private sector, has gotten so angry. The repeal of the Hatch Act, however, will make

it more difficult to keep government salaries in line with those of the rest of the world.

That may be the least of it. It is already close to impossible to fire a government employee because of the civil service. People on the public payroll are given, by law, greater security and tenure than workers in the private sector can get through collective bargaining. Now, by repeal of the Hatch Act, civil service employees will get so much more protection, and all coercive power to make them work will have been de facto abolished.

Repeal of the Hatch Act will demolish any good that may come from Jimmy Carter's zero-based budgeting or contemplated departmental reorganizations. It doesn't make any difference if a federal program is good or bad in concept if it is to be administered by a bureaucracy in which all supervisory control over the employees has been extinguished or attenuated to the point that the civil servants can be as abusively arrogant to their nominal bosses as they are already to the various publics they make wait in the endless lines of weary and frustrated people stretching out of every government office in America.

The lowest price that should be exacted for the repeal of the Hatch Act is a repeal of the Civil Service Act. Instead, President Carter will sign the measure proclaiming as he does that this is the political emancipation of the enslaved bureaucrats. But the first time he tries to put this creaking government to some good and efficient use, they'll thank him by shoving their fists down his mouth.

#### ILLEGAL IMMIGRATION: A MEXICAN VIEWPOINT

**HON. HERMAN BADILLO**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BADILLO. Mr. Speaker, I have, as my colleagues know, held a deep interest in the problem of illegal immigration to this country. As time passes, it becomes increasingly clear that the root of the problem is not what is happening in this country, but what is happening in the sender countries. It does not matter whether we patrol our borders more thoroughly, or whether we institute criminal, or even civil, sanctions against employers of undocumented workers, and it will not matter whether we institute forgeproof methods of identification. Until we begin actively to work with the leaders of other countries, and direct our aid programs in positive job-producing industries in those countries, people will continue to seek economic opportunity in the United States.

An article by Alan Riding in this morning's New York Times vividly points this position up through an interview with Dr. Jorge A. Bustamante, one of Mexico's outstanding authorities on illegal immigration. Dr. Bustamante echoes the position of those of us who feel that the current direction of American immigration policy will only exacerbate an already critical situation. I commend this article to you:

#### MEXICAN SAYS UNITED STATES INVITES DISASTER ON ILLEGAL ALIENS

(By Alan Riding)

MEXICO CITY, May 25.—Mexico's leading expert on illegal migration to the United States has sharply criticized the Carter Administration's plans for dealing with the problem and has warned that its “myopic policy” could

bring disastrous consequences for both the United States and Mexico.

"The United States is looking at illegal Mexican migration as if it were simply a domestic problem," said Dr. Jorge A. Bustamante, an academic who has advised successive Mexican governments on the problem. "The Carter Administration isn't even considering the impact of its unilateral decision on our economy, on our levels of unemployment and, above all, on the border regions."

Although President Carter has still to announce his policy toward illegal migration, it is expected to include an amnesty for illegal aliens with several years' residence in the United States, new legislation to penalize employers of illegal aliens and a strengthening of the border patrol to stem the flow of Mexicans slipping into the United States.

The six-month-old Government of President José López Portillo has so far withheld comment on the American plans, but the issue was believed to have been discussed at a meeting in Washington today between the Mexican Foreign Minister, Santiago Roel, and Secretary of State Cyrus R. Vance.

In an interview, the 39-year-old Dr. Bustamante, a researcher at the Colegio de México, warned that any amnesty for illegal aliens in the United States would encourage hundreds of thousands more Mexicans to go north in search of employment. At the same time, he said, the Carter Administration's plan to bolster the border patrol and fine employers of illegal aliens would push the Mexican migrants back toward the 2,000-mile-long border.

Dr. Bustamante's fear is that such a policy would not only aggravate Mexico's economic problems but would also create a vast army of restive unemployed in the overcrowded and run-down Mexican border towns, spawning huge new slums and feeding the crime and violence that have already become serious problems.

"The phenomenon of social chaos in the border towns could bring a backlash on the American side and affect the broad spectrum of our bilateral relations, and it could well produce a wave of repression on both sides of the border," he said.

#### MOOD OF HOSTILITY NOTED

The population of Mexico's border towns has doubled to three million over the last 15 years, with most of the inhabitants living in shantytowns within one mile of the United States. The rapid and chaotic growth of the towns is expected to continue as unemployment in Mexico drives growing numbers to seek jobs in or near the United States.

Dr. Bustamante, who six years ago crossed into the United States as an illegal alien as part of his research into the problem, recognized that President Carter is under great pressure from organized labor to tackle the issue.

"There is a growing mood of hostility toward Mexican migrants," he noted. "All this talk of a 'silent invasion' has helped Americans associate such problems as unemployment, taxation and crime with illegal aliens. People are increasingly convinced that the Mexican migration is an evil that has to be eradicated."

"It's all so simple," he went on. "There are 6.7 million Americans out of work and they say there are six million illegal Mexicans in the U.S., so get rid of the Mexicans and you've got rid of unemployment."

But Dr. Bustamante insists that the Carter Administration's response to the problem is based on false premises. He believes that there are not six million to eight million Mexicans in the United States illegally but many fewer and that most illegal aliens are not taking jobs away from Americans but doing low-paid menial work that Americans refuse to do.

#### THIRTEEN INDICTED IN TEXAS BANKING CASE

### HON. FERNAND J. ST GERMAIN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ST GERMAIN. Mr. Speaker, last year, the Subcommittee on Financial Institutions Supervision, Regulation, and Insurance conducted an extensive investigation and hearings into the collapse of the Citizens State Bank of Carrizo Springs, Tex., and the various "control groups" which operate widely in Texas banking circles.

These hearings and related investigation have given us an important insight into the manner in which banks are bought and sold and milked for the benefit of their temporary ownership-control groups. The hearings produced evidence of classic patterns of insider lending and manipulation as well as a new look at Federal and State regulation of banks.

Last week, a Federal grand jury in San Antonio, Tex., indicted 13 persons in connection with the Citizens State Bank case. It is my understanding that this Federal grand jury is continuing its investigation and undoubtedly we will be hearing more of this case in the coming weeks.

Mr. Speaker, I want to place in the RECORD at this point three articles from the Dallas Morning News outlining the indictments and other aspects of this ongoing case:

[From the Dallas Morning News, May 21, 1977]

#### THIRTEEN INDICTED IN ALLEGED BANK SCHEME (By Stewart Davis)

SAN ANTONIO.—A federal grand jury indicted 13 persons Friday for their alleged roles in what investigators have termed the Texas "rent-a-bank" scheme.

The 49-count indictment charges 12 of the defendants with "reckless disregard" for the best interest of Citizens State Bank of Carrizo Springs, which was closed June 28, 1976, when \$3.5 million in bad loans were discovered.

Thirty-six loans involving \$1,912,800 are identified in the indictment as misapplications of bank funds.

Indicted were:

Enrique M. Salinas of Eagle Pass, director and majority stockholder when the bank collapsed. FBI agents were seeking to arrest and hold him on \$100,000 bond.

Gretchen Salinas, his wife, owner and operator of Galeria Inc. gift shop in Eagle Pass. Her bond was set at \$50,000, with release authorized on her personal recognizance.

Lewis Woodul of Cotulla, farmer, rancher and former president of the bank.

Dan Sanchez Jr. of Encinal, farmer and former co-chairman of the board at the bank.

Atlano de la Garza, a rancher from Del Rio and Muzquez, Mexico.

Luis E. Salinas, brother of Enrique Salinas, who is a Mexican citizen with an Eagle Pass address.

Ron Guess of San Antonio, former executive vice-president of the bank.

Blanca Alicia de Aldaco of Eagle Pass, reportedly a cousin of Enrique Salinas.

Bicknell Eubanks, II, U.S. customs inspector from Eagle Pass, identified in testimony before a U.S. congressional subcommittee as

the recipient of a loan from the bank used to purchase an airplane for Enrique's brother. Urban Farrow of Carrizo Springs, former chairman of the bank board.

Jesus Davis of Eagle Pass and foreman of De la Garza's ranch at Muzquez, Mexico.

Jose L. Flores of Eagles Pass and Monterrey, Mexico, owner of an insurance agency and Salinas' brother-in-law.

Richard George of Carrizo Springs, president of the bank before its takeover by Salinas.

Five of the defendants had been arrested late Friday. They are George, Farrow, Eubanks, De Aldaco and Guess. Two were released. Urban Farrow was released on \$50,000 personal recognizance bond, and Richard George posted a \$50,000 cash security bond.

The "rent-a-bank" phrase was used by investigators to describe the practice of bank "control groups" buying into banks and allegedly using bank assets for insider loans and other abuses.

Another state bank subsequently folded in Rio Grande City, another South Texas town, and the Federal Deposit Insurance Corporation has reported 60 "problem banks" in Texas, with some 35 of them having serious difficulties.

U.S. Attorney John E. Clark of San Antonio said the indictments were the first to result from a federal-state probe of South Texas banking practices that began last July after the collapse at Citizens State.

Clark said the indictments represent the end of the first phase of the inquiry. He indicated additional indictments would be issued against other people within two or three months.

Maximum penalties for the offenses charged range from five years in prison and \$10,000 fine on the alleged conspiracies and five years' imprisonment and \$5,000 for misapplication of bank funds and making false entries in bank records.

Salinas faced a total of 41 counts, his wife, 4, and Woodul faced 30 counts. The others were indicted on one to five counts. All except George, were charged with conspiracy. George was accused of disbursing a \$39,000 loan from which he benefitted personally.

The conspiracy accusation lists Enrique Salinas' late brother, Juan Salinas, as an undisciplined co-conspirator, along with Alex Short, his secretary, died in a mysterious plane crash on De la Garza's ranch.

Nance, vice-president of the bank when Salinas took control, was a key witness in congressional subcommittee hearings into the Texas bank situation last fall. U.S. Atty. Clark refused to comment on what role Nance might play in the defendants' trial, which under federal speedy trial procedures might come up this summer.

[From the Dallas Morning News, May 22, 1977]

#### INDICTMENTS NEXT CHAPTER IN BANK'S COLLAPSE

(By Stewart Davis)

SAN ANTONIO.—Enrique M. Salinas, 35, who pyramided a financial statement and Mexican ranchland into a 6-bank empire, was in Uvalde County jail Saturday, accused of conspiring to drain bank assets through his family and friends.

Salinas' empire of bank holdings collapsed when Citizens State Bank of Carrizo Springs was closed June 28, 1976, with \$3.5 million in "bad" loans, about \$2 million of that amount to him, relatives and associates.

Joseph E. O'Connell, FBI special agent in charge here, said Salinas and Salinas' wife, Gretchen Bentley Salinas, voluntarily surrendered to FBI agents at 10:30 p.m. Friday and were still in custody, awaiting arraignment before the U.S. magistrate at Del Rio.

Salinas was held in lieu of \$100,000 bond.

His wife was held in lieu of \$50,000 bond, subject to release on personal recognition by the magistrate.

Eleven others were indicted by a federal grand jury here, along with Salinas and his wife, for their alleged roles in what is known as a Texas "rent-a-bank" scheme, which consists of "control groups" gaining controlling interest in banks with borrowed money, then using bank assets for insider loans.

Five of the others were arrested, and two were released on bonds.

Salinas' group consisted of his brother, Juan, who died in a plane crash in Mexico a week before the bank closed, another brother, Luis, a Mexican citizen indicted in the alleged conspiracy, and Ron Guess of San Antonio, a financial adviser to Salinas and president of Maverick Air Inc. Charter Service, also indicted.

Salinas' group purchased Citizens State Bank from another group, headed by Ron Bramble, Willard Mertz financial consultants from San Antonio, and Dr. James Bauerle, a San Antonio oral surgeon and University of Texas regent.

The indictment named Salinas' late brother, Juan, as a co-conspirator but not as a defendant.

The federal allegation contends the conspiracy to milk funds from Citizens State Bank started with the naming of two Salinas associates, Lewis Woodul and Dan Sanchez Jr. (both indicted) as president and vice-chairman of the bank board, respectively. At the time, Salinas was borrowing about \$600,000 from Alamo National Bank of San Antonio to take ownership at Citizens State Bank.

Thereafter, the indictment spells out, the principals and their associates engaged in 36 loan transactions involving \$1,219,800 in purportedly legitimate loans which were improperly granted, totally or incompletely secured and granted with "reckless disregard" for the best interest of the bank.

Salinas was the main beneficiary in most cases, with relatives and associates receiving some of the funds, the indictment claims.

Urban Farrow, 73, president of the bank for 20 years until 1974 and one of those indicted, said after his release on bond in the case, that he signed for a \$67,500 loan on Jan. 6, 1976, as "an accommodation" to Salinas, who he said told him he needed the financial help for only a "few days."

Farrow denied he was part of any conspiracy, and he claimed handling of the entire Citizens State Bank closing by FDIC (Federal Deposit Insurance Corporation) officials and State Banking Commissioner Robert Stewart was "strange."

"There's no question," Farrow said in an interview, "from the moment they came in for the (bank examination, they had their hatchets in their hands."

He explained he felt the authorities never gave Salinas an adequate opportunity to obtain the funds necessary to cover the questionable loans discovered during bank examinations.

Salinas also contended in testimony before a U.S. congressional subcommittee hearing into the matter last year that he was the victim of prejudiced authorities.

Salinas contended he personally lost about \$3 million or \$4 million when the closure of Citizens State Bank led to foreclosure on the loans with which he had acquired control of Union State Bank of Carrizo Springs (which is in Dimmit County, South Texas), Security State Bank of McCamey (Upton County, West Texas), First Bank of Coppel (Dallas County), Comfort State Bank (Kendall County, Central Texas) and First National Bank of Anderson (Grimes County, East Texas).

Salinas claimed he obtained control of Citizens State to protect his cash deposits there.

Salinas was unavailable to comment on his indictment.

Others indicted by the federal grand jury in the alleged scheme include Atilano de la Garza, a rancher from Del Rio and Mexico; Blanca Alicia de Aldaco, a cousin of Salinas from Eagle Pass; Bicknell Eubanks III, a U.S. Customs inspector from Eagle Pass and Jesus Davis, a ranch foreman for De la Garza.

Also indicted separately was Richard George, president of Citizens State Bank prior to the takeover by the Salinas group. He was charged with converting a \$39,000 loan to his personal use, even though the loan was in the name of another person.

An example of the type of insider loans alleged by the indictment is a \$25,000 advance to Galeria Inc., an antique and jewelry gift shop operated by Gretchen Salinas in Eagle Pass.

The indictment claims the loan was not well secured and that the gift shop was not entitled to the bank's credit because no credit report on Galeria had been obtained, no collateral was pledged for the loan, no deed of trust was pledged to the bank and no verified financial statement of Galeria was obtained, all in violation of federal law.

In another case, customs agent Eubanks was alleged to have obtained a \$40,000 loan for an aircraft, without a lien on the plane ever given to the bank as collateral. The indictment alleged the plane wasn't worth \$40,000 and Eubanks never filed a verified financial statement.

Testimony to the congressional subcommittee examining questionable Texas bank activities showed the loan was used to purchase a plane for the use of Luis Salinas, Enrique's brother, because Luis, a Mexican national, was not eligible to own a plane with United States registry.

FDIC reports to the congressional subcommittee indicated possibly widespread banking abuses, including "control groups" and abusive banking practices that placed up to 60 Texas banks on a "problem" list.

About eight or nine "control groups" have been identified for scrutiny by government officials.

U.S. Atty. John Clark of San Antonio said additional indictments will be issued in a couple of months, naming others in the alleged abuse of legal banking practices.

Clark's year-long inquiry into the banking situation has been assisted by Texas Assistant Atty. Gen. John Blanton, on assignment as a special assistant U.S. attorney. Clark described cooperation from Atty. Gen. John Hill's office as excellent, and Clark cited other state and federal agencies for their assistance and cooperation in the probe.

Assistant U.S. Atty. W. Ray John headed the federal portion of the grand jury's investigation.

[From the Dallas Morning News, May 21, 1977]

#### CHARGES SPAWNED BY BANK COLLAPSE

SAN ANTONIO.—The indictment of 13 South Texans Friday is another in a series of ripples from the collapse last summer of Citizens State Bank in Carrizo Springs.

Closing of Citizens State has resulted in: Hearings last fall by the subcommittee on financial institutions of the U.S. House Banking, Currency and Housing Committee, aimed at remedial legislation and congressional oversight of regulatory enforcement agencies.

State legislative passage, upon Gov. Dolph Briscoe's recommendation, of a statute designed to screen new owners who buy 25 per cent or more of a bank's stock, thus becoming a "control group."

Grand jury probes in San Antonio and Dallas-Fort Worth.

Investigations by a myriad of governmental agencies, including the Justice Department, the Texas attorney general, the FBI, the Internal Revenue Service and the Federal

Home Loan Bank Board into the affairs of an assortment of banks, savings associations, insurance companies, government agencies and private firms and individuals.

Citizens State was closed by State Banking Commissioner Robert Stewart when bad loans totaled \$3.5 million.

Some of those loans were cited in the federal grand jury indictments filed here Friday, alleging a conspiracy to defraud the bank.

The indictment claims Enrique M. Salinas, whose ownership of five Texas banks disintegrated upon the collapse of Citizens State, obtained control of Citizens State Bank and put Lewis Woodul in as president and Dan Sanchez Jr. as director.

The indictment contends Woodul and Sanchez misapplied bank money in the form of numerous loans to the other accused "purporting to be legitimate loans made in the ordinary course of banking, but which were in truth and fact improperly granted, improperly secured or totally unsecured and granted with a reckless disregard for the best interest of the said Citizens State Bank."

The charge goes on to say that the proceeds of the loans were converted to the personal use of Salinas and other members of the group, exceeding the legal loan limit of the bank.

The alleged conspiracy was accomplished, the indictment said, through numerous false and fraudulent entries in the bank books as a coverup of the true nature of the loans and "to deceive the Federal Deposit Insurance Corporation and agents and examiners appointed to examine the affairs of the bank."

The indictment also alleged the conspiracy included such actions as making the bank records reflect legitimate loans so that the accused could sell a share of those transactions to other financial institutions, thereby obtaining additional funds from other financial institutions "to disburse to and among themselves..."

Bank certificates of deposit were issued, the indictment claimed, which had not been paid for, and these certificates were pledged for loans at other financial institutions.

Further, the indictment claims some of the accused gave immediate credit to checks drawn on foreign banks by the accused, even though in some instances the checks were never honored.

The indictment then describes each of 36 loans for \$1.9 million alleged to be misapplications of bank money.

Salinas testified under oath to the congressional subcommittee last fall that he may have been the victim of bank control groups that sold to him. He contended he was using family wealth from Mexican ranch lands to go into the banking business in Texas.

Salinas, 35, formerly a school teacher in Eagle Pass, said he lost several million dollars personally when his control of six Texas banks was lost as lienholders foreclosed.

#### THE FARM UNEMPLOYMENT STATISTICS BILL

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. NOLAN. Mr. Speaker, Congress has passed a great many laws providing economic aid and stimulus to State and local governments. We have appropriated funds for public works jobs, CETA, community development projects, revenue sharing, and a host of other programs. I wholeheartedly support the concept behind returning these funds to the localities, but I am deeply concerned about

the unjust manner in which these funds are being distributed.

We have not given due consideration to the ways in which many of those laws discriminate against people in rural areas as a result of the fact that their distribution is based entirely or partially on unemployment statistics that do not accurately reflect the economy in rural areas. Congress chose those statistics as a basis for distributing Federal funds largely because it has been assumed that employment means earnings and, therefore, buying power—and that buying power reflects economic conditions in a given area. On the surface, these statistics may seem to provide a nationwide common denominator, but it does not hold true in rural areas because they do not reflect one of the most basic components of the rural economy: the buying power of the farmer.

The Bureau of Labor Statistics does not really know how to deal with the occupation of farming. Because farmers are always "working" in the traditional sense of the word, they are always counted as "employed," and are therefore included when the total civilian labor force is calculated. However, they never show up in the unemployment statistics, regardless of whether or not they are "earning money" in the sense of having cash to put back into rural businesses. The economic health of those rural businesses is vitally dependent on the financial condition of the farmers in the area—yet severely depressed farm earnings and the resulting depressed earnings in local businesses do not show up in the statistics by which we are supposedly measuring the area's need for economic assistance. My district's farmers lost over \$50 million last year because of drought, but the unemployment rate stayed between 2 and 4 percent. Because of the way the BLS definitions weight the scales, those statistics are a distortion of the true situation. Clearly, the economy in those rural communities needs help, but because we refuse to acknowledge the different nature of those economies, the needs of rural people are being ignored.

This situation can have devastating effects on rural areas by forcing the mobile members of small communities to move to the urban and suburban areas where unemployment statistics are high enough to rate Federal jobs programs. This exodus of small businessmen and wage earners will result in the erosion of the local tax base as town revenues become dependent on senior citizens with fixed incomes and lower income people who are unable to relocate in the urban centers. This will add impetus to the downward spiral of the local economy as the repercussions are felt in local school systems and community services dependent on local taxes. By ignoring the interrelationship between local farm income and the well-being of the rural economy as a whole, we are contributing to the erosion of the rural way of life.

It is time for Congress to strengthen rural communities—not add to the pressures that turn them into ghost towns. If we continue to distribute Federal assistance inequitably between urban and rural areas, rural citizens will be compelled to flock to wherever the jobs are

being created. This will only compound the unemployment problem in cities and urban dependency upon the Federal Government will only grow as welfare rolls and unemployment assistance payments increase.

We must acknowledge the fact that farming falls into an employment category entirely different from most other occupations in this country. Farmers cannot control the weather, and "working" 365 days a year to bring in good crops does not necessarily mean the market price will allow them to recover their cost of producing those crops. Some people argue that "those are just the risks of farming and they have to be accepted"—and we will be arguing that issue here on the floor in the near future as we consider the farm bill—but the economic impact on the rural economy when farmers have no cash to spend at local businesses cannot be denied.

On the whole, unemployment statistics provide a relatively acceptable reflection of buying power in urban areas where most labor is compensated by wages or salaries. The challenge, then, is to provide a means whereby low buying power is adequately reflected in rural areas. I believe my proposal provides a workable compromise. It is based on recognition of the fact that when an individual whose sole occupation is farming reported a net farm loss for a given tax year, his "income" situation is roughly equivalent to "unemployment" for someone who normally works for wages or a salary. Neither has much income to put back into the rural economy. In fact, the farmer is usually deeply in debt since he has to borrow money to put in the next year's crop. And because the adult members of his family who also work on that farm are also dependent on the farm's net income, they, too, are economically equivalent to "unemployed."

I am proposing that the Bureau of Labor Statistics be required to compile statistics on these individuals with the assistance of the Internal Revenue Service, and that they be included in the unemployment statistics on which distribution of Federal assistance is based.

When we weigh the need for economic stimulus and support in urban and rural areas, we should make sure the scales are not unfairly weighted at the outset. I hope my colleagues will recognize the justice in my proposal and support it.

#### NATURALIZATION CEREMONIES— FEBRUARY 22, 1977

#### HON. THOMAS A. LUKE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LUKE. Mr. Speaker, I would like to share with my colleagues the text of a speech given by my constituent, Dr. Nicholas J. Tapay, at naturalization ceremonies on George Washington's birthday, February 22, 1977.

Dr. Tapay was born in Hungary and has been a naturalized citizen since 1962. In June 1951 when he was a senior medical student in Budapest, he was deported

with his family to a labor camp in eastern Hungary because his father was a professional army officer of the prewar regime. In November 1951, Dr. Tapay was released from the camp to finish his medical studies, but his family was left behind in camp for 2 more years.

On November 1, 1956, during Hungary's fight for freedom, Dr. Tapay became the youngest member of the Council of Cegled. In December of the same year, he escaped to the West and came to the United States on February 26, 1957.

From 1957 to 1962, Dr. Tapay trained in Cincinnati and in Kansas City as a pediatrician. After becoming a citizen in 1962, he has been practicing medicine in College Hill in my district. Dr. Tapay is a past president of the American-Hungarian Society of Cincinnati.

I think you will enjoy, as I have, Dr. Tapay's profound appreciation for our country and the principles upon which it was founded:

#### GREETINGS TO THE NEW CITIZENS ON GEORGE WASHINGTON'S BIRTHDAY

Your Honor Judge Porter, Dear New Fellow Citizens and Friends: It is indeed a great honor for me to participate in this festive occasion and greet you as new citizens of the United States. For a naturalized citizen like me, it is certainly an exceptional privilege to have an opportunity to do this today, February 22nd, on the birthday of the father of our country. As we gather here today, enjoying the spiritual and material achievements of 200 years of independence let us go back for a few minutes in memory to those times when this nation was created. It was created by a conscious act of men who set as fundamental goals for their country liberty, justice, equality and progress. These were almost unheard ideals in the political reality of the 18th century and it is no wonder that it took a revolutionary war to establish these ideals as guiding principles for a functioning political system. It was exactly these ideals of the founding fathers which made America so unique among the nations of the world. They attracted and still attract people from all over the world since they express basic, simple but long suppressed human aspirations. I'm sure they had much to do with your decision too as you were planning to leave the old country and settle in a new one. We Americans owe probably no one more for what has been achieved than George Washington who so conscientiously guarded these ideals during his 2 terms as this nation's first president.

When in his kind invitation Judge Porter reminded me that this day would be actually Washington's birthday, although officially it was observed yesterday, I thought it most appropriate to do a little research into his speeches, proclamations and writings and present you with a few of his thoughts. In doing so I will quote him a few times. For the sake of easier understanding please permit me to substitute modern English for some of his archaic words.

How did he envision the functioning of our government?

He most humbly offered his prayers "to enable us all, whether in public or private positions, to perform our duties properly and punctually; to render our national government a blessing to all the people, by being a government of wise and just and constitutional laws, discreetly and faithfully executed and obeyed."

The need to hear a wide range of opinions in the political life of the nation was interpreted by him in the wisest way when he

Footnotes at end of article.

said: "A difference of opinion on political matters is not to be charged to free men as a fault, since it is to be presumed that they are all caused by an equally laudable and sacred regard for the liberty of their country."<sup>2</sup>

What a far cry this is from the attempt of many political systems today to unnaturally unify the political expression of a citizenry and claim it as the "will of the people".

He felt that there are 2 factors essential for the internal stability of a country—free elections and an informed electorate.

"... it remains for the citizens of the US to show the world that the accusation that republican governments are not stable is without foundation, when that government is the deliberate choice of an enlightened people."<sup>3</sup>

In his political philosophy the role of the government and the leaders was beautifully summarized when he stated: "Government being, among other purposes, instituted to protect the persons and consciences of men from oppression, it certainly is the duty of rulers not only to abstain oppression themselves, but also to prevent it in others."<sup>4</sup>

He took justifiably great pride in religious liberty already established: "In this enlightened age and in this land of equal liberty, it is our boast that a man's religious tenets will not forfeit the protection of the laws, nor deprive him of the right of attaining and holding the highest offices that are known in the US."<sup>5</sup>

He defined as the sources of national and personal happiness: "Your love of liberty, your respect for the laws, your industriousness and your practice of the moral and religious obligations are the strongest claims to national and individual happiness, and they will, I trust, be firmly and lastingly established."<sup>6</sup>

He summarized the essence of his foreign policy as follows: "... my foreign policy has been to cultivate peace with all the world; to observe treaties with pure and absolute faith; to check every deviation from the line of impartiality; to explain what may have been misapprehended and correct what may have been injurious to any nation, and having thus acquired the right ... to insist upon justice to ourselves."<sup>7</sup>

For me, who 20 years ago had to risk my life to reach the sanctuary of the free world, it is amazing how he foresaw this country as the asylum for political refugees. In one of his Thanksgiving proclamations he asked the Almighty: "... to render this country more and more a safe and proper asylum for the unfortunate of other countries."<sup>8</sup>

In perspective he saw the role of this nation as follows:

"The virtue, moderation and patriotism, which marked the steps of the American people in framing, adopting and thus far carrying into effect our present system of government, have excited the admiration of nations; it is only up to us to uphold these principles, that we may gain respect abroad and insure happiness to ourselves and our children. It should be the highest ambition of every American to extend his views beyond himself and to bear in mind that his conduct will not only affect himself, his country and his next generation, but that its influence may be felt all over the world and stamp political happiness or misery on ages yet unborn."<sup>9</sup>

As closing remark let me quote from one of his addresses to Congress in which he asked the Lord: "... to perpetuate to our country that prosperity which his goodness has already conferred and to verify the anticipations that this government be a safeguard to human rights."<sup>10</sup>

Footnotes at end of article.

As the cause of human rights was foremost in the mind of our first president so it appears to be a leading principle of our new president too. In his recent, quite sensational letter to Sakharov, the great Russian scientist and brave dissident, he emphasized that: "... we will continue our efforts to shape a world responsive to human aspirations in which nations of differing cultures and histories can live side by side in peace and justice."

One cannot fail to see that as centuries have passed, our first and present presidents still see their duty unchanged: to provide and protect equal liberty in peace with justice for all.

I'm sure much happiness and joy fills your heart when this country with these ever lasting principles officially accepts you as one of her citizens. As you start a new life among us I wish all of you good luck in all your endeavors.

God bless you—fellow citizens.

### SISTER STELLA MARIE CELEBRATES HER GOLDEN JUBILEE

#### HON. JOHN G. FARY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. FARY. Mr. Speaker, I am often inspired and deeply moved with pride when I reflect on the great and humble personalities I have known in my lifetime. One such personality that stands at the forefront of my thoughts is Sister Stella Marie who will celebrate her golden jubilee as a religious nun on May 30, 1977. This golden jubilee celebration is but one of the many milestones in the 50 years Sister Stella Marie has been a servant of the Lord, an administrator, and an educator.

Sister Stella Marie Benben, is the daughter of the late Stanley and Josephine Siwek Benben. She was born on September 9, 1909, in Chicago, Ill. Her elementary education was received at Saints Peter and Paul and Nathanael Green Schools, and she graduated from Good Counsel High School.

August 15, 1927 marked the first landmark on a road that led Sister Marie to many years of gratifying service; she entered the Felician Community on that day. A year later, on August 12, 1928, she was invested in the habit of St. Francis. Then, with the passing of another year, she professed her first vows of chastity, obedience, and poverty. Her perpetual vows were taken 6 years later.

Later, Sister Marie was given a teaching assignment at St. James School in Chicago marking yet another milestone.

Teaching became a passion with Sister Marie. She served the children as she serves the Lord: with total devotion. For 8 years she taught the intermediate grades at St. James School, and spent 1 year at Holy Rosary School in North Chicago, Ill.

In 1938 Sister Stella Marie took her devotion to De Paul University where she worked for 2 years as a day student. On August 1, 1940 she received her bachelor science of commerce degree.

She joined the faculty at St. Joseph High School in Chicago and opened the secretarial department teaching shorthand, typewriting, and religion. She taught there for 17 years. Even while teaching she continued her personal education, working toward her master of arts degree in education which she received on June 13, 1951 from De Paul University.

Her hard work and devotion at St. Joseph led to the position of principal of Good Counsel High School. For 10 strong years she served as administrator there. She took on many ambitious projects which benefited the school. It was her supervision that guided the building of the new Good Counsel High School which she moved to in January 1966.

Later she returned to St. Joseph High School where she served as both a teacher in the business school and the assistant principal.

In 1971 and 1972 Sister Stella Marie served as the personnel manager at St. Mary's Home for the Aged in Manitowoc, Wis.

Sister Marie loved the people at the home but her heart was in the classroom. After 2 years she returned to St. Joseph High School where she is presently teaching shorthand, typewriting, and secretarial skills.

The celebration of her Golden Jubilee will be held on May 30, 1977 at the Motherhouse located at 3800 Peterson Avenue, Chicago, Ill., where a special Mass will be celebrated in her honor.

At the same Mass there will be many other nuns celebrating their Diamond, Golden, and Silver Jubilees. Those celebrating their Diamond Jubilee—75 years of service—will be Sister Mary Sanctuslaus Stempowski and Sister Mary Ambrose Manicki. Those celebrating their Golden Jubilees—50 years of service—will be:

Sister Mary Fidells Wyzkowski, Sister Mary Alacoque Wilczek, Sister Mary Lambert Rogala, Sister Mary Miriam Kontny, Sister Mary Ferreria Wardzala, Sister Mary Albinetta Tamillo, Sister Mary Dulceda Wirtel, Sister Mary Jeanne D'Arc Szczawinski, Sister Mary Viterbia Chmielewski, Sister Mary Cypriana Pawlikowski, and Sister Mary Lucretia Stopka.

Sister Mary Pontiana Kuspa, Sister Mary Theonille Veteska, Sister Mary Ewald Lupa, Sister Mary De Paul Sykta, Sister Stella Marie Benben, Sister Mary Redempta Lazarski, Sister Mary Nativitas Wlodarczyk, Sister Louise Marie Goralski, Sister Mary Geraldine Stopka, and Sister Mary Virgilia Raclawski.

Silver Jubilarians—25 years of Service—will be Sister Mary Franceline Gorski, Sister Mary Virginia Sztorc, and Sister Mary Marcelitta Krygowski.

These women are a great source of

pride. Their lives have served to inspire many, just as the life of Sister Stella Marie has inspired me to reflect, with such esteemed pride and honor, here before the House of Representatives.

# THE U.S. DEFENSE EFFORT REQUIRES CRUISE MISSILE DEVELOPMENT

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. KEMP. Mr. Speaker, Clarence Robinson of Aviation Week & Space Technology, recently wrote a most important article on the cruise missile and its relationship to the ongoing SALT II negotiations.

Mr. Robinson discussed the vital nature of this program to our defense effort and the threat to the future of our cruise missile technology posed by shortsighted negotiations.

We should take note of the fact that a moratorium on cruise missile development, as Mr. Robinson reminds us, would be one sided indeed, as the Soviets already have deployed cruise missiles with nuclear warheads that can be targeted against major U.S. population centers.

The article follows:

## CRUISE MISSILE HALT CONSIDERED

(SALT negotiators base talks on development moratorium in exchange for backfire restrictions, delivery vehicle cuts.)

(By Clarence A. Robinson, Jr.)

WASHINGTON.—U.S. is considering a moratorium on cruise missile development in order to reach an agreement with the Soviet Union for a second strategic arms limitation treaty.

U.S. and Soviet strategic arms negotiators meeting last week in Geneva based their discussions on the proposed moratorium for cruise missile development for an interim period in exchange for possible restrictions by the Soviet Union on its Tupolev Backfire bomber and some reductions in the total number of strategic delivery vehicles.

The cruise missile moratorium would be for the period between a second strategic arms treaty and a more comprehensive agreement reducing nuclear weapons called SALT-3.

Still unclear is the effect such an accommodation by the U.S. will have on hundreds of cruise missiles already deployed at sea by the USSR on surface vessels and submarines, and on a U.S. program designed to develop tactical antiship cruise missiles.

Verification of cruise missile limitations will be a sticky point in any agreement, according to U.S. officials, and even an on-site inspection, which the Soviets have rejected in the past, will not be foolproof because cruise missiles on both sides have been designed to carry both conventional and nuclear warheads.

Range limitations also are being considered by the U.S. and USSR negotiators to insure that cruise missiles are limited to tactical applications, but many cruise missiles already in the Soviet inventory, which are now guidance-limited, have aerodynamic capabilities far in excess of present guidance restrictions.

President Jimmy Carter is eyeing range restrictions for cruise missiles, which would permit deployment of only the air-launched

cruise missile (ALCM-A) with a range of under 1,000 naut. mi., according to some Administration officials. This would preclude the U.S. from completing development of the longer-range ALCM-B, the ground-launched Tomahawk or sea-launched strategic cruise missiles with ranges of about 2,000 naut. mi.

U.S. Negotiators also are preparing to begin talks in Washington next month aimed at reaching an agreement with the Soviets for a complete test ban treaty barring all nuclear weapons testing by both nations.

Like a cruise missile moratorium, such an agreement calling for a complete test ban places the U.S. in a disadvantaged position as opposed to the Soviet Union, U.S. officials said. The reason is that U.S. nuclear weapons laboratories need to complete some testing of nuclear weapons devices for the advanced mobile MX ICBM, the Trident D-5 submarine-launched ballistic missile and other weapons.

Such an agreement would halt all nuclear weapons testing in the U.S., but the Soviet Union could continue to test nuclear devices below a level of about 20 kilotons without detection by the U.S.

"Testing of such low yields may not seem important to those not knowledgeable in nuclear weapons development," a U.S. official said, "but it has permitted this country to make necessary fixes to warheads in the inventory over a period of years. The U.S. would certainly honor any such treaty, but the Russians might not, and we would not know about it until too late."

The U.S. cruise missile development programs and the Soviet Backfire bomber have been the focal point for disagreement between the two nations since the Ford-Brezhnev Vladivostok meeting when both sides agreed in principle to a limit of 2,400 strategic delivery vehicles and a limit of 1,300 multiple independently targetable reentry vehicles. President Carter wants a SALT-2 pact, but is pressing for reductions below the Vladivostok level.

While the U.S. might not be able to deploy cruise missiles under any treaty providing for a moratorium, the Soviets already have deployed cruise missiles with nuclear warheads that can be targeted against major U.S. population centers. Soviet Echo 2 submarines armed with cruise missiles can lay off New York City at the 100-fathom line, which is about 95 mi. from the coast, and launch cruise missiles. The 100-fathom mark is about 125 mi. from Washington, D.C.

The ranges of Soviet SS-N-3 and an advanced SS-N-12 Shaddock-type cruise missile are guidance-limited to about 250 naut. mi., but their aerodynamic range is about 500 naut. mi. The missiles have provisions for a 2,200-lb. nuclear or conventional warhead, and missiles in the inventory are armed with both. Since the 1960s, the USSR has produced more than 5,000 cruise missiles in a variety of ranges. Cruise missile ranges generally fall into three categories:

Up to approximately 25 naut. mi., where the cruise missile can be guided to its target by radar, electro-optical and infrared sensors on the launch platforms. The U.S. Navy's Standard Arm missile on some small patrol boats and the USSR's SS-N-2 and SS-N-11 carried by Osa-class boats and some destroyers are in this category, as are submarine-launched SS-N-7 Sirens and the anti-submarine SS-N-14 missile.

Up to about 100 naut. mi. for use against targets over the horizon, where targeting is performed by helicopter or fixed-wing aircraft. The U.S. McDonnell Douglas Harpoon missile and the Soviet SS-N-9 missile are in this range category.

More than 100 naut. mi., with either fixed-wing aircraft or satellites used for targeting by the USSR. The U.S. Navy/General Dy-

namics Tomahawk cruise missile and the USAF/Boeing air-launched cruise missile would fall into this category along with the USSR SS-N-3 and its successor the SS-N-12, which is now deployed on the Soviet carrier Kiev. The U.S. cruise missiles use terrain contour matching guidance and are extremely accurate.

The SS-N-3 and SS-N-12 are deployed with a guidance relay system for use against moving targets such as ships at ranges to 250 naut. mi. This range limit now is determined by data link limitations. The missiles fly at altitudes of 10,000 to 20,000 ft., and the data link is used to correct drift errors in the early stages of flight.

The air-launched cruise missile is the only U.S. strategic cruise missile program now in development. The Tomahawk cruise missile, which could have a range of more than 2,000 naut. mi. with extreme accuracy, is now funded in development as a shorter-range anti-ship tactical weapon and theater nuclear weapon even though its potential as a strategic delivery vehicle is greater than the air-launched missile.

One of the major reasons the Soviets have been so adamant about halting the U.S. cruise missile program is the concern that the cruise missile will be deployed on the West German plains with nuclear warheads to replace U.S. aircraft now standing alert in Europe.

With the range capability of the Tomahawk, which would be the missile airframe for the ground-launched cruise missile, the weapon would reach areas of the Soviet land mass as well as defend against massed armor attacks thrown at North Atlantic Treaty Organization nations.

One of the major reasons the U.S. is moving toward placing cruise missiles in its inventory is the recent decline in the number of large aircraft carriers now providing principal striking power in conventional and tactical nuclear weapons for the Navy. The accuracy available in the weapon and the low altitudes at which it flies below radar detection make it an attractive weapon system, particularly in view of the thousands of surface-to-air missiles deployed in the Soviet Union. None of the U.S. cruise missiles now deployed matches the average weight of Soviet cruise missiles, and neither the Standard Arm nor the Harpoon has a nuclear warhead capability. All of the Soviet cruise missiles are believed to have a nuclear warhead option except the SS-N-2 and its successor, the SS-N-11.

Before the initial deployment of the Harpoon in 1976, only four small patrol craft operating in the Mediterranean were armed with the Standard Arm missile. The Harpoon is scheduled for deployment this summer on a large number of surface vessels, submarines and aircraft.

The USSR now has about 230 vessels at sea armed with cruise missiles. This includes surface ships in the aircraft carrier/missile cruiser configuration like the Kiev and several classes of cruisers and destroyers, as well as several classes of nuclear-propelled submarines.

The Defense Dept. was being asked last week by U.S. negotiators in Geneva to assess the effect of a moratorium on cruise missiles and to determine range limitations that could still permit development and deployment of tactical anti-ship cruise missiles.

The Joint Chiefs of Staff were scheduled for a White House meeting late last week to discuss the cruise missile issue and what the ramifications of a moratorium or range limitations would be on the weapons system.

In the June meeting in Washington on a complete test ban treaty, the U.S. is preparing to respond to a Soviet initiative offered earlier at Geneva for a complete test ban for a period of 18 to 24 months. The USSR wants to have other nations with nu-

clear weapons join in accepting a complete test ban agreement, particularly China. The interim period proposed is to see if other nations will agree to the ban along with the U.S. and the USSR.

#### EDITORIAL SCORES CONGRESS FOR NEGLECT OF MASS TRANSIT

**HON. ROBERT W. EDGAR**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. EDGAR. Mr. Speaker, I was very disappointed that President Carter's April 20 energy message failed to propose vitally needed legislation to improve our deteriorating public mass transit systems. Recently, Secretary of Transportation Brock Adams offered a proposal to use part of the standby gasoline tax for the purpose of revitalizing our transportation network. While I do not endorse the specifics of this proposal, which has not been approved by the administration, I feel that it is certainly a step in the right direction toward meeting the vital transportation needs of this Nation.

An editorial of the Philadelphia Inquirer appeared yesterday which underscored the need for more sensitivity toward our transportation needs, in view of our goals to reduce energy consumption. I would like to share this editorial with my colleagues:

IT IS TIME FOR CONGRESS TO END TRANSIT  
NEGLECT

U.S. Secretary of Transportation Brock Adams, testifying before the House Ways and Means Committee, has suggested that gasoline tax revenues in the Carter energy program be earmarked for mass transit purposes.

That is a significant breakthrough—an encouraging indication of increased concern with transit needs by the Carter Administration. Such concern was absent conspicuously in the President's initial energy proposals.

The Adams suggestion merely scratches the surface, however. The time has come for America, now more urban than rural, to make a commitment to energy-efficient mass transit comparable to the commitment that was made to highways.

The Highway Trust Fund, fed by the gasoline tax and other vehicle-related revenues, has poured billions annually into highway construction for decades. Mass transit, a neglected orphan, wasted away in the process.

One place it wasted away was in the nation's capital. Despite belated efforts to catch up on transit needs with construction of a subway system, Washington public transportation has serious service and financial difficulties. Rush-hour bus fares will rise from 40 to 50 cents in July.

Secretary Adams, in another indication of growing Carter Administration concern about transit, has made a provisional offer of federal aid to help resolve the fiscal crisis in Washington's public transportation system.

On the same day that Secretary Adams testified before the Ways and Means Committee, Chairman James McConnon of the Southeastern Pennsylvania Transportation Authority also was on Capitol Hill. Testifying before the Surface Transportation Sub-

committee of the House, he made a strong case for comprehensive congressional action on mass transit this year.

More specifically, he called for increased federal aid for mass transit through establishment of a predictable funding base so that transit systems can meet immediate and long-range responsibilities in a nation confronted with limited energy resources.

An affirmative response to urban transit problems is required by Congress not only in the Philadelphia area, where SEPTA's financial troubles are of crisis proportions, but in cities and suburbs large and small throughout the country.

The Highway Trust Fund, as Mr. McConnon testified, "is grossly inequitable and unfair against the citizens in our metropolitan and urban areas" where mass transit systems are essential.

Mass transit, including rail lines, is in essence an urban extension of the highway system and should be funded with the recognition that, just as rural areas can't get along without highways, cities and suburbs can't get along without mass transit.

Highways and mass transit are not really competitive. They are complementary. Urban and rural members of Congress, working together, should produce a mutually acceptable program whereby substantial proceeds from gasoline tax revenues will be earmarked for mass transit commensurate with need.

Existing transit funds should be distributed equitably. Present formulas favor less densely populated areas at the expense of more densely populated areas. Chairman McConnon noted, for example, that the six-cents-per-passenger federal subsidy received by SEPTA compares with as high as 20 cents per passenger in some cities. Federal funds to SEPTA amounting to 20 percent of the operating deficit compare with subsidies as high as 50 percent elsewhere.

Commuter railroad services, a particularly attractive form of mass transit in terms of both travel time and energy conservation, urgently need stronger federal financial support. Existing federal law phases out U.S. contributions to cover commuter rail operating deficits. Congress should amend the law to preserve U.S. operating subsidies for commuter railroad lines.

State, regional and local governments also have heavy responsibilities to maintain and improve mass transit. But, it is the duty of Congress to recognize that prolonged federal neglect of mass transit, while highways were king, is the primary cause of the pitiful state of urban public transportation in the United States today. That neglect should be ended by Congress this year.

#### HOW REMOTE THE RISK OF SACCHARIN

**HON. JAMES G. MARTIN**

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MARTIN. Mr. Speaker, the American people are greatly concerned that the FDA is about to move to ban saccharin from diet foods and drinks and even as a necessary sweetener for toothpaste orally administered medicines. They are becoming more concerned that Congress has done nothing to stop the ban. They do not regard the FDA claim as indicating much of a risk.

Only about a fourth of the population uses saccharin, but a recent survey

showed that the public opposes the ban 5-to-1. Since the risk is remote at worst, most people reject the need for a ban, feeling that it would suffice to require warning labels and educate the public as to the risk.

What is the risk?

That can only be answered by making a series of assumptions based on the 1977 Canadian research. The FDA has estimated there would be 0-to-1,200 additional cases, only a 4-percent increase over the current 30,000 cases a year. That upper range is based on inflated arithmetic, and is probably high by a factor of 40.

First, you must assume that humans are as sensitive at their low dose as the rates are at the experimentally necessary, but nevertheless outrageously large, overdose. You must assume that the carcinogenic effect observed in the rats is chemically induced rather than the result of extreme physical irritation—otherwise there would be a no-effect threshold just a little lower than the massive overdose. If you allow these doubtful assumptions, for the sake of calculation, then you can assume that the dose/response curve is a straight line: that the frequency of cancer is proportional to the saccharin consumed.

Any average daily dose can then be used for the calculation, because whether you figure 1 million consumers taking two cans of diet drink or 2 million consuming one can per day, the predicted tumor incidence will be the same. This calculation will use a 150 mg/day dosage, because that is about the saccharin content of a single 12½-ounce diet beverage, and because that is the dose assumed in the FDA calculation. For a 60 kilogram—132 pound—human, 150 mg represents a saccharin diet of 2.5 mg per kg of body weight; which is one-thousandth the rat dosage of 2,500 mg/kg.

It is pointless to assume next that every man, woman and child in America consumes 150 mg of saccharin a day. That would total 26 million pounds of the stuff a year, when in actual fact: Only 6 million pounds of saccharin is actually consumed in this country. So, there's only enough for 50 million Americans to get an average of 150 mg per day.

First, 216 million Americans times 150 milligrams per day over 454 grams per pound times 365 days per year over 1,000 milligrams per gram equals 26 million pounds.

Second, 6 million pounds per year over 365 days per year times 454 milligrams per pound over 150 milligrams per day per person equals 49.7 million persons.

While some argue that women consume more saccharin than men, it does not affect the next step much to assume the simplest case, that the 50 million Americans consist of 25 million each of men and women. This could of course be refined further, as could the 60 kilogram body weight average, and would only result in a slightly smaller calculated risk.

Now, if 25 million males ingest 2.5 mg/kg of saccharin per day their risk—as a first approximation—would be 0.1

percent of the fraction of the male test animals found to develop bladder tumors at 2,500 mg/kg dosage. Since 24 percent of the test rats developed tumors, the chance for 25 million human males would be:  $25,000,000 \times 0.24 \times 0.001 = 6,000$  tumors over their lifetime.

Since the life expectancy of U.S. males is 71 years, there would be 85 cases a year ( $6,000 \div 71$ ), unless modified by other assumptions.

In the 1977 Canadian research, female test rats had no significant increase in cancer. Rather than assume that females are immune, a better assumption would be that since human females experience only one-third the incidence of bladder tumors as males: their sensitivity would be one-third that of males. Accordingly, with a life expectancy of 73 years, the risk—first approximation—for 25 million females would be  $25,000,000 \times 0.24 \times 0.001 \times 0.33 \div 73 = 27$  tumors.

The combined total would be  $85 + 27 = 112$  tumors per year—not 1,200—as an upper limit, provided no other assumptions are required. Another inescapable assumption is, however, required.

There is no experimentally significant increase in cancer in test rats unless both of two drastic conditions are imposed:

First. They must be fed at least 2,500 mg/kg/day; and

Second. This high dosage must begin with the mother at conception, continuing throughout the pregnancy, so that the fetus is exposed in utero to a very high concentration effect within the placenta.

If both conditions are met, there is a significant increase in bladder tumors; if not, there is no significant result. If, as already assumed, there are 50 million saccharin users—23 percent of the population—then 23 percent of mothers might be expected to use saccharin during pregnancy. Thus, only 23 percent of the lifetime users would also meet the second test of being exposed in utero. That reduces the upper risk to 23 percent of 112, or 26 tumors.

Once again, it must be emphasized that this is an upper limit of a range of 0-to-26. If you assume, as I do, that the carcinogenic effect in the rat is only due to an unrelenting physical torture of the bladder tissues by the microcrystals formed at such high doses, then it is highly unlikely that lower doses would cause any tumors at all.

Two further observations should be made. Since one-third of bladder tumors are benign, the upper limit of malignant cancers may be even smaller ( $26 \times .67 = 17$ ).

Since 30 percent of bladder tumors are fatal, the mortality rate predicted by the upper limit of this calculation would be:  $(26 \times 0.30) = 8$ . These numbers are regrettable if there is in fact even one such death, but are small indeed when compared with the current American rate of 30,000 bladder tumors a year and a bladder cancer mortality rate of 9,000 a year. Thus, less than 0.1-percent increase is predicted.

No one is in favor of even one addi-

tional cancer, just as we are not in favor of one additional highway fatality or heart attack. Nevertheless, it is important to correct the earlier faulty estimate that the risk is in the range of 0-to-1,200 cases a year, because that upper number is being quoted as though: first, it were a reasonable calculation; and second, there were actually some evidence to back it up.

In fact, there is no evidence that any human has ever gotten one tumor from the normal consumption of saccharin.

Even if all the assumptions are granted and the upper limit of 8 additional deaths is assumed, it would make no more sense to ban saccharin over this, than it would to ban leafy vegetables, grains, nuts, processed meats, milk, eggs, and butter; or reduce the automobile speed limit from 55 mph to 54.9 mph.

#### ASSESSMENT ON CIVIL DEFENSE

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES  
Thursday, May 26, 1977

Mr. BOB WILSON. Mr. Speaker, civil defense as a part of our national security program has been too long ignored, while the Soviet Union has for years been extremely active in this critical area.

Col. John Bex has been one of our most outstanding directors in our civil defense effort. An acknowledged expert in the field, Colonel Bex has written an assessment of our current state of civil defense, and I commend most highly his thoughts to my colleagues:

#### NATION LACKS BASIC POLICY, DIRECTION (By Col. John E. Bex, USAFR)

(The purpose of this article is to provide an assessment of the mismanagement and neglect which has existed in the federal government in preparing the United States citizenry for survival and recovery under national and local emergency conditions and to propose a different direction. The author is Director, Region II, Defense Civil Preparedness Agency, Department of Defense.)

We are lacking a basic national Civil Defense policy and direction which would provide for survival of the nation and which would serve to guide the efforts of all federal agencies involved and provide a model for state and local governments to follow.

The House Armed Services Committee Report No. 84-39 states that, "It is apparent . . . that civil defense, or emergency preparedness in a broader concept, has no settled place in the federal government." The Federal Civil Defense Act of 1950, as amended, authorizes a system of civil defense for the protection of life and property from an attack. To administer this act there has been a succession of agencies—FCDA, OCD, OCDD, OCD and now DCPA—which have been established to taken certain actions in preparation for an attack situation.

The National Security Act of 1947, as amended, the Defense Production Act of 1950, as amended, the Federal Civil Defense Act of 1950, as amended, and related Executive Orders cause the General Services Administration, Federal Preparedness Agency (GSA/FPA), to be responsible for Federal Agency

coordination, policy guidance and planning related to attack and recovery.

The Disaster Relief Act of 1974 and related Executive Orders cause the Federal Disaster Assistance Administration (FDAA) to be responsible for administering and coordinating certain planning and relief programs related to natural disaster situations.

#### 39 UNITS INVOLVED

In all there are 11 federal departments and 28 or more federal agencies that have emergency preparedness assignments involving national preparedness and our ability to survive.

Not since 25 May 1961, when President Kennedy delivered his civil defense message to Congress, has a Chief Executive publicly addressed the need for civil defense. Civil Defense is a part of our total strategic deterrent posture. It is a primary element for national survival. But the need for survival planning and its acceptance as an essential way of life in the nuclear age have not been articulated convincingly to the public from the executive level.

#### EFFECTS

Lack of national purpose and direction has resulted in little more than a holding action on United States civil defense. The defense part of the offense/defense equation has been continuously de-emphasized. The Civil Defense part of the defense posture has suffered out of proportion to all other elements. Of the 114.9 billion dollars projected for FY National Defense Budget, only \$82.5 million (.07%) of the National Defense Budget was set aside for Civil Defense.

The lack of national priority, unified management and supervisory controls has resulted in duplication of effort, disparity in actions, waste of money, and inefficient accomplishment of the nation's emergency needs. Confusion due to the splintered federal effort is reflected at state and local government levels. These jurisdictions find it extremely difficult to ascertain which federal agencies are doing what and for whom.

In recent hearings on Civil Preparedness and Limited Nuclear War, before the Joint Committee on Defense Preparedness, Gen. Otto Nilson, Jr. (Ret.) stated that "... numerous Governmental agencies . . . have . . . an emergency or crises role as an extension of their everyday duties and responsibilities. What is needed is for this to be spelled out and organizational means developed to assure that this is done, that the work is monitored to assess performance, and that the pieces are put together on the basis of some workable coordination effort."

#### LACK OF RESOLUTION

Apathy at state and local levels reflects the lack of federal resolution and purpose of a national scale. The defense of the country and the protection of the people are elements of the common defense as provided for under the Constitution and are primarily a federal responsibility. The general public reacts to a national situation in the way in which their leaders react. Apathy and indifference at the federal level cascades and permeates all political levels making the prospect of providing adequately for the common defense an insurmountable task.

Cuts in the federal budget for Civil Defense are echoed in the budgets of state and local governments. The result is widespread atrophy. For example, there is erosion in the National Shelter System, Radiological Defense System and Emergency Public Information System. At the same time, we are only able to effectively warn about 47 percent of the national population and have a "minimum" nuclear disaster operational capability for about 36 percent of the national population.

Avoidance of the issues by recent Chief Executives has left the public confused, uncer-

tain, fatalistic and virtually uninformed as to the value of Civil Defense as an instrument of national survival. The result is a weakness in our national will to sustain crises, and survive attack, inviting coercion or blackmail in our strategic posture. Former Secretary of State Kissinger said that "a thermonuclear war which broke over a psychologically unprepared population might lead to a loss of faith in society and government."

#### PLAN FOR ACTION

The Congress and Chief Executive should undertake coordinate action to establish and promulgate a policy of emergency preparedness and survival. This policy should cover the complete spectrum of emergency preparedness from local natural and accidental disaster to that of a nuclear attack upon the country, since there is large element of commonality in the systems and services which are involved in such situations.

Emergency preparedness functions and services presently under the three agencies (DCPA, GSA/FPA and FDAA) should be combined into a single agency to provide for management control and operational efficiency. This agency should be placed in the Department of Defense (at the Secretary or Service level) so that a balanced effort between offensive and defensive priorities can be achieved. Primary responsibilities would be vested in the Department of Defense with other federal departments and agencies providing directed support.

In order for civil preparedness to be successful, the Secretary of the new agency must be a strong leader who is dedicated and firmly committed to the survival mission. He must have the confidence of the President and Secretary of Defense, must be experienced in effecting rapport with the congressional, state and local leadership. He must be unencumbered in his personal commitment to a viable civil preparedness and readiness posture. This position requires a creative manager dedicated to change.

Adequate funding support is required for civil preparedness and national emergency support functions to assure a viable program which can develop into a significant element of national strategic defense and provide civilian protection from the effects of a national calamity.

While we cannot keep the American populace continuously mobilized for war, we must keep the people informed and do a better job of educating them to the kind of austerity and commitment that they would be called to undertake in a nuclear emergency.

TO THE CLASS OF 1977: NOT EVERYTHING IS WRONG WITH OUR COUNTRY—BY ROBERT M. BLEIBERG

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. KEMP. Mr. Speaker, in the fall of 1973, then Ambassador to India, DANIEL PATRICK MOYNIHAN, authored an essay for Saturday Review, entitled "A Country in Need of Praise." It stands today as one of the most thoughtfully and convincingly articulated writings in praise of the American people's accomplishments to be published.

But the greatest impact of that article was in his description of what unbridled, "irresistibly chic" criticism of America, its institutions, its achievements, and of what falsely characterizing segments of its people can do to the national mood.

In short, he showed how such self-flagellation undercuts the social energies needed to set right those things which are wrong, how it can become a self-fulfilling prophecy.

Let me quote briefly from this essay:

In 1970, toward the end of his life, so unhappily cut short, Richard Hofstadter described the 1960s as "The Age of Rubbish." A man of the Democratic Left, he was depressed by the rise of a vulgar—but "irresistibly chic"—radicalism among the well educated and well to do. He found "almost the entire intellectual community . . . lost in dissent." There was almost no dialogue left "between those who are alienated from society and those who are prepared to make an intelligent defense of it."

A generation ago the great social critic Joseph Schumpeter described the mind-set of a type of intellectual, endemic to bourgeois democracy, who avoids having to acknowledge any evidence that the society has successfully undertaken and achieved certain objectives by dismissing the objectives as trivial: "A sneer will serve as well as a refutation. . . ." It sometimes seems we have gone beyond this to the point where evidence is not so much trivialized as politicized. Facts become a kind of code in which, seeming innocuous to the uninformed, they reveal sinister realities to the initiated.

Now, the apocalyptic style of recent politics has been costly. It wears out its welcome. Already one can sense the nation turning away from important matters that it was patiently, and on the whole successfully, working at. If nothing is ever achieved, what, then, is the point of trying?

This is the danger of dwelling only, or mainly, on the nation's troubles. And how much the nation deserves praise, and how much it needs it! To recognize and acknowledge success, however modest, is fundamental to the practice of government. It is a first principle of leadership in a democracy, where loyalty must be directed more to institutions than to individuals. Robert C. Tucker notes that charismatic leadership derives in considerable measure from the ability to "accentuate the sense of being in a desperate predicament." This is rarely a climate in which liberties flourish. It perhaps accounts for the unease with which many view the relentless emphasis on social failure and corruption that characterizes the New Politics. It too readily follows that a system that could tolerate so much wrong must itself be wrong. In any event, it is no way to summon the social energies that are needed to set things right.

Mr. Speaker, I had not since seen any other presentation which made the point as cogently, as convincingly, until I read in the current issue of Barron's excerpts from the commencement address of its editor, Robert M. Bleiberg, at the 125th commencement exercises of Hillsdale College, Hillsdale, Mich., this month.

Bob Bleiberg observes how the constant chiding from some quarters in our country of the market economy, the free enterprise system, business and commerce in general has done exactly what PAT MOYNIHAN predicted. It has obscured the inalienable link between political and economic freedom. It has diverted the attention of society on from how to replicate the many successes to how to ameliorate the relatively small number of failures. It has drawn managers and workers alike from their principal tasks—making more and better mousetraps at less cost to the consumer. In short, no matter how well intentioned, government intrusion in and interfer-

ence with the economy has hurt more than it has helped.

I commend Bob Bleiberg for this address. He is an astute observer of the economy and of the social and political milieu in which it tries to function.

This is well worth the careful reading of every Member of Congress. It follows:

TO THE CLASS OF 1977 NOT EVERYTHING IS WRONG WITH OUR COUNTRY

(By Robert M. Bleiberg)

Herewith some thoughts (random and otherwise) suitable for use on Commencement Day. And now, Class of '77, let's get down to business. You're about, as the saying goes, to go out into the world, and, by most contemporary accounts, an ugly world it is. So many shortcomings and failings—high unemployment, rampant pornography, widespread pollution, corruption in high places, notably the executive suite. Illegal political contributions, corporate payoffs, foreign bribes by hundreds of major U.S. corporations. Watergate gone, but not forgotten. From Wall Street to Washington, nearly everyone, it sometimes seems, is a crook.

That's what sells newspapers, and, as far as it goes, it's true enough. But let's try to put the facts in perspective. Some four hundred companies have owned up to impropriety or worse. Thousands of others have been found guilty of nothing. To illustrate, the ranks of publicly owned companies include 1,145 listed on the American Stock Exchange, 1,553 listed on the New York Stock Exchange, and roughly 11,000 traded over-the-counter, or nearly 14,000 publicly owned concerns in all. Last time I looked, the 400-odd culprits constituted barely 3% of the publicly owned total.

All told, there also happen to be more than two million U.S. corporations, public and private alike, as well as more than one million partnerships and roughly 11 million individual proprietorships. Fourteen million units do business in this country. How many, and what percentage, of them have been publicly involved in shady dealings? What percentage of the tens of millions of U.S. businessmen, or the trillion-plus dollars worth of goods and services which they help to produce have been tainted by impropriety or illegality?

Nor can we afford to forget that allegedly improper corporate conduct may cover a multitude of sins. On this score, eloquent testimony has come from Albert Sommer Jr., former SEC Commissioner. Last spring, Mr. Sommer told the Ohio Legal Institute that owing to the absence of clear-cut standards of disclosure, "Many companies have simply chosen to disclose every payment, no matter how trifling, that might in any way be questioned. Thus we have learned that huge multinational corporations made political and other questionable contributions in amounts as little as \$100; in many instances, disclosure has been made of small payments which were clearly legal under the laws of the country where made, and in other instances were at worst of questionable legality. All of this reminds me of the sorry spectacle in Soviet Russia in the 1930s, when erring bureaucrats almost literally fell over each other confessing various 'crimes' against the state."

So much for crime in the suites. To the corporate coin, there is another more glittering—if far less publicized—side. While the number of jobless (a figure, by the way, which greatly overstates the case, since it includes a good many workers who have just quit their jobs) does stand at 7% of the labor force, more Americans today are gainfully employed than ever before in U.S. history. Indeed, in January-March of this year, the private sector created over one million jobs

(and, in the past 12 months, more than 2.6 million).

By the same token, thanks to American industry, marvels of technology—citizens band radios, hand calculators, home computers, with all their built-in potentialities for enlarging our capacities and enriching our lives—flow in an endless stream from drawing-board to assembly line. The much-maligned Lockheed Corp. deploys the Hercules Airlifter, which, when famine, flood or earthquake strikes, gets there fastest with the mostest by way of disaster relief. And despite the many obstacles raised by the Food and Drug Administration, the U.S. pharmaceutical industry continues to make significant additions to the nation's medicine chest.

On this score, despite the environmentalist hue and cry over chemical additives, pesticides and pollution, the people of this country over the decades have enjoyed an uninterrupted growth in longevity. For example, since World War II—here's a statistic you're not apt to read in the daily press or hear over the major television networks—life expectancy in the U.S. has increased from 65.9 years to 72.5 years. In the past decade alone, it's risen by two-plus years.

Many other things are right with the country, including a steady growth in benevolence. According to that benevolent institution known as the Internal Revenue Service, over the past 10 years charitable contributions by taxpayers have increased from \$9.1 billion to \$15.4 billion; tax-deductible or not, that's a lot of good works. And even today, despite the proliferation of federal regulation, the number of new businesses incorporated year-by-year shows a steady rise. Finally, for young people like yourselves, here's a noteworthy statistic: in 1977, for only the sixth time in the 32 years since World War II, compulsory military service, with all its ugly statist overtones, is no longer part of the domestic scene.

Contrast the glittering record of private enterprise with that of the public sector, a comparison which, unfortunately, too few of our fellow citizens ever seem to make. Indeed, with respect to the relative performance of government and industry, a curious and ugly double standard has long come into play. For government can commit the most egregious blunders—if they aren't recorded for posterity on tape, or somehow leaked to Jack Anderson—with apparent impunity. After 30 years and the outlay of hundreds of billions of dollars, the powers-that-be confess that the welfare state has become an unworkable mess and blandly seek new, and doubtless costlier, federal solutions. After more than a generation of something for nothing, the Social Security system piles up over \$4 trillion in unfunded liabilities, and, as even its most fervent proponents have just been forced to concede, is well on the way toward going broke.

Some of the specific facts and figures cited above may be news to you. However, thanks in large measure to your college years, the views which I have tried to express—an abiding confidence in private initiative, deep suspicion of government—are now a basic part of your intellectual equipment. And thanks to your distinguished teachers, you've learned perhaps the most important lesson of all, namely, that one man on the side of right is an army.

Nor need one be an educator, journalist or other kind of professional to fight the good fight. On this score, there are a couple of businessmen about whom you ought to know more (and whom I learned about from my colleague, Jim Grant). One sells groceries in Bessemer, Ala., the other sells sportswear in San Jose, Calif. Each owns his own business, and each, when threatened by coercive government action, stood his ground and fought back. Mel Solomon, the California retailer,

mailed out a 25,000-piece promotion for a Fourth of July sale two years ago. The Post Office (which, by law, he had to patronize) promptly lost 10,000 of his flyers. The sale was a flop and Solomon, out of pocket some \$20,000 brought suit. It's still in progress.

Meanwhile, in Bessemer, Ala., the owner of a food store, Sam Pilitteri by name, reached the conclusion that the State Milk Commission had no right to tell him what prices to charge. He proceeded to cut prices, in defiance of the law, but to the benefit of his customers' pocketbooks and to his own ultimate profit. Served with an injunction, he counter-sued, demanding that the Commission be declared unconstitutional. As the trial began, the latter abolished its own pricing decree, but Pilitteri wasn't satisfied. The trial went forward.

The result? Two months ago, the Alabama State Circuit Court ruled in Pilitteri's favor. Cost studies used by the state, so the Court held, "have resulted in subsidizing the inefficient producer, processor, distributor and retailer at the expense of the more efficient producer, processor, distributor and retailer, as well as subsidizing such inefficiency at the expense of the consuming public. Ordered, adjudged and decreed, that the actions of the plaintiff in fixing, establishing, administering and enforcing the price or prices of fluid milk be and said actions are hereby declared to be null and void."

Some may say that freedom is a lost cause, and, despite the moral imperative of Commencement, which virtually compel one to look on the bright side, in all candor there's plenty of cause for concern. Compared to the alternatives, however, this is one cause, lost or otherwise, for which everyone here should be ready, willing and able to take up the cudgels.

#### TRIBUTE TO STANLEY J. HATOFF

#### HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MOAKLEY. Mr. Speaker, it gives me great pleasure to bring to the attention of my colleagues the remarkable accomplishments of one of Boston's most outstanding community leaders, Stanley J. Hatoff. Stan is general chairman of the Greater Boston Israel Bond Campaign and vice president of Temple Mishkan Tefila, and in that position, he has been awarded the Shield of Honor Award.

The bond campaign leaders, in discussing the significance of the award, noted that Stan Hatoff is a "man who has never said no to a friend or any noteworthy endeavor. He is a dynamic and articulate leader whose notable triumphs in spearheading civic and communal projects for so many of our key community agencies and institutions has resulted in new levels of accomplishment. His leadership in behalf of Israel Bonds has enrolled many new supporters and raised the level of support for Israel."

Stan Hatoff came up through the ranks of the Boston Israel Bond Organization, serving as cash mobilization chairman, congregations chairman and as executive vice chairman of the campaign cabinet.

Despite his manifold duties as head of the Israel Bond Campaign, Stan finds

time to provide needed leadership for numerous major local organizations and institutions. He is a fellow of Brandeis University; vice president and fundraising chairman of the Boston Brandeis Club; vice president of Associated Synagogues of Massachusetts; trustee of new England Sinai Hospital; a patron of the Jewish Theological Seminary, from which he received the National Community Service Award in 1974.

Stan is the kind of man whose commitment, dedication and integrity set him apart from the great majority of people. I would like to take this opportunity to join the Jewish community in Boston and throughout Massachusetts in honoring Stan Hatoff, and in honoring Stan Hatoff, and in congratulating him on receiving the Shield of Honor.

#### MEMORIAL DAY: A TIME TO REMEMBER THE DEAD AND HONOR THE LIVING

#### HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. WOLFF. Mr. Speaker, Monday marks this Nation's observance of Memorial Day when we traditionally pay tribute to those men and women who gave of themselves so that we may be free today. Their sacrifices are the cornerstone upon which we have built this Nation's greatness.

In addition to paying tribute to those who died in the service of their country, Memorial Day should also be a day when we honor and rededicate ourselves in behalf of those men and women who are our living veterans and who so honorably served this Nation. In particular, I think it appropriate that we honor those veterans who served this country with honor during the difficult and controversial years of the Vietnam war. We must do so by providing them with educational and employment opportunities which will help restore to them their rightful and proper place in our society. The present structure of the Vietnam veterans' GI bill prohibits hundreds of thousands—perhaps millions—of our most needy and deserving veterans from obtaining the educational and vocational training to facilitate their readjustment. Our programs specifically designed to assist Vietnam veterans in gaining meaningful employment suffer from acute disorganization and lack of coordination.

We in the Congress, Mr. Speaker, are in the unique position of being able to right these wrongs and the legislation necessary to accomplish this end is pending before the Committee on Veterans' Affairs. H.R. 2231, the Comprehensive Veterans Readjustment Assistance Act of 1977, which has been cosponsored by over 70 of my colleagues, and H.R. 1370 specifically are designed to restore our Vietnam veterans with the educational opportunities they need. H.R. 6590, the Comprehensive Veterans Employment Training and Supportive

Services Act of 1977, would, by establishing coordination between the Department of Labor and employers, bring order out of the chaos of our present veterans employment programs. These bills, as well as many others now pending in committee, would help bring meaning back into the lives of our forgotten Vietnam veterans.

Mr. Speaker, as we honor our dead on this Memorial Day, let us also rededicate ourselves in behalf of those living veterans who can only look to us for a solution to their problems. In the memory of the dead let us honor the living.

#### FARM BILL A COMPROMISE

### HON. JOSEPH S. AMMERMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. AMMERMAN. Mr. Speaker, the House will soon debate the Agricultural Act of 1977—H.R. 7171. I want to report to you on the committee action which shaped the bill and my views on it.

After lengthy hearings and drafting sessions which have occupied most of the year to date, the House Agriculture Committee, of which I am the only Pennsylvania member, at last has reported out a comprehensive farm bill.

Most of the major Federal agricultural legislation was up for renewal this year. Thus, the committee was confronted with the task of extending, or at the very least reexamining, a massive number of programs.

One of the major struggles during the committee's work on the bill was to keep the price supports for farmers—or more correctly, the crop target price and loan programs—at reasonable levels. President Carter's proposals called for very tight spending limits on price supports.

I can only report mixed results to you on this issue.

On a narrow 23 to 22 vote, Committee Chairman THOMAS S. FOLEY, Democrat of Washington, was able to beat back an effort to increase wheat target prices to a level far above that acceptable to President Carter. I voted with Representative FOLEY against that increase.

We also defeated a similar move on corn prices. Even so, the bill as reported by the committee provides price levels somewhat above those requested by the Carter administration, although substantially below those set in the Senate's farm bill.

Farmers in Pennsylvania for the most part expressed concern that higher feed grain prices would increase the cost of the dairy operations which are a key element of Pennsylvania agriculture.

I am not completely happy with the way the bill came out, but I do recognize that Chairman FOLEY had to strike a very delicate balance among the conflicting objectives of the grain belt farmers, eastern dairymen, and other important groups.

As far as the dairy price support program itself was concerned, most of the Pennsylvania farmers who contacted me

said they did not favor an increase in the statutory floor for such supports which currently is 75 percent of parity. The Secretary of Agriculture can set higher support levels and Secretary Bergland recently increased them to 83 percent of parity.

We did not win this fight in committee, but we did hold the increase in the support floor at 80 percent of parity instead of the 85 percent some committee members sought.

For research, extension service, teaching and facilities, the bill authorizes \$950 million in fiscal year 1978 and will increase spending on these programs to \$1.4 billion by the 1982 fiscal year. These programs all have been authorized for 5 years while the price support programs are extended for 4.

The bill's provisions are so numerous that I really cannot list them all. Further, the measure provides spending authorizations for such programs as food stamps and the Federal Insecticide, Fungicide and Rodenticide Act, which will be addressed in separate legislation.

As with anything so complex, the bill has its good points and its weak points. It will be helpful to Pennsylvania in many ways; less helpful in others. But I think the benefits were sufficient for me to vote for it in committee and to join Chairman FOLEY in cosponsoring the version being sent to the House floor.

#### ARMED FORCES WEEK

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. DERWINSKI. Mr. Speaker, last week was "Armed Forces Week." At a time, when we are not faced with a major threat of war, we must recognize the necessity of maintaining a strong military defense force, second to none, in order to protect our national security interests and the peace and freedom in the world.

Members of our military services deserve our respect, appreciation, support and prayers. I insert a very fine editorial broadcast by Chicago's WGN Radio and TV, on May 16, in honor of this special observance.

[WGN Editorial No. 77-118, Monday, May 16, 1977]

#### "ARMED FORCES WEEK"

This week all across the nation, has been proclaimed "Armed Forces Week." In paying tribute to the men and women of our Armed Forces, let us not forget the importance of a "Total Force." This includes the thousands of civilians working in many areas of our Armed Services; also, the National Guardsmen and Reservists who have assumed an even greater role in our nation's defense, and are deeply involved in the total combat capability.

No longer do these Reserve Forces have to depend upon obsolete equipment handed down to them. They now receive the most modern and sophisticated weapons available. These are no longer just weekend warriors; they are now full-fledged partners with their active duty counterparts.

Spending for national defense takes one of

the larger chunks of our federal tax dollars. We have the right as taxpayers to insist that these dollars be spent as carefully as is consistent with maintaining our national defense. It is our opinion that the total force concept, the linking of regular forces and what we call the weekend warriors, is one way to assure that this is being done.

So, here is a verbal salute to those dedicated men and women, all of those who wear a uniform every day or only for drills and summer exercises . . . from all of us.

#### THE 1976-77 REPORT ON THE POLISH CULTURAL SOCIETY OF AMERICA, INC.

### HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MURPHY of New York. Mr. Speaker, it is a great pleasure to report that the Polish Cultural Society of America, Inc., P.O. Box 31, Wall Street Station, New York, N.Y. 10005, is a loyal American service organization which endeavors to represent the best interests of 11,000,000 loyal and dedicated Americans of Polish heritage throughout the Nation. The national chairman of the Polish Cultural Society of America is Mr. Raymond H. Paluch, a distinguished businessman, patriot, and past commander of the New York State Veterans Association as well as an active member of many civic organizations engaged in philanthropic, eleemosynary, social amelioration and humanitarian endeavors.

The basic purpose of the Polish Cultural Society of America is "to undeviatingly support the Constitution of the United States of America and the institutions of freedom and democracy embodied in our American Bill of Rights as enunciated in the first 10 amendments to the Constitution." Membership in the Polish Cultural Society of America, Inc. and in its subdivisions is open without any restrictions or hindrance, whatsoever, to all loyal Americans irrespective of differences of race, color, creed, sex, or country of origin.

Mr. Speaker, it is my privilege and pleasure to submit for the Record, the 1976-77 Report on the Polish Cultural Society of America, Inc. The society is a national organization devoted to serving the interests and needs of 11 million members of the Polish-American community.

#### THE 1976-1977 REPORT ON THE POLISH CULTURAL SOCIETY OF AMERICA, INC.

THE POLISH CULTURAL SOCIETY OF AMERICA, INC. MAKES A SIGNIFICANT CONTRIBUTION TO UNIVERSAL HUMAN RIGHTS

In the past year, The Polish Anti-Defamation League placed itself in the forefront of the organizations fighting the infamous Arab boycott of American businesses because these companies trade with Israel or have American Jews who are owners or directors of these businesses. The Arab boycott of American business in this respect has been declared, by President Jimmy Carter, "as an absolute disgrace." In addition, The Polish Anti-Defamation League, a subsidiary of The Polish Cultural Society of America Inc., worked with its utmost effort not only in honoring the millions of Polish and Jewish victims of the

Nazi Holocaust, but in also attempting to secure the ratification of the Geneva International Convention Against Genocide by The United States Senate.

**UNIVERSAL HUMAN RIGHTS DECLARATION OF THE POLISH ANTI-DEFAMATION LEAGUE**

(1) The Polish Anti-Defamation League Is Dedicated To The Proposition That All Human and Civil Rights Are Universal, Defensible, and Sacred.

(2) The Polish Anti-Defamation League Believes That The Sacred Universal Rights Of All Human Beings Must Be Legally Defended and Protected At All Times.

(3) The Polish Anti-Defamation League Believes That All People of Good Will Must Join The Crusade For Enlightened Humanity! . . . The Polish Anti-Defamation League, In Traditional and Historic Reliance On The American Bill of Rights and The Constitution of the United States, and in Affirmation of the United Nations Covenant On Human Rights . . . Believes That Indifference and Apathy to Character Assassination, Vilification, Derogation of Integrity, and Corrosive Defamation, Oral and Written, of Persons of Polish or of Any Origin, Constitutes a Farflung, Destructive, Pathological Social Degeneration Which Can Only Be Cured By the Direct and Dedicated Social Involvement of Enlightened Individuals and Corporations Who Will Not Only Defend and Fight For Their Own Precious and Unalienable Rights and Liberties, But Also For the Sacred Rights and Liberties Of Others.

**FINANCIAL SUPPORT REQUIRED!**

(4) Therefore, In This Era of Growing Technological and Telecommunications Expansion and Tension, The Polish Anti-Defamation League Has Instituted Appeals To All Citizens In All Walks of Life To Financially Support This "Crusade For Universal Equal Humanity" Supported By and Under The Fatherhood of GOD and The Brotherhood of Man.

**NEW SUBDIVISIONS**

Among the new subdivisions formed by The Polish Cultural Society, Inc. were the Polish Genealogy Society, The Polish-American Consumers Council, The Polish-American Senior Citizens League, The Copernicus CB Club, The Radio and Television Listeners of America and The Society of the Friendly Sons and Daughters of Copernicus, US Merit Awards Council and The Copernicus International Travel Club.

**AWARDS AND HONORS**

Among the distinguished world and public citizens who have received Awards "For Distinguished Public Service" from The Polish Cultural Society of America Inc. are: Artur Rubinstein, John Chancellor, Gerald R. Ford, Clarence M. Kelley, Edmund G. Brown, Percy Sutton, Shirley Chisholm, Jesse Zaslav, Abraham Beame, Norman Lent, John M. Murphy, Jacob K. Javits, Edward Koch, Jack R. Muratori, Daniel P. Moynihan, Jonathan Bingham, Benjamin S. Rosenthal, Lester L. Wolff, Theodore Weiss, Harrison Williams, James J. Delaney, Herman Badillo, Jack F. Kemp, Henry Jackson, Edward H. Lehner, Gary Hart, John Mulhearn, Barry Farber, Bruce Morrow, Dick Summer, Steve Powers, Dan Meenan, Bob Grant, Evrard Williams, John W. Wylder and Howard Cannon.

**A BRAVE BOY SCOUT**

**HON. MANUEL LUJAN, JR.**

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LUJAN. Mr. Speaker, next month will mark the sixth anniversary of the

drowning of an Albuquerque, N. Mex., Boy Scout in the Green River in Utah. Peter McCarthy was well prepared for his trip and along with the other Scouts of Troop 442, he met his fate in an accident when his raft encountered rapids and fallen trees in the river.

The majority of the Scouts were able to reach the shore immediately. However, Peter and another Scout were swept downstream. Peter's friend had lost his lifejacket and Peter, in a heroic gesture, called out to him to hang on to his jacket in order to keep from falling deeper into the rapids.

The couple floated for approximately 3 or 4 hours when Peter appeared to be losing consciousness. The two tried to reach safety at the crown of a bank, but Peter, in weakened state, could not make the climb. His body was found downstream by another group of Scouts.

I would like to recognize Peter posthumously as a brave and fearless young man who reached out to save a friend's life only to lose his own. I would like to offer my prayers to Peter's family and close friends at this time and ask my colleagues to join with me.

**THE DEBAUCHERY OF OUR CHILDREN**

**HON. CARDISS COLLINS**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, the time is at hand for the people of our Nation to rebel against the nefarious "exploitation" of the children of America. It is deplorable that our youngsters are becoming victimized by the purveyors and practitioners of what psychoanalyst Rollo May calls the "new puritanism," the current philosophy which promotes "sex without love and sex deliberately separated from the unique human capacities of passion and commitment."

I am appalled by recent reports of children—some as young as 3 years old—being shown in pornographic films and magazines, posing for explicit sexual acts. It is my understanding that this segment of the booming, billion dollar pornography industry is perpetrated by a steady supply of runaway children who, as Time reports, serve as a "ready pool of 'acting talent' for photographers" for a meal or money, and who often become residents of houses of prostitution.

Little imagination is needed to realize the psychological effect of all this on the child-victims of the craze of perversion. New York psychoanalyst Herbert Freudenberger states that:

Children who pose for pictures begin to see themselves as objectives to be sold. They cut off their feelings of affection, finally responding like objects rather than people.

An even greater damage and danger to the community at large is that, in the opinion of Los Angeles psychiatrist Roland Sumit, sexually abused children may become sexually abusing adults. And so, the sinister cycle continues.

I feel real outrage over the absence of protective and punitive Federal legislation in the area of child pornography; but, I am encouraged by the recent legislative initiatives of my colleagues. Twenty-five percent of the Members of the House of Representatives have joined in the cosponsorship of effective child protection legislation—H.R. 4572, the "Child Abuse Protection Act". In the Senate, two similar bills have been introduced and cosponsored by at least 20 percent of that body.

A principal argument by the detractors of these legislative measures is that they pose first amendment problems akin to those created by obscenity laws. However, as Congressman JOHN MURPHY says,

This legislative approach focuses on the immensely important fact that such pornography materials are an unconscionable abuse, both mental and physical, on the children involved; our bill does not determine whether such materials are obscene.

H.R. 4572, also known as the Kildee-Murphy bill, calls for up to 20 years' imprisonment and/or a \$50,000 fine for the production of pornography involving children, or knowingly permitting a child under 16 years of age to be photographed in sexual acts. It also mandates a sentence of up to 15 years and/or a \$25,000 fine for shipping or selling such materials. Hearings on this matter have already begun in Congress and in many State and local legislative bodies.

Current reports reveal that measures to outlaw "child-porn" have been introduced in 23 State legislatures. In March of this year, the Illinois General Assembly overwhelmingly voted to consider a stringent measure that not only calls for prison sentences of up to 10 years for anyone found guilty of obscene conduct involving a child, but provides for jail terms of 1 to 10 years for anyone dealing in child pornography. It also prohibits judges from sentencing such a person to probation, periodic imprisonment, or conditional release.

In conclusion, I urge my colleagues to support similar measures to insure the protection of our offspring and the morality of our Nation.

**THE NEED FOR A RENEWED CHRISTIAN AMERICA**

**HON. RICHARD H. ICHORD**

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ICHORD. Mr. Speaker, in this age of realism we seem to have strayed far from our foundations. Seemingly, we have become more acquiring than inquiring, more material than spiritual, more clever than possessed with character, and more witty than wise. Our Bicentennial celebrations reminded us of our foundations, but even in those moments of reevaluation, little was said about the role of religion in the founding of this Nation. As my good friend and fellow Missourian, the Rev. Dr. Arthur C. Fulbright points out in his

March 13 sermon to the First United Methodist Church of Sikeston, Mo.:

Our fathers built this nation upon God and religion.

His sermon points to the great need for all of us to renew our idealism as a Christian republic and to regain our spiritual heritage. It is a sermon which I recommend to all of my colleagues as a challenge to us and to our Nation:

"THE COMMUNIST CONSPIRACY IS KNOWN! I!"

The Communist conspiracy is known. The diabolical Marxian philosophy of dialectical materialism has caused the historical record of Communism's amazingly rapid spread across much of Europe and Asia. Its tactics and techniques of conquest, subversion and infiltration; its atheistic immorality; its barbarities; and its ultimate objective—world conquest—is known and accepted by the majority of mankind!

Why the advancement of Communism? The great philosopher, Edmund Burke, once said: "If no certain laws, establishing invariable ground of hope and fear . . . keep the actions of men in a certain course, or direct them to a certain end . . . (then) the commonwealth itself would, in a few generations, crumble away, be disconnected into the dust and power of individuality."

What are the "certain laws, establishing invariable ground of hope and fear . . ." that have held society together "in a certain course?" These certain laws have been and are—the Ten Commandments! Here in the Ten Commandments we find stated the enduring principles upon which our civilization is based. We may call them God's laws, the natural law, the moral law, or the common law as they came to be known when translated in the rules which our ancestors established for governing the conduct of mankind.

Society is breaking down today because these enduring principles are no longer honored as rules for our conduct! Many of our citizens have no knowledge of the Bible. Many, indeed, have never heard of the Ten Commandments! How can we expect our society to prosper and endure—if the principles upon which it was founded and which gave it meaning and purpose are to be ignored and forgotten?!! Therefore, whatever power controls the mind will soon control the people!!!

If I am any student of history at all, I see World War III approaching. We can look for one sore spot after another erupting on the surface of this globe, little revolutions, keeping us and the United Nations in a constant stew running here and there putting out the fire, trying to restore peace and order. And all the while, the USSR and Red China, behind this smokescreen, are feverishly working to bring their economic order and nuclear stockpiles to a level comparable to ours.

Wishful thinkers keep hoping for a state of peace in the world, but there is no peace! The shameful Cuban disaster, the Vietnam defeated struggle, all Southeast Asia in ferment, Korea seething with apprehension, Red China pawing the shoreline looking longingly at Formosa, Africa foaming and steaming, Germany divided by an ugly wall, Israel and Arabian states in constant turmoil, Latin America in a perpetual state of unrest, demonstrations at home and abroad. Skirmishes, upheavals, riots, armed revolts on every continent and in every nook and corner of the earth . . . one festering sore after another coming to a head and all according to the Communist time-table!

In April 1975 the world took note of the shameful and appalling Communist take-over of Cambodia with their acts of murder and rape of a gentle people and land. The Communists murdered over one million Cam-

bodians in their take-over. The account of the full awesome truth about the new holocaust is revealed by two renowned writers, Mr. John Barron and Mr. Anthony Paul in their recent book, "Murder of a Gentle Land", the story is told as the Cambodians witnessed the Communist murder and rape of their gentle people.

There is a feeling that the present Soviet Government is somewhat less militarily belligerent than Red China, but no one who looks at the situation realistically suggests that there has ever been a significant change in the Russian objective. Their eventual aim is still World Domination! You recall what Lenin said: "As long as Capitalism and Socialism exist, we cannot live in peace; in the end, one or the other will triumph."

The adherents of Communism believe—and that belief is a strong conviction, a flaming passion—that our way of life is doomed to failure because of its weaknesses, which they see, but seemingly we are not able to accept and see; or if we do, we shrug our shoulders and disinterestedly pass by. Russia thinks she foresees the eventual decay of our democracy.

Please note the seven deadly sins that are destroying our nation:

1. Politics without principle;
2. Pleasure without conscience;
3. Knowledge without work;
4. Wages without labor;
5. Business without morality;
6. Science without humanity;
7. Worship without sacrifice!!!

What, then, is the over-all Marxian strategy?

1. Foment trouble throughout the world without becoming directly involved.
2. Sap the strength of the democratic nations. And while moral, spiritual and psychological decay is working within our democracy, she will continue to wear us and the Western World down by ingeniously planned uprisings in every part of the world.

3. The Communist chief purpose is to demoralize the Western World, to weaken and wear us down, waiting until we eventually crack up.

4. Then with one masterful stroke, having already infiltrated government, education, business and religion, start a bloody revolution.

Every student of Marxism knows that is the strategy! When we go into a declared war against World Communism, we will already be wearied, weakened and defeated within. That is the advantage the Communists want, and they are staking everything on getting it.

There it is—the Communist plot! In defending our way of life on many fronts we are speeding up its decay within. Then at the strategic moment Communism steps in for the kill. And that is what I am afraid is happening, which leads me now to the really serious thought in my address:

Could there be more truth than we are willing to admit in the Marxist appraisal of our democracy? Are there glaring weaknesses in our way of life which will jeopardize its chances for survival? Are we nearing a moral and spiritual breakdown?

I venture an answer:

Our Capitalistic system may be headed for a downfall, unless we re-think, re-organize and revitalize our whole economy. The old method of fair and friendly competition is dying simply because it has been emptied of the true Christian spirit and is now hollow and dry. My friends, when your profit motive becomes your all-consuming purpose to the exclusion of every humanitarian outlook, then dry-rot sets in and your capitalistic system takes a tumble. When materialistic and secularistic thinking supplants the essential Christian principle and the Christian in-

reach and out-reach of life, then the days of your economy are numbered. A materialistic humanistic philosophy which puts possessions before service and holds them to be more sacred than human welfare, you can't deny the dry-rot. We give the impression in America that only material things count. So on and on we try to out-bid Communism at the level of gross materialism. We forget that human greed is insatiable. You can never satisfy it. Even if we outbid Communism on that level of materialism, they have won, because it is the materialism that has won—not the spiritual ideals that so-called Christian America professes.

Who can deny that our American Democracy has fallen sick? My friends, we are not as Christian a nation as we rationalize ourselves into believing we are. And Communism knows that! Do you think Communism would dare tamper with our way of life if she thought we were as sold on it as we were our early American Fathers?

I think it is time for somebody to tell the truth! Fifty million Americans are avowedly Godless. And just how Christian are the 115 million Americans who statistically belong to somebody's church? How many of them actually practice the Golden Rule? How many of them stand four-square for righteousness and justice? How many of them attend church regularly? What percentage of them are in church today?

Rome survived about a thousand years. Greek civilization survived about 500 years. We are 200 years old, and unless we change the trend we may not live another fifty years as a civilization and a first class nation.

Our very existence as a sovereign nation is in jeopardy. A nation can carry its indebtedness. It can correct its errors in judgment. It can rebuild its physical wreckage after natural disaster. But history makes plain that immorality and Godlessness lead to destruction!

So you see, my friends, it isn't war with the Communists that I fear. It is the decay of our Christian civilization that I dread, which would be even worse than war. Unless we experience some kind of moral and religious awakening in this country, the Communists will accomplish their Godless aims with war.

Are we heading for World War III? We are heading for something worse—more disastrous—the collapse of our morals, the loss of our spiritual heritage, the loss of our idealism as a Christian republic.

What can we do? Can we save ourselves and our beloved America? Can we experience such an awakening that the Communists will be jolted out of their egotistical assumption that everything is going their way right down the line? Can we make ourselves strong within? Can we find that spiritual power that will give us the decided edge? Can we upset the Marxian time-table? Can we lead the world to a just and lasting peace?

YES! That is why this address is necessary.

First of all, this is a personal matter. The place to begin is with ourselves. We must humble ourselves. We must repent of our sins. We must learn to discipline ourselves and re-organize our lives and our philosophies about the traditional spiritual values and concepts of life. We must simplify our living, slow down our pace, settle our racial differences and get back into our churches and out into the world with as much Christian love as American money. We must give God the chance He needs and cannot have unless we let Him have it!

Here's our predicament. Here's our need. Here's our challenge, our chance. Here's our hope, society's hope, the world's hope, put together in one verse of Holy Scripture.

"If my people, who are called by my name shall humble themselves, and pray and seek my face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sin, and will heal their land."—II Chronicles 7:14

Either we are going to discipline ourselves for our own sake, for our nation's sake, and our world's sake, or else discipline will be imposed upon us from without. Men know right but do wrong. Men, free to worship God according to conscience, use that freedom not to worship God at all. Men, free to build a commonwealth, use their trained minds for exploiting others and set in motion forces which destroy democracy. Men who know the value of law become lawless. Men who want a peaceful world are not at peace in their own homes, in their churches, or in their communities. We produce too many citizens with more wit than wisdom, more cleverness than character—using liberty for license.

You know the truth: "Liberty is not the right to do what you choose. It is the responsibility of choosing to do what is right."

And that is where religion comes in. You must get back into the church and become a vital part of its effort to save our society through Jesus Christ and the gospel. That may not be all of the solution, but it is a definite and indispensable part of it.

Caesar built a civilization upon power, and it failed. The medo-Persians built a great nation, but they drank their way to doom, and that civilization failed. Egypt flourished until she forgot God, and diminished into obscurity. Greece, under Alexander conquered the world, but Alexander couldn't conquer himself and died in a drunken orgy. Rome was once the proud center of the world, but luxury and lust ate at the center of her life, and she perished.

Our fathers built this nation upon God and religion. Do you recall that picture of George Washington at Valley Forge? His little army was almost starving and freezing to death. Everything they held dear was at stake. They were fighting against insurmountable odds. But out there in the snow was George Washington on his knees, praying to God for guidance. That was the spirit that built America! That has been the spirit that sustained America. That will be the spirit that will save America!!!—Amen.

Respectfully submitted,

ARTHUR C. FULBRIGHT, Th. D.,  
United Methodist Minister.

#### TUNA/PORPOISE CONTROVERSY

**HON. BOB WILSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BOB WILSON. Mr. Speaker, next week, we will be considering H.R. 6970, a bill that will provide some measure of relief to our tuna fishermen while going far toward reducing porpoise mortality.

Recently, the Washington Post, in an editorial, made comment on the tuna/porpoise controversy and took exception to the actions of the chairman of the House Merchant Marine and Fisheries Committee.

In an effort to set the record straight and to place accurate information at the disposal of my colleagues—particularly in view of the fact that tomorrow this question will be brought before us, I would like to include Chairman Mur-

phy's reply to the Post editorial as an extension of my remarks.

**PORPOISES, TUNA BOATS AND A NET OF FACTS**  
(By John M. Murphy)

It is hard to determine where to begin the corrections to The Post's May 15 editorial "Save the Porpoises," which attacked my tuna/porpoise amendments. However, I think I will start with the pejorative implication that I was "caught" by the tuna fleet. I was certainly not caught by the fleet, but by a net of facts, a net successfully eluded by The Post. I found the facts after a personal investigation of the affected areas of the country, months of committee meetings and after reading a hearing record replete with testimony, which The Post obviously did not bother to read.

First, the tuna men did not "beach [their] own fleet" to put pressure on Congress. The government failed to issue permits to fish using the dolphin-following technique until April 15, 1977. When it did, the government allowed a catch of 59,000 dolphins—but not one dolphin of the species known as the Eastern Spinner. As a result, the tuna boats that tried to operate under the 1977 federal regulations found themselves in violation of the law if they caught one of these dolphins, which they use to spot and catch tuna in the first half of the fishing year. They sailed home "partly" in protest, but mainly because the regulations were not workable.

My bill calls for an allowable take of 6,500 of these particular dolphins. At a recent hearing Dr. Robert White, the head of the National Oceanic and Atmospheric Administration, presented evidence that the government now agrees that the allowable take of the Eastern Spinner should be at the 6,500 level. White's revised scientific data have put the total allowable dolphin take at 69,000 over the next six months, with projected increases in the stocks of dolphins in the coming years.

The Post says the tuna industry has been slow in installing the proper nets and using the proper techniques for saving the dolphin. But the editorial fails to point out that it was the U.S. fleet that pioneered the fishing techniques that reduce the dolphin mortality rate. It was a fisherman who developed the backdown procedure used by the entire tuna fleet long before the Marine Mammal Protection Act, for which I voted and worked, ever became law. The Post implies that the fleet objects to this procedure. The fine-mesh nets that The Post referred to were invented by a fisherman named Medina; they are on 70 per cent of the boats in the fleet and will be on all the tuna boats as quickly as they are produced.

But most important, the editorial ignored a judicial interpretation of the law that put tens of thousands of people out of work. My amendments can help these thousands of cannery workers and ordinary seamen, who have been without paychecks since November 1976, to go back to work without threatening the depletion of the dolphin population. Most of these workers are minority and female, and in many cases they are the heads of households. They provide 30 per cent of the fish protein eaten by American citizens. And this inexpensive protein is about to become exorbitant in price or even nonexistent if the present stalemate is allowed to continue. It's time these people went back to work.

You refer to "administration" legislation. I waited for eight months for an administration solution, which by their own admission was finalized under pressure from committee hearings. The House Merchant Marine and Fisheries Committee has conducted endless

hearings and meetings without coming up with a bill. Sen. Alan Cranston's apparently acceptable compromise was wrecked by an intransigent group of environmentalists. It was then and only then that I decided to take action. My bill picks up the Cranston compromise. We are well on the way to solving this controversy. Editorials such as the one in The Post only exacerbate the problem and continue the polarization of the radical elements on both sides of the issue.

Finally—and this is the unkindest cut of all—The Post promotes the myth that the American tuna fleet cannot transfer to a foreign country and that, even if it did, a U.S. import ban would solve the problem. These old arguments have been discarded for weeks. The fleet is not made up of boats alone. It is made up of highly skilled captains and crews. They are the ones who are preparing to go to Latin America, and the foreigners would be only too happy to supply the vessels for these expert American fishermen. And in a world that is increasingly devoid of a cheap source of protein, it would be a Pyrrhic victory indeed for this country to ban an inexpensive protein source that everyone else in the world wants—and will buy.

**SHOULD THERE BE GREATER REGULATION OF LAND USE AT THE STATE AND FEDERAL LEVELS—**  
BY BERNARD H. SIEGAN

**HON. JACK F. KEMP**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. KEMP. Mr. Speaker, one of the most controversial issues before Congress in recent years—and again this year—has been the role of the Federal and State governments in land-use planning and control. The controversy is not going to go away.

Caught up in the give and take of lobbying efforts either for or against greater Federal or State roles, most authors, no matter how knowledgeable, lose sight of the fundamental, core questions. That is why I was impressed with, an article I read over the past weekend by Bernard H. Siegan, one of our country's most respected and outstanding authorities on zoning and land use. He has avoided the pitfall which catches other commentators and has addressed himself squarely to those fundamental, core issues.

Perhaps I can summarize Mr. Siegan's conclusions most accurately by quoting directly from this article:

We have had four or five different zoning systems or strategies in this country. Each has been introduced with what has turned out to be greatly inflated rhetoric as to what it would accomplish. And each in turn has for the most part, failed to meet the expectations created by that rhetoric. The result, each time, is a new effort at the drawing boards, resulting in more and severer rules and regulations which, experience suggests, is not likely to be more successful than the previous program.

The question arises, can these widely recognized problems be solved by state or federal land use regulations? The simple answer is that political pressures moral and legal corruption and bad laws are not confined to local government. A second answer comes

from the experience of regulation in this country. That record has been an extremely poor one.

The proponents of higher land use regulation are doing what seems to come instinctively these days, to ask for more or a different kind of government regulation when the existing ones have failed. This attitude represents what Dr. Samuel Johnson called, when speaking of another endeavor, "a triumph of hope over experience."

Not only would state or federal land use regulations not solve the many problems seen by its proponents, it would be harmful to our society.

The situation demands deregulation. We should start dismantling the regulatory processes which harm the economy and prevent people from acquiring the best and most desirable shelter. There surely should be no greater regulation of land use at either the state or federal level.

Mr. Speaker, the complete text of the article follows:

SHOULD THERE BE GREATER REGULATION OF LAND USE AT THE STATE AND FEDERAL LEVELS?

(By Bernard H. Siegan)

My position is that there should be less regulation of land use at both the state and federal levels of government. The existing problems of land use can best be solved by deregulation, not increased regulation. I will be speaking about area-wide regulation and not specific land use control proposals.

Let me begin by referring briefly to the experience of zoning in this country, so that we can better understand the operation of land use controls. We have a very rich history of zoning regulation, even just including the part the public knows about. Area-wide land use controls arrived in 1916 in the form of the New York zoning resolution, the country's first zoning ordinance. It was a modest ordinance containing three use districts: residential, commercial and unrestricted; five classes of height districts and three classes of area districts. At my last count, New York had 66 zoning districts, and a host of other controls never conceived of by the draftsmen of its original ordinance. A similar story applies to other cities. Small, modest ordinances in time become very complex and complicated ones. One reason for this is of course the change in conditions, techniques and thinking that occurs over the years and is reflected in our laws. But there are two other explanations for the uncontrolled growth of zoning.

The first is that zoning has been the story of unrealized expectations. We have now had four or five different zoning systems or strategies in this country. Each has been introduced with what has turned out to be greatly inflated rhetoric as to what it would accomplish. And each in turn has for the most part, failed to meet the expectations created by that rhetoric. The result, each time, is a new effort at the drawing boards, resulting in more and severer rules and regulations which, experience suggests, is not likely to be more successful than the previous program.

The current situation in San Diego provides an example. The existing zoning system has been deemed inadequate and a great many promises are being made as to what the new proposed five tier zoning policy will accomplish. One gets the impression that even if only a portion of these promises materialize, this city will surely be another Camelot.

Another reason for the large growth in zoning regulations is that the process is basically one of resolving differences between various special interest groups in the community. No matter how perfect the zoning plan, some people will be helped and others

hurt by it. The losers, experience shows, will immediately after passage of the ordinance, start doing those things that will make them winners. Owners of property will seek to rezone it, so that it will be worth more. Homeowners and conservationists will try to downzone property and civic groups will try to overcome the inadequacies they discover. The courts may also cause significant changes to be made. It will not take long before the original plan has been reduced to not much more than an historical document, having grafted upon it innumerable amendments. The dominant factors in zoning have been public pressures, political pressures and just plain politics. Matters such as highest and best use of the land, conservation of the land, satisfying consumer demands and sound planning have been subordinate and often nonexistent considerations.

The question arises, can these widely recognized problems be solved by state or federal land use regulations? The simple answer is that political pressures, moral and legal corruption and bad laws are not confined to local government. A second answer comes from the experience of regulation in this country. That record has been an extremely poor one. The most immediate example is the regulation of airlines. President Carter, Senator Kennedy, Ralph Nader and Milton Friedman all agree upon substantial economic deregulation of the airline industry.

The evidence is rather clear that airline regulation has been harmful to the nation. A study by the General Accounting Office has concluded that a reduction in federal regulation of airlines during a six year period would have resulted in fare reductions ranging from 22 to 52 percent. The lower fares would have resulted in savings to domestic air passengers on the order of \$1.4 billion to \$1.8 billion per year. The Carter administration has now also proposed deregulation of the ICC which controls rail and truck rates, thereby joining Ralph Nader and Milton Friedman who have long held this view.

Even in the area of health and safety, it is most questionable how effective regulation has been. Consider the case of the FDA, and I do not refer to the current flap about saccharine. Some very extensive studies have shown that while the FDA is keeping out of the market bad drugs, it may be excluding an even greater number of beneficial drugs, such as those which might help us relieve or control heart disease and cancer.

There have now been numerous studies of the many regulatory agencies and many of them have been printed in the *Journal of Law and Economics* published by the University of Chicago Law School. Professor Ronald Coase, editor of the *Journal*, has this to say about these studies, and I quote:

"The main lesson to be drawn from these studies is clear; they all tend to suggest that the regulation is either ineffective or when it has a noticeable impact, that on balance the effect is bad, so that consumers obtain a worse product or a higher priced product or both, as a result of the legislation. Indeed, this result is found so uniformly as to create a puzzle; one would expect to find in all these studies at least some government programs that do more good than harm."

A recent article in the *Bell Journal*, favorable incidentally to regulation, written by Economics Professor Victor Goldberg, affirmed Professor Coase's conclusion in this manner:

"The failure of regulation has been widely chronicled in recent years. Among economists the disdain and contempt for regulation is nearly universal; if effective, it is thought to be pernicious, and if ineffective, a waste of resources."

Accordingly, based upon the history of

zoning and other regulation, the lesson should be clear that additional regulation of land use should not be imposed unless there is extremely strong cause for it and even then, only if it is very likely to accomplish its purpose.

Using these criteria, existing proposals for state and federal land use controls fail. To demonstrate this, let me discuss with you the objectives of the principal groups seeking such regulation. These include the environmentalists, egalitarian-civil rights groups and a portion of the development industry.

The environmentalists seek to carefully screen and/or prevent development in areas considered environmentally sensitive. What are environmentally sensitive lands? The definition is not as simple as may appear. This was evident in the Bill sponsored by Congressman Morris Udall and others, which would have partially subsidized state land use programs, and which nearly passed the House in 1974. That bill's definition of areas of environmental concern was so broad many of us thought it included most of the land West of the Mississippi river. In a subsequent bill introduced by Udall and others in 1975, the definition was refined and among other things, eliminated agricultural land, but it still involved a great amount of territory. I quote to you just one portion of the definition contained in the later bill, Section 302(A), designating as areas of critical state concern the following: "natural or historic lands with significant scientific, educational, recreational or aesthetic values, such as significant shorelands of rivers, lakes and streams, rare or valuable eco-systems and geological formations, significant wildlife habitats and fragile areas. . . ." The language would still cover large quantities of land, and is subject to considerable expansion.

However, regardless of the language or intent of its sponsors, it is not likely that all development will or can be prohibited within these areas. What will happen in all probability is much more of what is already occurring under local zoning. There would be less development, more land would be used for urban purposes and real estate prices and rents would tend to increase. However, relatively few of the critical areas would be preserved in their natural setting.

There are two basic reasons for this. First are the "taking" and due process provisions of federal and state constitutions which limit the extent to which private property can be regulated. The second reason is that the regulatory process tends to solve controversies through some compromise formula, an approach which would be reinforced in this situation by the constitutional provisions I have mentioned.

We tend to be sanguine about compromise under regulation and ignore its realities. In that context, compromise may be likened to throwing a fifteen foot line to someone drowning twenty feet out, while claiming to be meeting him more than halfway.

The history of California's coastline regulation established in 1972 by public initiative, tells us more specifically how land use controls would probably operate in areas of critical environmental concern. Bear with me briefly while I present some statistics.

In 1973, over 6200 permit applications were received by the six regional commissions given permit power under the coastal zoning law. Of these, about 5200 or 83 percent, were granted. In 1974, over 4700 permit applications were received and approximately 4400 (or 94 percent) were granted. To get a better understanding of what these numbers mean, Professor Bruce Johnson has made an analysis of the operation of the Santa Barbara Coastal Commission on which he served. During the first fourteen months in the life of that Commission, it approved

95 percent of the applications received for single family dwellings, but granted only 60 percent of the single family units requested on these applications. While 77 percent of the multi-family applications received approval, only 51 percent of the units applied for were allowed. What all of these figures mean is that if a developer applies for a permit to build 100 units on his five acre tract adjoining the ocean, he will, after considerable delay, red tape, maneuvering, arguing and possibly a nervous breakdown, have his request whittled down to roughly around 70 units. That's what is referred to in regulation as "balancing".

The five acres in our example will still remain in private ownership and not normally accessible to the public, except possibly for an easement to the coastline that would be required, but which would have more theoretical than practical value. It is questionable that better views would be provided since the buildings might also have to be aesthetically compromised. The question that now presents itself is what happens to the thirty units that were disallowed? One probable answer is that these, along with other disallowed units, represent unsatisfied demand and would in time, cause greater or more rapid development of the coast, something entirely inconsistent with the aims of the initiative. It is of course, possible that the thirty units would never be built, in which case, society will have lost the benefits of approximately three-fourths of a million dollars worth of construction for business, employment, tax revenues and housing supply and there will be less housing.

Possibly these 30 units may find their way into existing vacant land within a developed city. But they would then reduce the amount of land available there for other projects. Another alternative is that the disallowed units will increase demand for building in rural, undeveloped areas at the expense of other environmentally sensitive land, or of land used or suitable for agriculture, grazing and mining. The result in this case would be more spread and sprawl, exactly those horrors from which regulation is supposed to protect us. But this consequence is not an unusual one these days. Slow and controlled growth policies have caused development to leapfrog the areas so restricted and sprawl and spread further and further into areas that are or should be used for other purposes such as farming, grazing and mining.

A recent article on Austin, Texas in the Texas Monthly, describes the situation very succinctly. It concludes the following about the growth policies of the Austin City Council:

"The irony is that the most anti-growth council in Austin history may have done more to bring about urban sprawl than did any of the pro-developer councils that preceded it. Over 75 percent of the homes built in the Austin metropolitan area last year were outside the city's extraterritorial jurisdiction."

Such a pattern, while perhaps not always as drastic would be likely for areas of critical environmental concern in demand for development and much more than just the California coastline would be involved. Development would take place, but with less intensity of use and while there would be more open space, it would be privately owned and not normally accessible to the public. I submit that the proposed state controls would accomplish more of what the proponents say they want to prevent: instead of conserving a precious resource, more of it will be misused and wasted.

Developers have not been blind to the regulatory dynamics. In October 1975, an article in the San Diego BCA Builder advised its readers on how to handle the situation, and I quote:

"It is generally advisable to be prepared to give something up. Don't go into the public hearing with a bare minimum proposal. Be ready to barter something away."

Many developers can be expected to try to beat the game by asking for more than they really want and that would mean that frequently the entire process would accomplish little more than waste the public's time and money and further undermine the credibility of government.

As I indicated, some civil rights groups are also demanding state land use controls. They want the state to require all or most municipalities to allow development of projects catering to minorities and low and moderate income families. They condemn exclusionary zoning and argue that it can only be overcome by state or federal laws.

One problem with their approach is that zoning or land use regulation will not build housing and the housing they are talking about requires government subsidies which are not very plentiful these days. Nor are they likely to succeed in obtaining the kind of land use regulations they want. Most legislatures are suburban/rural dominated, or strongly beholden to such forces, and they are not about to force low and moderate income housing down the throats of unwilling municipalities. The State of New York provides an example. Its Urban Development Corporation had for many years the power to override local zoning ordinances and develop low income housing in suburbia. When it finally attempted to implement this power by announcing a number of projects, it was stripped of it by the New York legislature in 1973. There is one state however, that has made an effort to deal with this problem, but its results are minimal and possibly counterproductive.

In 1969 Massachusetts passed an anti-snob zoning law under which developers of low income projects could appeal local denials to a state agency. In the first five years under this statute, 27 comprehensive building permits were issued for 2281 units, which constitutes even less than tokenism, considering the state's population is under six million and contains 350 cities and towns. Despite the encouragement of this law, developers have found it too difficult to obtain the subsidies and finances necessary to build the housing and fight battles with City Hall.

It might be said that even this number is better than nothing. Such a conclusion is highly questionable. Cities and towns that contain or have zoned for low income housing are not reticent about disclosing this and righteously claiming that consequently they have fulfilled their obligation to mankind. They say they should now be left alone to do as they wish with respect to the balance of their zoning. Some courts have accepted this line. Thus the Federal Appeals Court upholding the severe growth restrictions of Petaluma, California, in part justified its decision on the basis of the small amount of zoning for lower income people provided in the city's plan.

The court noted that the city had allowed annually for about fifty units of such housing and somehow was not deterred by the fact that the development controls that it validated excluded probably ten to fifteen times that number of conventional units. This is a very poor trade-off for the housing consumer, poor and rich alike, especially considering there is little funding available for subsidized housing. But the idea has politically attractive features which could be implemented in state controlled zoning, and create an even more exclusionary result.

Some of the development industry wants the state and federal governments to control zoning in the hope that they will provide better for them than the localities have. These developers believe that state controls will bring about a kind of one-stop service so they would only have to go to one state

agency for a development permit. All the evidence suggests that this is no more than a pipe dream, although it was very seriously advanced by supporters of the Udall bill. State land use controls will bring with it the plethora of state agencies that would have to pass upon development proposals much as now occurs at the local level. The problem for most developers probably would be compounded, not relieved.

The proponents of higher level land use regulations are doing what seems to come instinctively these days, to ask for more or a different kind of government regulation when the existing ones have failed. This attitude represents what Dr. Samuel Johnson called, when speaking of another endeavor, "a triumph of hope over experience."

Not only would state or federal land use regulations not solve the many problems seen by its proponents, it would be harmful to our society. Consider how it would affect the development industry. At the present time, the complexity of local regulations has forced many small builders to drop out. They do not have the funds to hire lawyers and experts that are so necessary these days for those who have to cope with zoning. The troubles of this group would be intensified when a new set of regulators emerged at the state or federal capitals. The bigger and wealthier builders are in a much better position to hire the needed help. As a result, we might in time lose the very great efficiency, creativity and imagination of the small builder, and that would indeed be a serious loss for the country.

Faced by criticism of this sort, both Udall bills for national land use policy contained provisions safeguarding property rights. These provisions stated that nothing in the Act "shall be construed to enhance or diminish the rights of owners of property as provided by the Constitution of the U.S. and constitution and laws of the state in which the property is located." For the Rockefellers and Gettys, such a provision may be comforting. But for the small landowner it is close to meaningless. No matter how wicked, reprehensible and confiscatory a regulation is, a bolt from heaven will not strike it dead. It can only be declared unconstitutional or illegal by a court of law, and this means that the owner must be in a position to use costly and lengthy court processes to sue for such a ruling. From the moment the regulation is even contemplated—perhaps just a glimmer in a planner's eye—those financially able will begin employing lawyers and experts to protect their interests.

The big owners and developers have the capabilities and will often modify or defeat regulations. While the state authorities may find it difficult to overcome such people, they will easily succeed against those who cannot fight back. The latter group may have to settle for lower prices, await future appreciation, or just pray that someday the meek will inherit the earth. In other words, state and federal controls will operate to do exactly the reverse of what is written and intended in the Udall bill. The regulatory process will, in effect, enhance property rights for the wealthier owners and diminish those of the less affluent owners.

Finally, let us consider the impact of additional state and federal land use regulation upon the country. In spite of the dangers of refueling inflation, the national government is spending billions upon billions of dollars to reduce unemployment, stimulate the economy and increase housing starts. Housing in particular has been badly hit during the last three years with starts substantially decreased. At the national level, the emphasis is clearly on greater economic growth and any reduction in gross national product such as came to light with the recently revised figures for the last quar-

ter of 1976 seems to send shivers through Congress and the administration.

A contrary perspective prevails at much of the local levels of government. There, through the use of zoning laws, efforts have been under way to manage, slow or even stop, growth. The impact of the billions being spent nationally to promote growth are being countered by local efforts to restrain it.

These policies at the local level are not only harmful to the economy, but they hurt the most primary of environmental concerns: employment, better housing and better housing conditions. The people desperately in need of a better quality of life are those who are unemployed and living in substandard housing. Under our system, only private industry can help alleviate these troubles, but its efforts are currently being shackled by the innumerable restrictions and regulations of local government. New regulations at higher levels will only add to the problem. The proposed state or federal regulations will cause a large number of new rules to be superimposed on a large number of existing rules and at the very least, that will result in confusion and uncertainty for owners and land developers. Two or three government levels will then have a piece of the zoning pie. It may be necessary to hire experts in the locality, in the state capitol and possibly, if national land use is enacted, in Washington, as well, just to determine what the new rules are.

The situation demands deregulation. We should start dismantling the regulatory processes which harm the economy and prevent people from acquiring the best and most desirable shelter. There surely should be no greater regulation of land use at either the state or federal level.

#### PERSONAL EXPLANATION

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MAZZOLI. Mr. Speaker, on Tuesday, May 24, I missed several recorded votes because of previous commitments in my district.

Had I been present, I would have voted "yes" on roll No. 277; to resolve into the Committee of the Whole to consider H.R. 6884, the International Security Assistance Act of 1977.

I would have voted "no" on roll No. 278 on the Ichord amendment to delete the provisions establishing a South Africa Special Requirements Fund and to provide \$100 million in security supporting assistance for the fund.

I would have voted "yes" on roll No. 279 on the Bonker substitute—for the Bauman amendment—to strike out "majority rule" as a precondition for countries to receive aid from the South African Special Requirements Fund.

I would have voted "yes" on roll No. 280 on the Harkin amendment to reduce foreign military sales authorizations by \$103 million.

I would have voted "no" on roll No. 281 to recommit the bill.

I would have voted "yes" on roll No. 282, final passage of the bill, H.R. 6884.

With respect to the bill, H.R. 6161, the Clean Air Act amendments, I would have voted "yes" on roll No. 283 to adopt

House Resolution 589, the rule providing for the consideration of H.R. 6161.

#### GALLAUDET COLLEGE COMMENCEMENT

### HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BUCHANAN. Mr. Speaker, this Monday I had the distinct pleasure and honor to attend the 113th commencement of Gallaudet College. Since 1864, this school has provided hope and opportunity to thousands of persons who have impaired hearing or are totally deaf.

Along with my good friend and colleague from California (Mr. RYAN), I have the privilege of serving on the Board of Directors of Gallaudet. I commend the president, Dr. Edward C. Merrill, the administration, and the faculty for the outstanding work they are doing. I also congratulate the 204 graduates in the Class of 1977 and wish them the best of luck in the future.

The commencement address was given by the Honorable Jack Ashley, a member of the British Parliament. Mr. Ashley, while in Parliament, lost his hearing, because of an ear infection after an operation. He has continued to serve in Parliament by using his wife as an oral interpreter and using a palantype—a system which makes use of court reporting—stenotype—to present a phonetic display for a deaf person. In his address, Mr. Ashley cites the deprivation of educational opportunity and individual human rights for the millions of deaf persons in the world, and calls on the graduates to be ambassadors of all deaf people. The text of his address follows:

#### ADDRESS PRESENTED BY MR. JACK ASHLEY

It is a great privilege to attend this notable occasion and I am deeply appreciative of the honour.

Anyone the world over who is deaf, or interested in the problems of deafness, would welcome the opportunity to visit Gallaudet, for it is a world famous institution of great renown.

I know it is world famous because wherever I have travelled—in Europe, Africa or Asia, the name and the fame of Gallaudet have been warmly acknowledged.

This fame owes much to your ambassadors from the College itself. At a recent conference in London, opened by our Prime Minister, your President, Dr. Merrill, spoke with eloquence and pride of the Gallaudet legacy. It was, if I may say so, impressive testimony to the achievements of the College.

In the past, Gallaudet has accommodated students from many nations—some from Britain—and today they include people from no less than 27 countries; and it is through them, also, that people of all nations learn of the work of Gallaudet.

I personally know of Gallaudet simply because I am deaf. For any man or woman afflicted by deafness looks to this international beacon of educational light—however dark may be their own personal tunnel.

Gallaudet undoubtedly stands at the pinnacle of the educational pyramid of deaf people throughout the world. But this pyramid—despite the eminence of its pinnacle—is malformed as a result of its very

low and enormously wide base. Millions of deaf people throughout the world are denied educational opportunity and are therefore burdened with the dual handicap of deafness and educational deprivation.

They are no tiny, under-privileged minority. The number of deaf people in the world is greater than that of the whole population of the U.S.A. In fact it is greater than the population of any nation in the world, except India or China; and the vast majority of them receive a much lower standard of education than the average in their own countries.

It is against this sombre background that the legacy of Gallaudet, and the achievements of the College, should be viewed—and it is only in this context that their true nature can be appreciated. It is, by any standard, deeply impressive. But to have surmounted such formidable obstacles as those which face all deaf people is a dazzling institutional and individual accomplishment, and one of which they can be very proud.

Of course Gallaudet graduates will go forth and face the same problems and prejudices as confronting deaf people all over the world. There may be some slight national variations but, in the main, deaf people are subject to discrimination simply because of their disability.

It is remarkable that mankind, which can recognise and respond to great national disasters with understanding and generosity, fails to appreciate and alleviate the myriad personal disasters of deafness.

This failure is based on ignorance, which in turn is based on fear. It is fear of the unknown, because the problems of deaf people are largely unknown. They are not amenable to simple exposition, still less to easy solutions.

The graduates of Gallaudet, will be better equipped than most to face these unequal odds, to mitigate the ignorance and to dispel the fear. They will become not only the ambassadors of Gallaudet, but the ambassadors of all deaf people—carrying with them the hopes, the trust, and the aspirations of millions who share this disability.

Each man or woman will tackle these problems, and make their contributions in their own individual way. By virtue of their individuality, nurtured and cherished at Gallaudet, they will help to dispel the common illusion that all deaf people are the same—the myth that they are an inferior, homogeneous group to be lumped together and brushed aside.

The graduates can help society to see a deaf person as an individual who happens to have a disability, rather than as a member of a disabled group who happens to be a person. They will thereby not only add to collective wisdom; they will help lighten the burden of those who are to follow.

An acceptance of the value of individuality is crucial to the future of all deaf people. For far too long they have been denied rights which are part of their natural heritage. Anyone concerned with deafness must place a high priority on insisting that full rights be accorded to all deaf people.

This claim for full human rights has a hallowed tradition. Men and women have fought throughout the centuries to establish their rights—most of them motivated by the highest ideals—and seeking to redress fundamental grievances.

This tradition has been renewed and revitalised by President Carter. By his insistence on full human rights, he has made a major contribution, and won the support of all free men throughout the world. His is a noble and altruistic ideal to which we should all aspire because wherever the rights of men and women are diminished, for political, economic, social or religious reasons—or because they are disabled—so mankind itself is diminished.

The clarion call of the President of the United States has not only been heard in the U.S.A.; it has found an echo in all parts of the globe. And it is a call with special relevance to all deaf people because their particular disability deprives them of vital human rights.

It is a regrettable fact that deafness is an unfashionable disability provoking derision and scorn rather than the sympathy and understanding accorded to other disabilities. Deafness robs men of their rights; deprives women of their due; and denies children their destiny. Deafness is destructive. It destroys human rights as effectively, yet more silently and with greater subtlety, than the most perverse dictatorship. For deafness results in second class citizenship—which by definition means deprivation of human rights.

In many nations there are people fighting to preserve and extend the rights of deaf people. In Britain, we have the Royal National Institute of the Deaf doing outstanding work in this field. The British Broadcasting Corporation also plays an important part with special weekly programmes like "News Review" with captions—all to help deaf people. These are important and heart-warming developments which are furthering a great change in the lives of deaf people which I can now sense in Britain.

In the U. S. A., you have Gallaudet College and it is no coincidence that the College has established a special Center for Law and the Deaf, advocating equal rights for all deaf people. By pursuing the rights of one deaf person, we enhance the rights of all deaf people under the law. That is a splendid aim, and the commendable objective, of Gallaudet, and many people appreciate it.

Gallaudet helps in individual cases to secure legal rights—yet simultaneously accepts international responsibilities to establish the rights of many others through its International Center. In doing so, it recognizes the basic truth that justice—like truth—is indivisible; and justice for deaf people means including those millions who do not have the same wonderful opportunities as the graduates of Gallaudet.

Most of the major problems of deaf people in every country derive from adverse public attitudes—and these can best be changed by deaf people themselves. This is not to say that they should behave in a uniform way. Every individual must decide for himself how to deal with the difficulties—whether to face the challenge of mixing in public or be content with the smaller circle of his family and other deaf people, with whom he can communicate easily.

Neither is more laudable than the other; they are just different. It would be as wrong to attempt to persuade one deaf man to mix in public against his will, as it would be to try to cajole another to segregate himself from others he wished to join. Individual choice is, and must remain, the main consideration.

Those who choose to make their way in public will find, at first, that deafness deprives a person not only of his hearing but of his confidence. This is due largely to the condescending attitude of many people to the deaf, motivated partly by a natural feeling of superiority to any disabled person, and partly because lack of confidence is easily detected, even by the most ungracious, and quickly exploited.

There is, of course, no simple answer, and it is pointless to urge a timid deaf person to act like a lion. But deaf people should never permit patronage, nor allow abuse, because of their disability. Nor should they allow the public to judge them by their deafness rather than their personalities. If deaf people lose confidence in themselves, they cannot expect to win confidence from others.

This is perhaps the most difficult battle

of all—especially in the early years, and for those deaf people venturing into an indifferent or hostile environment. They face a kaleidoscopic pattern of life—a rapidly changing picture of despair and hope; occasionally depressing with failure but frequently shining with promise.

I believe that there is a new public awakening to the problems of deaf people—and a realization that these need not lie, as they have lain so long, in the shadows of public and private indifference. Deaf people can now rely on some of the people some of the time—but they cannot rely on all of the people all of the time.

To fulfill their own potentialities, deaf people must take a firm hand in their own destiny—relying on neither friend nor foe to determine their future. There is the same birthright as other human beings', to life and laughter, joy and sorrow, failure or achievement. Their handicap is but one more hazard in the steep climb of life; and by determination to surmount it, they can win the glittering prizes of happiness, accomplishment and fulfillment.

And for those graduating today there is a very special advantage. Whatever they do, wherever they go, they can claim with truth and pride, "I come from Gallaudet."

#### ARMENIAN INDEPENDENCE DAY

#### HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BIAGGI. Mr. Speaker, this Saturday, May 28, 1977, is the 59th anniversary of Armenian Independence Day. It is my pleasure to take this opportunity, as Americans and the citizens of the world again pause in remembrance of that solemn occasion, to pay tribute to the memory of outstanding Armenian nationalists and leaders throughout the annals of history. We can also salute their proud counterparts of today, those who continue to display the indefatigable spirit of their very brave people in the fight for human rights. Their account merits our attention. Their valor is worthy of our esteem.

It is terribly sad that one instantly recalls the horrifying genocide of 1.5 million Armenians, living under Turkish rule from 1915 to 1917, when thinking of the story of these noble people. We reflect on that experience with repulsion, but such atrocities are truly hard for us to fully comprehend as a people who have always lived with liberty.

Americans have been allied with the Armenian struggle for many years. It is not widely known that our President, Woodrow Wilson, has emerged through the chronicle of their survival as a true champion and ally of the Armenians. I would like to share some of that remarkable history, and a special American contribution, with you and my colleagues here today.

When the Russian Army withdrew from the Caucasian front in October of 1917, an ill-equipped Armenian Army of refugees and volunteers from abroad fought the invading Turkish divisions to a standstill. That heroic feat prevented the Turks from seizing the Baku oilfields for the use of the German war machine.

These military successes led directly to the establishment on May 28, 1918, of the independent Republic of Armenia.

Two years later, a joint attack by Turkish Kemalist forces and Russian forces led to the destruction of Armenian freedom. This overwhelming, mortal takeover occurred despite all of the promises and assurances of the Allies.

The United States was moved to recognize the free Armenian Republic of 1918 to 1920, the only government of that nation to be accorded that status by our country. The high regard and importance with which the United States viewed Armenia led to an American mandate to intercede. As the major part of that effort, President Wilson arbitrated the boundaries of that small, but fearless, nation with Turkey, pursuant to the Sevres Treaty.

As Americans take the time to celebrate Armenian Independence Day, we, as the greatest freedom-loving people in the world, should strengthen our bonds with all those who similarly enjoy freedom. At the same time, we must renew our commitment to all those people who continue to struggle under the bonds of oppression.

The courageous people of Armenia have spent far longer than 59 years searching for true liberty. Their struggle has ensued through centuries of persecution and ruthless domination. Yet, throughout these long years, the freedom-loving spirit of the Armenian people has remained undaunted, and today they continue their struggle for freedom.

I am very proud to be considered a friend of the cause of Armenian freedom by my constituents of Armenian heritage, and particularly their leadership, as represented by the Armenian National Committee and their chairman, Harry Derderian.

The Armenian-American citizens of the United States have contributed much to our Nation, and for that we are grateful. It remains our hope that freedom may yet return to Armenia so that next May 28 we can truly celebrate Armenian Independence Day.

#### UNIVERSITY OF NEW MEXICO LEADS THE NATION

#### HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LUJAN. Mr. Speaker, I rise for the purpose of bringing deserved recognition to the University of New Mexico as being No. 1 in the Nation of major State universities as the leader on all levels, including undergraduate, graduate, and professional programs in percentage of minority student participation.

I believe that the University of New Mexico should stand out as a model for other institutions of higher learning in order to provide the necessary education and experience to the numerous minority students willing and wanting to attend college.

There are many factors which must be

present to successfully carry out the functions of a multicultural university. These include cooperation and positive action by both the University and the State government, and most importantly—the large minority groups that live in New Mexico.

At this time, I would like to share with you a summary of the Presidential progress report on ethnic minorities which includes the latest available national statistics:

The University of New Mexico is the national leader among major state universities and colleges in providing educational opportunities for minority students. University of New Mexico President William E. Davis said at a news conference today.

Referring to a presidential progress report on minority educational opportunities Davis said that according to the latest available national statistics (1974) undergraduate minority enrollment at UNM is approximately 22 per cent, while the national average is 7.1 per cent.

The 1974 U.S. Dept. of Health, Education and Welfare survey also shows a wide gap between national averages and enrollment at UNM in graduate and professional schools.

UNM's population of minority graduate students is 15.69 per cent with the national average 7.11 per cent.

UNM's professional school minority enrollment is 23.09 per cent with the national average 8.15 per cent.

When compared to other major universities with large minority populations the record shows UNM still emerging as the leader.

At the University of Texas at Austin, with an enrollment of 39,048 students, the Hispanic enrollment is 2613 students or 6.6 per cent.

The two major institutions in the University of California system, UCLA and California at Berkeley, also lag behind the Hispanic student enrollment at UNM.

UCLA this year has a student enrollment of 29,055 domestic students and a total of 1890 Hispanic students or 6.5 per cent. California at Berkeley, with a total enrollment of 28,343 students shows an Hispanic enrollment of 977 students or 3.5 per cent.

The University of New Mexico has an Hispanic enrollment of 4684 students or approximately 22 per cent.

While UNM is number one among all major state universities in minorities as a percentage of enrollment, the state as a whole—that is, all of the institutions of higher education in New Mexico—ranks second in percentage of minorities enrolled among total student population in all but one category.

In graduate level education New Mexico ranks fifth nationally. UNM, as a major state university, is well ahead of comparable institutions in other states in service to minorities, but smaller institutions in other states absorb a greater percentage of the total minority student population than is the case in New Mexico.

During 1975-76, the latest year for which accurate figures are available, UNM awarded a total of \$10,000,000 in grants, scholarships, loans and work-study arrangements.

Of that amount, 45 per cent or \$4,500,000 went to minority students who represented approximately 25 per cent of the student body.

That means that minority students received nearly half of the financial aid distributed at UNM while representing only about a quarter of the total enrollment.

During the same year UNM allocated another \$4,600,000 to minority-emphasis recruitment-retention programs and put more than \$140,000 into three ethnic student centers.

The UNM financial aid office estimates that it will have distributed approximately \$12,-

000,000 this year with, once again, at least 45 per cent going to minority students.

## POSTSECONDARY EDUCATION

### HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CORCORAN of Illinois. Mr. Speaker, as we shortly approach the time when the appropriations bills for fiscal year 1978 will be considered, it would be wise to reflect on one area where Congress and the President have differing opinions and legislative proposals—that is, in the area of education. The President had originally provided no funds for the national direct student loan program in his fiscal year 1978 budget proposal. This program provides a revolving fund to colleges to offer loans for students. The Carter position was the repayment of earlier student loans from the NDSL program would amount to \$276 million next year. The budget plan rationale noted that other new and expanded Federal loan programs aimed at the underprivileged, would make up for a cutback in NDSL funds. Several colleges and universities, though, objected to the Carter proposal. Some argued that they had not been able to collect student loans which were past due.

As a result of heated and long drawn-out negotiations, the House Appropriations Committee's Subcommittee on Labor—Health, Education, and Welfare added \$379 million to the fiscal year 1978 education appropriations bill for the national direct student loan program. This action will most surely be sustained by the entire House when this bill is considered on the floor.

As a result of this confusion and inherent weaknesses of the NDSL and other loan programs. I think that the time has come to study new proposals to help assist our families as they attempt to cope with the ever-increasing costs of college education for their children.

I have become very concerned with this problem and have introduced a bill (H.R. 6301) with nearly 30 cosponsors to come to grips with this unsettling situation. As part of our attempt to convince the House of Representatives to consider our proposal, I was pleased to testify before the House Budget Committee about this bill on May 12. I would like to, at this time, include the text of my remarks before the committee in the RECORD:

#### STATEMENT BY HONORABLE TOM CORCORAN

I am pleased to be here today to testify before the first House committee to hold hearings on an idea which has been neglected for too long.

The idea of tax credits for post-secondary education is not a new one. Twice, during 1976, the Senate passed such legislation. This House, for what reasons I do not know, has rejected this legislation.

Similar legislation has been introduced again this year, and I have come to join Senator Roth in urging you to look with favor on our proposal.

The costs of a college education are rising at a terrifying rate, while we struggle just to

keep our heads above water with paychecks that always seem just a little too short.

Consider, for a moment, these facts, supplied to me by the House Education and Labor Committee. The cost of one year in a public college will be four percent higher in the 1977-78 school year than it is in the 1976-77 school year. At private schools, the increase will be 5.2 percent. This is not an isolated instance. The trend of higher and higher college costs is persistent.

In the years between 1970 and 1977 the cost of tuition alone increased 57.2 percent at public colleges! Fifty-seven percent, and there's no end in sight. If you have an 18-year-old child, one who plans on entering college next year, it will cost you, on the average, \$17,500 for four years at a public university. If, on the other hand, your child is in the first grade this year, you can plan on spending \$35,420 for his bachelor's degree. Finally, if your child is born this year, college costs will be \$47,330 for four years when the child enters college.

To meet this expense, you would have to save \$1,570 every year. In addition, if you want your child to attend a private college, and about one-fourth of our college students do go to private institutions, the cost for a baby today will be \$82,830 by the time he or she reaches college age.

So far, I've talked about four-year colleges and universities. What about those students who prefer a two-year school—either a junior college or a vocational school? The increase in cost at two-year schools has risen over one hundred and thirty percent since 1970. It now costs nearly as much to attend a two-year school as it did to attend a four-year school not that long ago.

During the past two years, state support for education, on a per student basis, and adjusted for inflation, has declined in about half of the states. This creates still another pressure toward increased costs for post-secondary education.

The result of this increase in the cost of post-secondary education is quite simple, and equally frightening. Many able and eager young students are being priced out of school. They are being denied what most Americans have always considered a basic right—the right to better themselves through education.

I am aware of the studies which show that, today, a college degree does not mean a person will automatically get a better job, or that he will be better paid. Indeed, Mr. Chairman, we all too often equate a better job or higher pay with a better person. I believe that we, in the United States, are guilty of perverting the idea of what a college education, or indeed any education, is. Education, especially at the post-secondary level, should not be merely a training program for some job. Education should be nourishment for the mind and heart; it should contribute to the creation of a thoughtful, well-rounded person—one who is equipped to apply his God-given talents and abilities to the problems of everyday life; problems which are becoming increasingly complex.

So, Mr. Chairman, because education is so important, I am worried. I am worried by the increasing numbers of young people in all income brackets who are no longer going to college. I am most concerned, though, with figures which show the biggest decline attending college is in the middle-income range; that is, from families whose income is between \$10,000 and \$15,000 per year. During the 1974-75 school year, there was a drop of nearly seven percent in students entering college from middle-income families as compared with the 1972-73 school year.

These figures make it clear, at least to me, that something needs to be done. It is equally clear that the Guaranteed Student Loan Program, the National Direct Student

Loan Program and other loan programs like them are not the complete solution. Both of these programs are costly to administer, and both have very high default rates. For example, four years ago, Congress appropriated \$40 million to cover defaults on these loans. This past year, five times as much money—200 million dollars—has been appropriated for defaults. In addition, President Carter has proposed elimination of the NDSL Program, which is one of the largest of the student loan programs, in his fiscal 1978 budget.

I think the legislation Senator Roth and I have introduced—an income tax credit for post-secondary education expenses—can be a viable replacement.

This legislation provides a meaningful incentive for parents to continue the education of their children beyond elementary and secondary levels. Known as "The College Tuition Tax Relief Act of 1977", this bill would provide tax credits for college education expenses paid by an individual for himself, his spouse, or his dependents. The amount of tax credit is an incremental progression: \$250 in 1977; \$300 in 1978; \$400 in 1979; and \$500 in 1980 and thereafter.

These credits would apply to tuition, fees, books, supplies and equipment required for courses of instruction of eligible institutions. Only full-time students are eligible for this credit who are above the secondary education level and attend an institution of higher education (including community colleges) or a vocational school.

Such a tax credit would have three advantages. First, and foremost, it is aid directly to those who bear the brunt of college costs, especially the middle class, which has financed most student aid programs while being denied the benefits of those programs. Every student, or the parent of a student who is not self-supporting, can take advantage of the credit. It is a form of aid with few strings attached.

Secondly, the tax credit is simple and inexpensive from an administrative point of view.

Finally, the cost of the program, in terms of revenue loss, would not be prohibitive. The revenue ceiling in the Fiscal '77 budget is \$348.5 billion. According to the figures I've been given by the Joint Committee on Taxation, the revenue loss from a tuition tax credit, if it became effective on June 30, 1977, would only be \$138 million, or less than three one-hundredths of one percent of total revenues. In Fiscal 1978, when the credit would be increased from \$250 to \$300, and when the proposed revenue ceiling will be \$396.3 billion the revenue loss would be \$988 million—still only about one-quarter of one percent.

In the Federal budget for 1977, only 2 percent was spent on education. If we consider the revenue loss from a tuition tax credit as an expenditure, we will still be spending less than 3 percent of our budget for higher education. Is such an expenditure out of line when we in Congress spend more than that on our own operations? In a world which grows more intricate with each passing day, we must educate as many of our young people as we can; educate them not only in terms of vocational skills, but in terms of knowledge itself.

In short, Mr. Chairman, we must school our young people in the way to learn. We must instill in them the thirst for information, the desire to seek out all the mystery that life has to offer and to use it for their own betterment.

It is for that reason that I urge this committee to support this legislation.

Thank you, and I would be happy to entertain any questions.

## CITIZEN COMMENT ON THE CLAM-SHELL ANTI-NUCLEAR LUDDITIES

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. McDONALD. Mr. Speaker, the Clamshell Alliance's antinuclear power organizers, veterans of the pro-Vietcong demonstrations of the 1960's, have misjudged the effect of their mass lawbreaking adventure on May Day. They have gained their support from the fringes of the ecology movement, from the Marxist New Left, and from naive students; but they have alienated themselves from the mainstream of citizens.

The Clamshell Alliance and its subsidiaries rely for funds on a tax-exempt foundation, the Haymarket People's Fund, which only provides money to groups it determines are organizing in support of eventual Marxist revolution. The Haymarket money is provided by radical heirs to free enterprise fortunes, the dilettantes of dissent, who take a tax exemption for donations to groups conspiring to break the law.

The perceptive citizens of New England, however, have not been taken in by radical protests. I was delighted to read a letter to the editor of the Manchester Union Leader by Mrs. Louise G. Muzzey, a Massachusetts resident, which shows a clear understanding of the issues, and the steps necessary to remedy the problem. The letter follows:

[From the Manchester (H.N.) Union Leader, May 18, 1977]

### TIME, MONEY TO THROW AWAY

Addressed to William Loeb: It is very interesting to read letters in the MUL from around this nation from individuals wondering where the malcontents get their money to survive.

The young people in the age bracket from 20 to 35 who have inherited wealth and have liberal thinking can only support those groups that are considered progressive and for social change. They have too much time and money to throw away.

Those nuke-haters at Seabrook are a good example. They either are supported by inherited wealth or by the taxpayers. If they had legal jobs and other responsibilities, they would have no time for protesting.

Although I live in the Bay State, I hope no disaster comes up in this state because we deserve no help from the other New England states seeing our Governor refused help to New Hampshire because of Seabrook. For one who wants regional government, he was quick to say no when the need arose for help.

It is not surprising to know that nearly half of the protestors at Seabrook were from the Hot-Bed of Radicalism on the East Coast (Massachusetts).

People should become aware of reading material other than local papers because data turns up in out-of-town material that sometimes proves very interesting.

It is about time the American public woke up and started complaining to Congress about the fact that the people of the United States of America have no protection for the internal security of this country. No individual has any rights today unless they are left-of-center but I would rather be Right.

In closing, Seabrook is a good example of the future of New England unless the public stands up and supports those in favor of our Republic.

Mrs. LOUISE G. MUZZEY.

SOMERVILLE, MASS.

## INSTANT VOTERS

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MAZZOLI. Mr. Speaker, the following, which appeared in the May 21 Washington Post, offers some interesting points on H.R. 5400, the Universal Voter Registration Act:

### INSTANT VOTERS

It is not clear whom President Carter had in mind when he told the United Auto Workers the other day that "some powerful special interests are trying to kill the electoral reform bill, because they don't want working people to register and to vote." That formulation may serve the President's interest—and perhaps his party's—in bringing about instant, election-day voter registration. But one need not be a "special interest" in order to see grave defects in the bill. To sum up our own view in Mr. Carter's terms, we do want working people and others to register and vote—but not necessarily on the same day.

The bill's wrongheadedness starts with its premise that pre-registration is a major barrier to voting. That used to be true. But registration rules and procedures have been greatly eased since 1960—and the percentage of voting-age Americans who turn out in presidential elections has been dropping anyway. The primary causes of the decline are demographic changes, public disenchantment and apathy—forces that can't be countered by a law. While simplifying pre-registration—by using a postcard system, for example—is a good idea in itself, it does not necessarily lead to larger turnouts at the polls. Even abolishing pre-registration may affect the turnout less than the nature of a given campaign. Last November, turnouts were a few percentage points above 1972 levels in the four states with instant registration. But they were also higher in most Southern states, where pre-registration is still required.

It's generally assumed that larger turnouts would help the Democrats, which is why partisan lines are drawn so sharply on this bill. The basic question, though, is whether democracy as well as Democrats would be well served by making election-day registration available in every precinct in the land. An impressive array of state and local election officials, among others, say no. They predict widespread fraud if they can no longer obtain signature cards and verify addresses of all potential voters before election day. Requiring voters to show IDs and sign an affidavit at the polling place may deter fraud in Minnesota and other states where elections are generally scandal-free. In areas with more turbulent traditions, though, stronger precautions have proven desirable—as Rhode Island's secretary of state said in Senate testimony excerpted For the Record on this page.

The administration's bill presents other problems, too. It would compel most states to rewrite their election laws in short order, and to train many new precinct workers to process instant registrations. It would trample on the tradition of state governance of state and local elections. States would have to

either extend instant registration across the board or suffer the cost and confusion of running elections under two different sets of rules. Finally, the federal grants for administration and "voter outreach" strike us as virtually impossible to police without bureaucratic controls so elaborate that the states will rebel and the Federal Election Commission will collapse.

All in all, the more we study this proposal, the worse it looks. We have no quarrel with instant registration, or no registration, where the integrity of elections is not jeopardized thereby. But the states ought to make that judgment for themselves. We see no current abuses so flagrant, and no potential benefits so great, as to justify the dangers this program would open up and the disruption it would cause. If the Democrats want to get more voters to the polls, they could try to do so in the time-honored way: through good political organization, a sound choice of issues, strong candidates and vigorous campaigns.

#### URGES SUPPORT FOR DINGELL-BROYHILL AMENDMENT

#### HON. TENNYSON GUYER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. GUYER. Mr. Speaker, I wish to indicate my support for the amendment being offered to the House by the gentleman from Michigan (Mr. DINGELL) and the gentleman from North Carolina (Mr. BROYHILL).

I am most interested in the solutions proposed by the amendment and the committee bill to eliminate the anti-competitive and anticonsumer aspects of the performance warranty of the Clean Air Act. My first observation is that both the committee bill and Dingell-Broyhill amendment recognize that the performance warranty is anticompetitive, so there appears to be agreement on that point. After careful consideration of both measures, it is obvious to me that enough study has taken place on the issue. The committee bill reduces the warranty for only 3 years and mandates yet another study. This is not an effective solution. The committee bill would force Congress to act in 3 years to keep the warranty from automatically reverting to 5 years, 50,000 miles. This, Congress is not likely to find the time to do. Enough study has taken place on the issue, all 19 members of the House Small Business Committee recommended that the warranty be reduced because of its anticompetitive and anticonsumer aspects and the recent statement of the Antitrust Division of the Justice Department indicates that the warranty would create enormous costs to the consumer and have a major anticompetitive impact.

I would urge my colleagues to support the Dingell-Broyhill amendment which corrects the anticompetitive and anticonsumer aspects of the performance warranty permanently and has the support of 102 aftermarket associations representing over 166,000 business member firms. The Members of the House should remember that the committee bill submitted to the House and approved by the House last year carried a permanent

reduction to 18 months and 18,000 miles, similar to the Dingell-Broyhill provision. Unless this problem is permanently solved now, the independent garage and aftermarket industry would not be able to survive what the Small Business Committee indicated the performance warranty would do without relief—that is mandate a monopoly for parts and services by the Big Four.

Again, I would urge my fellow Members to support the Dingell-Broyhill amendment as the only permanent solution to the problems inherent in the performance warranty of the Clean Air Act.

#### FORGOTTEN VETERANS OF VIETNAM

#### HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MURTHA. Mr. Speaker, for the information of the Members, I insert into the RECORD an article from the May 25 Washington Post by Jan Craig Scruggs. As many of you know, I am a Vietnam veteran and this article eloquently adds to many of the comments I have been making over the past few years about the treatment of Vietnam veterans:

#### FORGOTTEN VETERANS OF THAT PECULIAR WAR (By Jan Craig Scruggs)

Just as the Vietnam war was unique in the way that it was waged—and lost—so that conflict has subjected our youngest-ever crop of war veterans to pressures unparalleled in American military history. The victory parades and hero status awarded to previous generations of military returnees were simply not present. The national turmoil surrounding the war made one's status as a Vietnam veteran a dubious distinction at best.

Probably no aspect of the war has been more exploited, misunderstood and officially neglected than the readjustment problems of Vietnam returnees. In the past two years the psychological and academic communities have finally started taking an interest in the effects of having participated in that conflict. We are seeing research indicating that serious and prolonged adjustment problems exist for many Vietnam veterans.

My personal interest in this topic is rooted in my own experience. When I was a naive teenager, a profound sense of duty compelled me to serve my country during time of war. After my tour, the wounds and medals I received as an infantryman in Vietnam became slowly transformed into reminders of my part in a cruel and meaningless conflict. My naive acceptance of America as a great and noble land gave way to more critical thinking as my conventional beliefs, attitudes and values were shaken by the war. I sometimes felt a deep bitterness toward this country as I reflected back to a quiet Sunday in 1970, when two very special friends of mine, a young black and a Jewish draftee, suddenly lay dismembered and motionless in the dirt of Vietnam.

During graduate training in counseling psychology at American University, I initiated a long and expensive social psychological investigation of the war's effects upon college veterans. A questionnaire was designed to test the major hypotheses advanced by the scant literature available on this

neglected topic. A prominent psychology professor, Dr. Allan Berman, provided excellent professional guidance. Questionnaires were given to 600 Vietnam veterans at local universities. Our 233 replies yielded some important findings about the psychological aftermath of that peculiar war.

The research found that men who served in units with a casualty rate of more than 25 per cent were statistically higher in political alienation. These veterans were also 11 times more likely to report dreaming of Vietnam combat than those who served in units with no casualties. Many evidenced low self-esteem. Only half of the sample did not feel that Vietnam duty had caused them psychological problems. Only one of the black combat veterans did not feel that Vietnam duty had hurt him psychologically. Some veterans who had psychological problems from the war indicated a reluctance to seek help from the Veterans Administration. Combat veterans had a 30 per cent rate of separations and divorce. The dry statistics of the social sciences revealed a sad legacy remaining from a war that this country is trying to forget.

In my present futile search for federal employment. I recently spoke with a civil-service counselor who has talked with several young men who refuse their five-point preferences rather than bear the stigma of being known as Vietnam veterans. One of the biggest and longest running jokes in this town is the special 10-point preference for disabled Vietnam veterans. Ronald Drach, employment director for the Disabled American Veterans and himself an amputee from Vietnam combat, states that it is generally not enforced and that cases exist where it has been intentionally circumvented by federal agencies. Most of the federal employees who have tried to help me and other disabled Vietnam veterans gain employment are also frustrated about this situation. The Department of Labor, which has been given the task of enforcing affirmative-action programs for hiring Vietnam-era veterans, sets a miserable example for private industry. Vietnam-era veterans constitute less than 1 per cent of the department's total work force, one of the lowest for any major federal agency. March unemployment statistics revealed that the unemployment rate for the youngest age group of Vietnam-era veterans has increased one percentage point, to 17.2 per cent. However, the unemployment rate for the same age group of male non-veterans has decreased one point to 10.4 per cent.

My findings are really not surprising. Several years back some leading psychiatrists, including Dr. Peter Bourne and Yale's Dr. Robert J. Lifton, warned that the Vietnam conflict would have serious, delayed consequences for many who served there. The very nature of this odd war—the lack of psychological justification for the soldier engaged in it, and society's indifference upon his return—perhaps made this inevitable.

It is, of course, not recent news that war has adverse effects on the human psyche. We have always known that. What is new, however, is that this country has never before given veterans the shoddy treatment that has been bestowed upon those who served in Vietnam. Many who volunteered or allowed themselves to be drafted did so with vague assurances of future educational benefits and employment. They returned to find that the GI Bill was inadequate and that many jobs were filled by those who had purposely avoided their military obligation.

The new administration has taken some measures to provide assistance, however belatedly, to those who became the victims of this nation's foreign-policy mistakes. It is not yet clear how far President Carter is willing to go to alleviate the appalling unemployment rate for veterans. He has, however, demonstrated his wisdom in the appointment of an energetic Vietnam returnee, Max Cleland,

as the new chief of the Veterans Administration. Some healthy changes are now taking place to make the VA's services more in keeping with the needs of all veterans. Cleland wants to reverse his agency's poor retention rate for physicians. He wants to expand the drug- and alcohol-treatment facilities. Furthermore, he recognizes the need for the Veterans Administration to provide readjustment counseling, the lack of which has exacerbated the problems of many Vietnam veterans.

My research will soon be reviewed by the Senate and House committees on veterans' affairs. If nothing comes of that, the effort will be buried away in some academic journal. But my findings, as well as those of other researchers, highlight some very real problems that will not go away, for all the haste with which this country may seek to sweep a shameful war under the rug.

There is a major issue here for this country to resolve, for the indifference and lack of compassion that the veterans have received is, to a large degree, a reflection of our lack of a national reconciliation after Vietnam. The fundamental challenge should now be to meet the very real needs of this group as a major step toward America's final recovery from that war. The power—and the responsibility—to make good on the national obligation to Vietnam-era veterans ultimately rests with the President and the Congress. No efforts can provide compensation, of course, to the Americans who made the ultimate sacrifice in Vietnam. For them, perhaps, a national monument is in order to remind an ungrateful nation of what it has done to its sons.

#### PHILADELPHIA'S MEMORIAL DAY CEREMONIES TO BE HELD ABOARD HISTORIC NAVY VESSEL

**HON. JOSHUA EILBERG**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. EILBERG. Mr. Speaker, I am pleased to be able to announce that Philadelphia's official Memorial Day ceremonies will be held aboard the U.S.S. *Olympia*, Monday, May 30, at Penn's Landing.

The special memorial services are being sponsored by the Cruiser Olympia Association in conjunction with the city's 30-member United Veterans Council.

Speakers include Adm. Wycliffe D. Toole, Jr., commandant of the Fourth Naval District, and Fire Commissioner Joseph R. Rizzo.

Admiral Toole and Commissioner Rizzo will receive special citations from the Cruiser Olympia Association in recognition of their efforts in helping to preserve the historic ship which served as Adm. George E. Dewey's flagship during the battle of Manila Bay in May 1898.

Floral wreaths will be tossed onto the waters of the Delaware in memory of the Nation's war dead. Taps will be sounded by members of the Police and Firemen's Band and volleys will be fired by a U.S. Marine Corps squad.

Entertainment will be provided by the Police and Firemen's Band, the Artisans Memorial American Legion Band, and the Former Big Band All Stars.

Many other Memorial Day ceremonies will be held throughout the city over the weekend as Philadelphians join with

Americans all across the country in honoring those who served in the armed forces.

#### A HOUSING PROGRAM TO AID YOUNG FAMILIES

**HON. ROBERT W. KASTEN, JR.**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. KASTEN. Mr. Speaker, an increasing number of Americans today cannot afford to purchase their own homes because of the rapid rise in housing prices which we have experienced during the last few years. We are reaching the point where the American dream of owning your own home is a luxury for the fortunate few and beyond the reach of the vast majority of Americans.

#### INFLATIONARY STRAIN

While inflation over the past 7 years has placed strains on all segments of our economy, it has been especially severe on the housing sector. Since 1970 the relative cost of homeownership has risen at an annual rate of 8.3 percent compared to an overall increase in the Consumer Price Index of 7.7 percent. Sale price of a new home has risen at an annual rate of 9.4 percent while an existing home has risen at a rate of 10.7 percent.

For the first time in history, the average new American home costs \$51,600—38 percent more than the price just 3 years ago.

As housing prices have continued to escalate, the proportion of American families able to afford a median-priced new home has declined from 54.7 percent in 1970 to 39.6 percent in 1975—after income tax considerations. During the same time, we have also witnessed a decline in the proportion of families able to afford existing homes. Recent studies indicate that only about one-fourth of all U.S. families could afford to buy the average new home at today's prices.

While the statistics confirm the damage already done to the housing market, the outlook for the future is even more discouraging. If we assume a 7-percent inflation rate in the overall economy, it is estimated that by 1986 the median-priced new home will sell for close to \$90,000 with the average downpayment required averaging close to \$23,000.

There are several recognizable factors which have contributed to this steady rise in prices: Rapidly rising sales prices, rising mortgage interest rates, and rising utility and maintenance costs.

The effect is devastating.

If present trends continue, more and more Americans will simply not be able to afford their own home. Young families seeking to purchase their first home will be hit hardest.

The first-time home buyer is confronted with the full impact of cost increases, and he lacks the necessary resources to meet those increases. A study prepared by the Congressional Budget Office shows that the cost of a median-priced new home for first-time home

buyers has on average risen one and a half times as fast as their incomes in the period of 1970-75.

That is why, Mr. Speaker, legislative efforts are necessary to keep homeownership within the reach of most Americans. During my study of legislative remedies, I became most interested in the proposals being advanced by Senator Brooke of Massachusetts. I am pleased to introduce in the House of Representatives a two-part bill which embodies these proposals. I believe adoption of this bill will make the dream of a decent home possible for millions of Americans who cannot afford to purchase a home.

#### GRADUATED PAYMENT MORTGAGE

The graduated payment mortgage concept is designed to attack one of the major defects of the present standard fixed-payment mortgage, which bases the amount of house a family can afford on its income at the time the house is purchased—even though they may live in the house for many years and their income can be expected to increase during that time.

The idea is to structure the mortgage payment so that it rises over time rather than remaining fixed for the life of the loan.

In effect, the graduated payment mortgage simply tilts the mortgage payment stream so that it more closely corresponds to a typical family's income growth over a period of years. In the early years of the loan, a family or individual would pay lower monthly mortgage payments with payments increasing over the duration of the loan.

The primary advantage is that it enables most families to purchase a home that they would not have been able to afford with a standard level payment mortgage—provided that they have good reason to expect their income to grow in the future. Thus, the graduated payment mortgage is particularly suited to young families buying their first home.

The concept of the graduated payment mortgage is not new. The Department of Housing and Urban Development has initiated an experimental program, and the bill I propose would extend that experiment to better reflect market realities. Essentially, I propose allowing the Federal Housing Administration to insure graduated payment mortgages under certain specified conditions.

The best way to experiment with this concept is to remove all volume restrictions and let potential home buyers choose between a conventional mortgage and readily available graduated payment mortgages.

#### INDIVIDUAL HOUSING ACCOUNT

The second part of my bill is designed to help the potential first-time home buyer meet the substantial downpayment necessary for purchase of a home. It is estimated that at the present time a young household needs between \$10,000 to \$12,000 to purchase a home. By 1986, if present trends continue, between \$20,000 to \$23,000 could be required.

Accumulation of the downpayment can be prohibitive, particularly when an individual or family is just starting out.

The best way to assist these individuals is to offer an incentive for them to save enough money to pay the downpayment.

I, therefore, propose creation of an individual housing account—IHA—a tax-exempt savings account.

This savings account would permit a potential home buyer to deposit up to \$2,500 a year to a maximum of \$10,000. This amount would be deductible from income for tax purposes, and the interest income would be exempt from taxation. At any point, this money could be withdrawn and used toward the purchase of a home. As long as the IHA was applied toward the purchase of a home, no tax would have to be paid on this sum or the interest income which has accrued in this account. These special IHA accounts would be restricted to first-time home buyers—a group which does not have the advantage of equity accumulation in an existing home.

This particular proposal includes a provision to recapture a portion of the lost taxes. At the time of resale, a homeowner would subtract from the original purchase price of the house that portion of the downpayment which was derived from the individual housing account.

Since the program would be restricted to first-time home buyers, it would benefit young and low- and moderate-income households. It provides a positive incentive for frugality without resembling a giveaway program.

#### STAKE IN SOCIETY

Mr. Speaker, homeownership has traditionally been a way in which American families build a stake in our society. If, for reasons largely beyond their control, families are denied the opportunity of owning their own home, we will have lost one of the most important stabilizing forces in our society. That would be frustrating for the individual and damaging to society as a whole.

I do not want to see this happen, and that is why I am pleased to endorse the concepts contained in this proposal. I commend this legislation to the attention of my colleagues.

#### PERSONAL EXPLANATION

### HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LEHMAN. Mr. Speaker, yesterday I had to miss the recorded vote on the motion that the House resolve itself into the Committee of the Whole House for consideration of H.R. 6161, the Clean Air Act amendments.

At the time when the vote was taken, I was meeting with EDA officials concerning the implementation of the Local Public Works Capital Development and Investment Act of 1976. Because of procedural errors in last year's program and a number of questions which have been raised by Dade County, I wanted to be sure that no mistakes would be made this time and that all communities in my district had a clear understanding of the guidelines.

I believe my time was well spent in this endeavor. Had I been present on the floor of the House when the vote was taken, I would have voted "yea."

#### UNNECESSARY HYSTERECTOMIES

### HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. WAXMAN. Mr. Speaker, in our country which boasts medical technology second to none, American women should not receive medical care that is second best. According to recent hearings on unnecessary surgery held by the House Subcommittee on Oversight and Investigations, some estimate that up to 40 percent of the hysterectomies performed each year in the United States are not medically required.

Unnecessary hysterectomies subject women to all the risks of major surgery, as well as postoperation depression and physical complications. One out of every 10 fatalities in surgery is due to anesthetic. Commonsense tells us surgery should never be performed where it is not clinically indicated.

These unnecessary operations are big business for unscrupulous surgeons. In 1975, more wombs were removed than tonsils—725,000. This is an increase of 25 percent since 1970. By age 65, half of all American women will have had a hysterectomy. Many of these women are subjected to the risk of cancer from hormone replacement therapy following surgery.

Rarely have I felt as dismayed at a hearing as I did when listening to the testimony of Dr. James Sammons, executive vice president of the American Medical Association, before the Oversight and Investigations Subcommittee. Dr. Sammons not only defended but actually advocated hysterectomy to relieve women's anxiety about pregnancy or cancer—even where there were no clinical signs that surgery was warranted.

I would expect great care and restraint to be exercised in ordering this serious surgical procedure. Instead, at the hearings I heard a callous litany of reasons why the United States has the highest number of hysterectomies per capita of any industrial nation. The hysterectomy rate in the United States is 2½ times that of England, and 4 times that in Sweden.

Most disturbing of all is the finding of the Oversight and Investigations Subcommittee that the rate of hysterectomies is higher when surgeons are paid on a fee for service rather than a salaried basis. Are surgical operations to be determined by the profit motive rather than sound medical judgment? This strikes at the very core of medical ethics, and casts a long shadow over one of our most learned and esteemed professions.

I would like to close my remarks by including in the Record a recent article by one of America's most discerning

columnists, Ellen Goodman. I include her article on the surgery hearings, because it capsulizes so well the indignation we all should feel at the casual escalation of unnecessary surgery on American women:

#### U.S. WOMEN ARE HAVING TOO MANY HYSTERECTOMIES (By Ellen Goodman)

BOSTON.—The man from the American Medical Association was pretty direct about it. If a woman had hysteria, then the cure might well be a hysterectomy.

Yes, there was something positively Grecian about the dogged line of reasoning pursued by Dr. James Sammons as he testified before the House Commerce oversight subcommittee that has been investigating unnecessary surgery.

The word "hyster" began its unfortunate etymological history as Greek for "uterus." It doesn't take a National Organization for Women task force to trace its descent into the English word "hysteria"—"an uncontrollable outburst of emotion or fear."

With that background, it should not have been surprising to find Dr. Sammons telling the congressional hearing that the AMA supported surgery as a means of cutting out fear. He condoned a hysterectomy for women in states of "acute pregnophobia" (fear of pregnancy) and acute cancer phobia.

In the process, he pointed up one thing: Hysterectomies have become big business. In 1975, more wombs were removed than tonsils—725,000 in all, up a full 25 percent from 1970. At this rate, half of all American women over 65 will have had their uteruses taken out.

Of course, relatively few of these operations are done for the fearful, but Dr. Sammons' casual attitude toward the procedure shows up in the statistics. The hysterectomy rate in the United States is 2½ times that of England and 4 times that of Sweden.

Of all these procedures, no more than 20 percent are performed for cancer or other life-threatening disorders. A large number, however, are done for sterilization, despite the availability of less drastic and less complicated procedures. At Los Angeles County Hospital for example, 20 percent were done openly for contraception.

That does not count the ones that are done less openly. Dr. Malkah Notman, associate professor at the Harvard Medical School, has noted that "there is a group of Catholic women who are in conflict about contraceptives. They come to the doctor with 'symptoms.' If they are 'sick' and 'need' a hysterectomy, then they are off the hook. Everybody, including the doctor, goes along with it."

Their operations become part of the 15 to 40 percent of all hysterectomies that, by conservative estimate, are "questionable." In the attempt to understand how this happens, some blame "consumer demand," and some blame surgeons for being profit-motivated and/or knife-happy.

Yale Medical School's Dr. John Morris testified that some California surgeons now pay \$100 a day for malpractice insurance; and added: "That can't help but affect some surgeons' judgment." It is known that the rate of operations is higher among the patients of doctors who are paid on a piece-rate (rather than salaried) basis.

Aside from the money incentive, surgeons in general are prone to work by the motto, When in doubt, cut it out. Dr. Notman, who has studied depression in posthysterectomy patients says: "There are too many hysterectomies done because they appeal to the surgeon's sense of tidiness. It is the obvious way to get rid of the symptoms."

This attitude combines with another, says Dr. Notman: "It's pretty clear that most

surgeons think that the uterus is useless once women are done having babies."

A study by a sociologist, Diana Scully, in Illinois found that many surgical residents develop a "sales pitch" for the operation, which she quoted this way: "Think of the uterus as a cradle. After you've had all your babies, there's no reason to keep the cradle."

Surgeons themselves often maintain that women seek, and even shop, for a hysterectomy. Dr. Kenneth Ryan, chairman of Harvard Medical School's obstetrics and gynecology department—who also testified in Washington—does not believe that happens very often. When it does, he says, "we ought to figure out why instead of just going ahead and doing it. In the menopausal years, especially, we need more medical care to avoid the procedure rather than encouraging women to have it."

As for the notion of surgically removing the wombs of the fearful, Dr. Ryan was set against it. "The AMA went out on a limb," he said, "I think their position has become untenable."

Indeed, during his testimony the man on the limb had also condoned removing breasts, bunions and assorted limbs under similar acute "mental" symptoms. By the end of the afternoon he was calling the members of Congress by the title "Doctors." There were those who believed that he sounded a touch hysterical.

#### TRIBUTE TO ALEX HALEY

#### HON. BARBARA JORDAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Ms. JORDAN. Mr. Speaker, it is highly uncommon to pay tribute to a living memorial. It is not the kind of thing that is taken lightly. However, uncommon this task may be, it is nonetheless, done with a great deal of pride and an abundance of sincerity.

Prior to the publication and eventual television drama of "Roots, the Saga of an American Family," this country was becoming increasingly apathetic toward the problem of racial injustice. It appeared that the revolutionary efforts of the 1960's and early 1970's were about to be diminished. People were justifying their apathy by saying that minorities have made substantial gains in recent years, now it is our turn. "Roots" jolted Americans out of this retrogression and served to raise their consciousness level to a new peak. It was a not so subtle reminder that racial prejudice in this country pervades every facet of our society and remains the underlying force which prevents us from coming together as a nation unified to preserve what the Founding Fathers laid down as the law of the land—equal justice. In the reading of Mr. Haley's book, we had to come to grips with this enigma. We had to face the problem squarely in the eye. It is obvious that we will have to direct all of our future efforts to proving that the founders of America had a certain foresight that we have yet to achieve. "Roots" gives us that added push to pursue this common goal vigorously. I applaud Alex Haley's unselfish and courageous efforts. It is an experience that all Americans can share.

#### THE PLANNED STRATEGIC COMPUTER SALE TO THE SOVIET UNION BY A U.S. FIRM SHOULD BE STOPPED

#### HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. RUDD. Mr. Speaker, much concern has been voiced over the years about the sale by U.S. companies of sophisticated technology—particularly that with a military capability or use—to the Soviet Union.

This is a valid concern, because the Soviet Government will definitely convert to military use any technology at its disposal.

The latest planned U.S. sale of potentially lethal strategic technology to the Soviet Union is the reported plan of Control Data Corp. to sell its \$13 million Cyber 76, the highly sophisticated computer used by our own Armed Forces for navigation and weapons guidance in modern aircraft, submarines, missiles, and other defense systems.

I strongly oppose such a sale, and have joined several colleagues in a letter to President Carter requesting the administration not to approve the necessary license for the sale of the Cyber 76 to the Soviets.

Jack Anderson and Les Whitten wrote an excellent column reporting Control Data's planned sale, which was published yesterday by the Washington Post. I include that column and our letter to the President at this point in the RECORD. [From the Washington Post, May 24, 1977]

#### A SUPER-COMPUTER FOR THE SOVIETS

(By Jack Anderson and Les Whitten)

Control Data is preparing to sell the Soviets a \$13 million electronic brain, which could be turned against us to track U.S. missiles, planes and submarines. It is also capable of decoding sensitive U.S. intelligence transmissions.

The miracle machine is the Cyber 76, which will soon be on its way to the Soviet Union unless there is a last-minute stop order. It not only will be the largest computer ever delivered behind the Iron Curtain, but it is more than a decade ahead of the Soviets' own computer technology. It operates at least 20 times faster than anything the Soviets produce.

A top-secret, interagency study warns tersely that the Soviets can convert the Cyber 76 to military use. Not only can it be used for tracking and decoding, but it could also improve the production of nuclear warheads multiple-headed missiles, aircraft and other military hardware.

There is no sure safeguard to prevent this, the study declares. An intelligence source put it more bluntly. "For a few bucks," he told us, "we're willing to give the Soviets the means to destroy us. We're becoming our own executioners."

Government officials, citing the strict secrecy, refused to show us a copy of the study. But sources with access to the original draft have told us of its warnings. They fear it may be softened in order to make the computer deal more palatable.

Control Data executives, in repeated meetings with U.S. officials, have insisted that the Cyber 76 will be used by the Soviets strictly

to study the weather. The company kept hammering at Washington to get an export license. Final Commerce Department approval of the deal, according to our sources, was imminent until our inquiries caused some hesitation.

The sale of computers to Russia was pushed originally by ex-Secretary of State Henry A. Kissinger. Eager to promote détente, he overruled military objections to earlier computer sales. Now that the Soviets have already received lesser computers, they will be enraged if the Cyber 76 is withheld from them, say our sources.

One high official source, talking to us in confidence, related how a mysterious Soviet official showed up in the United States a few years ago. The Central Intelligence Agency immediately spotted him as a man with a purpose. He had come here, the CIA warned, to seek strategic U.S. computers.

The State Department, under Kissinger, persuaded the CIA to soften its warning and to pass off the visitor as merely the house guest of Soviet Ambassador Anatoli F. Dobrynin.

This helped lead to computer sales not only to Russia but also to China and Hungary. In return for these sophisticated computers, according to an International Trade Commission report, the Soviets have offered the U.S. "horses, asses and mules" at favored prices. Russia's famous vodka will also be sold to the United States at a tariff of \$1.25 a gallon, instead of the present \$5.

Frustrated U.S. officials complain that the Soviets are getting the best of the deal. They have gained strategic advances from the computers that have already been delivered, these officials assert. But the Cyber 76 would give them a technological boost that no amount of vodka could justify, they say.

The secret study declares categorically that the wonder machine both could and would be misused by the Kremlin for military purposes. Those officials who favor the sale contend, however, that the Soviets will use the Cyber 76 to increase their participation in a world meteorological network. The result, they say, would be better international weather data, larger crops and fewer unexpected natural disasters.

A spokesman for Control Data assured our reporter John Schuber that the computer can be set up in Moscow in a way to prevent any misuse. Any diversion to military use, he said, could be detected immediately. Then Control Data would pull out its technicians and refuse parts to the Soviets, thus crippling the electronic monster.

But other computer experts told our reporter Tony Capaccio that Control Data's arguments are spurious. One former Control Data executive, referring to the alleged safeguards, said derisively: "That's a joke." Other experts agreed that the Soviets could train their own technicians, and eventually locate parts from other countries.

Footnote: At the Commerce Department, spokesmen confirmed that the secret study disclosed "some problems" relating to safeguards against the misuse of the Cyber 76. But the draft report, said the spokesman wasn't final.

#### HOUSE OF REPRESENTATIVES,

Washington, D.C.

The President,  
The White House,  
Washington, D.C.

DEAR MR. PRESIDENT: We, the undersigned Members of Congress, wish to express our strong opposition to the pending sale to the Soviet Union of Control Data Corporation's "Cyber 76" computer.

The "Cyber 76" can be used for navigation and weapons guidance in modern missiles, aircraft, tanks, high performance satellite-

based surveillance systems, ABM defense systems, and submarines.

The "Cyber 76" is the brain center of the Pentagon, the U.S. Air Force, the National Security Agency, and the National Aeronautics and Space Administration. The Energy Research and Development Agency has fifteen "Cyber 76s"—they have been described as the backbone of our nuclear research. Moreover, the Cyber series is also used by the North American Air Defense Command.

Soviet assurances that this computer will be used for peaceful purposes are unreliable at best and there is no practical method of monitoring the uses to which the computer is put.

We believe that the strategic military applications of the "Cyber 76" are such that the sale of this advanced technology is not in the national interest of the United States. Therefore, we urge that the license for the sale of the "Cyber 76" not be approved. We also urge that exacting scrutiny be used in the future when evaluating all future sales of advanced design computers which have military applications.

Respectfully,

ROBERT K. DORNAN.  
CLAIR W. BURGNER.  
ELDON RUDD.

#### EXAMPLE OF PERFDY

### HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial from the Santa Maria Times entitled "Example of Perfidy," which comments on Vietnam's determination to subjugate all people it can conquer:

#### EXAMPLE OF PERFDY

Those who feel it is time for normalization of relations with Vietnam have gotten a lesson in the perfidy of the Communist nation.

After having on several occasions told the U.S. that there are no missing in action (MIA) Americans in Vietnam, that nation has now announced that it will not cooperate with the U.S. in searching for MIAs unless agreement is reached over aid to repair damages from the war.

Once again it has been demonstrated that communism uses the truth as a weapon, and the truth becomes a victim just as much as anyone who believes Vietnam can be dealt with truthfully.

Both Ex-President Nixon and his Secretary of State, Henry Kissinger, have stated that Vietnam abrogated the portion of an agreement dealing with aid when it continued its aggression. Thus, what America agreed to give as a condition for its withdrawal, is not to be forthcoming—at least as a provision of that agreement.

Any aid that comes now must be under a program by President Carter and with approval of Congress. We see this as doubtful, in view of Congress' action of last week in turning down aid both for Cuba and Vietnam.

Vietnam has remained communistic and has remained unswerving in its determination of subjugating all whom it can conquer.

For the U.S. to supply aid would be a help toward this goal.

#### DRIVE TO REPEAL HATCH ACT

### HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CRANE. Mr. Speaker, in the aftermath of the House's decision to postpone indefinitely consideration of H.R. 10, the Hatch Act bill, it is encouraging to note that this legislation was perceived for what it was—another special interest measure that would not so much give more freedom to workers as it would more power to Federal employee unions. One can only hope that, rather than reconsider this measure, the House will simply let it die a quiet, well-deserved death.

The underlying difficulty with any legislation of this type is that it fails to take into account the fact that working for Government is not the same as working for private industry. For one thing, Government is the only supplier of the services it provides while, by virtue of the antitrust laws, there are alternative suppliers in the private sector. For another thing, Government is by definition, sovereign; through its power to tax and regulate, it exercises control over all individuals and businesses in the private sector. Thus, granting public service employees either the right to bargain collectively or the right to be active political partisans, gives them political leverage that private sector employees, even if they were fully unionized, cannot match.

Carrying this explanation a step further, granting a public sector union the right to bargain collectively when it has a monopoly over the delivery of services puts it in a position of being coequal with Government in the setting of public policy, including tax rates. By contrast, a private sector union on strike does not deal directly with Government, does not impact directly on Government services, and often is not the sole provider of goods or services in the private sector. Furthermore, no company would permit its employees to campaign against it in their spare time, whereas repeal of the Hatch Act, coupled with the civil service protections already written into law, would permit Federal employees to campaign against their employer with impunity.

So, the real winner, if the Hatch Act were to be repealed, would be the unions. They would have life or death power over Government and, as a result, would pressure the Federal Government into settlements they would never be able to get if they were operating in the competitive private sector. Moreover, union members would be able to campaign, without fear of retribution, for those who supported their position, or the tax increases to finance it, or both. In any other circumstance, such a situation would be viewed as an inherent conflict of interest.

There are a number of other points that can and should be raised along these

lines but rather than duplicate the excellent presentation of them done recently by columnist Nicholas Von Hoffman, I ask unanimous consent that Mr. Von Hoffman's column, which appeared in the May 19 edition of the Baltimore News American, be inserted in this Record at this time. It is well written, thought-provoking, and in my opinion, worthy of the attention of every Member of Congress:

#### DRIVE TO REPEAL HATCH ACT

(By Nicholas von Hoffman)

Under the label of reform, a bill repealing most of the Hatch Act is making its way through Congress and toward the Oval Office where the President has said he'll sign it. Oddly enough, the Hatch Act, which prohibits government employees from taking part in partisan, electoral politics, was considered a reform measure when it was passed in 1939. Its purpose was to prevent a president from using the larger numbers of recently hired government employees as campaign workers.

The Roosevelt Administration was often accused of winning elections via this route, but national administrations weren't set up to run huge battalions of campaign workers at the precinct level; unless the patronage could be turned over to state and local officials it was not very useful for winning elections.

Despite his enemies' accusations, FDR didn't try this use of federal employees so he had no trouble living with the Hatch Act. In actuality, the law was superfluous because the protections and job securities afforded by the civil service robbed politicians of the weapons of coercion to make employees into campaign workers. How can you force a postal clerk to work for Gruntz for President if the clerk knows you can't fire him?

In the years after the passage of the Hatch Act, electoral politics underwent a change. In the language of economics it swung from being labor intensive to capital intensive. The costly armies of precinct workers were replaced by television campaigning, which allows a candidate to reach more people per dollar spent than the knock-on-the-door method. Thus it's questionable these federal employees would have been used by presidential incumbents even if there had been no law.

Nevertheless, the Hatch Act has been accomplishing another unintended good. If the political use of federal employees by presidents was never likely, the use of the same employees by labor unions is a much more real possibility.

Without the right to strike or take part in political campaigns, federal employees are already the highest-paid people in the country. Without a Hatch Act they would have long since extorted the right to strike from Congress and along with it even greater advantages in pay, pensions and other fringe benefits.

That's not mere supposition, as the record of the county and municipal workers' unions attests. When public employees are given the right to strike, as well as the right to engage in partisan political activity, there is delivered into their hands a combination of levers no other group of workers gets. The members of the automobile workers union can strike to enforce their wage demands, but what would the price of cars look like if the union could also participate in the election of the auto manufacturers' board of directors?

In addition, for many years public em-

ployee unions have had to negotiate with a pussy cat management; to wit, public officials who weren't spending their own money when they voted wage increases and productivity decreases.

In the last few years the pussy cats have stiffened somewhat because the rest of organized labor, the part that works in the private sector, has gotten so angry. The repeal of the Hatch Act, however, will make it more difficult to keep government salaries in line with those of the rest of the world.

That may be the least of it. It is already close to impossible to fire a government employee because of the civil service. People on the public payroll are given, by law, greater security and tenure than workers in the private sector can get through collective bargaining.

Now, by repeal of the Hatch Act, civil service employees will get so much more protection, and all coercive power to make them work will have been de facto abolished.

Repeal of the Hatch Act will demolish any good that may come from Jimmy Carter's zero-based budgeting or contemplated departmental reorganizations. It doesn't make any difference if a federal program is good or bad in concept if it is to be administered by a bureaucracy in which all supervisory control over the employees has been extinguished or attenuated to the point that the civil servants can be as abusively arrogant to their nominal bosses as they are already to the various publics they make wait in the endless lines of weary and frustrated people stretching out of every government office in America.

The lowest price that should be exacted for the repeal of the Hatch Act is a repeal of the Civil Service Act. Instead, President Carter will sign the measure proclaiming as he does that this is the political emancipation of the enslaved bureaucrats. But the first time he tries to put this creaking government to some good and efficient use, they'll thank him by shoving their fists down his mouth.

ET TU THUNNUS?

**HON. STEWART B. MCKINNEY**

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MCKINNEY. Mr. Speaker, it was a group of junior high school students from Greenwich, Conn. who in 1974 first brought to my attention the incidental taking of the porpoise by the tuna fishing industry. These students pleaded for something to be done immediately to save these intelligent and affectionate creatures from death at the hands of the American tuna fishermen. It is truly unfortunate that in the past 3 years the killing of hundreds of thousands of porpoises has been allowed to continue resulting in the depletion of several species, including the Eastern Spinner which is nearing extinction.

It is interesting to note the large scale killing of the porpoise by tuna fishermen did not begin until 1957 when the industry began to catch yellowfin tuna by setting large purse seine nets around both tuna and porpoise. This method replaced the traditional hook and line technique and uses the porpoise as a beacon to locate yellowfin tuna since this fish typically swims under and behind the porpoise. However, it is important to realize

catching "tuna on porpoise" does not necessarily mean that hundreds of thousands of porpoises must die. Through skilled shiphandling known as "backing down" it is possible to sluice living porpoise from the purse seine nets. In addition, the use of fine mesh nets have significantly reduced porpoise mortality. True, such methods require extra time and care on the part of the tuna fishermen, but to do otherwise surely means further depletion and possible extinction of a valuable marine resource and friend to man.

Shortly, the House will consider a possible method to save the porpoise, H.R. 6970. Generally, this legislation as approved by the Merchant Marine and Fisheries Committee does provide some protection for the porpoise. As you know, the legislation establishes a 100 percent observer program for the tuna fleets which will be paid for both by the industry and the Department of Commerce. Placing an observer on every tuna boat is vital if accurate figures on the number of porpoises killed are to be recorded. Moreover, according to testimony before both House and Senate committees, most of the porpoise killing was done by only a few culprit tuna boats. Thus, a total observer program will insure that those fishermen who are taking all steps to save the porpoise will not be unduly penalized by the irresponsible actions by those few who are too careless to do the same.

In addition, H.R. 6970 gives additional incentives for saving the porpoise by penalizing skippers with abnormally high kill rates and charging a \$32 fine for each porpoise killed in excess of the industry's average kill rate per ton. Finally, the bill would place restrictions on the transfer of any tuna vessel to a foreign registry unless the new owner agrees to fish in accordance with the Marine Mammal Protection Act. Thus, it provides a way for the United States to extend its environmental protection abroad and, more importantly, does not put American tuna fishermen who comply with such goals at a competitive disadvantage.

However, a serious problem with this legislation is that it provides for a higher 1977 quota of allowable porpoise kills—78,900 instead of 59,050. The latter figure was proposed by the administration and would require a continued reduction or "ratcheting down" of the annual kill quota. To allow a quota as high as 78,900 without providing for any further reduction in subsequent years would certainly spell disaster for those stocks of porpoise which are already badly depleted, such as the eastern spinner. Moreover, it is an especially untenable position for the United States to enact into law as it violates the rules of the International Whaling Commission—IWC—because it allows the taking of a depleted marine mammal species. In view of the strong environmentalist position that the United States has taken in the IWC during the past few years, permitting unratcheted and unpenalized killing of the depleted stocks

would certainly weaken our credibility as a world leader in conservation.

I would hope the House will adopt the amendment proposed by my colleagues Mr. McCLOSKEY and Mr. PRITCHARD which will limit the total incidental mortality and serious injury rates authorized in 1980 to no more than 50 percent of that authorized in 1977 and that subsequent annual reductions shall be set at the discretion of the Secretary.

Allowing H.R. 6970's 78,900 annual kill quota to go into effect without reduction during the next several years will only lead to disaster for the porpoise. And whatever the personal feeling about the plight of these fascinating and amicable creatures, it must certainly be asked—without them, can the tuna themselves survive?

A TRIBUTE TO THE LATE HONORABLE JOHN F. KENNEDY ON THE OCCASION OF THE ANNIVERSARY OF HIS BIRTH, MAY 29, 1917

**HON. JOHN G. FARY**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. FARY. Mr. Speaker, Saturday, May 29, marks the anniversary of the birth of the late Hon. John F. Kennedy, 35th President of the United States. I would like to express my admiration for the purposes and accomplishments of his brief administration, and hail him as a leader of the highest quality and the most inspiring nature.

As President, John Kennedy was exceptional in many different ways, so much so, and with so many beneficial results, it is hard to realize his term in office was actually of such limited duration.

As President of the United States, John Kennedy was confronted by international situations calling for a full knowledge of the diplomatic arts with which he was well acquainted from an early age. During the service of his father, Joseph Kennedy, as Ambassador to England, John Kennedy was employed as a member of the American Embassy staff in London in which capacity he witnessed at close range the awesome development of World War II. As President in the Berlin crisis of 1961 and the Cuban missile crisis of 1962 he would reveal an astonishing capacity for diplomatic negotiation.

In the matter of civil rights, John Kennedy brought to the Presidency a totally new concept, in that he fought all his battles against majority oppression right out in the open where there was no doubt as to what he was doing.

Gone was the old, time-honored policy of secret messages to and secret negotiations with Southern Governors. Now, at long last, the Federal Government was taking an open, defiant, public stand against racial segregation; and when Southern officials sought to circumvent the law, the President brought to bear the full force of Federal authority.

Concerned with the living conditions of

poor and middle-income people in many sections of the country, John Kennedy promoted the Housing Act of 1961 to the benefit of many thousands of Americans, and many hundreds of American communities.

To vary a metaphor, the proof of an American political pudding is in the eating—in the anger engendered among the members of the opposition. Not one of the great American Presidents had gone through his term or terms in office without bring down upon his head the outright curses of the opposition. So it was with Washington, with Jefferson, Jackson and Lincoln; so it was with Wilson, both the Roosevelts, and Harry Truman. And so it was for John Kennedy.

Cut down by an assassin and rendered a martyr, he is mainly remembered today in melodramatic terms: The young President, the man who brought a youthful flair to politics, the man who captured the imagination of American youth—and all that is true, of course.

But more than that, he was a brave and bold reformer in a period desperate for reforms long overdue—reforms opposed by important elements in Congress, Business, Labor, the Press, and every other influential force.

In the end, death robbed him of his victories, but he had been a President of principle, who fought for justice—not for glory.

It was an honor, Mr. Speaker, to our country to have experienced the leadership of such a man as John F. Kennedy whose record of accomplishments has placed him high among the heroes of our national purposes and the democratic cause throughout the world.

President Kennedy is a man long to be remembered.

#### CONGRESSMAN McDONALD'S TESTIMONY ON H.R. 6575

#### HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CRANE. Mr. Speaker, earlier this month the Health Subcommittee of the Ways and Means Committee and the Health and Environment Subcommittee of the Interstate and Foreign Commerce Committee held 3 days of joint hearings on H.R. 6575, President Carter's Hospital Cost Containment proposal. During these hearings we heard from more than 50 witnesses representing the administration, the hospitals, medical professionals, and consumer groups.

On two previous occasions before the House, I stated the reasons for my opposition to H.R. 6575, citing the many factors behind rising hospital costs and the effects that this legislation will have on the quality of hospital care. However, I do not believe that anyone has made a more succinct case against the enactment of this bill than our own colleague, Congressman LARRY McDONALD. As a physician he is particularly qualified to speak to this issue, and I include the remarks he made before the joint hearings

at this point in order that we may all have the benefit of his sage advice:

#### THE PRESIDENT'S HOSPITAL COST CONTAINMENT PROPOSAL

Thank you, Mr. Chairman. I appreciate this opportunity to testify on the President's Hospital Cost Containment Proposal, H.R. 6575.

Before commenting on the President's proposal, I would like to briefly consider the problem it is designed to solve and the causes of that problem.

Medical costs have been rising at an average rate of 9 percent per year since 1965, whereas the general rise in prices has averaged 7 percent per year over the same period. Hence the cost of health care is rising more rapidly than can be accounted for by inflation, and that is the problem. Since hospital costs comprise about 40 percent of all health care expenditures, they are one of the first areas to consider in attempting to deal with the problem. (All statistics are from the 1976 Statistical Abstract, Bureau of the Census, unless otherwise indicated.)

Before we can propose solutions, however, we must identify the causes.

Obviously the major cause of the rise in cost is inflation, which is the result of the deficit spending and credit manipulation policies of the Federal government. Discounting this, we have only a 2 percent per year increase to account for.

Various factors have been suggested causing part of this increase. Construction costs, for example, have risen drastically in recent years. Grady Memorial Hospital was built in Atlanta in 1958 at a cost of \$18,000 per bed; whereas St. Joseph's Hospital is presently being completed in Atlanta at a cost of \$100,000 per bed. New discoveries and advanced technology may also be a factor. Whereas in most areas of the economy technological advances constitute a savings and increase efficiency, in medicine they often expand available services and increase demand.

But whatever role such factors may play, I believe it is negligible in comparison to that of the government. In 1965 government at all levels spent \$9.5 billion on health care, which was 24 percent of the total. By 1975 government spending increased 5 times to \$50 billion, which constituted 42 percent of total spending on health care. Consider how this enormous increase in government spending effects the cost of health care.

Price is determined by demand relative to supply times a constant ( $P=D/S \times K$ ), the constant being the money supply which hasn't been so constant in the past 10 years. If demand increases relative to supply, then the price increases and virtually all of this increase in government spending has gone to increase demand, not supply. Hill-Burton funds, for example, may have increased supply slightly, but their amount is insignificant in comparison to spending under programs such as Medicare and Medicaid. These programs offer medical care to eligible recipients at little or no personal cost, producing a kind of open-ended demand force. Obviously this increases demand relative to supply and forces prices to rise. It is, of course, these types of programs which account for most of the increase in government spending. The fiscal 1978 Budget in Brief estimates that Medicare and Medicaid together will account for 82 percent of fiscal year 1977 federal health outlays.

Another way of looking at the effect of the increase in government health care funding is to consider the effect of an increase in the money supply in our price formula. Obviously price is proportional to the money supply, rising with an increase and falling with a decrease. In the past 10 years we have not only had a vast increase in inflation but an even greater increase in the money spent on health care due to the infusion of government funds.

As further proof of the effect, consider the increase in spending on health care relative to the Gross National Product (GNP). In 1965, 5.9 percent of the GNP went for medical expenses, 4.45 percent private funding and 1.45 percent government funding. But by 1975, health care accounted for 8.2 percent of the GNP, with the government spending 3.46 percent and private sources 4.74 percent. Of the increase in percentage of GNP of 2.3 percent from 1965 to 1975, government spending accounted for 2.01 and private spending for only .29—that is, government spending accounted for 87 percent of the increase.

Hence private spending on health care has remained relatively constant, while government spending has increased enormously. Clearly it is this rapid infusion of government funds which is responsible for increased health care costs.

Now let's turn to the Hospital Cost Containment Proposal. Its most striking feature is that it totally ignores the causes of rising hospital costs—inflation and government health care funding. Instead it addresses itself only to the effects—the rising costs themselves. Frankly, I find this unbelievably naive. Legislatively ordering prices to hold still by limiting hospital income is no solution, unless one considers rising costs as an isolated, causeless phenomenon, which may be stamped out of existence by legislative fiat.

In fact, the rising prices have specific causes and if these are not treated, the problem will not be solved. The prices may be temporarily "contained", but the causes will continue to work and the effects will be disastrous.

Consider the results of H.R. 6575. If hospital costs don't rise above the 9% ceiling, then there is no reason for the bill. But if prices do rise to the ceiling, then hospitals will be forced to cut costs. There is only so much room for increased efficiency; sooner or later something in terms of health care service will have to go.

Probably the first to go will be medical innovations and new technology. We will not hear of these new life-saving techniques, they simply won't come into existence. We may never know if or how many lives might have been saved if hospitals would have been allowed to adopt the new medical advances.

Possibly next to go will be hospital expansion. It will surely be too expensive, and besides there will be innumerable layers of government bureaucracy to wade through to get permission to expand.

And as the costs keep bumping the income ceiling, something else must be cut. Hence hospitals find themselves unable to hire new nurses, and quality of health care declines proportionally.

Demand, however, increases incessantly. The population continues to expand and government health programs direct people in ever-increasing numbers through the hospital doors. But by now the supply cannot keep pace, shortages develop and lines begin to form at these same hospital doors. After the initial limitation of new technology in an effort to hold costs, the next step will mean rationing of hospital services in some form and under some label.

Clearly something must be done to insure equal treatment and separate the malingers and neurotics from the authentically sick. So the government expands the Professional Standards Review Organizations' authority to cover everyone, and the government is soon deciding who may be treated and who may not, who may have a needed operation this year, and who must wait for next year, and the next and the next. This in effect is rationing as in England today but always presented under some more palatable term.

There will, of course, be a side door for a new elite—those with political pull. But the vast majority of decent, honest, hard-working citizens will be unable to plan their lives

and make provisions for health emergencies. Even if they work overtime, setting aside extra money to pay for the operation of a loved one, well, that's sure unfortunate. But they'll have to wait in line like anyone else.

Now this scenario may sound grim and there is no way to know how soon it will happen. Nevertheless, it is the inevitable result if we attempt to control costs while continuing to inflate the currency and pour funds into government health programs.

H.R. 6575 would more accurately be titled the Government Mandated Lower Quality Health Care Act.

Mr. Chairman, I ask the committee not to pass any legislation to place cost ceilings on hospital services. It is not hospital income that should be controlled, but government spending. However, even if government spending is not controlled, it is better to allow prices to rise because at least people will be able to plan their future and control their access to health care. The government has no right to mandate lower quality health care and restrict its availability in order to hold down its cost.

Instead, I would hope the respective committees will investigate the actual causes of these cost increases and design legislation to correct the root of the problem. If this requires controlling government spending, then let's get on with it. And if controlling government spending is politically unpalatable, consider the alternative.

Thank you, Mr. Chairman.

#### WHAT'S IN A NAME?

### HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. VANDER JAGT. Mr. Speaker, there are countless substantial reasons for opposition to the so-called Agency for Consumer Protection. But, an excerpt from a recent editorial in the Muskegon Chronicle, Muskegon, Mich., may have summed it up best:

We'll never do anything about big government and excessive regulation by adding "another layer or bureaucracy" that will harass business, slow down government machinery and aggravate inflation.

Perhaps another weakness of the entire concept is the fact that there has been such difficulty in naming it. When first proposed, it was to be called the Consumer Protection Agency. Then later it was named the Agency for Consumer Advocacy. But, now we are talking about the Agency for Consumer Protection. So, we might ask what's in a name? In this instance, nothing. We really do not need a name any more than we need more bureaucracy. What we really need is protection from the Consumer Protection Agency, the Agency for Consumer Advocacy, or the Agency for Consumer Protection—whatever its name.

I am pleased to insert an excellent editorial from the April 27, 1977, edition of the Muskegon Chronicle at this time:

PLEASE, NOT ANOTHER BUREAUCRACY!

We noted in these columns during the 1976 presidential campaign that then-candidate Carter had managed adroitly, and often, to get on both sides of an issue.

An arresting example of this talent—if that is the word—was his appearance on both sides of the "cut-the-bureaucracy" fence.

He assured voters that if elected he would reduce the burgeoning federal bureaucracy and reform the powerful, inefficient and costly regulatory system.

He would do that, and at the same time press for enactment of a bill—already several times defeated—that would create a new, superpowerful, independent Agency for Consumer Protection (ACP).

It is a very bad bill, essentially the same as when first introduced back in 1970. It would further bloat the bureaucracy and, through the ACP's authority to intervene in the proceedings of other regulatory agencies, give it the power in court to challenge, disrupt, delay and overturn the decisions of virtually all other government rule-making bodies.

In addition to these powers, the ACP also would have information-gathering authority that would permit it to demand business records to a degree that would turn officials of the government's 33 regulatory agencies—even OSHA bureaucrats—green with envy.

The last thing business needs is another paper-work deluge. Labor wants no part of the bill—it managed to get itself exempted—and, Ralph Nader to the contrary, it is decidedly not needed by the tax-battered American consumer.

The ACP bill in 1975 won Senate approval and, considering the infusion of newly elected liberal, consumer-oriented members, was expected to sail easily through the House.

But 1975 was a year of growing public disenchantment with the federal bureaucracy, and by the time the bill reached the House floor—where it was fought vigorously by Rep. Guy M. Vander Jagt, R-Luther—it slithered through with a slim nine-vote margin.

Then-Senate Minority Leader Robert P. Griffin, R-Mich., had urged President Ford to veto the measure (a virtual certainty) and, since the margin of adoption was far short of the number of votes needed to override, it was allowed to die.

But it didn't stay dead.

Unhappily for all of us it was resurrected after Carter pledged support, and unless the public again voices strong opposition the result this year could be different.

The bill is objectionable on many scores, and particularly in its assumption that it would speak for all consumers. All Americans are consumers, granted. But as opponents point out, consumers have a vast variety of wants, needs, interests, tastes, life-styles and buying habits.

These interests often conflict, and it is an arrogant absurdity to assert there is a "consumer interest" which can be represented by a single agency.

There are all kinds of consumer groups, each with its own platform and lobbying organization, and the most effective of these, speaking in their own specific interests, would find in an ACP super-bureaucracy a club ready-made to inflict their minority views on the majority.

As noted, the ACP would have almost unlimited powers to interfere in the affairs of other agencies by arranging to fight and to appeal decisions in the courts.

It is estimated it will cost at least \$60 million to set up and run the ACP for three years, and it's a safe bet that that's a conservative guess.

It doesn't take into consideration the costs of other agencies forced to respond to ACP interference, nor the costs to business and consumers of regulations promulgated by the new agency.

As a matter of fact, the 1975 ACP bill carried a price tag of only \$10 million for the first year. This time around it's pegged at \$15 million—which will scarcely surprise taxpayers who know the financial feeding habits of federal bureaucracies.

The consumer does need to be protected. And heaven knows there exist plenty of laws and agencies designed to do this. Plainly, they don't do this well. Thoroughgoing reform is badly needed. But not this way.

Not by making "big government" bigger still.

Much the better course is that recommended—and started—by the Ford Administration. President Ford wanted measures taken to safeguard consumer interests within the agencies themselves, directing them to review their procedures to be sure these interests were being adequately heard and represented.

He also called on the heads of the major regulatory agencies to evaluate the costs and benefits of proposed regulations. The heads of the major independent regulatory agencies were ordered in to discuss the need for changes, and a similar session on regulatory reform was held with congressional leaders.

These efforts and initiatives would be scrapped if APC is created as an all-inclusive agency.

We think most of our readers will agree with President Ford's response to the last Naderite effort to "protect" us all into the poor house. He said:

"I do not believe that we need yet another federal bureaucracy in Washington, with its attendant costs ... and hundreds of employees."

It is gratifying that Sen. Griffin and Rep. Vander Jagt are ready, again, to fight the bill. And Sen. Donald M. Riegle, the Flint Democrat, should.

If you are concerned, readers—and we hope you are—you can help the cause by writing to them, and to President Carter.

We'll never do anything about big government and excessive regulation by adding "another layer of bureaucracy" that will harass business, slow down government machinery and aggravate inflation.

The addresses: President Jimmy Carter (the salutation is "Dear Mr. President:"). The White House, Washington, D.C. 20004; Sen. Robert P. Griffin, 353 Russell Office Building, Washington, D.C. 20515; Sen. Donald J. Riegle, Jr., 1205 Dirksen Office Building, Washington, D.C., 20515; and Rep. Guy M. Vander Jagt, 1211 Longworth Office Building, Washington, D.C. 20515.

#### THE DECLINE OF THE AMERICAN SHOE INDUSTRY

### HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. HARSHA. Mr. Speaker, I have long been concerned over the adverse effect the importation of many products has had on American industries and on the jobs of thousands of American workers.

It is particularly unfortunate that the industries most vulnerable to foreign competition are those which are labor intensive and provide jobs for many semi-skilled workers who find it extremely difficult to find new employment. One of the industries that has suffered the most is the footwear industry. Many of our shoe plants are in small rural communities or towns and are often the largest or among the largest employers in the area. When they go out of business or layoff workers, this creates an immediate and serious economic and employment problem for the entire com-

munity. In these instances there are few available jobs for the unemployed to seek in the vicinity, and most workers are reluctant to leave their homes to move to other areas which might have more encouraging employment prospects.

One good example of this situation is my hometown—Portsmouth, Ohio. A major employer—a shoe factory—was forced to close down more than a year ago as a result of increased shoe imports, and hundreds of workers lost their jobs. Prior to the closing of this plant, the unemployment situation in this area was already unacceptably high—almost 20 percent. As the unemployment rates in adjoining counties are comparable, there are few, if any, available jobs for our unemployed shoe workers in their home town or nearby communities.

An excellent article appeared in the *Cleveland Plain Dealer* on April 17, 1977, concerning the decline of the American shoe industry and the effect this has had on one community—Portsmouth, Ohio. I would like to take this means of sharing this article with my colleagues:

**SHOE IMPORTS CRIPPLE PROUD INDUSTRY**  
(By Richard G. Ellers)

PORTSMOUTH, OHIO.—Ohio's shoe-making industry, with about 3,000 workers, is threatened with extinction, like an endangered animal species.

As in the 11 other major American shoe states, Ohio's shoe industry is barely a shadow of its former self. Fifty years ago, close to 40,000 people made shoes in some 30 Ohio factories.

The Depression and post-war competition took a toll of companies, plants and jobs. But the current foe is the low-cost foreign shoes that have captured 52% of the retail market.

In the dozen years since shoe importing began in great numbers, Ohio has lost an estimated 12,000 jobs and a dozen factories in shoemaking and related industries.

The swift decline of the American shoe industry in the face of imports was demonstrated clearly here, in river a town that once considered itself a shoe capital of mid-America.

In the 1950s, the city had 8,000 employees in five shoe factories and two others that made shoe parts and equipment.

Today, Portsmouth only has former shoe workers. About 1,200 are on unemployment compensation, having lost their jobs when Williams Manufacturing Co. closed last year.

Williams made women's fashion shoes that sold for under \$10.

Only five years ago, Williams management celebrated the company's 50th anniversary with glowing pride over increased sales at a time when imports had a substantial growing share of the market.

Today, the seven-story Williams factory stands empty, except for a financial vice president and a small staff closing out the company's books.

The production equipment was sold at auction. The buyers of some of the equipment said they would be shipping the machinery to foreign shoe factories.

Industry leaders today say the Williams boom of five years ago was misleading, that the company's increase in sales came not from improved marketing, but because Williams was reaching some markets that were abandoned when other shoe companies folded.

David F. Bussler, vice president of Boot and Shoe Workers Local 385 at the Williams plant, said the company did all it could trying to stay ahead of imports in its markets.

"We had a modern plant, the best equipment and good workers," Bussler said. "But

what can anyone do when the competition is from Taiwan and South Korea, where workers are paid only an eighth of American wages?"

"And you have to realize that, historically, shoe workers have been one of the lowest-paid trades in the United States."

Worker complaints here and in Ohio's still working shoe factories are bitter against President Carter.

They had expected Carter, a Democrat, to take their side against imports, partly because he had labor support in his campaign last year and particularly because he has emphasized the importance of employment in solving America's problems.

But earlier this month, Carter announced his rejection of the U.S. International Trade Commission recommendations that shoe imports be reduced to 1974 levels and tariffs be significantly higher for above-quota imports.

But instead of quotas and tariff control, the President said he is sending representatives abroad, starting in Taiwan and South Korea, to negotiate for voluntary export controls.

Carter said he would also ask Congress for higher unemployment pay and more job-retraining benefits for workers in shoe and other industries who lose their jobs because of high imports.

Company officials who deal with markets have very little hope that voluntary controls will work.

"They have tried that before and it failed," said George R. Utley, president of Irving Drew Corp. in Lancaster.

"They (the exporters) almost had the American market in control, and we'd be foolish to expect them to give it up now."

Shoe workers have also ridiculed Carter's proposal for increased aid to displaced workers as a solution to the import problem.

David L. Gray, regional director of the Boot and Shoe Workers of America, said, "Increasing and extending unemployment pay is not the answer. It just delays the problem."

"What do these people do when unemployment pay ends? There are no jobs, especially in an area like Portsmouth where unemployment has been running close to 20%."

"Age is another factor. At least 50% of the Williams people are past 55. There is no way they will get new jobs with or without job training or a federal anti-age discrimination law."

Trudy M. Legge, secretary-treasurer of the Williams union local, said federal retraining benefits are mostly meaningless to the women who were a majority of the factory's work force.

Mrs. Legge, divorced and supporting a 20-year-old son who cannot find work, recently became one of the first Williams workers to start retraining under the federal trade assistance program.

Although the factory closed last June, it took until recently for the bureaucratic paperwork to get the retraining program under way.

"I'm studying accounting at Shawnee State College, but, after 20 years, it is hard to be a student again," Mrs. Legge said.

The older workers problems here are complicated because the company's pension program is tied up in the mandatory review under new federal regulations.

Louis A. Kindelberger, financial vice president who is closing out the Williams Co., said the government's long delay in approving the final pension program has understandably worried the workers.

Shoe workers who still have their jobs are also worrying.

Ohio's three independent shoe companies make footwear that has been invulnerable, so far, to the cut-rate competition of imports because they make fewer shoes, but sell them for a higher price.

Irving Drew Corp. in Lancaster and Miller

Shoe Co. in Cincinnati make working women's shoes.

Brooks Shoe Co. in Nelsonville manufactures nuns and boys "service" shoes.

John W. Brooks, the owner, said he is trying to keep the plant "important proof" by concentrating on small specialized markets.

Arthur P. Weigand, president of Miller Shoe, said he thinks his "grandmother" shoe market is safe from imports indefinitely because "it is too small for the imports to compete in efficiently and, as good as the imports are, we have a higher degree of perfection."

Weigand said he has problems with supplies, rather than markets, due to the imports. Machinery is no longer manufactured and he must buy equipment from closed plants, such as Williams, for replacements and spare parts.

While their jobs seem safe, workers in these three independent plants are not ignoring the war against imports.

They've given up on Carter's support and are deluging Ohio's senators and representatives with letters, postcards and phone calls, asking them to override the President's decision and make the ITC recommendation into law.

Shoe workers and shoe plant operators are also angry at the operators of retail shoe stores and shoe departments in department stores.

They said, nationally, the retailers have been as strongly opposed to import controls as the manufacturers have been in favor of them.

Retailers contend the lower cost of imports keeps prices under control.

But many people, like William J. Burns, personnel manager at Miller Shoe, called it a "smokescreen that retailers use to hide their real motive, which is greed."

"What the public doesn't know is that a retailer buys an imported shoe at \$6 wholesale and sells it for \$19, in competition with the \$20 American-made shoe that wholesales for \$10."

"The retailer is not helping the public when he takes a triple markup on the cheaper imported shoe."

I am sure the situation is similar in many other communities throughout our country. It is my understanding that since 1968 more than 300 shoe plants have closed with the loss of over 70,000 jobs and \$500 million in annual payrolls. A great many of these plants, as I have mentioned, were in small communities and the impact of the job loss upon thousands of families and many small businesses has been devastating.

In Ohio alone, eight plants have been closed, and employment has been reduced by 18.7 percent in this time period. Inasmuch as imports are entering our country at a rapidly increasing rate, the situation is worsening. In 1968 shoe imports accounted for approximately 20 percent of domestic sales. Today it is estimated that imports have captured nearly 50 percent of the U.S. market. We face a possible demise of this vital industry unless action is taken to protect the industry from unfair competition resulting from low-paid foreign labor. This would, of course, greatly increase the financial problems of many American workers and small businesses and adversely affect the economic well being of many small towns, such as Portsmouth.

I strongly supported the recommendations made by the International Trade Commission calling for the imposition of tariff-rate quotas on the importation of footwear and joined with other con-

cerned Members of the House to urge the President to approve these recommendations. Regrettably, he rejected the ITC's recommendations and, instead, stated he would try to obtain relief for the industry by negotiating voluntary quotas with shoe-exporting countries.

I was tremendously disappointed at the President's decision as I very much doubt that these negotiations will provide effective relief for the industry. If the President's trade negotiator is unsuccessful in negotiating voluntary quotas that are adequate to protect our domestic industry, I feel we should seriously consider overriding his decision. This may be necessary if this vital domestic industry is to survive.

#### UNITED STATES CHAMBER'S PAPERWORK REDUCTION RECOMMENDATIONS

### HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. HORTON. Mr. Speaker, the Chamber of Commerce of the United States has submitted to the President, and the Commission on Federal Paperwork, of which I am privileged to be chairman, a number of recommendations for reducing the paperwork burden imposed by the Federal Government. Along with these recommendations, I am also inserting into the RECORD Mr. Richard L. Leshner's letter of transmittal to the President.

The recommendations forwarded by the chamber are based on the suggestions submitted by thousands of business men and women throughout the country as well as the ongoing work of the Paperwork Commission. I urge my colleagues to carefully consider these recommendations:

RECOMMENDATIONS TO THE PRESIDENT OF THE UNITED STATES FOR ACTION TO REDUCE THE FEDERAL PAPERWORK BURDEN, PRESENTED BY THE CHAMBER OF COMMERCE OF THE UNITED STATES, MARCH 25, 1977

March 25, 1977.

The President,  
The White House,  
Washington, D.C.

DEAR MR. PRESIDENT: I am pleased to submit to you the National Chamber's recommendations for reducing the paperwork burden created by the Federal Government, in fulfillment of your request to our chairman, Herbert S. Richey, our vice chairman, William K. Eastham and me at our meeting on February 24.

National Chamber representatives have personally invited thousands of business men and women throughout the United States—and, in particular, our small business members through our Council of Small Business—to submit their suggestions and comments on this problem. Our recommendations are based on their pleas, as well as on the continuing work of the National Chamber and the Commission on Federal Paperwork.

The reduction of superfluous paperwork is closely related to your other major goals of government reorganization, regulatory reform and zero-base budgeting. To a large extent, success in reducing the paperwork

burden will depend on success in these areas as well. The National Chamber will strongly support your efforts to attain these highly desirable objectives.

Much has been promised over the years in each of these problem areas, but little has been accomplished. One major reason for lack of success, we believe, is that an ad hoc effort is totally inadequate. Continuous close monitoring by high level authority is necessary. It is for that reason that our report concentrates on organizational and management recommendations.

We sincerely believe that your vigorous personal leadership is the key to effective action in each of these areas.

Many of our members have sent to us and to the Federal Paperwork Commission specific examples of burdensome paperwork requirements. Because of the great volume of these submissions, we have not put them in the body of the report. We have, however, included a sample of the more interesting case histories and suggestions in an appendix.

Sincerely,

RICHARD L. LESHER.

It will be of little avail to the people that the laws are made by men of their own choice if the laws be so voluminous that they cannot be read, or so incoherent that they cannot be understood, if they be repealed or revised before they are promulgated, or undergo such incessant changes that no man, who knows what the law is today, can guess what it will be like tomorrow.—James Madison.

#### RECOMMENDED ADMINISTRATIVE ACTION

1. The Office of Management and Budget (OMB) should be divided into two separate suboffices: The Executive Budget Office (EBO), and the Executive Management Office (EMO), each headed by a deputy director of OMB.

The Executive Budget Office would be responsible for preparing the President's budget.

The new Executive Management Office would assist the President in applying sound management principles to the operations of the departments and agencies. The EMO would develop cost/benefit information on federal programs as a basis for selecting priorities; improve interagency and intergovernmental coordination; develop common standards for regulation, information collection and definitions; train and motivate agency executives; and control paperwork by serving as a clearinghouse for all new federal reporting requirements prior to their official promulgation.

2. Departments and agencies should be required to submit to the EMO and Congress comprehensive estimates of the potential paperwork impact of Administration bills providing for mandatory reports.

3. The Administration should require that reporting and record keeping assessments be published during the notice and comment period for all new or revised regulations issued by executive agencies.

4. The clearance function within the individual agencies should be strengthened so that unwarranted forms can be eliminated before coming to the EMO for review.

5. The ombudsman function which is now in the Commission on Federal Paperwork should be transferred to the proposed Executive Management Office. This ten-person function responds well to the public, is highly cost-effective, and is needed on a continuing basis.

6. Federal Government report forms should follow a standard format which provides essential facts about the information request, including:

A clear statement of the purpose of the request;

A statement as to whether a response is mandatory or voluntary;

An identification of the authority for the request—Congress, EMO, or an independent regulatory agency;

An explanation of the legal penalty for not responding to the request.

The standard format should include a readable print size, and adequate space for filing in the information requested.

7. There should be an increased effort to train the persons responsible for drafting federal questionnaires in the techniques of report form drafting.

8. Information requests should be coordinated to spread the reporting burden over the year, eliminating peaks which impose excessive burdens on respondents.

9. Requests from two or more federal agencies for identical or nearly identical information should be consolidated in one form so that respondents may report essential information once instead of many times. Submitting the same information to more than one agency is justified only when privacy and confidentiality are primary considerations.

10. The frequency of recurring reports should be stretched out to the maximum extent possible to minimize the reporting burden, consistent with the benefits to business of the information developed.

11. The Executive Management Office should establish an effective process for assessing the actual benefits of ongoing reporting programs.

#### RECOMMENDED CONGRESSIONAL ACTION

1. The Administration should prepare and strongly support legislation to require independent regulatory agencies to submit to the EMO a comprehensive estimate of the potential paperwork impact of bills and rules initiated by such agencies.

2. The Administration should urge House action to require that any bill involving reporting requirements be accompanied by a comprehensive estimate of the potential paperwork impact. (The Senate already has such a requirement.)

3. The Administration should support legislation authorizing the transfer from the General Accounting Office (GAO) to the proposed Executive Management Office the current GAO responsibilities for clearance and review of the information requests of independent regulatory agencies.

4. The Federal Reports Act of 1942 should be revised and strengthened to:

Involve the business community in the preparation of information requests so the information needs of the government are met with the least possible costs;

Require pilot testing of report forms with a representative group of the persons affected before the reports become mandatory;

Allow adequate lag time between the date a new or revised report form has been announced and the date on which a response becomes mandatory, to permit respondents to develop the required data;

Establish an appeals procedure through which respondent could challenge specific reporting requirements;

Require that agencies make public their reasons for not accepting suggestions submitted during the notice and comment period for proposed reporting requirements;

Require that all public use reports, both exempt and nonexempt, be "logged" in a computer facility to cross check data elements, thus minimizing duplication and facilitating measurement of the total burden on the public.

5. The Federal Government should reimburse expenses incurred responding to mandatory information requests made to obtain information essential for government policy decisions and not for the specific benefit of the businesses affected. Such federal paperwork burdens should be financed from the general revenues instead of constituting a special "tax" on the respondents. If the expense of mandatory surveys of business were

funded through the appropriations and budget processes, the cost of federal paperwork would be clearly identified for the information of the Executive Branch and Congress.

#### RECOMMENDED JOINT ACTION

1. A greater use of sampling techniques should be required in place of 100 percent canvassing. Exceptions should be made only when information about each and every business firm is clearly essential to achieve the objective of the survey.

2. Exceptions from most reporting requirements should be provided for very small businesses. It is important to include all business firms in basic census surveys which establish the conditions, problems, and trends affecting business. However, small businesses—such as those having ten or fewer employees, or a gross income of less than \$100,000—should be relieved of responsibility for responding to frequently recurring information requests.

#### HYDROPOWER—TAKING THE WATERS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. OTTINGER. Mr. Speaker, on May 17, John B. Oakes, the senior editor of the New York Times wrote an "op-ed" article on the great potential for cheap hydroelectric power production from existing dams. The article, entitled, "Taking the Waters," heartily endorses the idea of moving ahead to obtain such cheap, environmentally compatible, and fuel-conserving power production. As he indicates,

The real problem isn't identifying the sites, as Mr. Carter seems to think, or in determining whether small-scale hydro production is economically feasible. (It is even possible now to produce power from flowing streams where there is virtually no fall of water.) The real problem is overcoming the inertia of old patterns of thought and the hostility of old vested interests, especially of the power companies.

Mr. Speaker, I am convinced that passage of the Small Hydroelectric Power Projects Act of 1977, which I introduced on May 24, would enable us quickly to show the country the advantage and feasibility of using existing dams for power production. I am inserting the article by Mr. Oakes for the benefit of my colleagues.

#### TAKING THE WATERS

(By John B. Oakes)

Tucked away in one paragraph of the 28-page fact sheet issued last month by the White House on President Carter's national energy program is this intriguing statement: "The President has directed the Corps of Engineers to report within three months on the potential for additional hydropower installations at existing dams throughout the country—especially at small sites." (emphasis added).

With these words Mr. Carter somewhat rectified his failure to make any mention, in his previous addresses to the nation and to Congress, of this long-neglected source of supplementary energy production that is relatively cheap, readily available and environmentally acceptable.

Mr. Carter may have deliberately played

down the potentialities of small-scale hydroelectric power because he did not wish to risk confusing it in the public's mind with those large-scale power and water-control projects on which he has been locked in battle with Congress.

There is no relation, however, between the two. One involves generation of electric energy through rehabilitation of small dams and installation of small plants to serve local needs on a decentralized basis without seriously damaging the regional ecology. The other is typified by such ruinous pork barrels as Dickey-Lincoln in the State of Maine—so hideously expensive that it is doubtful that they can ever become economically justifiable, quite aside from the permanent environmental damage they cause.

But it is quite a different story with small-scale hydropower. During the 19th and early 20th centuries, thousands of dams were built for a variety of purposes on millstreams and small rivers throughout the country, particularly in New England and New York. They powered grist mills, saw mills, paper mills; and eventually some were fitted out with installations for local generation of electric power, which ultimately fell into disuse or were altogether removed when large-scale power plants and regional distribution systems began to absorb the market.

It is these sites—plus many untapped navigation and flood-control dams in the Middle West—that afford a valuable and available source of easily, quickly and cheaply developed hydroelectric power. Ronald A. Corso, an official of the Federal Power Commission, estimates that if only 10 percent of the 50,000 existing small dams in the United States were developed to an average capacity of 5,000 kilowatts—which is very small indeed—the resultant hydroelectric production could save the equivalent of 180 million barrels of oil a year, about 6 percent of present oil imports. Put another way, these small dams could produce 24,500,000 kilowatts, increasing the present supply of hydroelectric power in the United States by more than one-third.

Representative Richard L. Ottinger of New York's 24th District points out that in this state alone there are more than 600 such untapped dams, which—if only 10 percent of them were put to work at that small 5,000 kw. capacity—could provide the equivalent of the total electric consumption of a city bigger than Albany. And on almost every tumbling stream of New England, there stand today several of these ancient dams—3,000 in all—harking back to a simpler past, when their water power was tamed to turn the mill wheels of another day. If small generators were installed in but 10 percent of these, they could produce enough electricity to supply a population equal to that of Boston.

From the investigations already conducted by such public agencies as the Federal Power Commission and by such private ones as the Development and Resources Corporation (headed by David E. Lillenthal, former chairman of T.V.A.), enough is already known about potential hydroelectric generation at small sites to warrant immediate and intensive Federal encouragement of this use of a permanently renewable natural resource.

Here is where Congress comes in. One way to encourage small-scale hydro-power technology, to which American manufacturers have given scant attention, would be through Federal grants to demonstrate various new techniques in small-scale power development. Another might be through low-interest loans for rehabilitation of existing dams and installations of small turbines and generating plants. Another might be through a form of investment tax credit.

The real problem isn't identifying the sites, as Mr. Carter seems to think, or in determining whether small-scale hydro production is economically feasible. (It is even possible now to produce power from flowing

streams where there is virtually no fall of water.)

The real problem is overcoming the inertia of old patterns of thought and the hostility of old vested interests, especially of the power companies. As President Carter says, this is a time for innovation—and the irony is that in this case, innovation means going back to first beginnings with modern technology now waiting to be used.

#### PRESIDENT CARTER'S NEW AFRICAN POLICY

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by my constituent, Gen. Henry Huglin. General Huglin is a retired Air Force brigadier general and syndicated columnist. He comments on President Carter's new African policy. The article follows:

#### CARTER'S NEW AFRICAN POLICY

(By Henry Huglin)

The Carter Administration has a new and controversial policy approach for the problems and aspirations of the blacks in southern Africa—apparently intended to promote needed changes peaceably, gain influence, and undercut Soviet and Cuban moves.

The focus of the new policy is firstly on South-West Africa (Namibia), which the Republic of South Africa controls, and secondly on Rhodesia (Zimbabwe), but also on South Africa itself. President Carter has chosen to side clearly with the black Africans calling for early replacement of the present white-minority governments with back-majority governments.

This policy, obviously, stems partly from the emphasis on human rights that Mr. Carter has made a keystone of his foreign policy.

But this new policy is also apparently based somewhat on the hope that, by helping the black nationalists come to power in southern Africa, they will be pro-West and not be captured by the Soviets' and Cubans' wooing them with arms and advisors.

Our overly-outspoken UN ambassador, Andrew Young, has had a major role in the development of this new approach. And he recently played a major role at a UN conference in Mozambique which was focused on how to end white rule in southern Africa.

Further, Vice President Mondale recently met in Vienna with Prime Minister Vorster of South Africa, in furtherance of this new policy, for a frank exchange of conflicting viewpoints.

And President Carter said on May 17th that the U.S. is "willing to use all the levers we can to bring an end to racial discrimination in South Africa."

These developments are important. Much is at stake in Africa for our interests.

Great raw material resources that we will need are in that large continent. And the sea lanes for transporting 40% of the vital crude oil from the Mideast to Europe and to our country skirt Africa's shores and could be militarily interdicted from them.

Further, the nations of that continent have become a major target for geopolitical and ideological exploitation by Soviet Russia and Cuba, and somewhat by China.

The Soviets are making particularly great efforts in Africa. And their goal is not political evolution or economic betterment for the benefit of Africans, but power for their

clients and influence and bases for themselves.

Now, there is much reason for feeling that our country and other major non-Communist countries hold much more attraction for responsible black Africans than do the Russians, Cubans, or Chinese. We have more of what they really need and want: trade, and monetary, economic, and technological development aid.

The nub of the matter is what is the best way for our country to promote peaceable changes in Africa for the good of the Africans, black and white, and also avoid the area becoming more of an ideological and military battleground.

Now, few people will quarrel with our government standing four-square for human rights. But many may well quarrel with the one-sided public condemnation of southern African governments, policies, which may harden their positions against needed change, and thereby increase the possibilities of expanded guerrilla war.

And it has yet to be shown how this new policy will be even-handedly applied, if it will, to some black-ruled African nations, where the denial of human rights and perpetration of gross injustices are greater than in white-rural southern Africa.

With any policy—and ironically especially with one based on human rights concerns over southern Africa—we have to face the prospect that, if the leaders of the black nationalist movements do come to power there soon, they will follow the authoritarian path of most of the black-ruled African nations. In these countries there are widespread violations of human rights and, of the 38 changes of government that have taken place since blacks assumed power, all have been by coups, none by elections.

In some ways, the blacks in southern Africa—though greatly discriminated against—now have more rights, justice from the courts, and chances to be informed by a relatively free press than the majority of blacks in many of the black-ruled nations.

So, the situation is far from just "black and white" or even "black versus white." And President Carter's new African policy approach can be questioned on grounds of being overly moralistic, selectively applied racially, and naive as to what is effective in bringing peaceful democratic change to southern Africa and in countering the Soviets' and Cubans' moves in that area.

But we now need to hope that it will soon succeed—or be changed.

#### TRUTH IN LENDING—LAWYER'S AGITATION

**HON. J. J. PICKLE**

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. PICKLE. Mr. Speaker, I have introduced legislation to have the creditor not liable for meaningless, technical violations of the truth-in-lending law.

Some people are aware that I have done this as letters have been received from various lawyers indicating support or opposition.

From time to time I want to share with my colleagues some of the feedback I am receiving from attorneys about the legislation, H.R. 5206.

Today's letter is from Mr. Tom Curtis of the Clark, Thomas, Winters & Shapiro law firm in Austin, Tex. This letter brings to light a very interesting point.

This point is that the vast amount of lawsuits being heard in the truth-in-lending area are lawyer-generated, not consumer-generated. The fact is that Mr. Curtis does not know of one instance where a consumer came forward to sue because he had been injured because of a violation of "truth-in-lending."

Instead, the situations Mr. Curtis is familiar with occur after a dispute arises, and the borrower has a lawyer brought in. This lawyer, knowing much of the incredibly technical and unclear requirements of the regulations promulgated under the truth-in-lending law, and knowing the strict liability of any technical violation of truth-in-lending by the creditor, immediately sets out to find a technical violation.

Please note, the consumer has not been injured, nor does he have a complaint. It is after the lawyer who sniffs out something to create one of the many lawsuits now underway under "truth-in-lending." Perhaps that is fair game, but it ought to be kept at a minimum.

Mr. Speaker, the letter from Mr. Curtis says it better than I, so I place the letter in the RECORD at this point:

CLARK, THOMAS, WINTERS & SHAPIRO,  
Austin, Tex., April 29, 1977.

Re Proposed Amendment to Truth-In-Lending.

Congressman J. J. PICKLE,  
Cannon House Office Building  
Washington, D.C.

We have handled the defense of a good many Truth-In-Lending cases and so far as I know, none was ever instigated or brought to the attention of the creditor by the debtor himself. In other words, all of these cases came about as a result of some controversy existing outside the parameters of Truth-In-Lending which brought the contract to the attention of an attorney and subsequent to that time, the Truth-In-Lending violations were alleged by the attorney. The majority of these cases arose where the debtor could not make his payments and had either been sued by the creditor or threatened with suit, at which time he took the case to an attorney who discovered the Truth-In-Lending problems.

While I would not take the position that substantive violations of Truth-In-Lending should be without a remedy under Truth-In-Lending or some other law, it is apparent that with regard to the many many technical requirements of Truth-In-Lending, the debtors are not aware of them and in nearly every case, the action complained of once the case gets in the hands of a plaintiff's attorney, is for a technical violation of the law as opposed to a substantive violation where some conceivable injury has been caused the debtor.

Your proposal that the creditor substantially comply with the regulation would be of considerable help, depending on how substantial compliance is interpreted. To my mind, Regulation Z was intended to show the debtor the cost of credit and the simple interest rate that he would be charged, together with the total he would be expected to repay. I have no fault with that but the many intricacies of the law now exist as a legal trap for the creditor, even the wary creditor with adequate counsel. In short, it is virtually impossible to advise a creditor that his form is in compliance with Regulation Z. The law is simply too complex and there have been too many rulings requiring constant revision of the form making it all but impossible for the wary creditor to constantly stay abreast of the many interpretations. The small businessman, I sus-

pect, finds it wholly impossible to stay in compliance with the amorphous changes in the law.

This is somewhat akin to strict liability and if the creditor is to be punished in the form of statutory penalties and attorney's fees, without substantive injury to the plaintiff, these costs, where possible, will simply be an increased cost of doing business for those businesses that can pass it along.

#### BODY, MIND, AND NOISE

**HON. CECIL "CEC" HEFTTEL**

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. HEFTTEL. Mr. Speaker, today I would like to insert in the RECORD information that I recently received from the Citizens Against Noise Association of Honolulu, Hawaii. The text of their research statement follows:

#### DOCUMENTED RESULTS FROM WORLDWIDE RESEARCH

Noise is a slow agent of death! (Dr. Vern O. Knudsen, a founder of the Acoustical Society, N.Y. Times Magazine, Nov. 23, 1969, p. 131.)

Commonsense awareness of the relationship between noise and the sleep needed for health has existed for centuries. In ancient Sybaris, 2500 years ago, roosters and forges were banned in residential areas. Julius Caesar banned chariots after 10 p.m. on Rome's stone-cobbled streets. Elizabethan England didn't permit wife-beating after 10 p.m. In many European cities less than a century ago you'd have known which house had an ill resident. Straw in front deadened the sounds of horse and carriage. "Quiet Zone—Hospital" is a taken-for-granted sign today. As one moves up the executive ladder so does insulation from the sound of typewriters, telephone, and talk. In ancient Hawaii all sound was taboo while fishing lures were tied. Legend has it noise made the fish god angry. Logie has it that tying a natural fiber lure took concentration. If it fell apart in the water—no fish!

Experiments with animals and noise show rapid advance of arteriosclerosis, a 25% increase in fetal deformities, 60% drop in fertility, loss of libido, convulsions, enlarged hearts combined with shrunken adrenals, ovaries, and kidneys, more tooth decay, nervous breakdown, and even death.

Testing people and noise has limits. There are no volunteers for mass autopsies to evaluate experiments. Studies of people who live or work in noisy places are well into the third decade in many countries. Initially done to document hearing loss, it is impossible not to be impressed by scientific recognition of physical, psychological and mental skills effects.

"Noise affects people's communication, sense of touch, vision, performance of skilled tasks, orientation and coordination... contributes to fatigue, loss of sleep, psychosomatic symptoms, and possibly impairments of circulation and brain functions." (1954: Army, Navy, Air Force Joint Committee on Hearing and Bio-Acoustics, Report No. 2.)

Noise rules have been part of public health legislation in Britain since 1960.

"We know that noise is as much of a health hazard as other pollutants." (1969: Keynote address of Dr. Gerald Dorman at Sixth American Medical Association Conference on Environmental Health—all on noise.)

"There is evidence that workers exposed to high levels of noise have a higher incidence

of cardiovascular disease, ear-nose-and-throat disorders, and equilibrium disorders than do workers exposed to lower levels of noise." (Environmental Protection Agency Report to the President, December 31, 1971.)

"Daily encounters with workplace noise may degrade hearing mask reception of desired sounds, heighten emotions and psychologic activity, disrupt concentration, or otherwise hinder job safety. The collective impact of these noise effects clearly poses a significant challenge to the employee's health, productivity and well-being." (1972: Health Education & Welfare Department study—Occupational Exposure to Noise, p. IV-16.)

"Acute noise exposure has been shown to markedly affect various hormone secretions. Immunological function can be affected. . . ." (1976: National Institute of Environmental Health Sciences report, pub. by Department of Health, Education & Welfare.)

"In disease states such as anxieties, duodenal ulcers, and other so-called tension ills, the additive deleterious effect of noise is real and immediate." (Dr. Lee Farr, writing in the AMA Journal 1967, Vol. 202, pp. 171-174.)

Noise and learning: Probably the most significant study of the effect of noise on classroom achievement was done in 1973. Elementary children living in four 32 story buildings built in air rights over a heavily travelled New York freeway were tested. Final evaluation was done on 54 children. Noise outside the buildings averaged 76-79 dBA (except when heavy trucks roared by). The apartment living rooms, with windows closed, ranged from 70 dBA at the lowest floor to 51 dBA on the 32nd floor. (Note: an increase of 10 dBA means twice as loud.)

When data was analyzed and adjusted for all variables, including educational attainment of parents, noise level (floor level) emerged as the most significant factor in aural word discrimination, speech, and reading achievement. Children in the quietest apartments consistently scored higher in all three categories than children in noisier school noise levels were also tested.) Mentioned in every book on noise since 1973, this study, by Glass, Cohen and Singer, was first reported in *Psychology Today* under the title "Urban Din Fogs the Brain."

Tests in Japan in 1964 (Nomura Research Group of Tohoku University); in England in 1969 (London Institute of Psychiatry) and the U.S. (there are three pages of bibliography in *Noise and Children: A Review of the Literature—Journal of the Acoustical Society of America*, Vol. 58, No. 4, Oct. 1975) all indicate that exposure to noise for extended periods affects the acquisition of speech, language, listening, and such related skills as reading. In other words, good listening situations are prerequisites to learning how to speak and read.

Last year Jerome Singer reported further noise and mental skills tests on subjects of varying ages. Skills were tested during noise exposure and just after it stopped. He found subjects in about two dozen experiments could not find errors when proofreading, did not persist as long in difficult or important problems, were not able to process conflicting information as well. (Internoise, '76, pp 499-504.)

Noise and hostility: Singer also found that during and after noise exposure subjects "were not as willing to do a favor when requested." He writes "The specific noise effect need not be very large for a large social effect to occur as the behaviors involved are strongly influenced by modeling and imitations. That is, one occasion of noise-influenced aggression may set the model for many others . . . a small number of affected people may trigger . . . aggression or failure to help others." (Remember the rocks thrown at Lale tour buses?) About every six

months a noise-triggered murder becomes a national news event.

Detroit riots investigator Dr. Edward Crip-pen told the American Public Health Association's 95th Annual Meeting he felt ghetto tension was related to interrupted sleep. (Robert Alex Barron, *The Tyranny of Noise*, 1970, p. 61.)

Noise and your eyes: Blood vessels in the conjunctiva around the eyes contracted and grew pale as noise increased to 87 dBA while blood vessels in the retina responded to noise as they did to digitalis—by expanding. Documenting photographs were taken by Professor Giovanni Straneo in Pavia, Italy (reported in Berland, p. 100.) Testing pupil enlargement during noise, Dr. Gerd Jansen found that where subjects attempted precision work during and after noise, "test objects were not where the subjects thought they were!" (Theodore Berland, *The Fight for Quiet*, 1970, p. 85.)

Blood pressure, heart, and health: At Pavia's Institute of Occupational Medicine, Dr. Straneo's experiments confirmed German results found by Jansen. His findings: Finger pulse arterioles contract, cutting their blood supply in half within three seconds of the start of 87 dBA noise. It took at least five minutes after the noise ended to return to normal.

A cardiologist, Straneo also found a correlation between noise and irregularities in EKG tracings. Noise, he concluded, can affect the heart directly through nervous system stimulation and indirectly by changing the dynamics of the vascular system.

By the sixth month after conception the fetus responds to noise with a faster heartbeat. In tests using a vaginal microphone, Karolinska Institute (Stockholm) researchers found how much noise was masked by the mother's body, placenta, etc., and determined that when the fetus heard 50 dBA (like a quiet office) for one second, fetal heartbeat went from 130 per minute as high as 170 per minute. (Berland, p. 85.)

Over 1,000 people who lived near Stockholm highways were asked a series of questions in a masked interview in which the subjects didn't know the purpose. Of those disturbed by traffic noise more than half answered questions on general health by complaining of bad stomachs, headaches, insomnia and nervousness. (Researcher was Anders Kajland at Karolinska Institute, reported in Berland, p. 56.)

Noise from London's Heathrow Airport apparently generated so much stress that a substantially greater number of affected residents required psychiatric treatment for mental illness than inhabitants of comparable, quiet, areas. (The Lancet, December 1969.)

Commissioned by the Government of Luxembourg to research the psychological impact of noise on factory workers, Dr. Jansen found workers in noisy industries were more aggressive, more likely to quarrel with foremen and had more than twice as many domestic problems than workers in quieter industries. (Berland, p. 92.)

Although it wasn't part of his contract, Jansen also measured physical reactions. He found: "Their skin was pale, the mucosa of their mouths were pale and dry, their hearts had extra systoles, their peripheral circulatory systems were apparently under high tension." (Berland, p. 92.)

Noise and sleep: Working with test volunteers who were awake and knew what the test was about, Dr. Jansen found peripheral vasoconstriction didn't show up until about 75 dBA. But in subjects who were sleeping soundly, blood vessels in fingers and toes constricted at 55 dBA. Just a fraction of a second exposure at 70 dBA took several minutes to wear off. Jansen's conclusion: "An adaption made by a person to noise is made at the intellectual level . . . your body can never adapt to noise." (Berland, p. 97.)

The person awakened by noise has no trouble making the connection, but many tests have shown that people who aren't aware of being disturbed by noise nevertheless shift from deep sleep to a lighter (dream phase) sleep. On awakening they feel fatigued, often have palpitations. (Dr. George Thiessen, National Research Council of Canada; Dr. Gerd Jansen (cited above); Dr. Nathaniel Kleitman, University of Chicago, among many others. Berland, pp. 87-88.)

Noise and hearing: "The population at risk with regard to noise-induced hearing loss may be greater than any other hazard in the work environment." (Occupational Exposure to Noise, HEW 1972, p. IV-7). Today's cities are often noisy as a factory. Recreational noise is often quadruple that of a factory.

How does hearing loss happen? Usually so slowly the victim isn't aware of change. Like the well-trod path where grass withers and vanishes, hair cells in the ear (which translate sound pressures into words, music or noises that tell us what is happening) shrivel and disappear with abuse.

To experience "temporary threshold shift" in hearing, leave the car radio at "on" when you turn off the ignition after coming home after work (or noisy play). When the ignition key turns your radio on in the morning at last night's comfortable volume, you'll be surprised at how loud it sounds. Yesterday's noise assault dulled your hearing for a time. Over the years recovery is less and less complete.

Women do hear better than men. Drs. William Wilson and William Zung ran tests at Duke University in 1965 and found that "women were three times more likely to be roused from sleep by noise than men." The difference starts to emerge at age eleven. Is it because boys play with firecrackers, shoot targets, ride motorcycles, and drive unmuffled cars more than girls? Is it because men are more likely to run power mowers, fly planes, work in noisy industries, hunt, and train for war?

By age 13 hearing starts to deteriorate in our noisy world. "Audiometer Tests of Tennessee students gave the sobering information that while only 3.8% of sixth-grade children had some degree of hearing loss, 11% of ninth-graders did, and 30.2% of freshmen in college. The last figure seemed implausible to Dr. David Lipscomb, director of Audiology Clinical Services at the University of Tennessee, so he repeated the study with the next class of incoming freshmen. Instead of obtaining the lower figure he hoped for, this time hearing losses were measured in 60.7%. Many of the deficiencies were for sounds at seldom-used frequencies, but even for those used in normal speech, hearing was below expectations for this age." (Lucy Kavalier, *Noise: The New Menace*, p. 38, 1975.)

No wonder there is talk of a "deaf generation" in this age of loud music. Lipscomb tested rock musicians. One out of three tested had "notable hearing losses for high-frequency tones." (Kavalier, p. 50.)

Noise and the elderly: Commonsense tells us falsely that noise is less of a problem to older people because hearing impairment is common. Not so. Sleep patterns differ with age. As we grow older it takes longer to fall asleep and deep sleep intervals are fewer and shorter. Noise intrudes more easily and sleep shifts quickly to drowsiness . . . or even anger, wakefulness and insomnia. Stanford Research Institute studies by sleep specialist Dr. Jerome Lukas showed noise intrusions disturbed hardly any five-to-eight-year olds, 18% disturbed the middle-aged, and 32% of noise intrusions disturbed the sleep of the elderly.

Another handicap for the retired is the feeling of being trapped by noise trespass into places where they live.

Many scientists now believe that much "old age hearing loss" results from noise. They point to the remote African Mabaan tribe where 70-year-olds hear as well as those in their twenties. Tests with equally quiet-environment, but high saturated fat diet tribes in India's Nilgiri plateaus showed no hearing losses, no high blood pressure and no heart problems! (Berland, p. 87.)

Going without food, or even water, may be easier than going without sleep. Sleep deprivation is a standard torture, brainwashing, or "third degree" weapon. It can reduce the victim to a robot, physically and mentally disabled. And, as Mt. Sinai Hospital's famous Dr. Smith Rosen says, "You may forgive noise, but your arteries never will." (Office, 1972.)

## J. CRAIG SMITH MOURNED

### HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. NICHOLS. Mr. Speaker, I have been fortunate to know many great men during my lifetime but none have surpassed the achievements of the late J. Craig Smith. A close personal friend, Craig was one of Alabama's finest sons and was recognized around the world as an astute businessman and an outstanding civic leader.

His long list of achievements, his dedication to his fellow man, and his concern for the betterment of the community will long be remembered by Alabama and his many friends across the Nation.

My deepest sympathies have been expressed to his wife, Mrs. Page Thompson Smith, and his daughter, Miss Mignon Comer Smith of Washington, D.C., and their prayers will be joined by the many friends and businessmen who knew, respected and admired this great American.

Mr. Speaker, I submit for the RECORD the following two newspaper articles about J. Craig Smith, both of which appeared in the Sylacauga News and I join with Craig's many friends in this Congress who mourn his death:

ENTIRE TOWN DEEPLY AFFECTED BY LOSS OF AN OLD FRIEND

(By Joe Patton)

A profound sense of loss shrouded Avondale Mills along with an entire town Thursday morning at news of the unexpected passing of J. Craig Smith whose mourners here and abroad are legion.

One of the most admired and respected figures in the textile industry succumbed of a heart attack at Chicago, Ill. while attending a meeting of Illinois Central and Gulf Railroad directors.

The gravity of his loss will be measured in terms of what he meant to thousands in Sylacauga over the years, and a steady influence that spanned the textile world.

Although officially in semi-retirement since 1970, the former Avondale Mills president and board chairman remained active in company affairs as chairman of its executive committee, Avondale Educational and Charitable Foundation chairman, company director, and trustee of the Avondale Mills Employees Profit-sharing Trust in which he played a founding role.

At 71 years of age, Smith was pursuing a variety of business, civic, professional, and

philanthropic activity with the enthusiasm and vigor of a much younger man.

He was a giant among American textile leaders, the only American ever to serve as International Federation of Cotton and Allied Textile Industries president of which he was also an honorary life member. Smith had also served as president of the American Textile Manufacturers Institute and the National Cotton Council of America and was a Liverpool Cotton Association, Ltd. honorary member.

Showered with numerous awards, among the proudest were his being honored by the editors of Dixie Business as Man of the South for 1970, his selection by the International Council of Industrial Editors as Communicator of the Year for 1970, the first time it had been made to anyone from the South or the textile industry, and his naming to the Textile Award by the Alabama Textile Manufacturers Association in 1971, only the third such award in ATMA history.

The grandson of Avondale Mills founder, B. B. Comer, who also served Alabama as a Governor and United States Senator, was named to the Alabama Academy of Honor in 1974.

Smith was a director of South Central Bell Telephone Company, Southern Bancorporation, Illinois Central Industries, Birmingham Trust National Bank, Protective Life Insurance Company, General Machinery Corporation, and First Federal Savings & Loan Association of Sylacauga, the latter also as board chairman.

His public office record included Alabama Water Improvement Commission, University of Alabama Medical Center Advisory Board, Alabama Education Study Commission, Alabama Institute for the Deaf and Blind executive committee, Alabama State Advisory Committee on Public Education, and Sylacauga Hospital board service.

The lengthy list of civic affiliations and offices Smith had enjoyed included The Eye Foundation, chairman and trustee, Alabama Safety Council, president and director, Sylacauga Park and Recreation Board, vice chairman, Boys Club of Sylacauga, honorary trustee, South Talladega County Chapter of the American Red Cross, honorary member, Sylacauga Exchange Club, honorary member, Sylacauga Rotary Club, president.

Smith had also served the Alabama Chamber of Commerce as president and chairman of the board, and was a member of the University of Alabama School of Commerce board of visitors.

His legacy to Sylacauga may be found in the new J. Craig Smith Community Center in testament to 32 years of faithful Sylacauga Parks and Recreation service, and the coveted J. Craig Smith Medal and Scholarship Award annually bestowed on an outstanding B. B. Comer Memorial School female graduate.

A wide, natural smile that became something of a Smith trademark belied a latent shyness, and a native business acumen the Virginia Military Institute graduate's early ambition to one day become a journalist.

The ability to identify with the common man and captains of industry alike endeared Smith to thousands of Avondale Mills employees who over the years attached a value beyond price to their coworker relationship. The pride with which his coworkers embraced a Zero Defects program that Smith was instrumental in implementing gave him as much satisfaction as any of his many achievements. It is a program that has made the Avondale Mills label a byword for quality throughout the textile industry.

A newspaper employee who had known Smith for many years, Jack Leach, used to shock associates with a "Hi, buddy!" greeting. Smith said not long ago it had often made his day. Of such was attached great worth.

Although a Birmingham native, Smith was considered one of Sylacauga's own.

Services for Smith were held Friday afternoon from graveside at Elmwood Cemetery in Birmingham, his wife, Page Thompson Smith, and daughter, Miss Mignon Comer Smith of Washington, D.C., among the multitude who mourn his passing.

Giants have walked this land, a remarkable J. Craig Smith among them.

## CASUAL COMMENTS

(By Charles H. Greer)

"Ave Maria, gratia plena, Dominus tecum" . . . the strains coming from the 73 beautiful voices of the Sylacauga Community Chorus as the second song of the evening concert was dedicated to the memory of Sylacauga's warm friend, J. Craig Smith. How sad it was . . . the realization this kind and friendly gentleman would never be among us again.

"Dominus tecum, Dominus tecum" . . . my mind kept going back ever so many years as I thought of the shock registered not only in this state, the country as a whole . . . but the world. And it was so true . . . because J. Craig Smith indeed had worldwide recognition both as an industrialist and as a humanitarian. I knew, of course, that my family had indeed lost a friend . . . but it was astounding to note how many, many people said the same thing over again and again . . . each had lost a very dear friend.

Yet, it was easy to understand because this man did not put off living . . . he made his own epitaph . . . his life drew it up in terms so flattering that only he could deserve such a glowing inscription.

Mr. Craig, as I respectfully called him, was one of three men who made a profound impact on my life. He, along with my father and uncle, Roe Greer, gave me impossible goals to emulate . . . but the examples of their lives have been the cause of any successes I might have. Our youngest son, Craig, is his namesake.

"Benedictus, benedicta tu in mulieribus" . . . so many remembrances kept coming back. The time his only daughter, Mignon, fell from her horse . . . and it was touch and go for a few days before his and others' prayers were answered. How he worried about his life's companion, Page, as she suffered ill health. That time he got lost trying to find our house where he was headed with a gift for his namesake who was sick. The many visits he would make to the office before he moved to Birmingham . . . and the way he would walk through the plant and shake hands with every employee. The last time our family had lunch with him . . . and he let Craig drive the Cadillac.

I remembered, too, the younger Craig Smith . . . particularly his love and respect for Donald Comer, Sr., one of the kindest and most gentle men in the world. And I can recall his stories of trips made in efforts to sell Avondale products when that great company like all the rest of the nation, was still recovering from the great depression.

Then there were those years when he edited the *Avondale Sun*. Man oh man, could he ever write. His editorials were sought out by all. Though he quit writing after his retirement, he never lost interest in the company publication . . . and would brag on his cousin, Donald Comer, Jr., and his editorials. He was particularly proud to see the *Sun* continually improve.

*et benedictus fructus ventris tui Jesus* . . . memories kept coming back. There is just no way (other than through his loyal and efficient secretary, Mary Edmunds) to count the many people who received gifts from him and Page as they returned from their European trips. Then, of course, there were countless cards and letters and phone calls concerning bereavements, birthdays, graduations and the list goes on.

I thought back to the many gifts . . . most of them in our library . . . that we have treasured from him. I remembered how much he enjoyed receiving mail and papers from home at hotels in London, Zurich . . . wherever he went. His was a fantastic sense of humor. I remember telling him once there was really no reason for him to write us . . . that we couldn't read his handwriting anyway. Mary wasn't on these trips to make them legible.

Just that afternoon at his services a beautiful young lady and a recipient of the J. Craig Smith Scholarship was telling us that Craig had called prior to her graduation from the University of Alabama . . . just to make sure she was graduating. He was proud she had accepted a job with Avondale Mills and was going into sales out of the New York office. Treasure was not alone. He checked on every one of his scholarship winners . . . and was so proud of them.

Maybe he didn't know every single member of the Avondale Family . . . but I think he did. I do know this . . . he numbered among his friends those employees from the lowest to highest category of employment. Many of them were there to tell their former boss "goodbye" Friday afternoon.

*Sancta Maria, Mater Dei ora pro nobis peccatoribus . . .* he just didn't have a jealous bone in his body. He wanted so much for people to advance in life's chosen professions. When it came to family, such was doubled in spades. He encouraged the younger generations of the Comer Family to enter the successful business begun by his grandfather, Gov. B. B. Comer.

No man I ever met could have enjoyed life more than Craig Smith. He loved to travel . . . enjoyed being wealthy but wore this wealth in a manner that demanded respect.

Perhaps the best description of Craig Smith as a man can be found in the writings of Henry Amiel who stated: "It is not what he has, or even what he does which expresses the worth of a man, but what he is." No one questions what he was . . . a gentleman.

*nunc et in hora mortis nostrae. Amen . . .* The hymn was finished as is Craig Smith's life. Today there is a living memorial to Craig Smith. It is probably one of the things for which he was most grateful and proud . . . the J. Craig Smith Community Center. I'm so glad he lived to see this beautiful center dedicated to his memory.

I just hope one of his associates did for him what he did for my dad . . . that of placing a vase of roses on top of the desk . . . as a tribute to an executive who had gone to his reward.

Somehow or other I can see my dad, Uncle Roe and Craig Smith all together once again . . . as I see my son with his grandfather in that great Valhalla in the sky.

#### CONTINUING CRISIS IN FOSTER CARE

#### HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MILLER of California. Mr. Speaker, earlier this week, I reported on the highly successful comprehensive emergency services program in Nashville. Today, I would like to discuss another project which has modeled itself after the Nashville design and achieved similarly successful results, the CES program in San Francisco.

With full funding of Child Welfare Services, title IV-B of the Social Security Act, as contained in H.R. 7200, and my own Foster Care and Adoption Reform Act of 1977, many more communities would be able to replicate this highly proven and cost-effective alternative to our present system which deemphasizes prevention and reunification in favor of expensive, long-term maintenance.

In 1974, before the CES program existed in San Francisco, more than 800 children were annually admitted to public custody. There were no emergency foster home beds, no Outreach programs, and no in-home services to prevent the need for foster home placement. Thus, as in so many cases, the first intervention in a family crisis was by police, not by potentially helpful social workers, and the result was removal of the child, not the offering of emergency services. In this manner, children are forced into a system with very little accountability where many do not belong and from which many exit only after years of needless or inappropriate placement.

Within only 2 years of that situation, the CES program was achieving major reforms. The administrative procedures were streamlined and similar programs were merged to provide more effective assistance:

Children in Youth Guidance Center Dependent Cottage: 1974, 24.3 daily; 1976, 2 daily (45 percent for less than 1 day).

Emergency Foster Beds: 1974, 0; 1976, 22. Special Subsidy to Emergency Foster Parents: 1974, 0; 1976, \$100/month.

Adolescent Shelter Beds With 24-hour intake: 1974, 16; 1976, 32.

24-hour intakes for Emergency Foster Homes & Adolescent Shelter: 1974, 0; 1976, all on 24-hour intake.

24-hour, 7-day outreach: 1974, 0; 1976, 6 teams.

Reduction petitions filing dependent children: 1974, 37/mo.; 1976, 16/mo (down 43 percent).

Increase in intake of CES Unit over 1974: 32 percent.

Impressive as these results are, such programs are so financially strapped, because of inadequate Federal support that other aspects of the CES project go wanting. San Francisco's CES has not been able to develop emergency caretaker and homemaker services and respite care which would dramatically reduce the need for the removal of children from their homes. The CES staff has only been able to partially meet their plan for emergency family shelters and emergency child care. Nor are San Francisco and Nashville alone in demonstrating that such preventive services programs can work effectively. In New York City, a study by the Child Welfare League several years ago disclosed that the average stay of children in foster care was nearly 5½ years. Over 30 percent of the children reviewed had no discharge plans whatever, but would indefinitely remain in foster care at an annual cost of \$5,000 to \$13,000.

A preventive service program was initiated on an experimental basis to attempt to alter this sad and expensive state of affairs. Several services, of the sorts which would be provided with the foster care reforms contained in H.R.

7200, were offered to 373 children in an experimental group. The results of the year-long project were reported in HEW's publication, *Children Today*, November-December 1976, in the article from which the following is excerpted:

#### REDUCING FOSTER CARE THROUGH SERVICES TO FAMILIES

(By Mary Ann Jones)

According to nearly every measure, better results were obtained among the experimental group than the control group, usually to a significant degree. Some of the highlights of the findings follow:

The project was successful in both preventing and shortening foster care placements.

Of those children home at the time of assignment to the project, only seven percent of the experimental group but 18 percent of the control group had entered placement by the end of the evaluation period.

Of the children starting out in placement, 47 percent of the experimental group, compared to 38 percent of the control group, had returned home by the end of the evaluation period.

During the time that cases were open in the project, the children in the control group were in care for an average of 24 days longer than the children in the experimental group. If the experimental group children had spent the same number of days in care, this would have amounted to an additional 44 years of foster care during the project year alone!

These positive effects of the project were even more marked when a follow-up on the whereabouts of the children was conducted six months after the end of the evaluation period. This notable increase in the impact of the demonstration services was most evident among the children who started out in placement. At the time of the six-month follow-up, 62 percent of the children in the experimental group who were in placement at the time of assignment to the project had gone home, as compared with 43 percent of the children in the control group.

The reduction in foster care was accomplished without detriment to the well-being of the children in the experimental group and it was accompanied by many positive changes in the functioning and problem situation of the families.

#### FINANCIAL IMPLICATIONS

The savings in foster care expenditures resulting from one year of operation of this project with the 373 families in the experimental group are estimated to be over \$2 million. Approximately \$286,000 in foster care costs were saved during the project year alone on the 663 children in the families which received the intensive services. Additional savings of about \$1.8 million in foster care expenditures are expected to accrue over the next four years because of the reduction in placement with this sample of children.

A second question, of course, is how much it cost to save foster care expenditures that were, perhaps, in excess of \$2 million. The total reimbursement to the participating agencies for the demonstration services (other than foster care) during the evaluation year was \$1 million. For a variety of factors related to the demonstration nature of the program, such as the slow build-up and low turnover of caseloads, and the heavy reporting and travel demands, we think the reimbursement figure greatly exaggerates the cost of providing such services on an ongoing basis. In addition, the participating social service districts were unable to estimate the non-foster care costs of serving children in the usual way in their system. So, while we had a figure for providing services other than foster care to the children in the experimental group (the \$1 million figure), we had no

comparable figure for the children in the control group. For all of these reasons, we feel a more accurate reflection of the additional costs incurred by providing the demonstration services would be in the neighborhood of \$500,000 during the evaluation year. In sum, a \$500,000 investment in services in one year yielded a savings estimated at over \$2 million in foster care expenditures over five years.

These figures do not include the cost of any further service that might be required to sustain the gains achieved during the evaluation period, nor do they include the increased AFDC costs to maintain the families re-established as a result of the project. On the other hand, neither are the continuing non-foster care costs of the control group included, nor the myriad costs and benefits that might accrue as the result of this project, as the children from both the experimental and the control groups grow into adulthood.

#### SERVICES PROVIDED

Families in the experimental group received about twice as many service contacts during the evaluation period as the families in the control group. The principal differences were in the number of in-person interviews with the mothers during the eight and one-half months that the average case was open (17 interviews in experimental cases versus 10 in control cases) and the number of telephone contacts (29 versus 9). The experimental workers also had much more frequent contact with other community resources.

Many more kinds of services were provided to families in the experimental group. A significantly greater proportion of them received every service about which we inquired except placement of children and psychological or psychiatric evaluation or treatment. Obviously, the demonstration was successful in delivering a battery of preventive and rehabilitative services to project families.

The work with the families in the experimental group was active in many respects in addition to the number of service contacts and the kinds of services delivered. Over 75 percent of the interviews were conducted outside of the office; the workers most frequently described their principal role in interviews with family members as one of giving advice, guidance and direction; and in one-third of the cases the workers engaged in special advocacy efforts on behalf of the clients, particularly with the income maintenance system.

There are many, many communities in which these first steps to improving child service programs will not be made without more Federal support. That level of funding can be provided the States and local communities—which already outspend the Federal Government in this area 7 to 1—with the passage of H.R. 7200, which I urge my colleagues to support enthusiastically.

LLOYD C. FOWLER—PUBLIC WORKS  
MAN OF THE YEAR

HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. MINETA. Mr. Speaker, I rise today to honor a gentleman I have known for many years. Mr. Lloyd C. Fowler, the chief engineer of the Santa Clara Valley

Water District, has been chosen by the American Public Works Association and seven other organizations cosponsoring National Public Works Week as one of the "Top Ten Public Works Men of the Year."

Mr. Fowler is a registered civil engineer with over 25 years of experience in irrigation, hydraulics, flood control, water supply, and river control works. He is a member of several professional societies and currently serves as president of Watercare, the California Association of Reclamation Entities of Water.

Mr. Speaker, I am sure that you and all of my colleagues in the House will join me in congratulating Mr. Lloyd C. Fowler on his selection as a "Man of the Year."

#### INVESTIGATES RELIGIOUS "BRAIN-WASHING"

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. GIAIMO. Mr. Speaker, in February, more than 40 of my colleagues joined me in asking the Attorney General or his principal deputy to meet with experts in the area of "brainwashing." Several other Members of the House and the other body contacted the Justice Department on their own. We hoped we would be able to provide Department of Justice officials with some information to help them understand better the allegations of "brainwashing" that have been raised against several of the seemingly religious cults with which we are all familiar.

The meeting was requested because many parents of young adult cult members are convinced that their children have been brought into and kept in these cults against their wills. I decided to approach the Justice Department because it is charged with the responsibility to investigate and prosecute suspected violations of Federal law.

After some initial difficulties, we managed to hold a meeting on May 18. Although one of the original experts whom I had invited was unable to attend, the meeting with officials from the Criminal Division included professionals with considerable knowledge of the legal, psychological, and ethical implications of the charges that have been made by the parents and several former cult members.

This was an informal informational meeting, and no prepared statements were issued. I shall, however, ask the Justice Department to comment officially on this meeting in the near future.

In the meantime, I believe that I owe it to my colleagues to summarize my impressions of what I thought were the major points discussed.

I appreciate and respect the constitutional limits that must be imposed on any matter so closely linked to the first amendment. This does not mean, however, that every activity of every re-

ligious group is beyond legal investigation. The courts in the past have distinguished between legitimate religious activities and those which have no legitimate connection to religion.

The central question in my mind is whether these young people freely are choosing to remain with these cults. In response to this query, I in turn was asked questions that emphasize the difficult preliminary matters which must be settled before the question of freedom of action can be answered in a legal sense.

How do you define a "cult"? One person's cult may be another person's religion. We must remember that at one point or another in history, nearly every religious group has been labeled a cult in the eyes of society.

Even if you should be able to define the type of organization that you seek to investigate, and if you are able to show that it is not being investigated because it is a religious group, another problem emerges. How can you prove "brainwashing," or coercion? What appears to be coercion to one person may in fact be a sincere religious conviction. With all of its advances, medical science cannot emphatically distinguish between the two.

In essence, I believe that the Justice Department was asking how one could develop a test which would pass a first amendment challenge and show beyond a reasonable doubt that improper influence had been used against a cult member's free will. I confess that for this I have no answer at this time, but I also think that, with its considerable resources and expertise, the Justice Department should be able to establish a plausible test.

I recognize the difficulties this issue creates. When a person's life and liberty are at stake, we correctly should not be frivolous with accusations; this narrow view of criminal laws may appear to be insensitive to some people, but it is a proper point of view legally and constitutionally.

I am convinced that we need a redefinition of our legal terminology. Last year, the Justice Department presented its policy in a letter to me, and I had that letter included in the January 31 CONGRESSIONAL RECORD. This policy is based on major court cases a generation old. Over the years, we have learned that, indeed, brainwashing exists. The experience of Korean war POW's substantiates this fact. It often takes decades for the law to recognize medical facts. Perhaps a test case is needed to determine exactly where we stand now with respect to the law's interpretation of this matter.

I did not ask the Justice Department to initiate an investigation of any particular cult or case. I hope, however, that the officials with whom I met will review with an open mind the comments that were made and will consider the possibility of examining in greater detail the allegations they have on file.

In the near future, I shall ask the Justice Department to indicate to me whether or not it intends to modify its

earlier position in light of our meeting. Naturally, I shall advise my colleagues of whatever reply I may receive.

Mr. Speaker, nobody need tell me that this is a complicated and sensitive issue. Many parents will think that nothing was accomplished at this meeting, and many civil libertarians will condemn its occurring in the first place.

I requested this meeting because I am convinced that our federal law enforcement officials must consider this problem in greater detail than they seem to have been doing in the past. Many of the parents and friends of cult members feel helpless in light of what they consider governmental indifference toward this problem. Their frustration has led to such activities as kidnapping and deprogramming. While I do not condone these actions, I am concerned about the entire situation, and I hope that Justice will not assume that there is nothing it can do in response to allegations being raised against the cults.

In conclusion, Mr. Speaker, many difficult questions have been posed, and few of them have been answered. Perhaps they cannot be answered to everyone's satisfaction. In any event, I hope that some light has been shed on this problem.

#### LET US PRESERVE OUR FREEDOM

### HON. ROBERT S. WALKER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. WALKER. Mr. Speaker, I would like to bring to your attention an article that was written by Dr. Stephen D. Lockett which brought him the Freedoms Foundation Award. In this article he expresses his concern for preserving freedom in this country and the whole Western culture. I am including at this point in the RECORD this article because I think that it will be of some interest to my colleagues:

#### FREEDOM

(Let Us Preserve Our Freedom: The Most Expensive And Valued Commodity In The World)

(By Stephen D. Lockett)

Freedom is yours to defend and uphold. For many years, newspaper and periodical headlines have presented to the American public examples of rapport between the East and West. President Gerald Ford works actively towards bridges to the East. The foreign policy academicians present views of peaceful engagement and cooperation (détente, cultural exchange, athletic contests). The ultimate questions still remain:

1. What are the present Communist activities which bear upon this subject, and,
2. Are the Communist regimes really reaching accommodation with the West, or are recent actions merely within the context of historical Communist aims of expansion and ultimate world rule?

In this letter, I will try to present Soviet Foreign Policy in a historical prospective pointing out those significant factors which bear upon present and past Soviet world conduct.

The Soviet geography reveals through the centuries the most pressing force upon her

foreign policy. Although most good Marxists would probably deny the importance of the United States to Soviet Russia's geographical position; this fact stands out significantly throughout her long history.

Geo-politicians had been aware of said fact for at least fifteen decades. No natural limits exists to which the United States of Soviet Russia could define or direct her energies. Due to the vast plains and steppes, the country is almost indefensible with the Russian boundaries often reflecting the strengths or weaknesses of her past and present rulers. The traditional aims of the Russian foreign policy are to absorb weak neighbors and to exercise as much control over those unwilling to yield and capable of resistance. Russia's specific territorial objectives have always been sea-outlets, ice-free ports, the subject of historical drives towards the Straits, the Persian Gulf, and the Yellow Sea.

The great demands placed upon Communist rulers have established a need for unity and centralization. Although her Constitution is Federal in form (distribution of powers from the top down), the Soviet Union perpetuates the old Tsarist tradition of central control of the Communist party. This control is exercised most rigidly.

Soviet territorial hunger can often be compared with a rancher, who when questioned why he was acquiring so much land, said, "I don't want much land, I just want that which joins my ranch." So it is, with the United States of Soviet Russia—she merely wants the security of ruling all the land that adjoins her. As she expands through the device of using subservient communist parties to control or to gain control of nominally independent nations, with the result that her borders extend and there are more neighbors to absorb.

Historically, considerable debate has taken place over Franklin D. Roosevelt's actions at Yalta. One aspect is now clear: the United States of Soviet Russia received her go-ahead to proceed with her ambitions and expansion. Franklin D. Roosevelt's closest advisor, Harry Hopkins, stated after the Yalta conference: "The Russians had proved that they could be reasonable and far-seeing, there wasn't any doubt in the minds of the President or the rest of us (with the exception of Winston Churchill) that we could live with them and get along with them peacefully as far far into the future as any of us could imagine."

The post-World War II era provided Russia with her great opportunity to fulfill five centuries of expansionist plans and dreams. She contends that her moves were within her legitimate spheres of interest, and were of absolutely no concern to the West. Thus, with almost 200 armed divisions, she filled the vacuum left by the Allies, who as now know, pulled their troops out of occupied areas too rapidly. Not until the Soviet Union became a threat to the interests of the United States and the freedom loving countries of Europe, did we answer the challenge; a challenge answered only after millions of people were enslaved (please read Gulag Archipelago by Aleksandr I. Solzhenitsyn).

One may define, therefore, the Soviet Union's drive to the seas, her search for agricultural lands, and her insatiable need for world recognition in the terms of Communism, pan-slavism, messianism, or Colonist-imperialism.

The ends have remained immutable and distinguished or guided by differing principles, Communism today has a direct legacy in Russian history.

As we proudly celebrate the 200th Anniversary of the Birth of our Nation, the Land of the Free, it becomes the task of the United States to remember our national interest and the national interests of free men everywhere. If cultural bridges, detent, or athletic

contests, in anyway serve as an avenue for communistic expansion or the enslavement of more people, then we must re-analyze this game. Let us divorce ourselves from gaming with the Soviet Union in every manner and look to the end to which she hopes to gain in close contact with the West. If these ends are consistent with our policy, let us proceed. Five centuries of Russian rule counsel extreme cautions.

#### RUSSELL DAM

### HON. DOUG BARNARD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BARNARD. Mr. Speaker, the Atlanta Constitution is fortunate to have on its editorial staff Mr. Bill Shipp. I have found myself both agreeing and disagreeing with him, depending on the issue of the day, but I always respect his lucid reasoning.

In yesterday's edition, he addressed himself to the controversy surrounding the proposed Richard B. Russell Dam under construction on the Savannah River between Georgia and South Carolina. Since the Appropriations Committee has reported out a bill for continued funding of the dam, and we in the House will likely be voting its fate in the coming weeks, I urge my colleagues to review his arguments in favor of the Richard Russell Dam's completion, and include it to be reprinted in the Extension of Remarks:

#### RUSSELL DAM

(By Bill Shipp)

A few centuries hence, our successors in these parts may send out an expedition to explore the wilderness area near the old town of Elberton. There they may find huge mounds of dirt and land that once was cleared and allowed to grow over. They will wonder what they have discovered. Is it a monument or tribute to some long-lost cause?

That is exactly what it is here and now. It is a monument to the fiscal irresponsibility of the federal government of the United States in the 1970s and a symbol of faltering efforts to develop sources of energy in the '70s and '80s.

These mounds and flat space, unless the political winds suddenly shift, will be the residue of plans and an expensive but abandoned startup on construction of the Russell Dam and Reservoir on a desolate stretch of the Savannah River.

The excavations and beginning of a dam represent \$21 million in taxpayers' money. They represent a long-term commitment to construct a hydroelectric dam between Lake Hartwell and Clark Hill. They represent the pledges of five previous Georgia governors, including Jimmy Carter, to support the Russell Dam. (Carter as governor signed off on a promise that the state would help provide recreation in the area once the dam and lake were in place.)

As President, Carter asked Congress to kill 15 water projects, including the Russell Dam. Carter gave environmental concerns as his major reason for putting the Russell Dam project on the chopping block.

Some observers believe, however, that the Russell Dam was the sacrificial lamb used by Carter to soothe the governors and congressmen

from other states who were irate at him for killing their water projects.

"See, I struck down a water project in my home state, so why are you fellows so upset?"

A House subcommittee has restored funding for the Russell project, and it is expected to go to the floor for a vote sometime in June.

I called an old friend in Washington to inquire about the project and the \$21 million of our money that may have been thrown down the drain. "Twenty-one million dollars is nothing," he said. Strange how Washington changes a fellow's perspective.

Nevertheless, if environmental concerns are now so important in the area, why weren't they used to kill the project five or six years ago? The same environment existed then as exists now.

I sympathize with the conservationists. But they made their pitch and lost \$21 million ago. This \$276 million project that would be used mainly to generate electric power needs to be allowed to move forward. The Georgia Electric Membership Corp. already has agreed to buy every unit of power produced by the generators at Russell Dam.

If the Russell Dam were to be built in a virgin river and forest area, I would say amen to the objectors. But it is not. That stretch of the Savannah River was torn asunder long ago by upstream development including Lake Hartwell. The stretch of river below Hartwell now runs through scrub woods and barely qualifies as a creek or branch much of the time because of the regulation of the flow at Hartwell. Carter also objects on the basis that as many as 60 families would be displaced by the project.

Let's face it. If the Census Bureau is correct, this stretch of the Savannah should be named the Welfare River. A large number of inhabitants in the area live on annual wages well below the poverty level. Hopefully, a new dam and recreation area would provide new and better employment opportunities.

Now we could make a point here of asking how Jimmy Carter can call off an energy-producing project while he calls for greater production of energy? That is not really fair. The conservationists have some good points in their arguments, all of which were made long ago.

But any taxpayer, including the bird-and-bunny folks, should be incensed at seeing \$21 million thrown away simply to mollify some disgruntled congressmen who lost out on projects in their home states.

#### OUR NEW IMMIGRATION CHIEF COULD BENEFIT FROM ON-THE-JOB TRAINING

**HON. B. F. SISK**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. SISK. Mr. Speaker, on May 13, Leonel J. Castillo was sworn in as the new Commissioner of the Immigration and Naturalization Service and already he has become a controversial figure. As the representative of a district which has a relatively high concentration of illegal aliens, I am very much concerned with Mr. Castillo's seeming desire to down-play the illegal immigration problem. According to recent news articles, he feels we really cannot tell whether illegal aliens have a positive or negative impact on this country because we do not have any hard figures on the actual numbers of illegal immigrants here or how

much they cost us in social services and lost wages. He concedes that there are additional costs associated with having more people in the community, but that those costs are offset if they are working and generating more revenue and paying property taxes.

With that kind of attitude we are never going to get to the root of the problem. Has Mr. Castillo seen recent apprehension figures of his own agency? In April alone, 3,996 illegal aliens were apprehended in northern California and 79 percent were employed, many earning substantial wages. Sixteen of those apprehended were receiving welfare or other public assistance. What about the costs to our school systems and those expensive bilingual education programs? What about medical care costs which county governments must absorb because illegal aliens are not covered by Medicaid? I have evidence to show that illegal aliens are costing California taxpayers millions of dollars annually for emergency medical care alone. The list goes on and on.

But even if one were to concede that the costs of illegal aliens in lost wages and social services were offset by their contributions to this country, their effect on U.S. population growth cannot be ignored. According to the Environmental Fund, illegal immigration is the source of almost half of our population growth. This is, of course, a nation of immigrants, and I have consistently supported a liberal immigration policy. However, we already admit roughly 400,000 legal immigrants each year, more than the total number of immigrants accepted by all of the rest of the nations on Earth.

The Immigration and Naturalization Service apprehended more than twice that many illegal aliens last year, 900,000, and whether or not Mr. Castillo wishes to believe his own people, they say we are only skimming the surface.

Continued population growth in the United States is certainly incompatible with a healthy human and natural environment and I hope our new Commissioner will take cognizance of the role illegal immigration has in that growth. I do not favor sealing our borders or isolating us from the poor people of the world, but that does not mean that I favor unlimited and uncontrolled immigration. Hopefully on-the-job training will give the new Commissioner the insight into the illegal alien problem he surely will need to effectively lead the one agency of our Government charged with enforcing our immigration laws.

In closing, I might say that I applaud Mr. Castillo's expressed desire to place increased emphasis on providing services to immigrants and their families, a function which has been given reduced priority by INS in recent years and which has resulted in a tremendous backlog of applications by aliens seeking legal entry into this country.

I insert for my colleagues attention an article which appeared in the Los Angeles Times on May 19 by staff writer Frank del Olmo, who recently interviewed the new Commissioner:

#### NEW IMMIGRATION CHIEF SPELLS OUT HIS VIEWS

(By Frank del Olmo)

In marked contrast to his controversial predecessor, the new U.S. immigration service chief said here Wednesday that there is "mixed evidence" as to whether the impact of illegal immigration in this country is positive or negative.

In his first press conference since being sworn in Friday as commissioner of the U.S. Immigration and Naturalization Service, Leonel J. Castillo expressed several views that differed from those of the previous commissioner, Leonard F. Chapman.

Castillo, a 38-year-old Mexican-American from Texas, said "it is very hard to get firm figures" on the number of illegal immigrants in the country, and added that "the approach I'd like to take is to use only those figures that are documented and verifiable."

One such documented figure cited by Castillo was the more than 800,000 illegal aliens apprehended in the United States last year, almost a tenfold increase from the number of INS apprehensions a decade ago.

"Those figures are high enough to justify increased attention to this problem," Castillo said.

Castillo indicated he would not speculate as to the number of illegal aliens that might be in the country, as Chapman did on occasion, because no firm figures are available.

Chapman, who usually estimated the number of illegal immigrants in the United States at from 6 million to 12 million, was often criticized by pro-immigrant groups for exaggerating the numbers of illegal aliens in order to create anti-alien feelings.

And unlike Chapman, who said that illegal aliens cost the United States millions of dollars in social services and lost wages, Castillo said the "actual costs" of illegal immigration also are not clear.

"It's true there are additional costs associated with having more people in your community," Castillo said. "But if they are working, they are generating revenue. If they live in houses they pay some property taxes."

Although illegal immigration is now being debated at the highest levels of government after years of neglect, Castillo said any final solutions are still a long way off.

"You will see a lot of action toward solving the illegal immigration problem over the next few months," he said, "but this problem has developed over the last decade and it will still take some time."

Castillo said that in the meantime, he will begin instituting immediate changes in INS procedures to reduce administrative problems that have developed in the agency in recent years due to manpower shortages.

He announced that on June 5 a special crash program will begin in six major cities, including Los Angeles, to reduce a backlog of applications by aliens seeking legal permanent residence in the United States.

The program will begin in Los Angeles, the busiest INS facility in the country, where a task force of 20 immigration officers and 30 clerks will work on a backlog of 8,600 applications.

Other cities where task forces will be formed are New York, Newark, San Francisco, Miami and Chicago.

Castillo said other INS programs would be launched soon to increase automation, provide overtime work for agency personnel, and to improve law enforcement along the border.

Castillo said that he, like President Carter, favors the concept of granting amnesty to illegal immigrants who have lived in the country for some time and developed "equity."

He warned, however, that an amnesty plan is still "quite a ways from becoming an actual program" because it must be approved by

Congress even after being proposed by the President.

During his visit to Los Angeles Tuesday, Carter said his Administration's new policy on immigration would be made public in about two weeks.

In addition to amnesty, Castillo said, the President's immigration policy will include: Sanctions against employers who knowingly hire illegal immigrants. Still being debated are whether those penalties should be civil or criminal, Castillo said.

Stricter enforcement of existing laws which can be used to keep workers from being exploited by unscrupulous employers such as federal safety regulations, minimum-wage laws and income-tax regulations.

More policing of U.S. borders to cut down on the number of illegal entrants.

Proposals for international financial activity to stimulate the economy of Mexico and other countries that send large numbers of illegal immigrants into the United States.

Castillo said that proposals for a new identity card or work permit that would be carried by all persons wanting to work will probably not be part of the Administration package.

He said the idea of a universal identity card was opposed by Atty. Gen. Griffin Bell both as a possible infringement on civil liberties and because of its potential cost.

While the idea of a new identity card is not dead, Castillo said, "It's limping pretty badly."

EDWARD W. LITTLEFIELD

HON. BOB CARR

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CARR. Mr. Speaker, I rise today to honor a great man, a former constituent celebrating today his 80th birthday—Mr. Edward W. Littlefield. I make special note of this occasion not only because Mr. Littlefield is a fine American, but because his life provides an example of a life well lived—one of responsibility, patriotism, energy, civic involvement, and a constant effort toward education and self-improvement. It is important that we recognize this kind of positive life as an example to others, especially the Nation's youth.

Mr. Littlefield would be a notable individual even if one only looked at his public life and activities. He served briefly in the Army at the age of 17, and was disappointed that World War I ended without giving him a chance to get in on the action. He began a college education at Harvard with the idea of a career in writing. There is little doubt he would have succeeded in that endeavor, as evidenced by his publication of numerous articles and letters throughout his life.

His love of the outdoors, however, got the better of him, and he transferred to the University of Michigan and earned a master's degree in forestry. Mr. Littlefield's abilities took him to the position of Assistant Commissioner for the New York State Conservation Department. Throughout his career, he was an ardent advocate of protecting our remaining forests and wilderness. After retiring in 1952, he taught both at Syracuse Uni-

versity in New York and at the University of Michigan.

Despite this distinguished public career, it is as a friend, a father, a grandfather and a man of limitless interests and experiences that Mr. Littlefield has made his special impact.

Mr. Littlefield's childhood and youth were full of the exciting experiences that were a part of the robust and energetic Nation of the early part of this century. There were the times in Boston—the marathon, the symphony, the great molasses explosion, the Boston police strike, the famous Harvard-Yale football game, and camping on Cape Cod. And there were the thrills of the first movies, the model T's and the flying machines. I might add that he tells these stories, and hundreds more, with a gift for "spinning yarns" that has become all too rare. The fortunate audiences of his tales invariably feel as though they are living those times and events themselves.

He has always been a man of intense devotion to his family. His strong character has served as the single greatest model for his seven grandchildren.

Then there are his numerous and richly varied hobbies: classical music, literature, current events, public speaking, the German language, forestry, health, the Unitarian Church, writing, politics, and poetry, just to name a few.

Let me close by saying that Edward Littlefield has lived the kind of life to which we all might aspire. His life has been a model for all of us, and his influence upon those he has touched will last for many generations to come.

#### PERSONAL EXPLANATION

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. HARKIN. Mr. Speaker, due to your appointment of me as a member of our delegation to the recent Council of Europe meeting in Strasbourg I was necessarily absent from the House of Representatives on April 27, 28, and 29. There were a number of recorded votes taken on those days and had I been present I would have voted in the following manner:

Rollcall No. 156, "yea."  
Rollcall No. 157, "no."  
Rollcall No. 158, "no."  
Rollcall No. 159, "yea."  
Rollcall No. 160, "yea."  
Rollcall No. 161, "yea."  
Rollcall No. 162, "yea."  
Rollcall No. 163, "no."  
Rollcall No. 164, "no."  
Rollcall No. 165, "no."  
Rollcall No. 166, "yea."  
Rollcall No. 167, "yea."  
Rollcall No. 168, "yea."  
Rollcall No. 169, "yea."  
Rollcall No. 170, "yea."  
Rollcall No. 171, "yea."  
Rollcall No. 172, "no."  
Rollcall No. 173, "no."  
Rollcall No. 174, "yea."

#### HOME WEATHERIZING PROGRAM

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ADDABBO. Mr. Speaker, I have recently been informed of the success of a unique home improvement program, Government funded, that is operating in Queens. I think the program should be adapted by all parts of the country, if similar programs are not already operating there, and I would like to share with the Members the information about what this program can do, as it was performed by two beautiful people.

Accordingly, I insert the following newsletter into the RECORD. The text of the newsletter is self-explanatory:

May 20, 1977.

Re: Home Weatherizing Program.

Mrs. EILEEN LEE,  
Project Director, Operation Open City,  
Jamaica, N.Y.

DEAR MRS. LEE: It is with enthusiasm and unconditional thanks upon having personally observed the maximum productivity and magnificent effectiveness regarding your Home-Weatherizing program.

About three months ago, we learned of the availability of your local operation through an announcement in our Community Planning Board 12's monthly newsletter; and immediately we were aware of one very special home (123-11 146th Street, South Ozone Park) owned by Miss Young and Miss Lyons, such house as of a year ago was a totally vandalized hulk of a wreckage before the same two ladies successfully purchased the house from HUD on an as-is bid; and the two ladies (75 years of age) through their own pioneering spirit and their own total equity-sweat (hammer, nails, paint brush, plumbers wrenches, cement hoes, etc.) did put that house together as liveable, and in effect started the first really genuine step to the housing rehabilitation of our community. . . . However, as with most Senior Citizens it was never their age that got in the way of their energy or ability, but the fact of the matter is that they are typically and unfairly striving with incredible imagination on the low fixed income social security which in no way follows anywhere close the continuing out-of-control inflationary economics of our times. And their home, like almost all of our homes whether new or old, was never built with fuel-crisis economics as critical objectives. Indeed the costs of "fuel-savings" reconditioning of any of our homes is almost as impossible as it is for affording the fuel bills; and with respect to most fixed income "Senior Citizens" without such programs as now administered by Operations Open City, none of us could really rest too much hope for a better day.

As it turned out, we advised the two ladies to contact your office for application to the Weatherizing program—and in the week of May 6th through May 13th, 1977, your marvelous team of energetic and skilled young men moved in to do one heck of an incredible job, the scope and thoroughness none of us could have guessed or imagined. In all too short praise, we do commend your program as vital, efficient, productive, compassionate and honest. We especially praise the actual men we so closely observed, Mr. Herbert Cosby, Field Manager, Mr. George Stallins, Tenant Service Coordinator and Mr. Milton Pratt, Deputy Manager, and Team Workers Mike Smith, Arthur Franklin, Arthur Cundy, Gregory Lee and Joseph Bryant.

We would wish that all government funded programs should be administered with as maximum effectiveness and compassion for which your service program has so exemplary demonstrated; it is to the spirit of such citizens as the two ladies Miss Young and Miss Lyons and to the spirit of such programs as Operation Open City which most nearly represents the only kinds of people and programs that can put our country back together again.

Sincerely,

J. R. SPILLER,  
Communications Correspondent.

#### NEW JERSEY SLOVAK HERITAGE FESTIVAL

**HON. PETER W. RODINO, JR.**

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. RODINO. Mr. Speaker, in one fashion or another, we, as Americans, are all immigrants. Aside from our priceless freedoms, perhaps the most cherished inheritance enjoyed by most of us is the culture and traditions of our ancestors.

In our Nation, which takes great pride in its diversity, it would indeed be tragic if we failed to appreciate the varied backgrounds from which we came.

It is, therefore, with great pleasure that I today salute Americans of Slovak descent who have set aside May 28 as an occasion dedicated to renewing the appreciation of their roots through the New Jersey Slovak Heritage Festival. Additionally, the festival is devoted to raising money for the Garden State Arts Center Cultural Fund which develops free programs for disabled veterans, senior citizens, school citizens, and the blind.

Mr. Speaker, the important and valuable contributions of those Slovak people who have chosen America as their home, are far too infrequently recognized.

From the arrival of Count Mauricus Augustus De Beniowsky in 1785, Slovaks have formed the backbone of industrial growth in various areas of the Nation. Particularly in the mines and mills Slovak Americans proved a major factor in building the vast steel industry so vital to American manufacturing.

But Slovak achievements are certainly not limited to the areas of technology and industry. The adult educational and recreations organizations called Sokols have served as models for similar programs among many other groups of new citizens. My home State of New Jersey is enriched by the presence of the headquarters of two of these worthwhile organizations—the Slovak Catholic Sokol and the Sokol Gymnastic Union Sokol of the U.S.A., both of which have numerous branches and are national in scope.

In the arts, especially in musically related fields, Slovaks have gained for themselves a prominent position. Further, in all fields of athletic endeavor but most particularly in gymnastic prowess, Slovaks have earned great renown.

Mr. Speaker, in summary I believe it would be difficult to surpass the simple eloquence of President Franklin D. Roosevelt who stated:

The country is mindful of the vast contribution the Slovaks have made to the cause of furthering the development and growth—moral, cultural and material. The stout hearted, clear minded, freedom loving and determined people of Slovakia, who... turned to America seeking a new home, now compose with their children and grandchildren an asset in the life industry and culture of this great land, that defies human power of appraisal.

#### A BILL OF RIGHTS FOR THE DISABLED

**HON. THOMAS J. DOWNEY**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. DOWNEY. Mr. Speaker, I would like to bring to the attention of my colleagues a compelling document that provides a framework and a set of goals for our legislative efforts to aid America's handicapped citizens in their struggle to enter the mainstream of our society. "A Bill of Rights for the Disabled" sets a standard for the Nation's policymakers, and I urge my colleagues to heed its message:

#### A BILL OF RIGHTS FOR THE DISABLED

Whereas, the disabled in the United States, constituting a large minority with a commonality of needs and a unity of purpose, seek only to obtain for themselves what all Americans believe to be their birthright life, liberty and the pursuit of happiness; and

Whereas, impediments and roadblocks of every nature are to be found at every hand, effectively preventing the fulfillment of life's promise for a large proportion of the disabled; and

Whereas, the American people, largely through lack of knowledge and misinformation have not as yet recognized the disabled as fellow human beings with a handicap to which all should make some accommodation, and who deserve equal opportunity as citizens; and

Whereas, the Congress of the United States and the legislatures of the various States, counties and municipalities have not as yet, by legal means, made it possible for the disabled person to attain equal access to those benefits of life enjoyed by the able bodied, be it resolved;

Health 1. That all disabled persons be afforded the opportunity for full and comprehensive diagnostic, therapeutic, rehabilitative and follow-up services in the Nation's hospitals, clinics and rehabilitation centers without regard to race, religion, economic status, ethnic origin, sex, age or social condition.

Health 2. That all disabled persons requiring same be given and trained to use such orthotic, prosthetic or adaptive devices that will enable them to become more mobile and to live more comfortably.

Education 3. That all disabled persons be given every opportunity for formal education to the level of which they are capable and to the degree to which they aspire.

Employment 4. That all disabled persons, to the extent necessary, have the opportunity to receive special training commensurate with residual abilities in those aspects of life in which they are handicapped so that they may achieve the potential for entry into the labor market in competitive employment.

Employment 5. That all employable disabled persons, like other minorities, be covered by equal opportunity legislation so that equal productivity, potential and actual, receives equal consideration in terms of jobs,

promotions, salaries, workloads and fringe benefits.

Employment 6. That those disabled persons who because of the severity of their handicaps are deemed unable to enter the normal labor market be given the opportunity for special training and placement in limited work situations including sheltered work shops, home base employment and other protected job situations.

Employment 7. That a nationwide network of tax-supported sheltered workshops be created to offer limited work opportunities for all those severely disabled persons unable to enter the competitive labor market.

Housing 8. That nationwide and local programs of special housing for the disabled be established to permit the man opportunity to live in dignity and reasonable comfort.

Architectural Barriers-9. That federal state & local legislatures pass laws requiring the elimination of architectural barriers to buildings, recreational, cultural & social facilities & public places. Such legislation should include architectural standards for all new construction.

Architectural Barriers-10. That federal, state & local legislation be passed establishing standards & a reasonable time for modification of existing sidewalks, buildings & structures for the comfortable use of the handicapped.

Transportation-11. That every community, county or other legally constituted authority establish programs & standards for the creations of special transportation for the disabled including modification of existing mass transportation systems & the development of new specially designed demand schedule transportation facilities. Income Maintenance-12. That every disabled person who because of the nature of his handicap is unable to be self-supporting be given a guaranteed minimum income not below established federal standards adequate to live in reasonable comfort & in dignity.

Institutional Care-13. That federal, state & local laws be enacted for the benefit of the disabled confined to any form of institution, setting minimum standards of housing, conveniences, comfort, staff & services.

Civil Rights-14. That civil rights legislation, national & local, be amended to include disability as one of the categories against which discrimination is unlawful.

Training-15. That federal & state tax-supported programs of training be established to prepare professional & non-professional personnel for work with the handicapped in the fields of health, education, recreation & welfare.

Research-16. That federal legislation be enacted expanding existing & developing new programs of research & demonstration by grant & contract, in both basic & applied fields, dealing with problems of disabling conditions & the disabled.

Be it further resolved that these rights, being urgent & critical to the well being of the disabled population of the United States, be given the high priority they justly deserve in the hearts, minds & programs of our nation's leaders.

#### FIRST CONCURRENT BUDGET RESOLUTION

**HON. BOB WILSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BOB WILSON. Mr. Speaker, though I am disappointed with the funding level contained in the conference report on the first concurrent budget res-

olution for national defense, I nevertheless supported it on the basis that half a loaf is better than none at all.

I believe the present military balance vis-a-vis the U.S.S.R. demands a great deal more concern with the condition of our own military and that this is not the time to attempt to build our own national defense system on the cheap.

In the future, it may not be necessary for us to concern ourselves so with our national security. But this is not the reality of the present. Trying to achieve financial restraint at the expense of self-protection is in my opinion a reckless course to follow.

#### MUZZLE ON THE MILITARY?

### HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. McDONALD. Mr. Speaker, during the early years of then President Kennedy and Defense Secretary McNamara, we went through another period of "muzzling the military" and in my view, it cost us dearly. Specifically, policies were put into operation that started us on the downhill slide that cost us not only Vietnam, but also our No. 1 military position in the world. Today, another such period appears to be upon us. As a member of the House Committee on Armed Services, I attended the session of the Subcommittee on Investigations yesterday, chaired by Congressman STRATTON and I found what General Singlaub had to say in support of his position to be very significant and persuasive. His evidence was formidable and was presented in a very factual manner. Therefore, it is my feeling that the Carter administration serves the Nation poorly if it permits dissent only from such as Secretary of Labor Marshall and U.N. Ambassador Young.

In this connection, please see my statement in the CONGRESSIONAL RECORD of May 24, 1977, page 16222. As columnists Evans and Novak recently pointed out, the military is not even being consulted on key decisions. The column appeared in the Washington Post of May 25, 1977, and with the exception of their statement on General MacArthur with which I disagree, I commend it to the attention of my colleagues:

#### A MUZZLE ON THE MILITARY?

(By Rowland Evans and Robert Novak)

Just as President Carter was publicly rebuking Maj. Gen. John K. Singlaub, resentment among senior military officers was given a stronger impetus when the Joint Chiefs of Staff belatedly learned about the latest proposal for the strategic arms limitation talks.

The JCS was briefed only last week on the new U.S. arms-control plan some two weeks after it was submitted to the Russians. The new proposals embrace basic questions of U.S. military strength, including retarded development of the cruise missile. That has generated rising resentment among senior officers that reaches into the JCS itself.

This is similar to both the cause and the underlying meaning of the Singlaub affair.

His out-of-order public criticism of troop withdrawals from Korea reflected widespread frustration among the generals for not having been consulted in shaping that policy. So, in both Korea and SALT, the military's complaint is not so much that it disagrees with a policy but that it is ignored in policy formation.

Herein lies an unhealthy situation not fully comprehended at the White House. While nobody questions civilian supremacy, senior officers grumble that they are given no chance to submit their views but are simply handed a completed policy—along with a muzzle.

Oddly, JCS Chairman George Brown plays no part in this simmering revolt. Kept at his post by sufferance of President Ford and now Carter after his string of indiscreet public remarks, Brown wants to serve out his term without further trouble. But other senior officers, including members of the chiefs, want a greater policy voice. Gen. Bernard Rogers, Army Chief of Staff, has pushed particularly hard for a military role in SALT policy-making.

The Army is at the center of Pentagon discontent mainly because of concern with Korea. When Carter entered office, he did not ask the Pentagon's advice on whether to remove troops from South Korea but merely requested their comments on the best way to do it (as he did on his plan for drastic mutual reduction in long-range missiles).

The troop withdrawal had been decided on by Carter long before he became President. Admittedly a novice in foreign affairs, candidate Carter based his decision more on the imperatives of presidential politics than any exhaustive study of the Korean situation.

Singlaub's view stated to The Washington Post that Carter's Korean policy will lead to war is nearly universally shared by other U.S. generals, as well as many of the most politically sensitive Japanese. Since the understrength U.S. 2nd Infantry Division is obviously not a significant military factor, the question is whether its departure, along with U.S. support troops, will be interpreted by Communist North Korea as an invitation to attack. While the debate clearly has two sides, the generals resent not having a chance to argue their case.

That resentment was intensified by the President's ordering Singlaub to the Oval Office. Old hands in Washington were amazed that the President had chosen public humiliation of a distinguished officer when a quiet reprimand and transfer would have sufficed.

To some officers, it appeared Carter was seeking to emulate Harry Truman's historic sacking of Gen. Douglas MacArthur. But MacArthur was a major political figure who repeatedly defied his President; Singlaub is a subordinate (third-ranking officer in Korea) guilty of one indiscreet interview. Actually, senior officers are even more concerned about the sudden exclusion of the military from SALT policymaking. While the Pentagon helped prepare Secretary of State Cyrus Vance's negotiating position in Moscow, it had no part in devising the new, softer stand in Geneva.

The possibility of a pattern here is suggested by the downgrading of military intelligence units, putting the CIA in a monopolistic status. While deprived of a full advisory voice before positions are taken, the officers are barred by the Constitution from commenting afterwards—as John Singlaub has learned.

The gagged condition of the military contrasts starkly with the rest of the open-mouthed administration, most conspicuously Secretary of Labor Ray Marshall criticizing the President's economic policies and U.N. Ambassador Andrew Young saying whatever comes to his mind. At a time of U.S. military decline in relation to the Soviet Union,

this anomaly breeds angry frustration among the military.

#### ON THE OPPOSITION TO EXPANSION OF REDWOOD NATIONAL PARK

### HON. LEO J. RYAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. RYAN. Mr. Speaker, a few days ago a group of citizens from Humboldt County, Calif., were here in Washington to express their opposition to legislation introduced by my colleague PHIL BURTON which would expand Redwood National Park. I respect their right to tell the Congress and the country how they feel about this legislation, and I also want them to know we are not ignoring their concerns.

Early this Congress, the Government Operations Committee issued a report titled "Protecting Redwood National Park." The report outlines the arguments in favor of expansion of the park; I do not intend to repeat them here. Included in that report is a chapter which discusses the impact of park expansion on the local economy. The report recommends that—

Congress should consider and assess the impact on the economy of Humboldt County of any legislation expanding Redwood National Park.

#### The report also urges that—

Congress and the Administration work closely with the State of California to determine what legislative and executive action is needed . . . to offset the expected initial and interim loss of jobs and revenue to Humboldt County.

I am happy to report today that both Congress and the Carter administration are working to insure that the purchase of old-growth redwood timber for additional parkland will not cause any significant increase in Humboldt County unemployment. In fact, our studies lead us to believe that better forest management practices by the timber companies could even increase employment in the area. The administration has also promised to spend Federal money to create alternative jobs for displaced timber industry workers. Representatives of the Departments of the Interior, Labor, and Commerce have already begun an onsite assessment of the job impact of park expansion. I am aware that Representative BURTON is working on an addition to his bill to deal with job losses, and I applaud his efforts.

No, the citizens of Humboldt County, Calif., are not being ignored in the Redwood Park legislation. Their legitimate and understandable concern about the efforts of park expansion on their lives is being heard and responded to.

I want to make it very clear that my support of expansion of Redwood Park has not diminished one bit. As we stand here today, groves of magnificent redwoods in the Redwood Creek basin are being eradicated by the lumber companies. Some of the very best quality

redwood timber is scheduled to be clear-cut in the next 90 days.

Interior Secretary Andrus is currently developing a strategy for purchasing a portion of the beautiful Skunk Cabbage Creek area along U.S. 101, partly with money donated to the Federal Government by the Save the Redwoods League. Both the Secretary and the league are to be commended for their efforts to stop the Arcata Redwood chainsaw from destroying this magnificent watershed.

Frankly, I am amazed that there would be any question of national support for purchase of enough land to give the absolute minimum protection to those coastal redwoods that are the tallest trees in the world. Nine years ago we bought those trees in order to save them. Now we find that the purpose of that action has been endangered because we did not provide enough land to save the tall trees from being destroyed by natural forces: water, erosion, and wind.

These redwoods are surely as much a part of our national heritage as are the crown jewels of Britain in the Tower of London. Would the British accept the argument that their beleaguered financial condition requires that they sell off their jewels? Surely not.

Certainly we must not use the argument that we cannot afford the limited funds needed to save our own national crown jewels. And our tall trees are presently far more fragile and in far greater danger than the stones in the British crowns.

I believe it is about time for Congress to act positively and forthrightly to save the redwoods—which is a national concern—while the livelihood of Humboldt County and its citizens is also protected.

UNITED STATES MAY SEIZE KEY PARCEL OF REDWOODS

(By Robert A. Jones)

U.S. Interior Secretary Cecil Andrus has approved "in concept" a plan to seize a key redwood parcel next to Redwood National Park before the old-growth trees can be cut down by the lumber company that owns the land, Interior officials said Friday.

The plan would employ condemnation powers granted the secretary under the 1968 law creating the park. It was developed in a frenetic series of meetings after a \$1 million offer by the Save-the-Redwoods League to pay for the land.

The offer, previously unannounced, was made by the league earlier this week.

In announcing its offer on Friday, the league said, "While Congress is considering an expansion of Redwood National Park . . . the major lumber companies of Northern California are continuing to log the finest remaining old-growth redwoods which adjoin and should be included within the present park. It is now a literal race between the lumber companies' chain saws and the Congress."

Interior officials cautioned that problems of procedure and additional financing remained to be solved before the plan could be put into effect. "The will is there," said one official. "But it may be next Wednesday before we are ready to move."

The action would be unprecedented in the tumultuous history of Redwood National Park. In part it reflects the urgency of the Interior Department as it tries to preserve remaining stands of old-growth timber until Congress votes on proposals to expand the 58,000-acre park north of Eureka.

Congress currently is considering two plans for park expansion, one that would add 48,000 acres and another that would add 74,000. The area under consideration by the Interior Department, known as Skunk Cabbage Creek, is included in both expansion plans.

Last week the California Board of Forestry approved a partial moratorium around the park, preventing companies from cutting three sections next to the park's southern portion. The moratorium, however, does not apply to the parcels in Skunk Cabbage Creek since the timber company involved, Arcata Redwood Co., already has received permits to begin harvesting.

The area has long been regarded by both environmentalists and the National Park Service as critical to any expansion of the present park. Arcata, however, has said in recent weeks that it plans to begin harvesting there soon.

Only one-third of the Skunk Cabbage Creek watershed remains in old growth. But maturing second-growth stands cover the remaining areas and in its expansion proposal the National Park Service said the watershed "will provide an unbroken park from the Pacific Ocean to the first major ridge" in the coastal mountains.

The condemnation procedure would secure only the two small areas within the watershed that are planned for harvesting, Interior officials said. If logged, the clear cuts would be visible from U.S. 101.

In fact, the visibility of the cuts from 101 proved to be critical, for the powers granted to the interior secretary under the original park legislation include the authority "to acquire . . . lands and interest in lands . . . to maintain or to restore a screen of trees between the highway and the land behind the screen."

The purpose of such a screen is to hide the scars of logging from passersby on the highway.

While Interior Department officials expressed the fear that Arcata, once notified of the plan, would hasten its logging operations, an Arcata official said late Friday that such action was "unlikely."

William Walsh, executive vice president of Arcata, said the plan was "just part of a total effort to take our property from us until it becomes impossible for us to continue."

Nonetheless, Walsh said, "We can't change our scheduling to react to every threat like this. It is not that easy to do." Walsh noted that the timber permits would have allowed the company to begin harvesting on April 1. "And you didn't see us marching in there on April 2," he said.

Interior officials said extra financing for the plan was the thorniest problem remaining. Agency estimates put the total value of the land at \$1.6 to \$2 million. "Even with the league's money, that means we have to come up with the rest from somewhere," said one official.

The agency was known to be looking for additional funds within its own budget and from other private donors.

## BETTER HEARING AND SPEECH MONTH

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. CONABLE. Mr. Speaker, May is Better Hearing and Speech Month. One out of every 10 Americans has a speech, hearing, or language problem and cannot communicate easily, and so it is important that we be aware of the efforts in

our communities to deal with these problems. A great many people and institutions are involved in these programs throughout the Nation. The American Speech and Hearing Association is the national scientific and professional society of more than 25,000 speech pathologists and audiologists who are carrying out the work of improving the speech and hearing of those affected. The association earlier this year published in Newsweek magazine a message to Americans about the problems, needs, and opportunities in this area, and I enter it in the RECORD for the information of our colleagues:

### HUMAN COMMUNICATION IS ESSENTIAL TO LIFE

More than 20 million Americans have some form of speech, language or hearing disorder. Six out of every one hundred children have such a disorder. One out of every four people who are sixty-five or older has a hearing loss. The ability to develop speech and language skills and to exchange ideas verbally is unique to human beings. Communication is the binding force in every human culture and the dominant influence in the personal life of every one of us.

Speech pathologists and audiologists are the professionals who identify, evaluate and provide help for communicative handicaps in individuals. Speech pathologists study speech and language, its normal development and its disorders. Audiologists specialize in hearing problems and are concerned with the detection, evaluation, and alleviation of hearing loss.

Professional help for persons with communication disorders is available in a variety of settings throughout the country. In schools. In clinics and hospitals. In community health centers. In private practice. In colleges and universities. In business and industry. In local, state and national governmental agencies.

If you, or someone you care about, has a communication problem, seek the help of a speech pathologist or audiologist in your community. Your local school district or health department can assist you in locating one. Or write to the American Speech and Hearing Association, 9030 Old Georgetown Road, Washington, D.C. 20014.

... For half a century, helping the communicatively handicapped achieve a meaningful life, through science and service.

## A BILL TO STRENGTHEN INSPECTION OF IMPORTED MEAT AND DAIRY PRODUCTS

HON. RICHARD H. ICHORD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ICHORD. Mr. Speaker, I am introducing legislation today which establishes stronger inspection standards for imported meat and dairy products and requires these products to be labeled as imported. This measure will be fair to producers and beneficial to consumers.

The American consumer deserves and demands a sanitary, wholesome, and pure food supply. The consumers who are wary of the conditions surrounding the production, processing or distribution of imported meats should certainly have the right to know whether the product they are buying is domestic or imported. Only

then can the customer be assured of a true choice between products in the marketplace. The labeling provisions of this bill would help bridge this inequity.

Throughout the 1970's, American consumers have demanded higher quality produce in our Nation's grocery stores. U.S. milk, meat, fresh fruits and vegetables, and cheese are produced and processed under the most stringent sanitary standards. Unfortunately, such is not the case in many foreign countries. The Food and Drug Administration, FDA, presently inspects less than 20 percent of all foreign dairy products entering the United States, yet 4 to 10 percent of the products inspected are rejected because they contain pesticides, salmonella, or some other contaminant. If we enact this legislation, we subject foreign manufacturers to the same scrutiny as domestic producers.

Agriculture is one of the Nation's largest businesses. Today, the American farmer produces enough to feed himself and 57 others, compared to being able to feed 15 people 25 years ago. The National Milk Producers Federation has recently completed a breakdown of milk production by congressional districts on the basis of information in the 1974 Census of Agriculture. This report revealed that milk producers in the State of Missouri produced over 2.5 billion pounds of milk with the dairymen of the Eighth District of Missouri producing over 339 million pounds of milk. While the numbers of farmers working the land are few, all of agriculture and rural America comprise 30 percent of the population of the United States. The agricultural industry, with so few people working directly on farms, is the most vital industry in our Nation, affecting every individual citizen.

I urge my colleagues from the cities and farm areas to support this bill to improve the wholesomeness of the food we eat and to restore equity between our inspection standards for our domestic and foreign meat and dairy products.

Following is the text of the bill:

H.R. —

A bill to require that imported meat and meat food products made in whole or in part of imported meat be subjected to certain tests and that such meat or products be identified as having been imported; to require the inspection of imported dairy products and that such products comply with certain minimum standards of sanitation; to require that the cost of conducting such tests, inspections, and identification procedures on imported meat and meat food products and on dairy products, as the case may be, be borne by the exporters of such articles, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

#### TITLE I—MEAT AND MEAT PRODUCTS

Sec. 101. Section 20(a) of the Federal Meat Inspection Act (21 U.S.C. 620(a)) is amended by inserting "(1)" after "(a)", and by adding at the end thereof the following:

"(2) The Secretary shall, with respect to any carcass, part of a carcass, meat or meat food product of a cow, sheep, swine, goat, horse, mule, or other equine which is capable of use as human food and which is imported into the United States, require by regulation or otherwise that any such article or any

product made in whole or in part from any such article, if capable for use as human food, or that the package or container of such article or product, be labeled or otherwise marked in such manner as the Secretary determines practicable to inform the retail consumer of such article or product at the time of purchase that such article or product was imported, in whole or in part, as the case may be, into the United States.

"(3) No carcasses, parts of carcasses, meat or meat food products of cattle, sheep, swine, goats, horses, mules, or other equines which are capable of use as human food shall be imported into the United States unless—

"(A) tests have been conducted on the carcasses, parts of carcasses, and meat and meat food products, including internal organs, of the animals from which such articles came, to determine whether such articles (i) contain any substance prohibited in any carcass or meat or meat food product from any domestically produced animal referred to above, and (ii) contain a level of any substance in excess of the maximum level of such substance permitted under law or regulation in any carcass or meat food product from any domestically produced animal referred to above;

"(B) such tests have been conducted, in the country from which such articles are being imported, by persons who have been initially certified (and subsequently recertified) in the same or similar manner and under the same criteria as persons who are initially certified (and subsequently recertified) by the Department of Agriculture to conduct such tests on articles of animals produced in the United States; and

"(C) the appropriate government official of the country from which any such article is being imported has certified to the Secretary that such article has been tested in accordance with regulations issued by the Secretary and that such article does not contain any substance referred to in subparagraph (A) or contain a level of any substance in excess of the maximum level referred to in such subparagraph, as appropriate.

"(4) In order to verify the accuracy of testing required for substances referred to in paragraph (5), the Secretary shall conduct a program under which inspectors of the Department of Agriculture take, from time to time, samples of carcasses, parts of carcasses, and meat and meat food products of animals referred to in paragraph (5) which are intended for export to the United States, including the internal organs of the animals from which such carcasses and meat and meat food products came, and send such samples to the United States for appropriate testing.

"(5) As used in paragraphs (3) and (4) of this subsection, the term 'substance' means any chemical matter for which the Department of Agriculture conducts tests on carcasses, parts of carcasses, and meat and meat food products, including the internal organs, of cattle, sheep, swine, goats, horses, mules, or other equines which are capable of use as human food, for the purpose of determining whether residues of such chemical matter are present in such articles or to determine whether the residues of such chemical matter present in such articles exceeds levels authorized by law or regulation.

"(6) (A) The Secretary shall prescribe such assessments and fees on imported meat and meat food products as he determines necessary to cover the costs of inspections, certifications, testing, and labeling (or other marking) required under this section.

"(B) In establishing the level or rate of assessments and fees to be imposed under this title, the Secretary shall take into consideration the volume of exports, the value thereof, and such other factors as he deems appropriate in order to achieve a fair and equitable allocation of such assessments and fees among exporters.

"(C) The Secretary shall have authority to suspend or revoke the privilege of any exporter of meat or meat food products to export such products to the United States if such exporter fails to pay the assessments or fees for which he is responsible to pay under this title."

#### TITLE II—DAIRY PRODUCTS

Sec. 201. For purposes of this title—

(1) The term "Secretary" means the Secretary of Health, Education, and Welfare.

(2) The term "person" means any individual, partnership, corporation, association, or any other business unit.

(3) The terms "dairy products" and "milk products" mean those food products derived from milk, or any combination or portion thereof; such as all forms of butter, cheese (whether natural or processed), milk, cream, skim milk, whey, buttermilk, edible casein, caseinates and frozen desserts; and any other food product which is prepared in whole or in part from any of the aforesaid products as the Secretary may hereafter designate.

(4) The term "wholesome" means sound, healthful, clean, and otherwise fit for human food.

(5) The term "labeling" means labels and other written, printed, or graphic matter on or attached to the container of any dairy product.

(6) The term "purity" means free from poisonous or deleterious substances which may render the product injurious to health.

(7) The term "administration and supervision" means the administrative review of foreign country laws, regulations, and enforcement procedures offered as being comparable to United States laws, regulations, and enforcement procedures, under the provisions of this title, and the supervision of inspection personnel both inside and outside the United States.

(8) The term "inspection" means the official service rendered by the Department of Health, Education, and Welfare, under the administration and supervision of the Secretary, for the purposes of carrying out the provisions of this title.

Sec. 202. (a) No dairy product shall be imported into the United States unless the Secretary shall first certify that such product originated from supplies of milk which are pure and wholesome and unless the plants in which such products were produced, manufactured, or processed comply with all minimum standards of sanitation prescribed by the Secretary pursuant to the provisions of this title. The standards prescribed by the Secretary shall include standards for sanitation procedures in the production, cooling, storage, transportation, and handling of milk, and in the manufacture, processing, handling, and transit of dairy products, as well as standards concerning the wholesomeness and purity of the final product.

(b) The standards established by the Secretary for any imported dairy product and for the establishments in which such imported dairy product is produced, manufactured, or processed shall be comparable to those standards of purity, wholesomeness, and sanitation recommended by the Secretary for domestic dairy products produced, manufactured, or processed in the United States and for establishments in the United States in which domestic dairy products are produced, manufactured, or processed.

Sec. 203. (a) For the purpose of establishing comparable inspection requirements and preventing the importation of dairy products produced, manufactured, or processed in foreign plants not meeting the minimum standards prescribed by the Secretary pursuant to the provisions of this title, the Secretary shall, where and to the extent necessary, cause to be inspected imported dairy products and require such products to be accompanied by a certificate of compliance issued by the Secretary in accordance with rules and regulations prescribed by the

Secretary establishing minimum standards as to the sanitation of the milk, plant facilities, equipment, and procedures used in the production and transportation of milk, and the manufacture, processing, handling, and transit of such imported dairy products.

(b) All imported dairy products shall, after entry into the United States, be subject to the Federal Food, Drug, and Cosmetic Act.

Sec. 204. The Secretary shall require all dairy products imported into the United States, or the packages or container of such products, to be labeled or otherwise marked in such manner as he determines practicable to inform the retail consumer of such products at the time of purchase that such products were imported, in whole or in part, as the case may be, into the United States.

Sec. 205. (a) The Secretary is authorized to prescribe rules and regulations to carry out the purposes of this title.

(b) In carrying out the provisions of this title, the Secretary may cooperate with foreign governments, other departments and agencies of the Federal Government, and with appropriate State agencies, and may conduct such examinations, investigations, and inspections as he determines necessary or appropriate through any officer or employee of the United States, of any State, or of any foreign government, who is licensed by the Secretary for such purpose.

Sec. 206. The provisions of this title shall be in addition to the requirements of all other laws relating to imports of dairy products.

Sec. 207. (a) The Secretary shall prescribe such assessments and fees on imported dairy products as he determines necessary to cover the cost of inspections, certifications, and labeling (or other marking) required under the provisions of this title.

(b) In establishing the level or rate of assessments or fees to be imposed under this title, the Secretary shall take into consideration, in the case of any exporter, the annual volume of exports, the value thereof, and such other factors as he deems appropriate in order to achieve a fair and equitable allocation of such assessments and fees among exporters.

(c) The Secretary shall have authority to suspend or revoke the privilege of any exporter of dairy products to export such products to the United States if such exporter fails to pay the assessments or fees for which he is responsible under this title.

Sec. 208. The cost of administering and supervising the provisions of this title shall be borne by the United States.

Sec. 209. There is hereby authorized to be appropriated such sums as are necessary to carry out the administration and supervision of the provisions of this title.

Sec. 210. If any provisions of this title or the application thereof to any person or circumstances is held invalid, the validity of the remainder of the title and of the application of such provision to other persons and circumstances shall not be affected thereby.

ADDRESS OF JAMES RESTON,  
MIAMI UNIVERSITY, OXFORD,  
OHIO, MAY 15, 1977

**HON. JOHN BRADEMAs**

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BRADEMAs. Mr. Speaker, on May 15, 1977, the distinguished columnist of the New York Times, Mr. James Reston, delivered the principal address on the occasion of commencement exercises

at Miami University, in Oxford, Ohio. I ask that Mr. Reston's comments, a perceptive appraisal of the world facing American college graduates of 1977, be placed at this point in the RECORD:

COMMENCEMENT ADDRESS, MIAMI UNIVERSITY,  
MAY 15, 1977

(By James Reston)

Mr. President, members of the Class of '77, ladies and gentlemen: To begin, I congratulate the parents of the Class of '77. Raising a family in these last twenty years cannot have been one long picnic. Also, I think it was very clever of the Old Folks to arrange things so that their children got out of college in 1977, for this is really the first year in an entire generation when the nation is at peace. This graduating class may have a little trouble getting the jobs they want, and if Jimmy Carter has his way, you may have to drive smaller cars and live in houses that are not boiling in winter and freezing in summer, but on the whole, this is not a bad time to be young and alive, particularly when you consider the alternatives.

Commencement is an old-fashioned tradition. It was based on the theory, not always supported these days, that after graduation, you were supposed to Commence—that is to say, to get along, and get off the old man's back. On your way out, you were expected to listen to some elderly type, telling you that you are the smartest bunch of students in the history of the Republic, and that the rest of us just can't wait to step aside and let you take over.

Well, I have news for you: This is rubbish. We are not eager to step aside. We're going to stick around until you elbow us out of the way. The first lesson of post-graduate life is that you have to spend a lot of time in your Twenties and Thirties listening to eminent bores, and Commencement addresses are just the first lesson in this tedious discipline.

#### A CALMER FUTURE

I want to say a few words about luck, for by the accident of history, my guess is that you are going to have a better chance to arrange your private lives in the last quarter of this century than your parents and grandparents had in the previous three quarters. In the first quarter, we had the first World War, which was really a kind of Civil War within the Western World. In the second quarter, we had a second World War and a world-wide economic depression that destroyed the old Empires and established the power of the Communist nations over most of Continental Europe and Continental Asia. In the Third Quarter, we had the Korean and Vietnam wars that divided and corrupted our country, and led to the retirement of one President and the banishment of another.

I will spare you a history lecture. My point is simply that these events tore up lives of men and women and their families, whose dreams, I can assure you, were as noble and ardent as your own. They had to grapple with Hitler, the military draft, and declarations of war. You have to deal with freedom, with Jimmy Carter, William James and "the moral equivalent of war." It won't be easy, but comparatively, it's not a bad deal.

It all depends, I suppose, on how you approach personal life, family and friendship and the life of the nation. When he came to the end of his life, G. K. Chesterton asked himself what he had learned. He thought everything depended on whether you took the miracle of life, with all its wonders and perplexities—whether you took it for granted or regarded it with gratitude. Everything, he concluded, depended on your approach, your assumptions, what you expected.

Many years ago, Judge Bettman of Cincinnati told me a story about this University that illustrates my point. A farmer, I think in

Hamilton County, sent his daughter to Miami University, and turned her over to the brilliant minds of the faculty and the tender mercies of the Administration, who in their wisdom promptly flunked her out.

This is not some Old Folks' tale. You can look it up in the legal records. The Old Gentleman took the case to court—all the way to the Ohio Supreme Court. The State argued that she just wasn't smart enough to make it. Her father argued that he knew she wasn't smart, but that he had paid his taxes, this was a state university, and therefore it was the duty of the State to make her smart. I suppose his approach to the problem was wrong, but I was a "C" student at the University of Illinois myself, and I always wondered sympathetically what happened to that girl. For all I know she's working for Jimmy Carter, whose staff is full of brilliant academic failures.

#### AN OPTIMISTIC OUTLOOK

What kind of a world are you going into? This no doubt is what you'd like to know. I am a reporter and not a prophet, but I believe we can see certain trends or tendencies that are bound to influence your lives and which, on the whole, are more optimistic than the popular pessimism of the time would allow.

In practical terms, I have mentioned the likelihood of general peace. There will be uprisings and rebellions, tribal wars in Africa, maybe even terrible racial but limited wars in the South of that turbulent continent; certainly great tension in the Middle East between Israel and the Arab nations; and much confusion over how to use atomic energy for peaceful purposes without losing control over the expansion of nuclear military weapons. But there is a new balance of power or terror in the world and the prospects for avoiding a major world war between your age and mine (which is quite a distance) are pretty good.

Second, the job market is not all that bad. Vice President Henry Wallace was condemned as an impractical dreamer when he talked in the Thirties about the possibility of creating "60 million jobs in America." Last week the Department of Labor announced that we had exceeded 90 million jobs for the first time in our history.

Third, the Class of '77, I believe, is graduating at a much healthier time than the graduates of the Sixties and the first half of the Seventies.

The divisions between the races in America, between the rich and the poor, between the generations, between management and labor, between the major political parties, and between the North and South are far less pronounced.

The extremists of the left and right have not been able to impose their will on the nation. Mr. Lincoln said "as our problems are new, we must think anew," and I believe the process of self-examination, of reappraisal, and even of reform has set in.

#### TIME OF MODERATION

Our problems are so new and complicated at home and abroad that no ideology has been able to deal with them—not the Welfare state ideology of George McGovern out of Dakota or the conservative ideology of the Tafts in Hamilton County, or the Fabian Socialists in Britain, or the Communists in Moscow and Peking. All the lovely ideological theories have been murdered by the brutal facts of modern life. So there is, I think, a new spirit of moderation coming to the fore in this country, and even, in a vague and fugitive way, in the other advanced nations of the world.

On a more personal level—perhaps more relevant to this year's graduates—I believe this same process of reappraisal is going on, with hopeful but not yet definite results. All the relationships of American life are under review—in the university between faculty

and students; in the church, between ministers, priests, rabbis and their parishioners; in the family between parents and children; in business between manager and workers and everywhere in the relations between men and women.

I have the impression, for example, that the worst of the drug culture has passed, at least for university students, that they have looked over the edge of that steep precipice and don't like what they have seen, and have begun to pull back. In the Victorian Age, we had love without sex and in the Modern Age, we have had sex without love, and I gather that lately a lot of people have been wondering whether the Age of Freedom produced even more problems than the Age of Repression. I'm not an expert of this subject, but I gather there's a difference between fun and happiness.

#### NEW EMPHASIS ON VALUES

In any event, if you look around these days, you will find that there is a revival of discussion on ethics and values. The Congress is putting down new ethical rules for its members, and passing new laws about the financing of political campaigns. Big Corporations, caught in illegal political contributions at home and bribery for contract abroad, are establishing new codes of business conduct. After Watergate, the law schools are wondering how Ehrlichman and Mitchell and all those legal eagles went wrong, and even that most self-righteous institution in the land, The Press, is beginning to police itself.

The President of Harvard University, Derek Bok, illustrated this rising concern with ethical values at Brown University in Providence the other day.

"More attention is being given today," he said, "to developing problem-oriented courses in ethics. These classes are built around a series of contemporary moral dilemmas. They may take any one of several forms. Some may emphasize issues of deception, breach of promise. . . ."

"Thus, premedical students can grapple with issues of abortion, euthanasia and human experimentation, while students interested in public service may discuss whether government officials are ever justified in lying to the public, or leaking confidential information, or refusing to carry out the orders of their superiors. . . ."

I find this very interesting, for he was talking very much like the Presidents of the little church-oriented colleges of 100 years ago in Ohio—from Oberlin and Ohio Wesleyan to Wittenberg, and responding, I think, to some yearning in our people who may no longer believe in the old values but still believe in believing.

This University was founded by an odd collection of Scotch and English preachers and editors—the Rev. John W. Browne, Robert Owen, a wandering Scottish school master and many others—and if you read their early sermons, you will understand the danger of inviting another Presbyterian to address you here on a Sunday morning, but I will be brief.

#### TOO MANY CHOICES?

The one thing that may be very hard on the Class of '77 is that its members have so much freedom. This has removed many barriers and silly taboos, and provided many advantages.

There is less loneliness in America. The generosity of young people today, their willingness to share what they have is beautiful. On the whole, personnel relations have become more gentle, but as Huxley observed many years ago, "a man's worst difficulties begin when he is able to do as he likes."

I have been watching and reporting on the revolution in American manners, customs, and particularly the attitudes toward sex, work, the family, the church, etc., for quite

a long time, and I would like to be able to say that I thought the New Freedom had made the graduates of the Fifties and Sixties happier than we were in the Thirties, I want to believe this is true but I can't.

Walter Lippman defines the problem better than I can. The prisoners of the puritan age have been released, he noted. They ought to be serene and composed. They are free to make their own lives. There are no conventions, no taboos, no gods, priests, princes, fathers, or revelations which they must accept.

Yet, he added, the result is not as good as they thought it would be. There is no moral authority to which the liberated young people must turn, but there is the coercion of opinions, fashions, and fads, and some, joining or inventing new creeds and cults, "put on manacles to keep their hands from trembling."

"What most distinguished the generation who have approached maturity since the debacle of idealism," Lippman concluded, "is not their rebellion against the religion and moral code of their parents, but their disillusionment with their own rebellion. It is common for young men and women to rebel, but that they should rebel sadly and without faith in their own rebellion, that they should distrust the New Freedom no less than the old certainties—that is something of a novelty."

If it is any consolation to this year's graduates, I should note that this was Lippman talking, not about your generation but about mine in "A Preface to Morals", but what was beginning to be true in the Thirties is I think, much more moral dilemma in the Seventies.

#### RANDOM THOUGHTS

I have nothing but a few random thoughts about the moral insecurity of the present age: The first is that personal license or self-gratification may be a self-limiting disease. For if it is true—as I believe—that the sexual and drug experiments of the Fifties and Sixties did not lead to a more satisfactory life but to frustration and middle-aged confusion and boredom, then the chances are that the graduates of the Seventies will begin to wonder and even to search for more enduring answers to the human problem.

Second, if the cynicism of the present age is justified—which I don't believe—and you find nothing good in the church, the government, the press, and the other modern institutions, then it seems to me your best hope lies in personal friendship, in faithful love, and in the integrity of the family.

I must say in passing that "the bitch-Goddess Success" is no sure answer either. A newspaper reporter spends a good deal of his time with successful or at least notorious people—I have been watching them in Washington for 36 years—and in my experience there is no inevitable relationship between success and happiness. Anybody who has watched Richard Nixon on the television these last couple of weeks will understand what I mean.

Third, it is not true in my experience—to quote that eminent philosopher Leo Durocher—that "nice guys finish last." Many scoundrels succeed—they are on the front pages every day, often under indictment—but in the generality of things, simple honesty, reliability, and hard work are still rewarded in this country. The cruelest book that I could write—and never will—would deal with the failure of success—and particularly what happened to the children of the people who put success in politics, business, or the press ahead of the family and everything else.

Finally, I think it's a little silly to believe, as so many do now, in the end of the American frontier, that the challenges before this generation are less exciting than

when the Old Folks cleared the Plains or when the Ohio General Assembly on February 6, 1810 directed the trustees of this founding institution to "lay out a town to be called Oxford and create a college township without a road leading to it."

Our frontier is now the world, and its main hope of creating a decent life for the human family lies as usual right here in America. We are just beginning to realize that for the first time in history, we have a world economy in which each nation's actions affect the lives of all other nations—if the two world wars and Vietnam didn't convince you, look at the price of gas or coffee. This year's college graduates will be just about 45 years of age at the end of the Century—at that point in life when you have just enough experience and energy to be needed and to be helpful, which in my view, is the key to what the Founding Fathers called "the pursuit of happiness."

Sometimes you have to be personal to be understood, so I will end on a personal note. This was the first University I ever saw. I bummed down on the pike when I was in high school in Dayton to see a basketball game. I forget whether you won—you usually do—but many years later when I went as a reporter to that other Oxford, where the British were educating the elite, I came to understand the genius of the American Land Grant colleges, which started in Mr. Lincoln's time at my own University in Urbana, Illinois, and insisted that education was not for the elite but for anybody's children who wanted to dream of a larger life.

Accordingly, Mr. President, I congratulate you, and the faculty, and the Members of the Class of '77. I hope they keep on dreaming, for this is not the end of anything for them or for America. The magic is still here. It is a beginning, a Commencement, and as I see it, the frontier is wider than ever, and very bright.

#### GENERAL SINGLAUB CITES WIDE OBJECTION TO U.S. PULLOUT

#### HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. McDONALD. Mr. Speaker, a major point brought out in General Singlaub's testimony yesterday before the Subcommittee on Investigation of the House Armed Services Committee was the fact that the Armed Forces of North Korea and South Korea are not evenly matched as some so-called experts have led us to believe. Thus, the withdrawal of the American forces will not only be a psychological blow to the free world, it will also tip the military balance further in Communist North Korea's favor. General Singlaub, whatever his future assignment will be, has again served his country well by bringing these facts to light so that if President Carter persists in his policy and war ensues, he will have been forewarned as well as the American public. The story from the Washington Star of May 25, 1977, follows:

SINGLAUB CITES WIDE OBJECTIONS TO U.S. PULLOUT

(By Vernon A. Guidry, Jr.)

Maj. Gen. John K. Singlaub said today that that no American officer in a responsible position in South Korea agrees with the Carter administration's plan to withdraw all U.S. ground troops there.

Singlaub testified before the House Armed Services subcommittee on investigations. He repeated his own estimate that withdrawal would mean war with North Korea.

(In Seoul, President Carter's two special envoys, Philip C. Habib and Gen. George S. Brown, today told President Park Chung Hee of plans to withdraw 33,000 American troops from Korea in four to five years, the Associated Press reported.)

(Park did not welcome the plan, but agreed to accept it as America's "established policy," an aide said. He said Park asked for U.S. help in strengthening South Korea's military.)

Singlaub, who was fired from his job as chief of staff of U.S. forces in Korea by President Carter and recalled to this country, said it was the opinion of senior officers of the South Korean armed forces that withdrawal of the U.S. ground troops would mean "flat-out, clearly, unequivocally" that North Korea would attack.

Singlaub said that on purely military grounds "I agree with that." The general said that it also was his impression that senior U.S. civilian officials also believed the withdrawal of American ground forces to be a mistake.

Subcommittee Chairman Samuel S. Stratton, D-N.Y., asked Singlaub if the "overwhelming majority" of official Americans in Korea opposed withdrawal.

"That is absolutely correct," he replied. What then was the reason for the withdrawal, Stratton wanted to know.

Singlaub said the Korean command wanted to know that, too.

The general continued that requests from the Korean command for a rationale for the withdrawal had brought no response, including a query directed to the Joint Chiefs of Staff.

Singlaub did not accept the proposition that the balance of forces between North and South Korea would permit withdrawal. He said there was "a clear military superiority of the North over the South" that would only be worsened by withdrawal of U.S. ground troops.

The general was fired from his post after an interview in which he expressed similar views was published in the Washington Post. Today he said he had thought his remarks to a reporter were "on background," a phrase that indicates the information may be printed but not attributed to the speaker by name.

"I realize that some will believe that regardless of whether I thought that my remarks were for non-attribution my aim was still the same—to take issue with our country's stated national security policy. However, I can state categorically that such was not my intent," the general said.

He said that as a professional military officer he supports the administration's policy. His contrary testimony was prompted under a convention of congressional testimony spelled out by Stratton. That permits committee members to solicit the personal views of military men after they have testified in favor of whatever it is their bosses want to do.

#### FIRST GLOBAL EXPERIMENT OF THE GLOBAL ATMOSPHERIC RESEARCH PROGRAM

**HON. GEORGE E. BROWN, JR.**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. BROWN of California. Mr. Speaker, today's New York Times contains an excellent review by Walter Sul-

livan of the major climatic research experiment soon to be undertaken jointly by the World Meteorological Organization and the International Council of Scientific Unions. This first global experiment of the global atmospheric research program, which will begin in September, is the kind of concentrated, cooperative effort which this country increasingly needs to support if we are to better understand climatic variations and the effects of climate on human activities.

As you know, H.R. 6669, the National Climate Program Act of 1977, which was reported May 6 to the House by the Science and Technology Committee, establishes a national, multi-agency program to finally address climate-related questions in an integrated way. I believe our participation in the first GARP global experiment would be facilitated if the Climate Program Office outlined by this legislation were already in place. I hope we of the Congress can move quickly to provide this stronger framework for our participation in these international climate research and monitoring efforts.

The article follows:

[From the New York Times, May 26, 1977]  
WORLD STUDY SEEKS TO LEARN WEATHER FORECASTING LIMITS  
(By Walter Sullivan)

GENEVA, May 20.—To test the intrinsic limits on weather forecasting and lay the basis for an understanding of climate change, one of the most extensive international scientific experiments in history is being organized.

The tools will include American, European, Japanese and Soviet earth satellites, some 50 research ships, hundreds of balloons adrift in the high atmosphere and buoys adrift in little frequented parts of the oceans.

French Argus receivers, riding American satellites, will collect data from the balloons and buoys, determining their positions. Transoceanic airliners will carry "black boxes" automatically recording weather data on the way. Some may report their readings over earth satellite relay.

The buildup of the operational network and testing of equipment will begin in September in preparation for a year of full-fledged observations starting in September 1978. During that year there will be two "special observing periods," in January-February and May-June.

#### FOCUS ON THE TROPICS

These will focus on the most problematic area of the world weather picture—the tropics—and will employ the more costly devices, such as dropsondes that are to parachute down from American long-range aircraft. These will indicate wind speeds and directions at many levels over tropical latitudes in the Pacific and Indian Oceans.

Virtually every country in the world is expected to participate, since ground-based observations will be made by the thousands of national weather stations integrated into the global network known as the World Weather Watch. Only the role of China remains uncertain.

The project is being organized by the World Meteorological Organization here, of which China is a member (Taiwan is not). The co-sponsor, however, is the International Council of Scientific Unions to which Taiwan still belongs and which has therefore been shunned by Peking.

The program is known as the First GARP Global Experiment. GARP is the acronym for the Global Atmospheric Research Program, started a decade ago as a long-term

effort. As stated in the prospectus of the global experiment, "The entire atmosphere of the earth and the sea surface will be observed in detail for the first time."

#### AFRICA-TO-BRAZIL STUDY

It is a successor to GATE, the GARP Atlantic Tropical Experiment carried out in 1974, which studied intently the region between Africa and Brazil.

Because conditions within a large part of the atmosphere, notably in the Southern Hemisphere and over tropical seas, are normally unobserved, long-range forecasts are currently imprecise or impossible. Yet there is also uncertainty as to how much would be gained by a more extensive—and costly—observing system.

It is assumed that beyond a certain time period weather becomes intrinsically indeterminate. Some suspect it may be two weeks. The global experiment seeks to find the answer by providing the huge weather center computers with two classes of information they now lack.

One is a succession of reasonably complete pictures of the state of the atmosphere at all levels and in all parts of the world during one year. The other is to derive from such observations better formulations of the rules that govern the atmosphere's behavior.

#### CONCERN OVER CHANGES

Because of recent concerns over climate change, an effort will be made to investigate its causes "within the limitation of a one-year period of observation."

The satellite observations will be made from four vehicles in north-south orbits and five in geosynchronous orbits, evenly spaced around the Equator. In a geosynchronous orbit, the vehicle, 22,000 miles aloft, is high enough so that its movement matches the earth's rotation and it remains above the same geographical location.

One American satellite, already in orbit, has been assigned a position above South America scanning ocean areas to either side of the Americas. Another American vehicle is over the central Pacific.

On Aug. 31 the Meteosat of the European Space Agency is to be launched to orbit over Africa. A Japanese vehicle will be placed over New Guinea, scanning the western Pacific, and in late 1978 the Soviet Union plans to place a GOMS satellite over the Indian Ocean.

These vehicles will transmit successive images of cloud cover from which wind directions at three levels of the atmosphere can be derived. This will be done two to four times daily.

#### SOVIET AND U.S. SATELLITES

Of the satellites in polar, or north-south, orbits, two will be of the American Tiros type and two of the Soviet Meteor system. Being only a few hundred miles aloft they will provide more detailed information on snow, ice and cloud cover as well as temperatures at various levels within the atmosphere and on sea surfaces.

The Tiros satellites will also carry the French balloon and buoy data collection and position-determining system. Some 320 constant-level balloons will be released to drift through tropical skies at a height of about 47,000 feet. They will transmit temperature data and their drift will reveal upper air winds.

They will be released from such sites as Samoa and Canton Island in the Pacific and Ascension Island in the Atlantic. The project is being organized by the National Center for Atmospheric Research in Boulder, Colo., with launchings to focus on the two Special Observing Periods.

It is also during those periods that the buoys are to be deployed in the region between 20 and 65 degrees south latitude. They are designed to fill in the largest gap of all—

the vast oceanic area surrounding Antarctica. Ships supplying bases on that continent will be among those launching the buoys, 100 of which are to be furnished by Canada, plus 200 from other countries.

Ships of participating nations at least twice daily will release balloons to ascend through the atmosphere reporting weather data.

The tropics are the focus of special efforts, not only because they are poorly observed but also because small-scale phenomena there seems to play an important role, providing most of the energy for atmospheric circulation.

#### STEVE EDNEY—MAN OF THE YEAR

#### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1977

Mr. ANDERSON of California. Mr. Speaker, on June 3, 1977, the Maritime Trades Department of the Southern California Ports Council, AFL-CIO, will honor a man whose assertive leadership has been instrumental in making organized labor a strong force in the harbor community. As president of the United Cannery and Industrial Workers of the Pacific, Steve Edney has worked tirelessly through the years for the working men and women who belong to his organization, and has also been active in expanding the scope of organized labor in the maritime world.

Currently, the tuna industry finds itself in a difficult situation due to Government regulations restricting fishing operations by American vessels. Steve has been extremely active in trying to resolve this situation, which has adversely affected the employment security of many members of his union who work in the major fish canneries in my district on Terminal Island.

This is just one example of the concern Steve Edney has always demonstrated, as well as the direct action he is willing to take on behalf of the men and women he represents. His efforts to save the jobs of cannery workers in this and other situations are just a sample of the reasons he will be honored by organized labor and the Los Angeles-Long Beach harbor community.

Born on January 10, 1917, Steve Edney first worked in the canneries in 1945. He became a shop steward in the Pan Pacific Cannery on Terminal Island, and his natural leadership ability and interest in helping people soon moved him up the ranks.

After serving as health and welfare director, chairman of the shop steward council, and business agent and vice president of the United Cannery and Industrial Workers of the Pacific, Steve was elected president of the union in 1965. His performance in this job has been marked by total devotion to his duties, and an openness and accessibility to the rank-and-file members of his union.

Steve has been involved in organized labor activities to a very large degree. Currently vice president of the California State Federation of Labor, AFL-CIO, he is also vice president of the Seafarers' International Union of North America. In addition, he serves as chairman of the Fisheries and Cannery Workers Conference.

He has been active in community and civic affairs as well. A former president of the Los Angeles harbor chapter of the National Association for the Advancement of Colored People—NAACP—Steve has also served on the board of directors of the Young Men's Christian Association. He is currently vice chairman of Los Angeles mayor Tom Bradley's city economic committee, and also serves on the mayor's welfare planning council.

Mr. Speaker, few individuals have deserved the title of "Organized Labor Man of the Year" as Steve Edney has this year. His leadership and ability have not only benefited the working men and women who belong to the United Cannery and Industrial Workers of the Pacific, but have helped improve the Los Angeles-Long Beach harbor area as a place in which to live and work.

My wife, Lee, joins me in congratulating Steve as he receives this award, and in wishing him continued success and good fortune in the years to come. We are positive that his lovely wife, Alberta, and son, Henry, must be justly proud of Steve as his many achievements are recognized by his peers in organized labor.

### SENATE—Friday, May 27, 1977

(Legislative day of Wednesday, May 18, 1977)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by Hon. SPARK M. MATSUNAGA, a Senator from the State of Hawaii.

#### PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Let us pray.

O God, our Father, help us to learn the lessons that life is teaching us. Save us from multiplying our mistakes, from repeatedly yielding to the same temptations, from refusing to see our own faults, from concealing our bad judgment, from harboring resentment and ill will—until personality is blemished and the Creator's image is effaced.

Keep us close to Thee, O Lord, and close to the people we serve. Help us daily to grow stronger, purer, kinder, to shed old faults and to gain new virtues, until, by Thy grace, life becomes altogether new. By becoming better help us to make a better world.

Be with us in our coming in and our going out, now and forever. Amen.

#### APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,  
PRESIDENT PRO TEMPORE,  
Washington, D.C., May 27, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. SPARK M. MATSUNAGA, a Senator from the State of Hawaii, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,  
President pro tempore.

Mr. MATSUNAGA thereupon took the chair as Acting President pro tempore.

#### THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Thursday, May 26, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I believe we got an order yesterday authorizing all committees to meet during the session of the Senate today, did we not?

The ACTING PRESIDENT pro tempore. Yes, we did.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. President, I have nothing more at this time.

Mr. BAKER. Mr. President, I yield to the distinguished Senator from South Carolina.

#### DECISION BY JUDGE RICHARD OWEN REGARDING UNEMPLOYMENT BENEFITS FOR STRIKERS

Mr. THURMOND. Mr. President, a few days ago, I offered an amendment to S. 275, the Food and Agriculture Act, which would have made strikers ineligible to receive food stamps. By a vote of 38 to 56, the Senate tabled that amendment. That action was a disappointment not only to me, but more importantly, to everyone who believes that our programs of public assistance must be limited to the truly needy.

This issue will come back to haunt us again. The Federal Government and the States are reaching the end of their ropes in terms of the financial resources they can afford to allot for welfare programs. Every food stamp dollar gobbled up by strikers, with the consent of the Congress, is a dollar taken away from the poor, the hungry, the destitute elderly, and needy children. Giving food stamps to strikers might be good politics, for some, but it is not good government. In my mind, it breaks faith with both the

taxpayers, who fund the food stamp program, and the poor, who depend upon it for nutritional assistance.

Mr. President, the battle of food stamps for strikers is over for at least a while. Looking to the future, however, we would do well to consider the implications of a decision handed down by Judge Richard Owen in Federal district court in Manhattan this week. On the very day on which the Senate, by its tabling vote, abdicated responsibility to protect the food stamp program against striker abuse, Judge Owen ruled unconstitutional the New York State law which, for 40 years, has allowed strikers to collect unemployment compensation while they were out of work.

Out of work, indeed. In the particular case decided by Judge Owen, strikers had received \$49 million in unemployment benefits. Forty-nine million dollars for one strike. Then the Congress is asked to bail out sinking unemployment compensation systems, not to mention the city and the State which are so free with funds to subsidize strikes. While the strikers of New York were getting that \$49 million, they were, of course, being counted among the unemployed by the Federal Bureau of Labor Statistics, whose unemployment rates no longer reflect the real number of people who, for one reason or another, do not have a job to their liking.

Mr. President, I believe that, sooner or later, an outraged public will force the Congress to face squarely the issue of striker abuse of food stamps, just as Judge Owen has courageously faced the issue of striker abuse of the unemployment compensation system. In tribute to Judge Owen, as well as for the information of our colleagues, I ask unanimous consent that the Wall Street Journal account of his decision be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

**JOBLESS BENEFITS FOR STRIKERS ARE STRUCK DOWN—U.S. JUDGE RULES NEW YORK LAW UNCONSTITUTIONAL IN SUIT BY UNITS OF A.T. & T.**

**NEW YORK.**—A federal district court judge in Manhattan ruled unconstitutional a New York state law allowing striking workers to collect unemployment benefits.

Judge Richard Owen said the law conflicts with the policy of free collective bargaining established under federal labor laws. He said that the tax-free payments, of up to \$95 a week, affect workers' willingness to go out and remain on strike, thereby improving their bargaining position.

The ruling was on a suit filed by New York Telephone Co. and several other American Telephone & Telegraph Co. units following a seven-month strike in New York in 1971-72. By the end of the strike, employees had received \$49 million in unemployment benefits and New York Telephone's credit in the state unemployment fund was depleted by about \$40 million. The fund is maintained by a tax on employers.

New York Telephone paid assessments of \$6 million in 1974 and \$9 million in 1975 to restore its balance in the fund. Judge Owen scheduled a hearing for next week to determine how to proceed on the question of damages.

The telephone companies contended in

their suit that the New York law compelled "employers to subsidize strikes against themselves." The company yesterday said Judge Owen's decision "restored an equilibrium to collective bargaining."

A spokesman for New York Attorney General Louis J. Lefkowitz said the state will ask for a stay of the decision pending appeal.

Morton Bahr, a vice president of the Communications Workers of America, which represents telephone company employees but wasn't a party to the suit, said he felt certain that an appeal would be successful in overturning the decision.

According to a 1976 U.S. Chamber of Commerce analysis, two states, New York and Rhode Island, grant unemployment benefits to strikers in all instances and 29 other states grant benefits to strikers when the employer continues to operate during the strike. Business groups for a number of years have urged courts and states to deny unemployment benefits to strikers.

Organized labor asserts that a person who is out of work for whatever reasons needs and is entitled to any available benefits, such as those provided by unemployment insurance.

In his 37-page opinion, Judge Owen referred to testimony that unemployment benefits strengthen the union's staying power during a strike and may lead employers to make concessions because they anticipate a rise in their unemployment insurance tax. The judge noted that the New York Telephone strike ended when the company's unemployment insurance account was approaching a negative balance and the strikers were still eligible for several months more of compensation. He referred to statements made by the Communications Workers that unemployment compensation assisted its members during the strike.

The U.S. Supreme Court is scheduled to decide two related issues before its current term ends next month. The Justices are reviewing a lower court decision ordering Ohio to pay unemployment benefits to workers who were involuntarily laid off because of a strike against their company by another union. The high court also is considering in a Maryland case whether states may deny welfare benefits to families of strikers. A lower court said they couldn't.

#### AMENDMENT OF THE FEDERAL AVIATION ACT

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of H.R. 6010, which the clerk will state by title.

The legislative clerk read as follows:

A bill (H.R. 6010) to amend title XIII of the Federal Aviation Act of 1958 to expand the types of risks which the Secretary of Transportation may insure or reinsure.

The Senate proceeded to consider the bill.

UP AMENDMENT NO. 343

Mr. BAKER. Mr. President, I send to the desk an amendment on behalf of the distinguished senior Senator from Kansas and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Tennessee (Mr. BAKER), on behalf of the Senator from Kansas (Mr. PEARSON), proposes unprinted amendment No. 343.

At the end of the bill, insert the following: SEC. 8. Section 406(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1376) is amended by deleting the period at the end thereof and

by adding the following: "Provided, That nothing in this section shall prohibit the Board from making payments as compensation for the transportation of mail by aircraft, the facilities used and useful therefor, and the services connected therewith, for the period August 1, 1973, through July 31, 1975, where such payments have already been provided by Board order, to the holder of a certificate authorizing the transportation of mail by aircraft, to the account or for the benefit of any air carrier designated an "air taxi operator" by the Board, which provided air transportation between points named in the holder's certificate in satisfaction of an express condition to the suspension by Board order of the holder's certificate authority to engage in air transportation between those points. In no event shall such payments differ from the amount previously provided by such Board order."

Mr. BAKER. Mr. President, the text of this amendment is identical to S. 1325, a bill introduced by Senator PEARSON on April 20 and reported without amendment by the Committee on Commerce, Science, and Transportation on May 16. The bill was reported by the committee without dissent.

Mr. President, this amendment has the support of the Civil Aeronautics Board and the U.S. Department of Transportation. The Office of Management and Budget has indicated that, from the standpoint of the administration's program, there is no objection to this measure.

Mr. President, this amendment simply provides explicit statutory authority for an experiment in small community air service conducted by the Civil Aeronautics Board from August 1, 1973, through July 3, 1975. The amendment has no prospective effect.

Under the terms of the experiment, Air Midwest, then a commuter air carrier operating under Board approval as a substitute carrier for Frontier Airlines in Dodge City, Great Bend, and Hutchinson, Kans., received—through Frontier Airlines—subsidy payment for performing its service obligations.

Mr. ROBERT C. BYRD. Did the Senator mention Dodge City?

Mr. BAKER. He did.

Mr. ROBERT C. BYRD. That is where Matt Dillon used to have his shootouts.

Mr. BAKER. No doubt, if Mr. Dillon were still around to observe the actions of the Senate in this respect, he would be happy that he had a way to get out of town.

[Laughter.]

Mr. ROBERT C. BYRD. I do not think Chester would let him get out of town.

[Laughter.]

Mr. BAKER. Mr. President, because Air Midwest was not—at that time—a certificated air carrier, the U.S. Court of Appeals for the District of Columbia Circuit found that the CAB had inadequate statutory authority to authorize the experiment. Thus, under the terms of the Federal Claims Collection Act, the CAB is obligated to seek reimbursement from Air Midwest and Frontier for the subsidy payments made during the course of the experiment.

By providing explicit statutory authority for the Frontier-Air Midwest "flow through" subsidy experiment in small

community air service, the amendment will relieve the CAB of the duty to seek reimbursement for payments made to the carriers during that experiment.

Mr. President, the carriers involved acted in good faith in conducting the experiment. They acted according to CAB order. The obligations of the carriers during the experiment to provide effective air service to the three small communities were performed in accordance with the CAB requirements.

Therefore, Mr. President, the mechanical operation of the Federal Claims Collection Act, in this instance, would impose a great injustice on the affected parties.

Mr. President, this amendment does not authorize future "flow through" subsidy programs. It serves only to eliminate any question as to the legality of the one "flow through" experiment conducted by the CAB during 1973-75.

Mr. President, I ask unanimous consent to have printed in the RECORD an extract from the committee report dealing with this amendment, following my remarks on behalf of Mr. PEARSON.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### PURPOSE AND BRIEF DESCRIPTION

The purpose of S. 1325, as reported, is to provide explicit statutory authority for the payment of "flow-through" subsidy pursuant to an experimental program administered by the Civil Aeronautics Board (CAB) during the period August 1, 1973, through July 31, 1975.

#### BACKGROUND AND NEED

Beginning August 1, 1973, the Civil Aeronautics Board conducted an experimental local air service program in cooperation with Frontier Airlines, a local service air carrier based in Denver, Colo., and with Air Midwest, a Kansas-based commuter air carrier that was subsequently certificated by the Civil Aeronautics Board as a local service airline. Under the terms of the experiment, part of the subsidy that would be paid to Frontier Airlines for service to selected points was transmitted through Frontier to Air Midwest in return for scheduled air services performed by Air Midwest at those selected points on Frontiers certificate of public convenience and necessity. This experiment, called the "flow-through" experiment, was approved by the Board in Order 74-1-78.

Subsequently, the U.S. Court of Appeals for the District of Columbia Circuit invalidated the "flow-through" experiment and vacated the CAB order which authorized Air Midwest to perform Frontier's service responsibilities in return for some subsidy payment. (*Air Line Pilot's Association, International v. Civil Aeronautics Board*, 515 F. 2d 1010 (1975)). The Court simply found that the Board lacked explicit authority under section 406 of the Federal Aviation Act of 1958 to conduct the experiment.

The General Accounting Office has determined that the CAB is obligated, under the Federal Claims Collection Act of 1966 (31 U.S.C. 951, *et seq.*), and the regulations adopted thereunder (4 C.F.R. Parts 101-105), to seek restitution for all payments made to Frontier for the beneficial use of Air Midwest, the carrier, which actually provided the service, pursuant to the "flow-through" experiment. The mechanical application of the Federal Claims Collection Act, in this case, would result in a gross inequity and injustice to the carriers who, in good faith, participated in the Board's innovative experi-

ment to develop improved ways and means to provide small community air service at reduced cost to the taxpayers.

The amount of subsidy payment made to the carriers during the course of the experiment is \$240,172. The payments were made to these carriers on the basis of the Board's determination that service to the local communities could only be provided through the subsidy which the Federal Aviation Act authorizes in such circumstances. The U.S. Court of Appeals did not hold that subsidy was not appropriate to maintain service; the court simply held that the method of making subsidy payments, as chosen by the CAB, was not a valid exercise of the Board's discretion.

Both Air Midwest and Frontier accepted the "flow-through" subsidy arrangement to maintain operations entirely consistent with the intention of the Federal Aviation Act. The Board's recent certification of Air Midwest as a subsidy-eligible carrier constitutes a reaffirmation that subsidy-assisted service to the subject communities is required by the public convenience and necessity.

#### EXPLANATION OF THE BILL

As reported, the bill would provide explicit statutory authority for the payment of "flow-through" subsidy pursuant to the experimental program administered by the Civil Aeronautics Board during the period August 1, 1973 through July 31, 1975. The bill has no prospective effect whatsoever.

#### ESTIMATED COSTS

The Committee estimates that implementation of S. 1325, as reported, will result in no cost to the Federal Government beyond the \$262,212 actually earned by the designated carriers pursuant to CAB order under the CAB's "flow-through" experiment. Pursuant to section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has submitted the following cost estimate to the Committee:

| Fiscal year: | Estimated cost |
|--------------|----------------|
| 1978         | 1 \$262,212    |
| 1979         | -----          |
| 1980         | -----          |
| 1981         | -----          |
| 1982         | -----          |

<sup>1</sup> This figure includes the \$240,172 already expended in prior fiscal years. Therefore the actual dollar expenditure during fiscal 1978 would not exceed \$22,040.

#### REGULATORY IMPACT STATEMENT

Implementation of S. 1325, as reported, will neither increase Federal regulation nor require additional paperwork.

#### AGENCY COMMENTS AND RELEVANT CORRESPONDENCE

CIVIL AERONAUTICS BOARD,  
Washington, D.C., April 6, 1977.

HON. JAMES B. PEARSON,  
U.S. Senate,  
Washington, D.C.

DEAR SENATOR PEARSON: I am writing you in regard to the operations of Frontier Airlines, a subsidized local service carrier, and of Air Midwest, a Kansas-based commuter carrier recently certificated to provide service between eight local communities in Kansas and Colorado and to the hub airports at Denver, Wichita, and Kansas City. Because of a Court of Appeals decision invalidating a 1974 Board decision awarding subsidy through Frontier to Air Midwest, it appears that the Board is now required to demand that Air Midwest and Frontier Airlines refund the \$240,172 subsidy paid them during court review of the Board's decision. Given the circumstances, the Board believes legislation to relieve the air carriers of the refund obligation may be appropriate.

The Board's staff has consulted with the General Accounting Office on the question of

the Board's obligation to attempt to recover the subsidy paid under the vacated Board order. The Acting General Counsel of the GAO issued an opinion dated November 24, 1976, in which he concluded that the Board must make a written demand upon Frontier and Air Midwest for repayment of the full amount of the "flowthrough" subsidy. GAO reasoned that the Government has a valid claim for repayment and that the carriers do not appear to have defenses to that claim. The GAO opinion relies on the general proposition that the United States is entitled to recover public moneys which have been wrongfully, erroneously, or illegally paid by its agents, whether by mistake of law or of fact. Moreover, the opinion states that the Board is obligated under the Federal Claims Collection Act of 1966 (31 U.S.C. 951, *et seq.*) and the regulations adopted thereunder (4 C.F.R. Parts 101-105) to attempt to collect the claim against Air Midwest and Frontier. Furthermore, the Board is not empowered to pass upon the validity of the claim or to compromise it. Accordingly, the Board is required to demand of Air Midwest and Frontier repayment of the \$240,172 "flow-through" subsidy disbursed to them.

The Board, pursuant to the GAO opinion, intends shortly to make such a demand on the carriers. The purpose of this letter is to inform you of this intention and to express our view that the possible liability of the carriers for subsidy paid during court review raises the question of whether the public interest would be served by legislation relieving the carriers of that liability. The payments were made to the carriers on the basis of the Board's determination that service to the local communities could only be provided through the subsidy which the Federal Aviation Act authorizes in such circumstances (Section 406(b) of the Act, 49 U.S.C. 1376(b)). The court's decision does not hold that subsidy was not appropriate to maintain service. Both Air Midwest and Frontier, therefore accepted the "flow-through" subsidy arrangement to maintain operations wholly consistent with the statute. The Board's recent certification of Air Midwest as a subsidy-eligible carrier constitutes a reaffirmation that subsidy assisted service to the communities is required by the public convenience and necessity.

Legislation to relieve the carriers of refund liability would assure that the carriers' financial ability to continue operations would not be impaired by the amount of the refund. If such legislation is deemed appropriate, the Board of course, stands ready to provide any requested assistance.

Sincerely,

JOHN E. ROBSON,  
Chairman.

Enclosure.

U.S. GENERAL ACCOUNTING OFFICE,  
OFFICE OF GENERAL COUNCIL,  
Washington, D.C., November 24, 1976.  
JAMES C. SCHULTZ, Esq.,  
General Counsel,  
Civil Aeronautics Board

DEAR MR. SCHULTZ: Our advice has been requested concerning whether the Civil Aeronautics Board (CAB) has a claim for the recovery of certain "flow-through" subsidy payments made by the Board under an order which was judicially determined to be invalid. For the reasons set forth hereafter, we believe that the Board does have a claim for recovery of the full amount of subsidy payments already made, which should be pursued against either or both of the air carriers involved. Needless to say, we likewise believe that subsidy amounts withheld should not be paid.

The "flow-through" subsidy was purportedly authorized by section 406(a) of the Federal Aviation Act of 1958, 49 U.S.C. § 1376(a) (1970), which provides:

"The Board is empowered and directed, upon its own initiative or upon petition of

the Postmaster General or an air carrier, (1) to fix and determine from time to time, after notice and hearing, the fair and reasonable rates of compensation for the transportation of mail by aircraft, the facilities used and useful therefor, and the services connected therewith (including the transportation of mail by an air carrier by other means than aircraft whenever such transportation is incidental to the transportation of mail by aircraft or is made necessary by conditions of emergency arising from aircraft operation), by each holder of a certificate authorizing the transportation of mail by aircraft, and to make such rates effective from such date as it shall determine to be proper; (2) to prescribe the method or methods by aircraft-mile, pound-mile, weight, space, or any combination thereof, or otherwise, for ascertaining such rates of compensation for each air carrier or class of air carriers; and (3) to, publish the same." (Emphasis added.)

The relevant facts are stated below. In 1970 the CAB suspended the duty of Frontier Airlines, a "certificated" carrier, to serve three Kansas cities, on condition that substituted service be provided. This substituted service was supplied by Air Midwest, a "non-certificated" commuter air taxi operator.

On August 1, 1973, Air Midwest applied to the CAB for an allocation of subsidy funds, under section 406(a) of the Act, *supra*, to support the substituted service it was providing. Apparently recognizing that Air Midwest was not eligible for a direct subsidy due to its noncertificated status, it was proposed that the subsidy be allocated to Frontier, the certificated carrier, which would then pay over the subsidy to Air Midwest. Hence, the subsidy would "flow-through" Frontier to Air Midwest. In CAB Order 74-4-77 (April 12, 1974), the Board approved the flow-through proposal, allowing subsidy payments for a 2-year period commencing retroactively as of August 1, 1973, and terminating on July 31, 1975. The CAB Order recognized the unprecedented nature of this subsidy arrangement, describing it as an "experimental program to test the feasibility and desirability of the 'flow-through' subsidy concept \* \* \*." *Id.*, at 1. It also rejected objections by several participants in the proceeding that the Board lacked authority under section 406(a) to subsidize services provided by a noncertificated carrier. *Id.*, at 4.<sup>1</sup>

Subsequently, in response to petitions to review the CAB subsidy order, the United States Court of Appeals for the District of Columbia Circuit vacated the order. *Air Line Pilots Association, International v. Civil Aeronautics Board*, 515 F.2d 1010 (1975) (hereafter referred to as *ALPA*). The court first pointed out that the flow-through subsidy could not be justified as meeting a "need" of Frontier under section 406(b) of the Act, as construed in *Delta Airlines, Inc. v. Summerfield*, 347 U.S. 74 (1954), which requires that need be established in relation to the entire operations of a carrier.

"The Board argues that the flow-through subsidy is in literal compliance with the statute because the money is paid to the certificate holder, Frontier. It further argues that the subsidy meets the 'need' of Frontier because, unless Air Midwest is supported, it will stop flying to the three cities, and in that case Frontier will have to reinstitute service itself. In the Board's view, Frontier has a legally cognizable 'need' to be protected against the activation of its continuing obligation to provide service.

"\* \* \* the Board erred in approving the flow-through subsidy. The Board wishes to pay Frontier not to reimburse it for expenses,

<sup>1</sup> See also, the Board's Order to Show Cause in the flow-through subsidy application, CAB Order 94-1-78 (January 14, 1974).

but to keep Frontier from incurring expenses at all. Moreover, in calculating the amount to be paid the Board has reference only to the operating experience of Air Midwest. \* \* \* In wholly ignoring the financial condition of Frontier, the Board violated the dictate of *Summerfield* to look at the need of the carrier to be subsidized. What Frontier's need might be does not appear from the record, but it could be that Frontier as a whole is so successful that even if it were forced to resume service to Hutchinson, Great Bend, and Dodge City, it would not be able to show a need for subsidy." 515 F.2d at 1013.

The Court went on to hold that: "In any case, the Board has no power to subsidize Air Midwest nor any other non-certificated carrier. Even though the Board may have been correct in finding Air Midwest more efficient at serving the three Kansas cities than Frontier would be and even if, therefore, it is desirable to keep Air Midwest in that service, Congress has not given the Board power to pursue that end by giving public money to Air Midwest." *Id.*

Accordingly, the CAB order was "vacated" by the Court "and the cause remanded to the Civil Aeronautics Board with instructions to deny the request for subsidy \* \* \*." *Id.*

As of the date of the Court's decision—July 11, 1975—flow-through payments had already been made in the amount of \$240,172. The Board has withheld the remaining amounts—\$22,040—which would have been payable under the flow-through subsidy program.

A memorandum dated July 25, 1975, from a CAB attorney to the General Counsel explores the question of whether flow-through amounts already paid should be recovered. The memorandum notes that under section 3(a) of the Federal Claims Collection Act of 1966, 31 U.S.C. § 952(a) (1970), the CAB "shall attempt collection of all claims of the United States for money or property arising out of \* \* \* [its] activities \* \* \*," and that, as a general proposition, the United States is entitled to recover public moneys which have been wrongfully, erroneously, or illegally paid out by its agents, citing *United States v. Wurtz*, 303 U.S. 414 (1938). However, the memorandum goes on to discuss three theories which could possibly establish an exception to the requirement for recovery in this case.<sup>2</sup>

One of the three theories explored is that flow-through subsidy payments received prior to the judicial determination of invalidity may be retained in the same manner as payments under non-mail rate orders. See pages 3-5 of the memorandum. However, the memorandum ultimately rejects this theory on the basis that the flow-through subsidy is not analogous to an ordinary rate order for this purpose, and, in any event, the flow-through subsidy order was determined to be "void" rather than "voidable." We concur in the memorandum's discussion and conclusion on this point, and see no need to restate that analysis here. We will address our views primarily to the other two theories raised, which concern, respectively, "detrimental reliance" and "ratification by specific appropriation."

According to the memorandum, it might be argued that Air Midwest should be permitted to retain subsidy payments for its

<sup>2</sup> The memorandum points out that CAB's authority to compromise claims is subject to the \$20,000 limitation contained in 31 U.S.C. § 952(b) (1970). The compromise authority of our office is subject to the same limitation. Accordingly, since the amount here involved exceeds \$20,000, the memorandum and our response are concerned only with the issue of whether a claim exists, rather than whether there are any grounds for compromise.

performance of substituted service, at least to the extent that those services were performed in reliance on the CAB order.<sup>3</sup> The memorandum cites, for example, *Missouri Utilities Co. v. City of California*, 8 F. Supp. 454 (W.D. Mo. 1934), appeal dismissed, 79 F.2d 1003 (8th Cir. 1935), where "the Court indicated that it would be inequitable to require repayment of United States funds even if wrongfully paid, if the recipient had acted to his detriment in reliance upon the ostensible legality of the payments." Memorandum at page 3.

The opinion in *Missouri Utilities* did suggest, by way of dictum, that a recipient of Federal funds in a manner consistent with a Federal statute would have the right to rely on the constitutionality of the statute, so that there might be no equitable basis for recovery should the statute be declared unconstitutional. While this case seems to have no bearing on the facts here involved,<sup>4</sup> we recognize that the law is somewhat uncertain concerning whether, and to what extent, theories in the nature of estoppel apply against the United States, judicial decisions, as well as decisions of our Office and other authorities, have considered the estoppel doctrine applicable to the United States in some circumstances. See e.g., *United States v. Georgia-Pacific Co.*, 421 F.2d 92 (9th Cir. 1970); *Smale & Robinson, Inc. v. United States*, 123 F. Supp. 457 (S.D. Cal. 1954); 55 Comp. Gen. 911, 931 (1976); 53 Comp. Gen. 502, 506, (1974); see generally, 2 Davis, *Administrative Law Treatise*, §§ 17.01-17.04 (1958 & 1970 Supp.); Annot., 27 A.L.R. Fed. 702.

However, the great weight of authority (including many decisions which recognize the applicability of estoppel in some contexts) supports the view that estoppel cannot apply to, in effect, sanction payments which are made, or would be made, contrary to a Federal statute or valid, statutory regulations. Accordingly, it is our opinion that the strict rule against estoppel in *Federal Crop Insurance Co. v. Merrill*, 332 U.S. 380 (1947), and related cases, precludes a defense of estoppel in the instant matter since it involves payments made contrary to statute. See, e.g., 27 A.L.R. Fed. 702, *supra*, § 5; 51 Comp. Gen. 162, 165 (1971). This position has very recently been affirmed by the Court of Claims:

"It is a well-settled principle that the Government has inherent authority to recover sums illegally or erroneously paid, and that it cannot be estopped from doing so by the mistakes of its officers or agents. See *United States v. Wurtz*, 303 U.S. 414, 415, 58 S. Ct. 637, 82 L.Ed. 932 (1938); *American Fidelity Fire Ins. Co. v. United States*, 513 F.2d 1375, 1381, 206 Ct. Cl. 570, 580 (1975); *Fansteel Metallurgical Corp. v. United States*, 172 F. Supp. 268, 270, 145 Ct. Cl. 496, 500 (1959). As this court recognized in *Fansteel Metallurgical Corp. v. United States*, 172 F. Supp. at 270, 145 Ct. Cl. at 500:

"[W]hen a payment is erroneously or illegally made it is in direct violation of article IV, section 3, clause 2, of the Constitution. [case citation.] Under these circumstances it is not only lawful but the duty of the Government to sue for a refund thereof \* \* \*."

<sup>3</sup> The memorandum indicates that this theory would apply only to \$153,059 of the subsidy payments already paid. The remaining \$87,113 of the amounts paid represents retroactive payments for which there could have been no reliance on the CAB order.

<sup>4</sup> In the instant case, of course, payments were made in violation of the terms of a statute, concerning which there was no constitutional challenge. *Missouri Utilities* actually supports the view that persons are charged with knowledge of statutory requirements.

*Aetna Casualty & Surety Co. v. United States*, 526 F. 2d 1127, 1130 (1975), cert. denied, 44 U.S.L.W. 3659 (U.S. May 10, 1976).

While we thus conclude that the estoppel theory is inapplicable here as a matter of law, there is any case an inadequate factual basis to invoke estoppel in this matter. Even where consideration of estoppel is appropriate, it seems clear that the party seeking to invoke this doctrine must establish that he acted reasonably in relying upon the actions (or inactions) of the party to be estopped. See, *United States v. Georgia-Pacific Co.*, supra; *Smale & Robinson, Inc. v. United States*, supra.

We do not believe that the airlines can claim reasonable reliance, for purposes of estoppel, on the validity of the CAB order. As noted previously herein, (1) the Board itself described the flow-through subsidy as a novel and experimental concept; (2) the express terms of the statute refer only to payments to certificated carriers; and (3) the Board's authority to grant the flow-through subsidy was subject to legal challenges in its own proceeding and in the subsequent petition for judicial review, which was pending while most of the subsidy payments were made. In this context, it is abundantly clear to us that the airlines accepted subsidy payments with their eyes open, having full notice of the potential legal objection, and thereby assumed the risk that the Board's order would be invalidated. There is no indication that the Board concealed, misrepresented, or in any way attempted to minimize the legal questions concerning its authority. Indeed, the public record known to the airlines spoke for itself.

In sum, we consider the estoppel argument inapplicable to this case as a matter of law and fact.

The third theory considered in the memorandum is that the action of Congress in appropriating for section 406 subsidies, with knowledge that the Board was making flow-through subsidy payments, constitutes a "ratification" of such payments. This theory is expressed in two alternative forms: (1) that the appropriations constitute an implied repeal of section 406 insofar as it excludes payments to a non-certificated carrier under the flow-through experiment; or (2) that the appropriations ratify flow-through payments made up to the time of the judicial determination of invalidity.

The Department of Transportation and Related Agencies Appropriation Acts for the fiscal years 1975 and 1976 provide for section 406 subsidies, under the heading "Payments to Air Carriers," as follows:

"For payments to air carriers of so much of the compensation fixed and determined by the Civil Aeronautics Board under section 406 of the Federal Aviation Act of 1958 (49 U.S.C. 1376), as is payable by the Board \* \* \*."

Pub. L. No. 93-391 (August 28, 1974), 88 Stat. 768, 778; Pub. L. No. 94-134 (November 24, 1975), 89 Stat. 695, 707.

As the memorandum points out, the House and Senate appropriation hearings for each of the 2 fiscal years contain various references to the flow-through subsidy experiment, as well as the pending judicial challenge to it. These references consist of presentations by CAB officials, and exchanges between Board officials and committee members, concerning the nature and status of the flow-through subsidy experiment. None of these references, nor anything else (to our knowledge) in the legislative histories of the appropriation acts, indicates any congressional sentiment concerning the Board's legal authority to pay flow-through subsidies.

The memorandum rejects the first alternative theory that the appropriations implicitly repeal section 406 in relation to the flow-through subsidy. We agree that this theory is without merit. As the memorandum points out, repeals by implication are not favored, citing *Committee For Nuclear Re-*

*sponsibility, Inc. v. Seaborg*, 463 F. 2d 783 (D.C. Cir. 1971). The memorandum also notes that "it would be rather late in the day" to urge an argument of repeal by implication now since this argument was not even raised in *ALPA*. Actually, we believe that such an argument is necessarily precluded by *ALPA*.

The second alternative of this theory is that the appropriations serve to ratify subsidy payments up to the date of the *ALPA* decision on a "pro tanto" basis. The memorandum relies here on *Committee For Nuclear Responsibility*, supra, in which the court held that the enactment of authorization and appropriation legislation for a nuclear test project did not constitute a determination as to the adequacy of the environmental impact statement for the test project under the National Environmental Policy Act (NEPA). The court observed, 463 F. 2d at 785-86:

"\* \* \* Congress must be free to provide authorizations and appropriations for projects proposed by the executive even though claims of illegality on grounds of non-compliance with NEPA are pending in the courts. There is, of course, nothing inconsistent with adoption of appropriations and authorizations measures on the pro tanto assumption of validity, while leaving any claim of invalidity to be determined by the courts. That is the effect of the authorization and appropriations measures relating to the Cannikin test. This conclusion is established by the general principles just discussed. Nothing in the legislative history leads to a different result. On the contrary, there is an affirmative indication that at least some of the Congressmen voting for the authorization and appropriations measures specifically contemplated that the claim of illegality remained for resolution by the courts. The legislative history indicates that while the impact statement was used as reference material by both proponents and opponents of the test, Congress did not purport to make a binding determination on the issue whether the statement was in compliance with NEPA."

Based on the analysis in *Committee For Nuclear Responsibility*, the memorandum suggests an argument that:

"\* \* \* Air Midwest should be permitted to retain the subsidy payments which it received up until the time of the *ALPA* decision, since Congress, with specific awareness of the Board's experiment appropriated funds for subsidy payments to be made pending the outcome of the judicial challenge. Nor would the present assertion of this argument by the Board be inconsistent with the failure to interpose it as a defense in the *ALPA* case, since there the issue was the basic legality of the experiment under § 406 and not the question of the Board's pro tanto authorization, by Congressional ratification, to make particular subsidy payments to Air Midwest until such time as its ineligibility to receive such payments might be judicially determined."

However, it also points out that applicability of the "pro tanto ratification" theory here would depend on the existence of an adequate factual background from which to infer congressional ratification of flow-through subsidy payments pending the outcome of *ALPA*.

As in the case of estoppel, "we consider this ratification argument inapplicable, both legally and factually."

Initially, we do not believe that *Committee For Nuclear Responsibility* can be read as supporting any "pro tanto ratification" theory of the type described in the memorandum, i.e., a ratification of illegal payments made pending the determination of illegality. There was nothing illegal about the underlying purpose for which appropriations were to be used in *Committee For Nuclear Responsibility*—conduct of a nuclear test. The test could not actually take place unless and until an adequate NEPA statement was issued. However, presumably some

funds were properly used in preparation for the test prior to issuance of the statement, and, once an adequate statement was issued, funding could proceed. In other words, *Committee For Nuclear Responsibility* has nothing to do with a challenge to the basic use of funds as such nor does the opinion suggest the possibility of a pro tanto ratification in such circumstances.

Turning to the instant case, certainly the CAB appropriations would have been available for flow-through subsidy payments to the extent that such payments were legal under section 406, but the *ALPA* decision holds that the payments were never legal. As noted previously, the court in *ALPA* "vacated" the CAB flow-through subsidy order and remanded the cause to the Board "with instructions to deny the request for subsidy \* \* \*." Clearly, therefore, the flow-through subsidy order was void from the outset and all payments made under it were illegal.

We find absolutely no indication of a congressional intent to ratify illegal flow-through payments made prior to the *ALPA* decision. The appropriations are by their terms available for payments of "so much of the compensation fixed \* \* \* under section 406 \* \* \* as is payable by the Board \* \* \*." As a result of *ALPA*, no flow-through subsidy was payable by the Board at any time. In our view, the existence of appropriations for section 406 payments is an entirely neutral fact here. At most, the Congress left determination of the legality of flow-through payments to the court; and the judicial determination, once made, governed all such payments.

The final point addressed in the memorandum is how, and against whom, collection should be effected, assuming that a claim exists. The memorandum indicates that a claim against Frontier Airlines could be collected by offset against other subsidy payments due to Frontier, but that there is no source for offset of a claim against Air Midwest. However, it concludes that, while Air Midwest is clearly liable for a claim, Frontier probably could not be held liable. This conclusion is based on the structure of the flow-through subsidy arrangement, "particularly as perceived by the court in the *ALPA* case," under which Frontier received payment only in nominal capacity:

"In these circumstances a claim by the United States for money had and received would not be likely to prevail against Frontier which—with the full understanding of the Board, Frontier and Air Midwest—did not receive these moneys for its own use but solely as a nominee for the intended recipient, Air Midwest."

While this analysis appears correct on the surface, we do not think it is quite so clear that Frontier has no liability. As the memorandum points out, at page 2, the claim is "for restitution of money had and received, to prevent unjust enrichment by the recipient of unauthorized payments of public funds." It seems to us that Frontier, rather than Air Midwest, could well be considered the party unjustly enriched. While Air Midwest at least performed services for which the subsidy was paid, there is ample basis to conclude that Frontier was a real beneficiary of the subsidy as well as the nominal payee.

Under the substituted service arrangement, which led to the flow-through subsidy application, suspension of Frontier's obligation to serve the three Kansas cities was contingent upon Air Midwest's service to those cities. Had Air Midwest been unable to continue service without the subsidy, Frontier obligation would have been automatically renewed. Moreover, as the *ALPA* court noted, it is not clear that Frontier could have qualified for a subsidy for this service under the appropriate standard, which requires consideration of the carrier's overall operations and financial condition. The court in *ALPA*

thus concluded that the flow-through subsidy could not be justified as meeting Frontiers' "need" within the meaning of section 406. However, the court does seem to have recognized that Frontier was more than a nominal payee by observing that:

"\* \* \* The Board wishes to pay Frontier not to reimburse it for expenses, but to keep Frontier from incurring expenses at all. \* \* \* 515 F.2d at 1013. (Emphasis added.)"

While we cannot instruct the Board on exactly how to seek collection of the claim we do suggest, in view of the foregoing, that further consideration be given to Frontier's possible liability.

Sincerely yours,

MILTON J. SOCOLAR,  
Acting General Counsel.

CIVIL AERONAUTICS BOARD,  
Washington, D.C., April 20, 1977.

HON. JAMES B. PEARSON,  
Committee on Commerce, Science and Transportation, U.S. Senate, Washington, D.C.

DEAR SENATOR PEARSON: This will respond to your letter of April 20, 1977, requesting the Board's views concerning a proposed amendment to section 406 of the Federal Aviation Act which would provide statutory authority for the Board's flow-through subsidy program conducted from August 1, 1973, through July 31, 1975. The bill would have no prospective effect.

The Board supports the proposed legislation.

Sincerely,

JOHN E. ROBSON,  
Chairman.

OFFICE OF THE SECRETARY OF  
TRANSPORTATION,  
Washington, D.C., May 2, 1977.

HON. HOWARD W. CANNON,  
Chairman, Aviation Subcommittee, Committee on Commerce, Science, and Transportation, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for Department comments on S. 1325, a bill "To amend section 406(a) of the Federal Aviation Act of 1958 (49 U.S.C. 1376) to provide explicit statutory authority for the payment of 'flow-through' subsidy pursuant to an experimental program administered by the Civil Aeronautics Board during the period August 1, 1973 through July 31, 1975."

The bill would permit a specific carrier, Air Midwest, Inc., to keep Federal funds it received from the Civil Aeronautics Board (the Board) "flow-through" subsidy experiment. In 1974, the Board approved an experiment under which Air Midwest, then a commuter air carrier, received Federal air subsidy funds indirectly through Frontier Airlines. The funds were received for serving, pursuant to suspension/substitution arrangements, the cities of Hutchinson, Great Bend, and Dodge City, Kansas, all on Frontier's certificate of public convenience and necessity. Air Midwest, now a certificated carrier, served the cities between August 1, 1973, and July 31, 1975, and received approximately \$240,000. After these moneys had been paid to Air Midwest, the U.S. Court of Appeals for the District of Columbia Circuit held that the Board did not have authority to authorize the "flow-through" subsidy arrangement. Consequently, in November 1976, the General Accounting Office ruled that the Board should seek return of the funds.

The Department poses no objection to the bill.

The Office of Management and Budget has advised that, from the standpoint of the Administration's budget, there is no objection to the submission of this report for the consideration of the Congress.

Sincerely,

LINDA HELLER KAMM,  
General Counsel.

Mr. BAKER. Mr. President, I urge the adoption of this amendment.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The ACTING PRESIDENT pro tempore. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that S. 1325 be indefinitely postponed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### ENVIRONMENTAL RESEARCH AND DEVELOPMENT AUTHORIZATION ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, on the Unanimous Consent Calendar is a measure which has been cleared for action, Calendar No. 162. I ask unanimous consent that the Senate proceed to the consideration of that measure.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1417) to authorize appropriations for environmental research and development activities of the Environmental Protection Agency, and for other purposes.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Environment and Public Works with an amendment in the nature of a substitute.

Mr. BAKER. Mr. President, I understand that these are technical amendments.

I ask the majority leader, is that the proper characterization? They are not substantive amendments, as I understand.

Mr. ROBERT C. BYRD. This is the technical budget amendment.

Mr. BAKER. I thank the majority leader.

#### UP AMENDMENT NO. 344

Mr. ROBERT C. BYRD. Mr. President, I send to the desk a technical amendment and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes an unprinted amendment numbered 344.

On page 13, line 7, after "\$10,000,000" insert "for fiscal year 1978".

On page 13, line 10, after "\$2,000,000" insert "for fiscal year 1978".

On page 13, line 15, after "\$5,000,000" insert "for fiscal year 1978".

On page 13, line 20, after "\$5,000,000" insert "beginning in fiscal year 1978".

The ACTING PRESIDENT pro tempore. Without objection, the amendment is agreed to.

The bill is open to further amendment. If there be no further amendment to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The ACTING PRESIDENT pro tempore. The question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 5101 be discharged from the Committee on Environment and Public Works and that the Senate proceed to its immediate consideration.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 5101) to authorize appropriations for environmental research and development activities of the Environmental Protection Agency, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I move that all after the enacting clause of H.R. 5101 be stricken, that the text of S. 1417 as amended be inserted in lieu thereof, that H.R. 5101 as amended be considered as having been read the third time and passed, that the motion to reconsider be laid on the table, and that S. 1417 be indefinitely postponed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The text of the bill (H.R. 5101), as amended and passed, is as follows:

#### H.R. 5101

That this Act may be cited as the "Environmental Research and Development Authorization Act of 1977".

#### SCIENCE ADVISORY BOARD

Sec. 2. (a) There is established in the Environmental Protection Agency a Science Advisory Board which shall provide such scientific advice as the Administrator of the Environmental Protection Agency requests. In addition, such Board shall advise the Administrator on the adequacy of scientific information supporting proposed regulations published under any Act which the Administrator shall administer.

(b) Such Board shall be composed of a Chairperson and eight members appointed by the Administrator for a term of four years, except that four of those members first appointed shall have terms of two years. Each member of the Board shall be qualified by education, training, and experience to evaluate scientific and technical information on matters referred to the Board under this section.

(c) (1) The Administrator, at the time any

proposed criteria document, standard, limitation, or regulation under the Clean Air Act, the Federal Water Pollution Control Act, the Solid Waste Disposal Act, the Noise Control Act, the Toxic Substances Control Act, the Safe Drinking Water Act, or any other authority of the Administrator, is provided to any other Federal agency for formal review and comment, shall make available to the Board such proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the Environmental Protection Agency, on which such proposed action is based.

(2) The Board shall make available to the administrator, its advice and comments on the adequacy of the scientific and technical basis of the proposed criteria document, standard, limitation, or regulation, together with any pertinent information in the Board's possession.

(d) In preparing such advice and comments, the Board shall avail itself of the technical and scientific capabilities of any Federal agency, including the Environmental Protection Agency and any national environmental laboratories.

(e) The Board is authorized to constitute such member committees and investigative panels as the Administrator and the Board find necessary to carry out this section. Each such member committee or investigative panel shall be chaired by a member of the Board.

(f) (1) The Board shall appoint and prescribe the duties of a Secretary, and such other employees as it deems necessary to exercise and fulfill its powers and responsibilities. The compensation of all employees appointed by the Board shall be fixed in accordance with chapter 51 and subchapter III of chapter 53 of title V of the United States Code.

(2) Members of the Board shall be entitled to receive compensation at a rate to be fixed by the President but not in excess of the maximum rate of pay for grade GS-18, as provided in the General Schedule under section 5332 of title V of the United States Code.

#### LONG-TERM ENVIRONMENTAL RESEARCH

SEC. 3. (a) ESTABLISHMENT.—The Administrator shall establish a separately identified program to conduct continuing and long-term environmental research and development. Unless otherwise specified by law, 15 per centum of any funds appropriated to the Administrator under section 5(a) of this Act or under any other Act shall be allocated for long-term environmental research and development under this section.

(b) NATIONAL ENVIRONMENTAL LABORATORY.—The Administrator, after consultation with the Science Advisory Board, shall submit to the President and the Congress a report concerning the desirability and feasibility of establishing a National Environmental Laboratory, or a system of such laboratories, to assume or supplement the long-term environmental research functions created by subsection (a) of this section. Such report shall be submitted on or before September 30, 1977, and shall include findings and recommendations concerning:

(1) specific types of research to be carried out by such laboratory or laboratories;

(2) the coordination and integration of research to be conducted by such laboratory or laboratories with research conducted by existing Federal or other research facilities;

(3) methods for insuring continuing long-range funding for such laboratory or laboratories; and

(4) other administrative or legislative actions necessary to facilitate the establishment of such laboratory or laboratories.

#### MANAGEMENT OF ENVIRONMENTAL RESEARCH AND DEVELOPMENT FUNDING

SEC. 4. (a) GENERAL.—The Administrator shall assure that the expenditure of any

funds appropriated under this Act or other provision of law for environmental research and development related to regulatory program activities shall be coordinated with and reflect the research needs and priorities of the program offices, as well as the overall research needs and priorities of the agency, including those defined in the five-year research plan.

(b) PROGRAM OFFICES.—For purposes of subsection (a), the appropriate program offices are:

(1) the Office of Air and Waste Management, for air quality activities;

(2) the Office of Water and Hazardous Materials, for water quality activities and water supply activities;

(3) the Office of Pesticides, for environmental effects of pesticides;

(4) the Office of Solid Waste, for solid waste activities;

(5) the Office of Toxic Substances, for toxic substance activities;

(6) the Office of Radiation Programs, for radiation activities; and

(7) the Office of Noise Abatement and Control, for noise activities.

(c) REPORT.—Administrator shall submit to the President and the Congress a report concerning the most appropriate means of assuring, on a continuing basis, that the research efforts of the agency reflect the needs and priorities of the regulatory program offices, while maintaining a high level of scientific quality. Such report shall be submitted on or before September 30, 1977.

#### AUTHORIZATION FOR APPROPRIATIONS

SEC. 5. (a) ENVIRONMENTAL RESEARCH AND DEVELOPMENT.—There are authorized to be appropriated to the Administrator the following amounts for environmental research and development activities for fiscal year 1978:

(1) \$96,000,000 for water quality activities authorized under the Federal Water Pollution Control Act;

(2) \$10,800,000 for activities concerning the environmental effects of pesticides;

(3) \$830,000 for radiation activities; and

(4) \$8,200,000 for toxic substances control activities.

(b) INTERDISCIPLINARY ACTIVITIES.—There are authorized to be appropriated to the Administrator for the Office of Research and Development \$28,000,000 for fiscal year 1978, to be used for interdisciplinary activities. Of this amount, \$4,000,000 shall be made available for long-term research and development.

(c) PROGRAM MANAGEMENT AND SUPPORT.—There are authorized to be appropriated to the Administrator \$19,000,000 for fiscal year 1978 for program management and support related to environmental research and development.

(d) LONG-TERM RESEARCH AND DEVELOPMENT.—In addition to other sums authorized by this section or other provisions of law, there are authorized to be appropriated to the Administrator for long-term research and development in accordance with section 3 of this Act, \$10,000,000 for fiscal year 1978.

(e) TRAINING.—There are authorized to be appropriated to the Administrator through the Office of Research and Development \$2,000,000 for fiscal year 1978, to be available until expended, for training of health scientists, needed for environmental research and development in fields where there are national shortages of trained personnel.

(f) ENVIRONMENTAL EMERGENCIES.—There are authorized to be appropriated to the Administrator \$5,000,000, for fiscal year 1978, to be available until expended, for scientific and technical support and services for response to environmental emergencies.

(g) GULF COAST AIR QUALITY.—There are authorized to be appropriated to the Administrator \$5,000,000 beginning in fiscal year 1978 for a study of air quality in the Gulf Coast region, including analysis of liquid and solid aerosols and other fine particulate matter and the contribution of such substances

to visibility and public health problems in the region.

#### COORDINATION WITH OTHER FEDERAL AGENCIES

SEC. 6. (a) GENERAL.—The Administrator shall coordinate and cooperate with other Federal agencies to minimize unnecessary duplication of environmental research programs, projects, and facilities.

(b) REPORT BY THE COUNCIL ON ENVIRONMENTAL QUALITY.—Not later than January 1, 1978, the Chairman of the Council on Environmental Quality shall submit to the President and the Congress a report identifying the environmental research and development activities of all Federal agencies, together with such recommendations as the Council deems appropriate regarding coordination of environmental research and development among such agencies. In carrying out this subsection, the Council is authorized to request the assistance of personnel from any Federal department, agency, or entity, with the consent of the head of such department, agency, or entity. There are authorized to be appropriated to the Council on Environmental Quality \$500,000 for fiscal year 1978 for this purpose.

#### MINIMIZATION OF PAPERWORK

SEC. 7. It is the national policy that to the maximum extent possible the producers utilized for implementation of this Act shall encourage the drastic minimization of paperwork.

#### QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### TANKER AND VESSEL SAFETY ACT OF 1977

##### UP AMENDMENT NO. 345

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that notwithstanding the third reading and passage yesterday of S. 682, a bill to amend the Ports and Waterways Safety Act of 1972, to establish a program of oil pollution research, and for other purposes, the following amendments be made to the bill which I send to the desk. They are technical amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD) proposes certain technical amendments.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments are as follows:

Page 38, delete lines 11 through 15.

Page 49, line 1, before the words "the Board" insert the word "or".

Page 49, line 4, before the words "the Board" insert the word "or".

Page 50, lines 13 through 14, delete the words "Ports and Waterways Safety Act Amendments of 1977" and insert the words "Tankers and Vessel Safety Act of 1977".

Page 71, line 4, delete "305" and insert in lieu thereof "306".

Amend the title so as to read: "A bill to amend the Ports and Waterways Safety Act of 1972, and for other purposes."

Mr. ROBERT C. BYRD. Mr. President, these amendments are occasioned by the elimination of the second title of the bill, and therefore there is no need in the portions of the bill which remain, to refer to particular titles of the bill.

I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, the amendments are considered en bloc and agreed to en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the unanimous-consent request that the bill be printed for the use of the Senate be vitiated, and I ask unanimous consent that the bill, as amended, be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The text of the bill (S. 682), as amended and passed, is as follows:

S. 682

An act to amend the Ports and Waterways Safety Act of 1972, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Tanker and Vessel Safety Act of 1977".

## SEC. 2. DECLARATION OF POLICY AND DEFINITIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by inserting the following new sections immediately after the first section thereof and immediately before title I:

### "SEC. 2. FINDINGS, PURPOSES, AND POLICY

"(a) FINDINGS.—The Congress finds and declares the following:

"(1) Navigation and vessel safety and protection of the marine environment are matters of major national importance. Increased vessel traffic in the Nation's ports and waterways creates substantial hazard to life, property, and the marine environment.

"(2) International standards for navigation and vessel safety and protection of the marine environment are incomplete and fail to provide adequate protection of the marine environment. The Federal Government should seek to require more stringent standards for any vessel using (A) any port of the United States or (B) operating in the navigable waters of the United States.

"(3) Standards developed through regulations under this Act shall incorporate the best available technology. Such standards shall be required unless clearly shown to create undue economic hardship which is not outweighed by environmental benefits.

"(4) Increased inspection and enforcement efforts by the Federal Government are necessary to reduce the possibility of vessel or cargo loss, or damage to life, property, or the marine environment.

"(b) PURPOSES.—It is therefore the purposes of Congress in this Act—

"(1) to authorize a comprehensive inspection and enforcement program for increased navigation and vessel safety and enhanced protection of the marine environment;

"(2) to direct the Federal Government to establish stringent standards for the design, construction, equipment, maintenance, alteration, repair, operation, and manning of all vessels which (A) use any port of the United States or (B) operate in the navigable waters of the United States; and

"(3) to establish a program to prevent any substandard vessel from (A) using any port of the United States or (B) operating in the navigable waters of the United States.

"(c) POLICY.—It is further declared, to be the policy of the Congress in this Act—

"(1) to authorize no impediment to, or interference with, the right of innocent passage or any recognized legitimate use of the high seas; and

"(2) to support and encourage continued active United States efforts to obtain international agreements concerning navigation and vessel safety and protection of the marine environment.

### "SEC. 3. DEFINITIONS.

"As used in this Act, unless the context otherwise requires:

"(1) The term 'discharge' includes, but is not limited to, any spilling, leaking, pumping, pouring, or emptying, however caused.

"(2) The term 'domestic trade' means trade between ports or places in the United States, its territories or possessions, either directly or via a foreign port, including trade on the navigable waters of the United States.

"(3) The term 'foreign trade' means any trade other than the domestic trade.

"(4) The term 'foreign vessel' or 'vessel of a foreign nation' means any vessel documented or numbered under the laws of any nation other than the United States.

"(5) The term 'hazardous material' means any material or substance which is—

"(A) flammable or combustible;

"(B) designated a hazardous polluting substance under section 311(b) of the Federal Water Pollution Control Act Amendments of 1972 (33 U.S.C. 1321); or

"(C) designated a hazardous material under section 104 of the Hazardous Material Transportation Act (49 U.S.C. 1803).

"(6) The term 'high seas' means all waters beyond the territorial sea of the United States and beyond the territorial sea of any foreign nation, to the extent that such sea is recognized by the United States.

"(7) The term 'marine environment' means the coastal zone, defined in section 304(1) of the Coastal Zone Management Act of 1972 (16 U.S.C. 1453(1)); the seabed, subsoil, natural resources, and waters of the territorial sea of the United States; the waters of the contiguous zone; the waters and fishery resources of any zone over which the United States asserts exclusive fishery management authority; the waters of the high seas; and the seabed and subsoil of the Outer Continental Shelf of the United States.

"(8) The term 'oil' means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil.

"(9) The term 'person' means any individual (whether or not a citizen or national of the United States), or any corporation, partnership, association, or other entity (whether or not organized or existing under the laws of any State), and any Federal, State, local, or foreign government of any entity of any such government.

"(10) The term 'public vessel' means a vessel which—

"(A) is owned, or chartered by demise, and operated by the United States or any foreign government; and

"(B) is not engaged in commercial service.

"(11) The term 'Secretary' means the Secretary of Transportation.

"(12) The term 'State' means each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, and any other commonwealth, territory, or possession of the United States, including the Trust Territory of the Pacific Islands.

"(13) The term 'United States', when used in the geographical context, means all the States thereof.

"(14) The term 'vessel' means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation through or on water.

"(15) The term 'vessel of the United States' means any vessel documented or numbered under the laws of the United States."

## SEC. 3. NAVIGATIONAL AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT.

Title I of the Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221–1227) is amended to read as follows:

### "TITLE I—NAVIGATION AND VESSEL SAFETY AND PROTECTION OF THE MARINE ENVIRONMENT

#### "SEC. 101. VESSEL TRAFFIC SERVICES.

"(a) IN GENERAL.—The Secretary, in accordance with section 103, may, in the ports, harbors, navigable waters of the United States and in any area covered by any international agreement negotiated pursuant to section 303—

"(1) establish, operate, and maintain vessel traffic services;

"(2) require any vessel except self-propelled fishing or recreational vessels under 300 dead weight tons, which operates within waters subject to any vessel traffic service, to utilize or comply with any such service, including requiring the installation and use of any electronic or other device necessary for such utilization or compliance;

"(3) control vessel traffic by—

"(A) specifying times of entry, movement, or departure;

"(B) establishing vessel traffic routing schemes;

"(C) establishing vessel size and speed limitations and vessel operating conditions; and

"(D) restricting operation, in any hazardous area or under hazardous conditions, by any vessel which has particular operating characteristics or capabilities, in a manner deemed necessary for safe operation under the circumstances.

The Secretary shall publish and distribute any relevant information with regard to actions taken under this section to all interested persons, including citizens of any foreign country.

"(b) SPECIAL POWERS.—The Secretary may order any vessel to operate or anchor in a manner he directs if—

"(1) he has reasonable cause to believe such vessel does not comply with any regulation promulgated under this Act or any other applicable law or treaty;

"(2) he determines that such vessel does not satisfy the conditions for port entry set forth in section 106; or

"(3) by reason of weather, visibility, sea conditions, or the condition of such vessel, he is satisfied that such directive is justified in the interest of safety.

"(c) EXTENDED SERVICES.—The Secretary shall, in accordance with section 103, establish advisory vessel traffic services in appropriate areas of the high seas. The Secretary shall take appropriate action to have any routing measures associated with such services adopted by the relevant international organization.

"(d) EXCEPTION.—This title shall not apply to any vessel of any foreign nation (1) that is in transit through the navigable waters of the United States which form a part of any international strait, and (2) that is destined for any port outside the United States, except pursuant to international treaty, convention, or agreement.

#### "SEC. 102. WATERFRONT SAFETY.

"The Secretary, in cooperation with the Secretary of the Army, may take such action as is necessary (1) to prevent damage to, or the destruction or loss of, any dock, bridge, or other structure on or in the navigable waters of the United States, or any structure on land, or any shore area, immediately adjacent to any such waters; and (2) to protect the navigable waters and the resources therein from vessel operation damage, destruction or loss or from structure damage, destruction or loss. Such action may include, but need not be limited to—

"(A) establishing procedures, measures, and standards for the handling, loading, unloading, storage, stowage, and movement on

any such structure (including the emergency removal, control, and disposition) of any oil or hazardous material;

"(B) prescribing minimum safety equipment requirements for any such structure to assure adequate protection from fire, explosion, natural disasters, and other serious accidents or casualties;

"(C) establishing water or waterfront safety zones, or other measures for limited, controlled, or conditional access and activity of vessels when necessary for the protection of any vessel, structure, waters, or shore area; and

"(D) establishing procedures for inspection to assure compliance with minimum safety requirements for such structures.

#### "SEC. 103. CONSIDERATIONS BY SECRETARY.

"The Secretary shall, in carrying out his duties and responsibilities under section 101, take into account all relevant factors concerning navigation and vessel safety and protection of the marine environment, including, but not limited to—

"(1) the scope and degree of the risk or hazard involved;

"(2) vessel traffic characteristics and trends, including traffic volume, the sizes and types of vessels involved, potential interference with the flow of commercial traffic, the presence of any unusual cargoes, and other similar factors;

"(3) port and waterway configurations and variations in local conditions of geography, climate, and other similar factors;

"(4) the proximity of fishing grounds, oil and gas drilling and production operations, or any other potential or actual conflicting activity;

"(5) environmental factors;

"(6) economic impact and effects;

"(7) existing vessel traffic services;

"(8) local practices and customs, including voluntary arrangements and agreements within the maritime community; and

"(9) the Secretary shall establish procedures for consulting with, and receiving and considering the views of, officials of State and local governments, and persons within the maritime community, who are knowledgeable about and experienced in dealing with local problems of vessel traffic.

#### "SEC. 104. PILOTAGE.

"The Secretary may require a pilot on (1) any self-propelled vessel of the United States engaged in the foreign trade, and (2) any foreign vessel, operating in the navigable waters of the United States in areas and under circumstances where a pilot is not otherwise required by State law. Such pilot may be required until the State involved establishes a requirement for a pilot in any such area or under the circumstances involved.

#### "SEC. 105. INVESTIGATORY POWERS.

"(a) SECRETARY.—The Secretary may investigate any incident, accident, or act which—

"(1) results in any loss or destruction of, or damage to, any structure or area referred to in section 102, or any vessel; or

"(2) affects, or may affect, vessel safety or environmental quality in any port, harbor, or the navigable waters of the United States.

"(b) BOARD.—(1) The National Transportation Safety Board may investigate any transportation-related incident, accident, or act which—

"(A) results in any loss or destruction of, or damage to, any structure or area referred to in section 102, or any vessel; or

"(B) affects, or may affect, transportation or vessel safety in any port, harbor, or the navigable waters of the United States.

"(2) Investigations conducted by the Board under this section shall be for the purpose of determining the facts, circumstances, and the cause or probable cause, of any accident, incident, or act investigated under paragraph (1).

"(c) POWERS.—In any such investigation, the Secretary or the Board may issue sub-

penas to require the attendance of any witness and the production of any document or other evidence relating to any such incident, accident, or act. If any person refuses to obey any such subpoena, the Secretary or the Board may request the Attorney General to invoke the aid of the appropriate district court of the United States to compel compliance with such a subpoena. Any of the district courts of the United States may, in the case of such refusal to obey such a subpoena, issue an order requiring compliance with such subpoena, and any failure to obey such order may be punished by the court as a contempt thereof. Witnesses may be paid fees for travel and attendance at such rates not exceeding those allowed in a district court of the United States.

#### "SEC. 106. CONDITIONS FOR ENTRY TO PORTS OF THE UNITED STATES.

"(a) IN GENERAL.—No vessel which carries, or is designed to carry, oil or any hazardous material in bulk as cargo shall operate in the navigable waters of the United States, or transfer cargo in, any port or place under the jurisdiction of the United States if such vessel—

"(1) has a history of accidents, pollution incidents or serious repair problems which, as determined by the Secretary, creates reason to believe that such vessel may (A) be unsafe or (B) create a threat to the marine environment;

"(2) fails to comply with any applicable regulation issued under this Act or any other law or treaty;

"(3) discharges any oil in violation (A) of any treaty to which the United States is a party or (B) of any law of the United States; or

"(4) does not comply with any vessel traffic service established by the Secretary under section 101;

unless and until the owner of such vessel proves, to the satisfaction of the Secretary, that such vessel is (A) no longer unsafe or a threat to the marine environment, or (B) complies with the applicable regulation, law, or treaty, as appropriate.

"(b) EFFECTIVE DATE.—This section shall become effective on the date of enactment of the Tankers and Vessels Safety Act of 1977, except subsection (a) (3) shall not become effective until January 1, 1979, unless before such date, the Secretary, by regulation, provides that such subsection will become effective before January 1, 1979, in which case, such subsection (a) (3) shall become effective on the date provided by the Secretary.

#### "SEC. 107. MARINE SAFETY INFORMATION SYSTEM.

"(a) IN GENERAL.—The Secretary shall establish a marine safety information system. Such system shall contain information with regard to any vessel (which carries, or is designed to carry, oil or any hazardous material in bulk as cargo) which enters, or transfers cargo in, any port or place under the jurisdiction of the United States. Such information shall include, but need not be limited to—

"(1) the names of any person with an ownership interest in any such vessel, in accordance with regulations prescribed by the Secretary;

"(2) financial responsibility information, if required for any vessel under section 311 (p) of the Federal Water Pollution Control Act Amendments of 1972 (33 U.S.C. 1321);

"(3) registration information, including all changes in the name of any such vessel;

"(4) the history of accidents or serious repair problems of any such vessel;

"(5) a record of all inspections or examinations of any such vessel conducted under section 202; and

"(6) any other data or information which the Secretary deems appropriate to carry out the purposes of this Act.

"(b) INTERAGENCY COOPERATION.—The head of each department, agency, or other instru-

mentality of the Federal Government shall, upon written request from the Secretary, furnish any available data or information which the Secretary deems necessary to carry out the provisions of this Act.

#### "SEC. 108. LIGHTERING.

"(a) IN GENERAL.—After June 30, 1978, no vessel may unload any cargo of oil or hazardous material at any port of the United States if such cargo has been transferred from another vessel on the high seas or in the navigable waters of the United States, unless such transfer was conducted in accordance with regulations prescribed by the Secretary pursuant to subsection (b).

"(b) REGULATIONS.—The Secretary shall, by June 30, 1978, prescribe, and may amend or repeal, regulations for transferring, in whole or in part, any cargo of oil or hazardous material on the high seas or in the navigable waters of the United States. Regulations prescribed by the Secretary under this subsection shall include, but need not be limited to, standards for—

"(1) minimum safe operating conditions, including sea state, wave height, weather, proximity to channels or shipping lanes, and other similar factors;

"(2) prevention of oil spills;

"(3) equipment for responding to any oil spill;

"(4) prevention of any unreasonable interference with international navigation or other reasonable uses of the high seas, as defined by treaty, convention, or customary international law; and

"(5) other matters which the Secretary deems necessary to promote navigation and vessel safety and protect the marine environment.

"(c) PROHIBITION.—No transfer of cargo at sea may be authorized under this section if such transfer is engaged in for the purpose of aiding the avoidance of standards relating to the design, construction, equipment, maintenance, alteration, repair, operation or manning of vessels promulgated under this Act or section 417a of the Revised Statutes of the United States.

#### "SEC. 109. APPLICATION OF TITLE.

"This title shall not apply to the Panama Canal. The authority granted the Secretary under this title may be delegated to the Saint Lawrence Seaway Development Corporation to the extent the Secretary determines such delegation is necessary for the proper operation of the Seaway."

#### SEC. 4. VESSELS CARRYING CERTAIN CARGOES IN BULK.

Section 417a of the Revised Statutes of the United States (46 U.S.C. 391a) is amended to read as follows:

"SEC. 417a. (1) APPLICABILITY.—Except as provided in subsections (2) and (3), this section shall apply to any vessel—

"(A) regardless of tonnage, size, or manner of propulsion;

"(B) whether self-propelled or not;

"(C) whether carrying freight or passengers for hire or not;

"(D) which is documented or numbered under the laws of the United States, which operates in the navigable waters of the United States, or which transfers cargo in any port or place under the jurisdiction of the United States; and

"(E) which carries, or is designed to carry, oil or any hazardous material in bulk as cargo.

Any such vessel shall be deemed to be a steam vessel for the purposes of title 52 of the Revised Statutes of the United States and shall be subject to the provisions thereof.

"(2) EXCEPTIONS.—This section shall not apply to—

"(A) any public vessel;

"(B) any vessel of not more than 500 gross tons documented in the service of oil exploitation which are not tank vessels and which would be subject to this section only because of the transfer of fuel from fuel

supply tanks of such vessel to offshore drilling or production facilities; or

"(C) any vessel of any foreign nation (i) that is in transit in navigable waters of the United States which form a part of any international strait and (ii) that is destined for any port or place outside the United States.

"(3) FISHING VESSELS.—Notwithstanding the other provisions of this section, cannery tenders, fishing tenders, and fishing vessels of not more than 500 gross tons used in the salmon or crab fisheries of the State of Oregon, Washington, or Alaska, when engaged exclusively in the fishing industry, shall be allowed to have on board inflammable or combustible cargo in bulk to the extent and upon conditions as may be required by regulations promulgated by the Secretary.

"(4) STANDARD-SETTING AUTHORITY.—(A) The Secretary shall issue, and may from time to time amend or repeal, regulations containing standards for the design, construction, alteration, repair, operation, manning, or maintenance of vessels to which this section applies, as may be necessary for increased navigation and vessel safety and enhanced protection of the marine environment. The standards issued by the Secretary under this subsection shall be in addition to any other standards, promulgated under other provisions of law, that may apply to such vessels. The standards issued by the Secretary under this subsection shall include, but need not be limited to, standards relating to—

"(i) superstructures, hulls, cargo holds or tanks, fittings, equipment, appliances, propulsion machinery, auxiliary machinery, and boilers;

"(ii) the handling or stowage of cargo, the manner of such handling or stowage of cargo, and the machinery and appliances used in such handling or stowage;

"(iii) equipment and appliances for life saving, fire protection, and prevention and mitigation of damage to the marine environment;

"(iv) requirements for the manning of such vessels and the duties and qualifications of the officers and crew, in accordance with subsection (7);

"(v) improvements in vessel maneuvering and stopping ability and other features which reduce the possibility of collision, grounding, or other accidents;

"(vi) the reduction of cargo loss in the event of a collision, grounding, or other accident;

"(vii) the reduction or elimination of discharges during ballasting, deballasting, cargo handling, or other such activity; and

"(viii) the reduction or elimination of discharges aboard vessels during cargo handling, tank cleaning, ballasting, deballasting, and other such activity.

"(B) In establishing standards under paragraph (A), the Secretary shall give due consideration to the kinds and grades of cargo permitted to be on board any such vessel.

"(5) MINIMUM STANDARDS.—In addition to any standards prescribed by the Secretary pursuant to subsection (4), or pursuant to any other law, any self-propelled vessel in excess of 20,000 dead weight tons which carries, or is designed to carry, oil in bulk, as cargo shall—

"(A) not later than June 30, 1979, be equipped with—

"(i) a dual radar system, one with short-range and one with long-range capabilities and each with true-north features;

"(ii) a collision avoidance system;

"(iii) a long-range navigation aid;

"(iv) adequate communications equipment;

"(v) a fathometer;

"(vi) a gyrocompass;

"(vii) up-to-date charts; and

"(B) not later than June 30, 1983, be equipped with—

"(i) a segregated ballast system;

"(ii) a transponder, or such other appropriate position-fixing equipment as the Secretary determines to be appropriate;

"(iii) a gas inerting system; and

"(iv) for any vessel the construction of which is contracted for, or actually commenced, after January 1, 1980, a double bottom (fitted throughout the cargo length of such vessel).

The Secretary may prescribe standards to substitute for any standard listed above if such substitute standard provides, as appropriate, equivalent or improved navigation accuracy, vessel safety, or environmental protection. Such equivalency or improvement shall be determined by the Secretary on the record after a hearing in accordance with section 553 of title 5, United States Code.

"(6) EVIDENCE OF COMPLIANCE.—(A) No vessel of the United States to which this section applies, shall have on board oil or hazardous materials in bulk as cargo until (i) it has been issued a certificate of inspection issued under the provisions of title 52 of the Revised Statutes of the United States, and (ii) such certificate has been endorsed to indicate that the vessel is in compliance with the rules and regulations established under this section. If any vessel is found not to be in compliance, the Secretary shall notify the owner of the vessel and indicate how the vessel may be brought into compliance.

"(B) No foreign vessel to which this section applies, shall operate in the navigable waters of the United States or transfer cargo in any port or place under the jurisdiction of the United States unless such vessel has been issued a certificate of compliance by the Secretary. The Secretary shall not issue such certificate until the vessel has been examined by the Secretary and found to be in compliance with the provisions of this section and the rules and regulations promulgated hereunder. If any such vessel is found not to be in compliance, the Secretary shall notify the owner of the vessel and indicate how the vessel may be brought into compliance. The Secretary may allow provisional entry for the purposes of conducting the examination.

"(C) The Secretary may accept, as evidence of compliance with this section (in whole or in part), a certificate, endorsement, or document issued by any foreign nation pursuant to any treaty, convention, or other international agreement to which the United States is a party.

"(D) No vessel may carry any kind or grade of cargo unless its certificate of compliance is endorsed to allow such carriage. No such endorsement may allow such carriage. No such endorsement may allow any vessel to carry any material prohibited by section 4472(3) of this title.

"(E) A certificate of compliance, or an endorsement, issued under this subsection shall be valid for a period not to exceed 1 year, as specified by the Secretary, and may be renewed. The Secretary may issue a temporary certificate of compliance, or a temporary endorsement, under this subsection in appropriate circumstances; except that such temporary certificate or endorsement shall be valid for not more than 30 days. Any certificate or endorsement shall be revoked or suspended if the Secretary finds that the vessel involved no longer complies with the conditions upon which such certificate or endorsement was issued.

"(7) RETROFIT OF CERTAIN MANDATORY REQUIREMENTS.—(A) On and after July 1, 1980, the Secretary shall not issue a certificate of compliance to any vessel to which subsection (5) applies, unless—

"(i) such vessel has a segregated ballast system (as required under subsection (5) (B) (i)) and a gas inerting system (as required under subsection (5) (B) (ii)); or

"(ii) the Secretary determines that tanks in such vessel have been designated for, and are used only for carrying ballast water

alone; and the owner of such vessel has paid a retrofit incentive fee levied on such vessel by the Secretary.

"(B) The Secretary shall determine the amount of the retrofit incentive fee applicable to any vessel (according to classes of vessels based on size, displacement, and configuration) by determining for vessels in each such class the estimated annualized cost of compliance with the requirements of subsections (5) (B) (i) and (5) (B) (ii). The Secretary shall estimate the annualized cost of compliance, based on a retrofit technique that he determines would enable typical vessels in each class to comply with such requirements, taking into account planning and design costs, equipment costs (including purchase, transportation, installation, and start-up or testing), operating and maintenance costs, cost of capital, inflation, taxes, and other relevant costs. The Secretary shall propose retrofit incentive fees for each class of vessels not later than July 1, 1979, and shall adopt fees, in accordance with section 553 of title 5, United States Code, not later than January 1, 1980. The Secretary may by regulation adjust the fee for a class of vessels if he determines that the fee varies significantly from the actual or probable annualized costs of compliance with such requirements, and he may provide for the automatic adjustment of a fee based on the performance of a suitable index or indices. The Secretary may, in his discretion, waive the fee if he determines that a good faith effort has been made to comply with the provisions of this paragraph.

"(C) Any interested person may seek judicial review of the action taken by the Secretary under paragraph (B) to establish retrofit incentive fees by filing a petition therefor in the Court of Appeals of the United States for the circuit in which such person resides. Such petition shall be filed within 90 days after the date of such action, or, if such petition is based solely on grounds which arose after such ninetieth day, any time thereafter. Action by the Secretary with respect to which review could have been obtained under this paragraph shall not be subject to judicial review in any civil or criminal proceeding relating to enforcement or collection of the fee established by such action. In any action brought under this paragraph, no court shall grant any stay, injunction or other similar relief before final judgment by such court in such action.

"(D) The Secretary shall prescribe, and may from time to time modify or repeal, such regulations as he deems necessary to carry out this subsection. Such regulations may include, but need not be limited to, requirements respecting—

"(i) submission of technical and cost information relating to compliance with the requirements of subsections (5) (B) (i) and (5) (B) (ii);

"(ii) marking areas designated as ballast areas for easy identification; and

"(iii) reporting of information relating to the designation of areas as ballast areas and the installation of segregated ballast and gas inerting systems.

"(E) Any retrofit incentive fee which is not paid in a timely basis shall be subject to a late payment penalty in an amount determined by the Secretary, but which shall not be more than 20 percent of the amount of such fee unpaid.

"(F) If any person or vessel fails to comply with any provision of this subsection, in addition to denying certification (as provided in paragraph (A) of this subsection), assessing a late payment penalty (as provided in paragraph (E) of this subsection), and assessing a civil penalty (as provided in section 203(a) of the Ports and Waterways Safety Act of 1972), the Secretary may pursue any other appropriate remedy authorized by any other applicable provision of law.

"(8) MANNING AND TRAINING REQUIREMENTS.—The Secretary shall prescribe stand-

ards for the manning of any vessel subject to the provisions of this section and the duties, qualifications, and training of the officers and crew thereof, including, but not limited to, standards relating to—

"(A) instruction in vessel and cargo handling and vessel navigation under normal operating conditions in coastal and confined waters and on the high seas;

"(B) instruction in vessel and cargo handling and vessel navigation in emergency situations and under accident or potential accident conditions;

"(C) license qualifications by specific class and size of vessels;

"(D) measurement of qualifications for licenses by use of simulators developed for the training of marine-oriented skills;

"(E) health and physical fitness criteria for all personnel;

"(F) periodic retraining, and special training for upgrading positions, changing vessel class or size, or assuming new responsibilities;

"(G) determination of licenses, conditions of licensing, and period of licensing by reference to experience, amount of training completed, and regular performance testing; and

"(H) recordation of safety and pollution control violations on licenses.

"(9) MODIFICATIONS.—The Secretary may modify any regulation or standard prescribed under this section to conform to an international treaty, convention, agreement, or an amendment thereto, which is ratified by the United States."

#### SEC. 5. IMPROVED PILOTAGE STANDARDS.

(a) Section 4442 of the Revised Statutes of the United States (46 U.S.C. 214) is amended to read as follows:

"SEC. 4442. (a) The Commandant of the United States Coast Guard shall, in accordance with subsection (b) of this section, establish eligibility requirements for the issuance of a license to pilot any steam vessel.

"(b) No person may be issued a license to pilot any steam vessel unless he—

"(1) is at least 21 years of age;

"(2) is of sound health and has no physical limitations which would hinder or prevent the performance of a pilot's duties;

"(3) agrees to have a thorough physical examination each year while holding a pilot's license;

"(4) demonstrates, to the Commandant's satisfaction, that he possesses the requisite general knowledge and skill to hold a pilot's license;

"(5) maintains adequate knowledge of the waters to be navigated as a pilot;

"(6) has sufficient experience, as determined by the Commandant, to evidence his ability to handle any vessel of the type and size which he may be endorsed to pilot; and

"(7) meets any other requirement which the Commandant considers reasonable and necessary.

"(c) No license to pilot any steam vessel shall be valid for a term longer than 5 years. Upon expiration of any such license, the holder may reapply for an additional term and may be reissued a license if he meets the requirements specified under subsection (b) of this section.

"(d) The Commandant may revoke or suspend any license to pilot any steam vessel, after notice and an opportunity for a hearing, upon satisfactory evidence of—

"(1) negligence;

"(2) unskillfulness;

"(3) failure to adhere to any requirements for a license;

"(4) willful violation of title 52 of the Revised Statutes; or

"(5) other just cause related to the performance of pilot duties, including conduct when acting solely under the authority of a State pilot license.

"(e) The Secretary shall develop and shall seek adoption by the States of uniform, minimum standards relating to the regula-

tion of pilotage at least equal to those required of federally licensed pilots."

(b) Section 304(a) (9) (B) of the Independent Safety Board Act of 1974 (49 U.S.C. 1903 (a) (9) (B)) is hereby amended by replacing the final period with a semicolon, and adding: "or section 4442 of the Revised Statutes of the United States (46 U.S.C. 214)."

#### SEC. 6. INSPECTION AND ENFORCEMENT.

Title II of the Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended to read as follows:

##### "TITLE II—INSPECTION AND ENFORCEMENT

###### "SEC. 201. PROHIBITED ACTS.

"It is unlawful—

"(1) for any person—

"(A) to violate any provision of this Act or any regulation issued pursuant to this Act or section 4417a of the Revised Statutes of the United States;

"(B) to refuse to permit any officer authorized by the Secretary to enforce the provisions of this Act or section 4417a of the Revised Statutes of the United States to board any vessel, or enter any shore area, place, or premises, under such person's control for purposes of inspection pursuant to this Act or section 4417a of the Revised Statutes of the United States; or

"(C) to refuse to obey any lawful directive issued pursuant to this Act or section 4417a of the Revised Statutes of the United States; and

"(2) for any vessel subject to the provisions of this Act or section 4417a of the Revised Statutes of the United States—

"(A) to operate in the navigable waters of the United States while not in compliance with any provision of this Act or any regulation issued pursuant to this Act or section 4417a of the Revised States of the United States; or

"(B) to fail to comply with any lawful directive issued pursuant to this Act or section 4417a of the Revised Statutes of the United States.

###### "SEC. 202. INSPECTION.

"(a) NATIONAL PROGRAM.—(1) The Secretary shall establish a national program for inspection of any vessel subject to section 4417a of the Revised Statutes of the United States. Each such vessel shall be inspected or examined at least once each year. Any such vessel over 10 years in age shall undergo a special and detailed inspection of structural strength and hull integrity, as specified by the Secretary.

"(2) An inspection or examination may be conducted by any officer authorized by the Secretary. If any such officer is not reasonably available, the Secretary may contract for the conduct of inspections or examinations in the United States and in foreign countries. Under such contract, an inspector may be authorized to act on behalf of the Secretary; except that no such inspector may issue a certificate of inspection or compliance, but may issue a temporary such certificate.

"(3) The Secretary shall prescribe by regulation reasonable fees for any inspection or examination conducted pursuant to this section based on the cost incurred. The owner of any vessel inspected or examined by the Secretary or his designee shall be liable for such fee. Amounts received as fees under this paragraph shall be credited to the appropriations bearing the cost of such inspection or examination.

"(b) VESSEL DOCUMENTS.—Any vessel subject to the provisions of this section shall have on board such documents as the Secretary deems necessary for inspection or enforcement under this Act, including, but not limited to, documents indicating—

"(1) the kind, grade, and approximate quantities of any cargo on board such vessel;

"(2) the shipper and consignee of such cargo;

"(3) the points of origin and destination of such vessel; and

"(4) the name of an agent in the United States authorized to accept legal process.

"(c) RECIPROCITY.—The Secretary may accept, as evidence of compliance with the provisions of this Act, any certificate or document issued by any foreign nation pursuant to any treaty, convention, or other international agreement to which the United States is a party.

###### "SEC. 203. PENALTIES.

"(a) CIVIL PENALTY.—(1) Any person who is found by the Secretary, after notice and an opportunity for a hearing to have committed an act prohibited by this Act or by section 4417a of the Revised Statutes of the United States shall be liable to the United States for a civil penalty, not to exceed \$25,000 for each violation. Each day of a continuing violation shall constitute a separate offense. The amount of such civil penalty shall be assessed by the Secretary, or his designee, by written notice. In determining the amount of such penalty, the Secretary shall take into account the nature, circumstances, extent, and gravity of the prohibited acts committed and, with respect to the violator, the degree of culpability any history of prior offenses, ability to pay, and such other matters as justice may require.

"(2) The Secretary may compromise, modify, or remit, with or without conditions, any civil penalty which is subject to imposition or which has been imposed under this subsection.

"(3) If any person fails to pay an assessment of a civil penalty after it has become final, the Secretary may refer the matter to the Attorney General of the United States, for collection in any appropriate district court of the United States.

"(b) CRIMINAL PENALTY.—(1) A person is guilty of an offense if—

"(A) in reckless disregard of the risk that his conduct would cause damage to property, he commits any act prohibited by subparagraphs 202(1) (A) or 202(2) (A); or

"(B) he willfully and knowingly commits any other act prohibited by section 202.

"(2) Any offense described in paragraph (1) is punishable by a fine of not more than \$50,000, or imprisonment for not more than 6 months, or both; except that if in the commission of any such offense the person uses a dangerous weapon, engages in conduct that causes bodily injury to any officer authorized to enforce the provisions of this Act, or places any such officer in fear of imminent bodily injury, the offense is punishable by a fine of not more than \$100,000, or imprisonment for not more than 10 years, or both.

"(3) As used in this subsection, a person's state of mind is 'reckless' with respect to:

"(A) an existing circumstance if he is aware of a risk that the circumstance exists but disregards the risk; and

"(B) a result of his conduct if he is aware of a risk that the result will occur but disregards the risk.

The risk must be of such a nature and degree that its disregard constitutes a gross deviation from the standard of care that a reasonable person would exercise in such a situation.

"(c) FEDERAL JURISDICTION.—There is Federal jurisdiction over any offense described in this section.

"(d) IN REM LIABILITY.—Any vessel subject to the provisions of this Act and found to be in violation of this Act shall be liable in rem and may be proceeded against in the United States district court for any district in which such vessel may be found.

"(e) INJUNCTION.—The United States district courts shall have jurisdiction to restrain violations of this Act or regulations issued hereunder, for cause shown."

## SEC. 7. MISCELLANEOUS PROVISIONS.

The Ports and Waterways Safety Act of 1972 (33 U.S.C. 1221 et seq.) is amended by adding the following new title at the end thereof:

## "TITLE III—MISCELLANEOUS PROVISIONS

## "SEC. 301. REGULATIONS.

"The Secretary is authorized to issue, amend, or repeal regulations to carry out the purposes and provisions of this Act, in accordance with the provisions of section 553 of title 5, United States Code. In preparing such regulations, the Secretary shall provide an opportunity for full consultation and cooperation with all other interested Federal agencies and departments (in particular the Environmental Protection Agency, the Department of Commerce, and the Department of State), and the States, and for consideration of views presented by any members of the general public, including representatives of the maritime community, environmental groups, consumer organizations, and persons concerned with navigation and vessel safety and protection of the marine environment.

## "SEC. 302. REPORT.

"Within 6 months after the end of each fiscal year, the Secretary shall submit to the Congress (1) a report on the administration of this Act during the preceding fiscal year; (2) a summary of inspection and enforcement activities during the preceding fiscal year; and (3) recommendations to the Congress for any additional legislative authority necessary to improve navigation and vessel safety and protection of the marine environment.

## "SEC. 303. INTERNATIONAL AGREEMENTS.

"(a) TRANSMITTAL OF REGULATIONS.—The Secretary and the Secretary of State shall undertake international negotiations, utilizing the appropriate international bodies or forums, to achieve acceptance of regulations promulgated or required under this Act as international standards.

"(b) NEGOTIATIONS.—The Secretary of State may—

"(1) enter into negotiations, in cooperation with the Secretary, with Canada and Mexico, and any other neighboring nation, to establish compatible vessel standards and vessel traffic services in appropriate areas and circumstances;

"(2) enter into negotiations through appropriate international bodies—

"(A) to establish mandatory vessel traffic services in appropriate areas of the high seas, and

"(B) to prohibit any discharge of oil in appropriate areas of the high seas;

"(3) enter into negotiations, in cooperation with the Secretary, with Canada and Mexico, and any other neighboring nation to establish, operate, and maintain international vessel traffic services in appropriate areas; and

"(4) enter into such other negotiations as may be necessary and appropriate to further the purposes, policy, and provisions of this Act.

"(c) OPERATIONS.—The Secretary, pursuant to any agreement negotiated under subsection (b), may—

"(1) require vessels to utilize or to comply with the vessel traffic service, including the carrying or installation of electronic or other devices necessary for the use of the service; and

"(2) waive, by order or regulation, the application of any law or regulation concerning the design, construction, manning, and equipment standards of vessels operating in waters over which the United States exercises jurisdiction if such vessel is not en route to or from a United States port, and if vessels en route to or from ports of the United States are accorded equivalent waivers of laws and regulations of the foreign nation.

## "SEC. 304. AUTHORIZATION OF APPROPRIATIONS

"Beginning October 1, 1977, there are authorized to be appropriated to the Secretary, for the purpose of carrying out the provisions of this Act, such sums as may be necessary."

## SEC. 8. SAVINGS CLAUSE.

Regulations previously issued under statutory provisions repealed, modified, or amended by this Act shall continue in effect as though promulgated under the authority of section 4417a of the Revised Statutes of the United States (46 U.S.C. 391a) or the Ports and Waterways Safety Act of 1972 as amended by this Act, as the case may be, until expressly abrogated, modified, or amended by the Secretary. Any proceeding under section 4417a of the Revised Statutes of the United States or the Ports and Waterways Safety Act of 1972 for a violation which occurred before the effective date of this Act may be initiated or continued to conclusion as though such section or Act had not been amended thereby.

## SEC. 9. STUDY OF MONITORING SYSTEMS.

(a) CONTENT.—The Secretary of Transportation, in consultation with the Administrator, the Secretary of Commerce, and other appropriate agencies or instrumentalities of the Federal Government, shall evaluate various shore-station monitoring systems of vessels, including fishing vessels, within the fishery conservation zone as defined in section 3(8) of the Fishery Conservation and Management Act of 1976. Each system examined shall be capable of reporting vessel position, identification, course, and speed using either a land, sea, or space monitoring technique.

(b) REPORT.—Within 2 years after the date of the enactment of this Act, the Secretary shall report his findings to Congress. This report shall describe the capabilities, limitations, and cost effectiveness of each monitoring system examined from the standpoint of both the Federal Government and any vessel owners who would be affected by the imposition of each approach. The report shall also include the Secretary's recommendation for a single, comprehensive, cost effective shore station monitoring system within the fishery conservation zone.

## SEC. 10. AUTHORIZATION FOR APPROPRIATIONS.

There are authorized to be appropriated to the Secretary for the purposes of section 9, not to exceed \$500,000 for the fiscal year ending September 30, 1978, and not to exceed \$500,000 for the fiscal year ending September 30, 1979.

## ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Marks, one of his secretaries.

## EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are

printed at the end of the Senate proceedings.)

## MESSAGE FROM THE HOUSE

At 10:03 a.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that the House agrees to the amendments of the Senate to the bill (H.R. 4390) to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes.

The message also announced that the Speaker has appointed Mr. Tsongas, Mr. RAHALL, and Mr. RUPPE as additional managers on the part of the House of the conference on the disagreeing votes of the two Houses on the bill (H.R. 2) to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes.

## ENROLLED BILL SIGNED

The message further announced that the Speaker has signed the enrolled bill (H.R. 6752) to amend the Water Resources Planning Act (79 Stat. 244), as amended.

The enrolled bill was subsequently signed by the Acting President pro tempore (Mr. MATSUNAGA).

## COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1400. A letter from the Chief Commissioner of the U.S. Court of Claims transmitting, pursuant to law, a report concerning the allowance of attorney expense claims in proceedings conducted pursuant to the Alaska Native Claims Settlement Act in docket No. F-22, Lester W. Miller, Jr., and docket No. F-26, Jackson & Fenton, Barry W. Jackson and Thomas E. Fenton (with an accompanying report); to the Committee on Appropriations.

EC-1401. A letter from the Deputy Assistant Secretary of Defense, Installations and Housing, transmitting, pursuant to law, notice of three construction projects to be undertaken by the Navy and Marine Corps Reserve (with an accompanying report); to the Committee on Armed Services.

EC-1402. A letter from the Secretary of the Interior transmitting a draft of proposed legislation to amend the Wild and Scenic Rivers Act by designating certain rivers for study as potential additions to the National Wild and Scenic Rivers System (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-1403. A letter from the Secretary of the Interior transmitting a draft of proposed legislation to amend the Wild and Scenic Rivers Act by increasing the appropriation authorizations therein, and for other purposes (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-1404. A letter from the Secretary of the Interior transmitting a draft of proposed legislation to establish National Historic Trails as a new category of trails with-

in the National Trails System (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-1405. A letter from the Acting Administrator of the Energy Research and Development Administration transmitting, pursuant to law, proposed legislation authorizing appropriations for the fiscal year 1978 for ERDA (with accompanying papers); to the Committee on Energy and Natural Resources.

EC-1406. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, a report entitled "If Defense and Civil Agencies Work More Closely Together, More Efficient Search/Rescue and Coastal Law Enforcement Could Follow" (LCD-76-456) (with an accompanying report); to the Committee on Governmental Affairs.

EC-1407. A letter from the Director of the Federal Mediation and Conciliation Service transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

EC-1408. A letter from the Director of the Administrative Office of the U.S. Courts transmitting a draft of proposed legislation to make technical and administrative amendments in the Federal Magistrates System (with accompanying papers); to the Committee on the Judiciary.

EC-1409. A letter from the Director of the Administrative Office of the U.S. Courts transmitting a draft of proposed legislation to enlarge and amend the trial jurisdiction of U.S. magistrates in misdemeanor cases (with accompanying papers); to the Committee on the Judiciary.

EC-1410. A letter from the Executive Secretary of the Administrative Conference of the United States transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

EC-1411. A letter from the Acting General Counsel of the Council on Wage and Price Stability transmitting, pursuant to law, a report on the administration of the Freedom of Information Act for the calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

#### PRESENTATION OF A PETITION— POM-210

Mr. BAKER. Mr. President, I have received a petition from my constituent, Mr. William A. Roscoe of Erwin, Tenn., who requests that the Congress repeal the withholding tax law. Mr. Roscoe has asked that I present his petition to the Senate, and I now submit it for appropriate referral.

The ACTING PRESIDENT pro tempore. The petition will be received and referred to the Committee on Finance.

#### REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. EAGLETON, from the Committee on Governmental Affairs:

S. Res. 180. An original resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1061. Referred to the Committee on the Budget.

By Mr. ABOUREZK, from the Select Committee on Indian Affairs:

With an amendment:

S. 103. A bill to convey to the Ely Indian Colony the beneficial interest in certain Federal land (Rept. No. 95-233).

By Mr. STENNIS, from the Committee on Armed Services:

With an amendment:

S. 1372. A bill to amend titles 10 and 5, United States Code, to disestablish one of the positions of Deputy Secretary of Defense and establish an Under Secretary of Defense for Policy, and for other purposes (Rept. No. 95-234).

By Mr. ROBERT C. BYRD (for Mr. BURDICK):

Conference report on S. 521, to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks (Rept. No. 95-235).

By Mr. ABOUREZK, from the Select Committee on Indian Affairs:

With an amendment:

S. 1377. A bill to extend the time for commencing actions on behalf of an Indian tribe, band, or group (Rept. No. 95-236).

S. 667. A bill to declare certain federally owned land held in trust by the United States for the Te-Moak Bands of Western Shoshone Indians (Rept. No. 95-237).

#### EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. SPARKMAN, from the Committee on Foreign Relations:

Patricia M. Derian, of Mississippi, to be a Coordinator for Human Rights and Humanitarian Affairs.

Robert Harry Nooter, of Missouri, to be Deputy Administrator, Agency for International Development.

Arthur A. Hartman, of New Jersey, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to France.

Malcolm Toon, of Maryland, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Union of Soviet Socialist Republics.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

#### POLITICAL CONTRIBUTIONS STATEMENT

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Arthur A. Hartman.

Post: Paris, France.

Contributions, amount, date, and donee:

1. Self, none.

2. Spouse, none.

3. Children and spouses names, none.

4. Parents names, Richard V. Ford, \$125.00 in 1976 to his local Congressional candidate in Haddonfield, New Jersey.

5. Grandparents names, none.

6. Brothers and spouses names, none.

7. Sisters and spouses names, none.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

Contributions are to be reported for the period beginning on the first day of the fourth calendar year preceding the calendar year of the nomination and ending on the date of the nomination.

Nominee: Toon, Malcolm.

Post, Moscow.

Nominated, April 25, 1977.

Contributions, amount, date, and donee:

1. Self, none.

2. Spouse, none.

3. Children and spouses names, Barbara Jane Toon, Alan Malcolm Toon, Nancy Margaret Toon, all unmarried.

4. Parents names, George Toon, Northboro, Mass.

5. Grandparents names, deceased.

6. Brothers and spouses names, George and Lorraine Toon, Jr.—none, Spalding and Anne Toon—contributions to local, regional and national candidate, but not exceeding \$100.

7. Sisters and spouses names, Constance and GE Williams, none.

I have listed above the names of each member of my immediate family including their spouses. I have asked each of these persons to inform me of the pertinent contributions made by them. To the best of my knowledge, the information contained in this report is complete and accurate.

#### INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. ROBERT C. BYRD (for Mr. MAGNUSON):

S. 1617. A bill to establish a program of ocean pollution research and monitoring, and for other purposes; to the Committee on Environment and Public Works for not to exceed 30 days, by unanimous consent.

By Mr. ANDERSON:

S. 1618. A bill for the relief of Sang Yun Yoon; to the Committee on the Judiciary.

By Mr. DOMENICI:

S. 1619. A bill for the relief of Nikolaos Athanassios Stergiou; to the Committee on the Judiciary.

By Mr. HUMPHREY (for himself and Mr. STENNIS):

S. 1620. A bill to authorize and direct the Secretary of Agriculture to carry out forest and rangeland renewable resources research, to provide cooperative forest resources assistance to States and others, and for other purposes; to the Committee on Agriculture, Nutrition, and Research.

By Mr. MELCHER:

S. 1621. A bill for the relief of Josefina Gonzales Batoo; to the Committee on the Judiciary.

By Mr. HATFIELD (for himself and Mr. PACKWOOD) (by request):

S. 1622. A bill establishing the Bull Run Watershed management unit, Mount Hood National Forest, specifying authorized uses therein, authorizing the Secretary of Agriculture and the city of Portland jointly and equally to manage the unit, and for other purposes; to the Committee on Energy and Natural Resources.

#### STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. ROBERT C. BYRD (for Mr. MAGNUSON):

S. 1617. A bill to establish a program of ocean pollution research and monitoring, and for other purposes; to the Committee on Environment and Public Works for not to exceed 30 days, by unanimous consent.

Mr. ROBERT C. BYRD. Mr. President on behalf of the distinguished Senator from Washington (Mr. MAGNUSON), I introduce a bill concerning ocean pollution research and monitoring. I ask unanimous consent that the bill be referred to the Committee on Environment and Public Works for not to exceed 30 days and that, upon the expiration of that time

period, the bill be placed on the Senate calendar.

This referral arrangement comports with an agreement struck between the members of the Senate Committees on Commerce, Science, and Transportation and Environment and Public Works. This bill is, in essence, title II of S. 682, which was reported by the Committee on Commerce, Science, and Transportation. S. 682 was passed by the Senate on May 26. Since title II contained matters which fall within the jurisdiction of both committees, as defined in Senate Resolution 4, this procedure provides the Environment and Public Works an opportunity to express its views with regard to this legislation before the Senate acts on it.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ADDITIONAL COSPONSORS

S. 1420

At the request of Mr. McGOVERN, the Senator from New Jersey (Mr. CASE), the Senator from North Dakota (Mr. BURDICK), and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of S. 1420.

#### SENATE CONCURRENT RESOLUTION 26

At the request of Mr. CRANSTON, the Senator from New Mexico (Mr. DOMENICI) was added as a cosponsor of Senate Concurrent Resolution 26.

#### SENATE RESOLUTION 180—ORIGINAL RESOLUTION REPORTED RELATING TO THE CONSIDERATION OF S. 1061

(Referred to the Committee on the Budget.)

Mr. EAGLETON, from the Committee on Governmental Affairs, reported the following original resolution:

#### SENATE RESOLUTION 180

*Resolved*, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1061. Such waiver is necessary because the Committee wished to consider this measure, which authorizes new borrowing authority for the District of Columbia government, in conjunction with other measures affecting the operations of the District of Columbia but which did not involve the authorization of new budget authority and therefore were not required to be reported by May 15. Hearings were held relatively late because of the reorganization of the Senate at the beginning of the 95th Congress.

#### SENATE RESOLUTION 181—SUBMISSION OF A RESOLUTION RELATING TO PROFESSIONAL FOOTBALL GAMES

(Referred to the Committee on Commerce, Science, and Transportation.)

Mr. ANDERSON submitted the following resolution:

S. RES. 181

*Resolved*, That it is the sense of the Senate, that—

(1) any attempt by a private promoter to acquire the exclusive rights to National Football League playoff and championship games for the purpose of providing private viewing

in theaters raises the critical issue of the public's right to view events held in publicly owned stadiums;

(2) stadiums in which these games are held are usually built and supported with the assistance of governments and tax dollars, and half-time entertainment is often provided by publicly supported institutions;

(3) two of every five Americans viewed the 1977 Super Bowl game from their homes, and most of them would be unable to attend such games even if enough tickets were available and few could afford the extremely high price of a ticket to view championship games in private theaters; and

(4) since the public has long supported professional football teams, the owners of football teams, as responsible businessmen, should take the public interest into account, and National Football League teams should be responsive to the American public by assuring that playoff and championship games continue to be available to the general public on television.

Mr. ANDERSON. Mr. President, I am deeply concerned by the recent offer of a west coast promoter to buy rights to the National Football League—NFL—playoff and championship games for exclusive closed-circuit theater entertainment. If agreed to by the NFL, this system of theater-only viewing of football games would deny tens of millions of Americans the opportunity to watch televised football games in their homes.

According to a recent report by the New York Times, a Mr. Bill Sargent has offered the NFL \$400 million for exclusive broadcasting rights to the next five seasons' championship games. Under the Sargent proposal, any person interested in watching the yearly NFL playoff games or the Super Bowl would have to purchase a ticket for a closed-circuit showing of a game in a theater. Current home television viewing of these games would end.

The NFL at present receives \$60 million from all of the networks for broadcasting rights to the NFL's entire season. The average business enterprise could not afford to easily reject a proposal several times more lucrative than the present arrangement. The National Football League and its member teams, however, are not average businesses. While football teams are privately owned businesses, the majority of the stadiums in which the teams play are funded, partially or completely, by local taxpayers.

Football teams enjoy overwhelming support from their respective cities. It is the support of these cities, from both financial backers and fans, that increases a team's publicity—and its gate receipts.

On June 15, owners of the 28 teams in the NFL will meet to discuss the Sargent offer. In my judgment it would be a terrible disservice to the American public if the league adopts the proposal and blacks out millions of our citizens who regularly watch these televised sports events.

Sporting events, including professional sports, have become a national pastime. In 1975 while only 81,000 people were able to personally attend the Super Bowl game at Tulane Stadium in New Orleans, the television audience was 71.3 million. The audiences at theaters around the Nation under the Sargent proposal would

certainly be greater than the attendance at Tulane Stadium. However, that number would be many millions less than the 71 million who in 1975 were able to view the game for free from the privacy and comfort of their own living room.

In 1977, the Super Bowl television audience grew to 81.9 million. Even if as many as 1 million persons purchased the \$100 tickets envisioned by Mr. Sargent to watch the game in theaters, over 80 million fans who had previously been able to watch the Super Bowl would be shut out.

Mr. President, the Federal Government normally should not tell privately owned athletic teams who they may or may not sell their broadcasting rights to. In this case, however, much more than money is involved. An acceptance of the Sargent offer would be a slap in the face to the millions of faithful football fans across this Nation. Many of these fans are senior citizens or others who are confined to their homes. Many others are in hospitals or nursing homes or live many miles away from possible theater locations.

Football is looked upon as a great American sport. I would hate to see it become a sport only available to those with \$100 in their pocket and able to go to a closed-circuit theater showing of an NFL playoff or championship game.

Mr. President, I am today introducing Senate Resolution 181, intended to express the sense of the Senate with respect to the public's right to view National Football League championship games. My resolution indicates to the NFL the Senate's opposition to the Sargent scheme. I urge all of my colleagues to support this resolution.

#### AMENDMENTS SUBMITTED FOR PRINTING

##### CLEAN AIR ACT—S. 252

AMENDMENT NO. 354

(Ordered to be printed and to lie on the table.)

Mr. METZENBAUM submitted an amendment intended to be proposed by him to the bill (S. 252) to amend the Clean Air Act, as amended.

AMENDMENT NO. 355

(Ordered to be printed and to lie on the table.)

Mr. HART. Mr. President, today Senator CRANSTON and I are offering an amendment which would modify the automobile emission standards provided for in S. 252, the Clean Air Act Amendments of 1977. I ask unanimous consent that the text of this amendment, along with a brief analysis be printed in the Record following my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HART. Mr. President, the automobile emission section in S. 252 has serious implications for the protection of public health. It would again delay the implementation of pollution controls on auto emissions and weaken the ultimate standards to allow more nitrogen oxide pollution from cars.

Supporters of this section, as well as supporters of industry efforts to further

weaken automobile emission standards, argue that stringent control of automobile pollution is not needed to protect public health. They also argue that the technology to reduce automobile pollution is expensive and involves a substantial decrease in fuel economy.

These arguments are not supported by the facts. Stringent control of auto pollution is needed to reduce the incidence of respiratory disease and to reduce the presence of cancer-causing substances in the air. Furthermore, the necessary technology is available. And, this technology can be employed at reasonable cost with no loss of fuel economy.

S. 252 allows for a 1-year extension of emission standards. We support this provision. Without this relief, auto manufacturers might have to shut down in 1978.

We do not support, however, the committee's stand on long-term nitrogen emissions. The committee proposes to relax the 0.4 gram per mile NO<sub>x</sub> standard to 1 gram per mile, allowing 250 percent more pollution from cars. This is neither necessary nor safe.

The amendment we are introducing today strengthens S. 252's ultimate nitrogen oxide standard by requiring a 0.4 gram per mile NO<sub>x</sub> standard in 1983, together with a flexible financial incentive program of noncompliance penalties and rebates.

The administration has endorsed the approach taken in this amendment, but the President's recommendation to Congress provides that the adoption of this approach be left up to administration discretion. Our amendment differs from the administration's recommendation only in that the 0.4 gram per mile standard and penalty-rebate program would be established by congressional mandate and not be left to the discretion of the Administrator of the Environmental Protection Agency.

Mr. President, Mr. Douglas Costle of the Environmental Protection Agency testified before the Senate Committee on Environment and Public Works that current evidence points toward the need for a 0.4 gram per mile NO<sub>x</sub> standard. We agree with Mr. Costle and ask that our colleagues act on that evidence when the Senate takes up S. 252 by rejecting efforts to weaken the committee will and by supporting our amendment.

The amendment is as follows:

On page 94, line 17, insert the following: strike "model year 1980 and thereafter" and insert in lieu thereof "model years 1980, 1981, and 1982".

On page 94, after line 20, insert the following new section and renumber accordingly:

"Sec. 22. (a) Section 202(b) (2) of the Clean Air Act, as amended, is amended by striking 'paragraph (1)' and inserting 'paragraphs (1) and (6)' in lieu thereof.

"(b) Section 202(b) of the Clean Air Act, as amended, is amended by adding the following paragraph:

"(6) (A) In addition to the requirements of paragraph (1) of this subsection, the regulations under subsection (a) applicable to emissions of oxides of nitrogen from light duty vehicles and engines manufactured during or after model year 1983 shall contain standards which provide that such emissions shall not exceed 0.4 gram per vehicle mile.

"(B) (1) Subject to subparagraph (C) of this paragraph, the Administrator may issue

a certificate of conformity with the regulations prescribed under this section, in accordance with section 206 of this Act, for a new motor vehicle or motor vehicle engine which does not attain the standards specified in subparagraph (A) of this paragraph. In any such case, notwithstanding the provisions of section 205, the manufacturer of such motor vehicles or motor vehicle engines shall be subject to a penalty, to be paid for each motor vehicle or motor vehicle engine before such vehicle or engine can be sold, offered for sale, introduced, or delivered for introduction, into commerce, or imported into the United States, as covered by a certificate of conformity issued under this subparagraph and in compliance with section 203(a) of this Act.

"(II) Such penalty shall be established by the Administrator at the time such certificate is issued, and based upon his determination of the difference between the cost of attaining the standards specified for the appropriate model year in subparagraph (A) of this paragraph and the cost of attaining the standards specified for such model year in subparagraph (C) of this paragraph, plus 2 per centum of the retail price of each vehicle subject to the penalty. Such penalty shall be established at a rate per vehicle or engine, and the Administrator may reduce such penalty in an amount proportional to any decreases in the levels to which any such vehicle or engine is certified below those required under subparagraph (C) of this paragraph.

"(III) In the case of any new motor vehicle or motor vehicle engine which is certified at levels below those required under subparagraph (A) of this paragraph or those required under paragraph (1) of this subsection, the Administrator is authorized to provide a rebate or incentive payment to the ultimate purchasers of such vehicles or engines. Such rebate or incentive payment shall be established by the Administrator at a rate proportional to the decreases in levels of emissions below those required under subparagraph (C) of this paragraph and on a basis equivalent to the amount per-unit of emissions of the penalty established under clause (II) of this subparagraph. Such rebate or incentive payment may be paid to the manufacturer to be credited against the purchase price of such vehicle or engine or directly to a purchaser of a vehicle or engine. Payments of such rebates or incentive payments shall be paid out of the proceeds of penalties collected under this subparagraph or out of funds appropriated for such purpose.

"(C) Notwithstanding the provisions of subparagraph (B) of this paragraph, and consistent with the requirements of paragraph (1) of this subsection, the regulations under subsection (a) applicable to emissions of oxides of nitrogen from light duty vehicles and engines manufactured during or after model year 1983 shall contain standards which provide that in no event shall such emissions exceed 1.0 gram per vehicle mile.

"(D) A certificate of conformity issued under section 206 in accordance with the provisions of this paragraph, and the particular levels of emissions to which a new motor vehicle or motor vehicle engine is certified under the authority of this paragraph, shall be deemed to be the certificate, and the regulations on which such vehicle or engine is certified to conform, for all purposes under this title."

"(c) Section 210 of the Clean Air Act, as amended, is amended by adding '(a)' after 'Sec. 210.' and by adding the following subsection:

"(b) The Administrator is authorized to make grants to States and political subdivisions thereof for the purpose of implementing transportation control plans approved or promulgated under section 110 of

this Act. The total amount of such grants in any year shall not exceed the amount collected in penalties under section 202(b) (6) of this Act, less the total amount of any rebates or incentive payments made under such provision. There are authorized to be appropriated such sums as may be necessary to carry out this subsection, not to exceed the amount specified in the preceding sentence."

"(d) Section 209(c) of the Clean Air Act as amended is amended by striking the period and adding a comma and the following: 'or to establish penalties in excess of those established under subsection 202(b) (6)'."

"(e) The Administrator of the Environmental Protection Agency shall conduct a study of the public health implications of attaining an emission standard on oxides of nitrogen from light duty vehicles of 0.4 gram per vehicle mile, and the cost and technological capability of attaining such standard. The Administrator shall submit a report of such study to the Congress, together with recommendations for implementing the noncompliance penalty and rebate program established under section 202(b) (6) of the Clean Air Act and identifying the penalties and rebates to be paid, not later than July 1, 1980."

#### PROVISION OF NO<sub>x</sub> AMENDMENT

The tighter NO<sub>x</sub> standard and penalty-rebate program would begin in 1983, giving auto manufacturers and the Environmental Protection Agency time to prepare. In 1983, the Federal emission standard for nitrogen oxide (NO<sub>x</sub>) would be 4 grams per mile.

Manufacturers would be encouraged but not required to make and sell cars meeting the 4 gram NO<sub>x</sub> standard. Cars that do not meet the standard would be subject to a noncompliance penalty. Cars that do meet it would not be subject to a penalty. Consumers who purchase cars that are cleaner than the HC, CO, or NO<sub>x</sub> standard would be eligible for a rebate.

To ensure the protection of public health, cars would not be allowed to be sold if emissions of NO<sub>x</sub> exceed a maximum pollution level of 1 gram per mile (the ultimate level adopted by the Senate Committee on Environment and Public Works). While cars could pollute up to that level and be subject to the noncompliance penalty, cars producing more than 1 gram per mile would not be allowed.

The penalties and rebates are to be calculated by the EPA and would be based on the cost of complying with the 4 gram standard plus 2 percent of the retail price of the automobile.

The EPA Administrator would be authorized to distribute any net revenue generated by the penalty and rebate program to state and local governments to help them implement transportation control programs.

The Environmental Protection Agency is required to study the health impact, cost and technological feasibility of a 4 gram per mile NO<sub>x</sub> standard. The EPA must report to Congress by 1980 the findings of that study and recommendations for implementing the noncompliance penalty and rebate program.

#### AUTHORIZATION OF APPROPRIATIONS FOR TERRITORIES

##### AMENDMENT NO. 356

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. ABOUREZK. Mr. President, on behalf of the distinguished Senator from Louisiana (Mr. JOHNSTON), I submit for printing an amendment intended to be proposed to H.R. 6550, legislation to authorize certain appropriations for the

territories of the United States, to amend certain acts relating thereto, and for other purposes. The amendment which is being proposed would permit the government of Guam to issue bonds to cover the costs of the purchase of a new hospital to replace the present structure which is inadequate to properly minister to the needs of Guam and which has been severely damaged by the recent Super-typhoon Pamela which devastated the island. The amendment is submitted at the request of Congressman WON PAT in order that the Department of the Interior will have a chance to review its provisions prior to the hearings on H.R. 6550 which the Committee on Energy and Natural Resources will hold shortly after the Memorial Day recess.

#### NOTICES OF HEARINGS

##### FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT

Mr. LEAHY. Mr. President, I wish to announce that hearings will be held by the Subcommittee on Agricultural Research and General Legislation of the Committee on Agriculture, Nutrition, and Forestry on June 8 and 9, pertaining to legislation to extend the authorization of the Federal Insecticide, Fungicide, and Rodenticide Act.

The hearings will start at 8 and conclude at 10:30 a.m. on both days with outside witnesses invited to participate. Witnesses are asked to submit their testimony 3 days in advance, and they will be limited to a 10-minute presentation summarizing their position. The full text of their statement will be made a part of the RECORD.

##### FINANCE SUBCOMMITTEE ON TAXATION AND DEBT MANAGEMENT GENERALLY SETS HEARING ON TAX ASPECTS OF BLACK LUNG LEGISLATION (S. 1538)

Mr. HARRY F. BYRD, JR. Mr. President, the Subcommittee on Taxation and Debt Management of the Finance Committee will hold a hearing on the tax aspects of S. 1538, a bill modifying the black lung benefits program and its financing.

The hearing will be held at 9 a.m. on Friday, June 17, 1977, in room 2221, Dirksen Senate Office Building.

The present black lung benefits program provides benefits for miners disabled by pneumoconiosis and for their dependents and survivors. This program is administered by the Department of Labor and the Department of Health, Education, and Welfare. Under current law, black lung benefits are financed partly by charges against coal mine operators—to the extent that individual liability can be established—and partly by the appropriations from Federal general revenues where no individual operator is determined to be liable or where the liable operator is no longer in business.

The bill, S. 1538, would make a number of changes in eligibility standards under the black lung benefits program and would also significantly modify the method for financing the program. The bill establishes a Federal trust fund for this program and provides for financing benefits which cannot be charged to in-

dividual operators by levying an excise tax on the mining of coal. The proceeds of the coal tax would be held in a new trust fund established by the bill.

Since this funding mechanism in the bill as reported by the Senate Committee on Human Resources is an exercise of the Federal taxing power, S. 1538 has been referred to the Committee on Finance for consideration of these tax aspects of the legislation.

Witnesses desiring to testify during this hearing must submit their requests to Michael Stern, staff director, Committee on Finance, 2227 Dirksen Senate Office Building, Washington, D.C. 20510, not later than 12 noon, Friday, June 10, 1977. Witnesses will be notified as soon as possible after this cutoff date as to whether they are scheduled to appear. If for some reason the witness is unable to appear as scheduled, he may file a written statement for the record of the hearing in lieu of a personal appearance.

All witnesses who have a common position or with the same general interest are urged to consolidate their testimony and designate a single spokesman to present their common viewpoint orally to the committee. This procedure will enable the committee to receive a wider expression of views than it might otherwise obtain. All witnesses should exert a maximum effort, taking into account the limited advance notice, to consolidate and coordinate their statements.

#### ADDITIONAL STATEMENTS

##### NEEDED MAIL SERVICE

Mr. McGOVERN. Mr. President, we appear to be in a situation where the U.S. Postal Service, without any input from the Congress, is moving to implement certain portions of the report of the Commission on Postal Service that will reduce mail service, eliminate much after hours processing of mail, and ultimately lead to a 16-cent first-class postage.

This arbitrary procedure on the part of the present managers underscores, again, the need for Congress to take direct and immediate action to bring postal operations back under some kind of public control.

The case for congressional oversight on postal matters together with an adequate public investment to insure that vital mail service continues was made recently in an editorial in the Sioux Falls Argus-Leader, the largest daily paper in South Dakota. I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sioux Falls (S. Dak.) Argus-Leader, May 19, 1977]

##### CONGRESS SHOULD ACT TO CHANGE POSTAL SERVICE'S STATUS

The 95th Congress has one crucial question on its hands affecting all Americans. That is the problem of the U.S. Postal Service and what to do about it.

How Congress reacts to that problem may determine whether the promised renaissance of the national legislature in holding a tighter rein on the presidency and bureauc-

racy is meaningful or just some more hot air.

Postmaster General Benjamin Ballar says the Postal Service will start work within 60 days to boost first-class postage rates as much as three cents while cutting deliveries to five days a week. He promised corresponding increases for other classes of mail. He said the higher rates would probably take effect in the second quarter of 1978 and the delivery cuts in the first months of the year. Ballar has also said the agency will resume closing post offices in areas where it feels service will not be hurt.

Thus, citizens of this country have been promised more deterioration in postal service, and higher rates. Only the government can handle the business of moving the mails for all Americans. Ballar's program would be a disaster for rural America. It would also be harmful to urban areas.

U.S. Rep. Charles Wilson, D-Calif., and U.S. Rep. James M. Hanley, D-N.Y., who are chairmen of two postal subcommittees, are drafting legislation to make major changes in the law that created the independent postal service in 1970. Wilson wants to abolish the Postal Board of Governors and make the postmaster general a presidential appointee again. He wants to give Congress power over rate increases. However, neither he nor Hanley has proposed new subsidies. Presumably, they're waiting for an indication from the White House. A new subsidy could cause problems for President Jimmy Carter's promise for a balanced budget by 1981.

It is odd that Congress can appropriate money for aid to foreign countries and other projects, but can't vote money to provide this country with an efficient, on-time postal service. A five-day schedule is not sufficient for most Americans, and will only result in further clogging of the mails on weekends.

The preceding Congress ducked the postal question by referring it to a study panel. The time for further discussion has long since passed. The members of this Congress will have to stand up on the postal service question. Their constituents will count how they stand.

Congress should do two things: (1) abolish the postal service as an independent agency and return it to cabinet status, with appointment of the postmaster general by the President and (2) subsidize the mails to the extent necessary to ensure an efficient, on-time service.

##### NATIONAL SMALL BUSINESS WEEK; BILLY CARTER SPEAKS TO THE REAL ISSUES

Mr. HATCH. Mr. President, as a newly elected representative of the people, I find the thinking in Washington very different from the way people think back home. In Washington, we see all sorts of problems that require the Government to do more. Washington sees the solution in bigger government.

Back home the people see all sorts of problems that require the Government to do less. They see the solution in getting Government out of their pocketbooks and off their backs. I doubt that very many of us were sent to Washington by constituents who want us to spend more, inflate more, tax more, and regulate more—certainly not a majority of us were sent here to spend, inflate, tax, and regulate. Nevertheless, that is Washington's way. The process gets pasted over with intellectualisms, but Washington likes problems that require Washington solutions.

The contributions of small business to

American society are of such a nature that it is difficult to imagine our society without these contributions. What is clear is that if Washington solutions continue, we would not have any small business. The famous brother of an American President has expressed himself in no uncertain terms about Washington solutions. I want to pass on to my colleagues the perspective from back home.

#### Billy Carter on the minimum wage:

Every time the minimum wages goes up, we have to lay off a few more people. I'd rather give these people jobs, but I have to look at costs. A lot of people simply aren't worth the minimum wage.

#### Billy Carter on welfare:

In Sumter County we have as many people administering welfare and related programs as there are in the rest of the county government. They raise hell if people getting welfare go to work. The trouble with the welfare program is that the more people they have on the payroll the more they hire, and the more they hire the more the director gets.

#### Billy Carter on unemployment abuse:

When unemployment was at the highest, I needed a man to run a peanut drying machine. It would have paid \$250 to \$300 a week. I couldn't hire a single person. They would rather draw \$90 in unemployment benefits every week and pick up food stamps at the same time.

#### Billy Carter on Federal regulation:

The major complaint I have is that 90 per cent of the folks they send here to inspect us don't know anything. All of the employees working around the gin had to wear earplugs. So I had to do the ginning. You see, as the owner, there was no way I could be made to wear earplugs. There are about 80 electric motors on a cotton gin, and the only way you can tell when there is a problem is to hear it. You can't convince OSHA about things like that.

#### Billy Carter on filling out forms:

Some of these quarterly, semi-annual and annual reports are a three and four-day job. Some are almost impossible to fill out. When they do these agricultural censuses, you can almost say the hell with everything else for almost a month because it's going to tie you up that long.

Mr. President, that is the way Washington solutions look to the people who have to live with them.

If we consider the tax burden that small business bears in addition to the high costs of all of these Washington solutions, it is hard to imagine anything more that the Federal Government could do to destroy small businesses. Judging from all of this, I would conclude that the Government is opposed to small business. After all, the fewer the number of firms and the more concentrated they are, the easier it is for Washington to run them. It is too hard to keep up with large numbers of small firms spread all over the country. It would be easier for Washington to plan the economy if there were not any small businesses.

I believe that something must be done about the cost burden and the tax burden that Washington imposes on small business. I do not believe anything could do more good for America than to greatly reduce the tax rates on small business and, in addition, to treat the cost of com-

plying with Federal regulations as a tax credit.

The Government is not content to raise the costs of small businesses and to take away half of their profits. It also makes it difficult for them to get started and to grow by making it difficult for them to attract risk capital. I believe that the \$500,000 regulation A exemption should be expanded to \$3 million and that we must stop the multiplicity of the business-destroying 10b-5 security "fraud" suits in small business matters by making them more difficult to bring except in cases of actual common law fraud. Let the Government get the welfare fraud in its own house in order before it throws any more stones at private businessmen.

Mr. President, I ask unanimous consent to have the Washington Post's article about Billy Carter's thoughts as a businessman printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 22, 1977]

#### THOUGHTS OF CHAIRMAN BILLY

*William Alton Carter III, of Plains, Ga., is known nationally as a beer-drinking gas station owner and archetypical Good Ol' Boy. But the President's brother is also the operator of the Carter family's peanut warehouse business, and it is in the role of a Concerned Businessman that he recently appeared in the pages of the May issue of the U.S. Chamber of Commerce magazine, Nation's Business. Here are some samples of the views of Billy Carter, businessman:*

#### ON THE MINIMUM WAGE:

"Every time the minimum wage goes up, we have to lay off a few more people. I'd rather give these people jobs, but I have to look at costs.

"Actually, I would much prefer some kind of system where we could hire people at a lower figure and gradually raise them to the minimum wage. That way, we would have a chance to see if they can do the work, or even show up for work, before giving them a regular job.

"I'm really on the spot. Every time the minimum wage goes up, I have to raise my other employees. It's not fair to have your better employees making the same as those who don't put as much into their work.

"You know, I shouldn't be talking like this. Every time I say anything about the minimum wage, I get more hell. Especially from the unions. But I'm going to say it again. A lot of people simply aren't worth the minimum wage."

#### ON WELFARE:

"We have a lot of trouble in this area with welfare. In Sumter County we have as many people administering welfare and related programs as there are in the rest of the county government. Five years ago we had eight people handling welfare; now there are close to 60. They raise hell if people getting welfare go to work.

"Here's a good example of what I mean. I had a man working for me—a big, strapping fellow—who had some kind of chronic leg ulcer. He went to a new doctor who told him he had to stay off the leg for a couple of weeks. They put him on welfare. At that time the work was seasonal, and he was making as much on welfare as by working. That was 15 years ago.

"I see him every once in a while walking down the street. On Saturday afternoon he's drunk and raising hell. I finally complained to the welfare people, and you know what they told me? 'Well, we check him every Thursday afternoon, and he's always there

sitting in a chair with his foot propped up.' I got mad. I said, 'Damn it, if I was drawing what you're paying him, I know damned well that one afternoon a week I'd sit there and watch television with my foot propped up when you come in.'

"The trouble with the welfare program is that the more people they have on the payroll the more they hire, and the more they hire the more the director gets."

#### ON UNEMPLOYMENT ABUSE:

"Our unemployment compensation system is so much abused. I guess we brought 50 people here from the state employment office this year when the rush season was on. I know of only one man who took a job and stayed on for a few weeks. The only thing most of them want to do is come out here and get us to sign the slip showing they applied for a job. Then they go back home and continue drawing benefits. We operate 60 and 70 hours a week in the rush season, so we had the jobs if people really wanted to work.

"When unemployment was at the highest, I needed a man to run a peanut drying machine. It would have paid \$250 to \$300 a week. I couldn't hire a single person. They would rather draw \$90 in unemployment benefits every week and pick up food stamps at the same time."

#### ON FEDERAL REGULATION:

"I'm not going to deny that some of those OSHA [Occupational Safety and Health Administration] and EPA [Environmental Protection Agency] regulations are good. They are. But I'm talking about all the ridiculous regulations we have to put up with.

"The major complaint I have is that 90 per cent of the folks they send here to inspect us don't know anything. We have some kids right out of college who don't know a damned thing. I could tell them this [pointing to his bookcase] is a peanut sheller, and they wouldn't know the difference. The trouble is that they don't educate these inspectors before they send them out.

"All of the employees working around the gin had to wear earplugs [as a result of one OSHA directive involving a cotton gin in the Carter warehouse]. So I had to do the ginning. You see, as the owner, there was no way I could be made to wear earplugs. There are about 80 electric motors on a cotton gin, and the only way you can tell when there is a problem is to hear it. You can't convince OSHA about things like that.

"I had to put in an expensive wall across the whole new shelling plant to cut down the noise. That wall is completely worthless for anything else.

"Now they're after me to put a couch in the women's washroom in case someone gets sick. Hell, I don't have room to put in any couches. So I told 'em to go to hell, and I haven't done it yet."

#### ON FILLING OUT FORMS:

"Some of these quarterly, semi-annual and annual reports are a three and four-day job. Some are almost impossible to fill out. I had some forms that had to be filled out by the 15th of the month, so for five days before the 15th we didn't do a thing but government paperwork.

"Take these crop reports and the agricultural census. A lot of them have to do with my finances. I don't like that information going through 40 government hands. Me, I'm kind of peculiar. I have six or seven bank accounts because I don't like everybody to know how much money I have in the bank.

"When they do these agricultural censuses, you can almost say the hell with everything else for almost a month because it's going to tie you up that long. I have to help the farmers who deal with us. The only place they can get the information to fill out their own census forms is right here. So we have to go through all our back records to satisfy

the government. And you can't get out of it because it's required by law."

# YOUTH UNEMPLOYMENT: A GROWING WORLDWIDE PROBLEM

Mr. HUMPHREY. Mr. President, when the President signs the Youth Employment and Training Act which we passed yesterday, we should recognize that the actions we have taken will not only have a major impact on our own Nation's youth, but will also provide an excellent example to other industrial nations around the world on ways to alleviate their own growing problem of high youth unemployment.

As I pointed out in a speech on the Senate floor on February 11, high youth unemployment is no longer just an American problem but one which plagues many other countries. In Canada, Australia, Japan, France, Germany, Great Britain, and Italy—the few countries for which we have reliable data—the youth unemployment rate has risen dramatically during the 1970's.

This problem has only recently received the concern and public attention it needs. Youth unemployment was a major topic of discussion at the London economic summit conference. This aspect of the London conference was reported by Paul Lewis in the May 8 New York Times, and by David Pauly in the May 23 Newsweek. In addition, the International Labor Organization featured an article on "Why It's Hard to Cut Youth Unemployment," in their first 1977 issue of the ILO Information magazine. These are excellent articles that point out the need for creating youth jobs as well as the need for the United States to cooperate with other industrial countries to develop effective and long-lasting solutions to the problem of high youth unemployment.

To begin this process of cooperation, I and 18 of my colleagues in the Senate sent President Carter a letter on February 28 urging him to call a Conference on Youth Unemployment among the member nations of the Organization for Economic Cooperation and Development, OECD. This suggestion received a very favorable response from the administration, with the State and Labor Departments working together now to develop a formal proposal for an OECD Conference on Youth Unemployment. I will report further on this later.

But, for now, I want to point out to my colleagues that the Youth Employment and Training Act will be a very important first step in the development of an effective youth employment and training program in this country. It will help hundreds of thousands of unemployed disadvantaged youths in our own country, and it will show the world's leaders that intelligent and effective steps can be taken in their own countries to relieve their own problems of youth unemployment.

Mr. President, I ask unanimous consent that the articles from the New York Times, Newsweek, and ILO Information be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CXXIII—1075—Part 14

[From Newsweek magazine, May 23, 1977]

## EUROPE: IDLE YOUTH

In Paris, 21-year-old Catherine Jousse finally gave up hope that her college degree would help her launch a career. Lowering her sights, she borrowed money from her grandmother and learned to be a cosmetician. The result: she still can't find a job. In Messina, Sicily, the city council has hired two law-school graduates—as refuse collectors. And in Rome, a former sociology student hops on a bus during rush hour every morning—but not for the usual reason. "I've got no work to go to, but it makes me feel better just to pretend I do," he says.

So it goes throughout Western Europe. The youth-unemployment disease that has plagued the United States since the early 1960s has crossed the Atlantic. More than 2 million people under 25 may be out of work in the nine Common Market countries, and at the economic summit in London this month, youth unemployment emerged as one of the West's thorniest issues. The danger is that disillusioned and sidelined youths may take a sharp political turn to the left. "We just can't afford to have young people out on the street at the mercy of radical ratchets," says West German Chancellor Helmut Schmidt.

## WISHFUL THINKING

At the summit, leaders of the seven industrialized countries pledged in their joint communique to "promote the training of young people in order to build a skilled and flexible labor force so that they can be ready to take advantage of the upturn in economic activity as it develops." But unfortunately for the politicians, the problem is a structural one that won't disappear even with a sharp economic recovery. Postwar babies are coming into Western European job markets in far greater numbers than can be absorbed. Common Market officials estimate that their member nations would have to produce new jobs at an annual rate of 7 to 8 per cent in the next three years in order to absorb the new workers expected in that period—but this seems improbable, given the relatively modest growth rates anticipated in these countries.

Some young people can't find work because they lack training, but just as many find themselves overqualified for the jobs that are available. Italy and Britain in particular are turning out university graduates in fields already saturated with job applicants. Many of them end up as shop assistants or waiters, but others refuse to take work they consider beneath them. One foundry in Modena, for instance, has to employ 192 Turks because no Italians will do the work.

Young Europeans who fail to find work upon leaving school often develop attitudes and life-styles that make them unfit for work when jobs do develop. And, as in the U.S., those who are passed over tend to stay that way; employers generally look for recruits among those leaving school—not those already on the breadline. Worried governments are revving up their subsidy machines to encourage the hiring and training of youth. France plans to spend \$660 million this year, and President Valéry Giscard d'Estaing has ordered his ministers to the provinces for the summer—not for a vacation, but to see to it that the job-creating measures are implemented. But the training schemes work only so long as the demand for labor increases—and like most of Europe, France's recovery remains sluggish. The result: French employers frequently release trainees once the subsidies run out.

[From the New York Times]

## JOBLESSNESS AMONG YOUNG KEY TOPIC IN LONDON TALKS (By Paul Lewis)

LONDON, May 7.—The leaders of the major industrial democracies expressed growing

concern today at their economic conference about the continuing high level of unemployment, especially among young people. About 40 percent of the 15 million unemployed in the 24 Western member countries of the Organisation of Economic Cooperation and Development are under 25 years old.

According to conference sources, this pre-occupation is likely to emerge as a major theme and will be stressed in a communique expected tomorrow.

The fact that so many young people are finding jobs hard to get means that the leaders assembled here may soon find themselves facing an alienated generation lacking a secure position in their societies.

As a result, the issue is being taken equally seriously by countries like West Germany, which still want the West to give priority to the fighting of inflation, and by those like Britain, which hope to see faster economic growth.

"The problem of unemployment, and especially of unemployment among the young, is a basic challenge to our whole economic system," President Valéry Giscard d'Estaing of France told the meeting this morning. Spokesmen said the sentiment was echoed around the table.

Officials say the conference is likely to produce agreement on a common strategy of simultaneously fighting both unemployment and inflation.

The seeds of this compromise were sown at a finance ministers' meeting last weekend at Versailles in France.

There, the weaker countries like Britain, Italy and France agreed to stop urging West Germany, the United States and Japan to expand their economies. In return, the stronger countries promised that they would not let their concern over inflation plunge the world into another recession with soaring unemployment. Some experts say the stronger countries will have to adopt more expansionary policies if they are to keep this promise.

## GROWTH RATES LIKELY TO BE SHORT

The British Chancellor of the Exchequer, Denis Healey, said today at a news conference that West Germany was committed to a 5 percent growth rate this year, while the United States would aim for 5.8 to 6 percent and Japan for 6.7 percent.

But, according to unpublished forecasts by the O.E.C.D., growth rates will fall short without expansionary measures, and will be 4 percent in West Germany, 4.5 percent in the United States and 5 percent in Japan. This would add a million to the 15 million already unemployed.

It is not hard to see why Western leaders are concerned about unemployment among young people. Figures recently published by the International Labor Organization put the total number of unemployed in the O.E.C.D. countries under 25 years of age at 7 million.

Although this age group represents 22 percent of the total work force, it makes up 40 percent of the unemployed. In the nine Common Market countries, the young people represent one in three of the 5 million people without jobs.

## IN U.S. 17.8% OF TEEN-AGERS JOBLESS

In the United States, where unemployment has slipped to its lowest level in 29 months at 7 percent of the labor force, 17.8 percent of teen-agers looking for work are without employment.

Experts say that the high rate of unemployment among young people will not be easy to correct. An O.E.C.D. study published last week speaks of a "longer-term imbalance between the growing demand for employment and the absorptive capacity of the economy."

Moreover, last summer the organization published a 10-year projection for the Western industrial economies suggesting that in

the decade between 1975 and 1985 they would experience higher rates of unemployment and inflation and lower rates of economic growth than they have known since the end of World War II.

#### WHY IT IS HARD TO CUT YOUTH UNEMPLOYMENT

The army of unemployed youth in the industrialized West has reached an all-time peak—7 million in the OECD group alone—but even if the recession miraculously disappeared overnight, there would still be large numbers of youths without jobs walking the streets with little hope that something would turn up.

Main reasons: the failure of educational systems to prepare the young adequately for the world of work, lack of training opportunities, reluctance of many employers to give youngsters a break, and society's indifference to the situation.

The seeds of the problem were sown well before the oil crisis of 1973. A textbook example is the United Kingdom where there were some 28,000 unemployed teenagers in 1968, 58,000 in 1971, 175,000 in 1975 and more than 200,000 in 1976.

A similar pattern can be traced in other countries, including Canada, France, Italy, and the United States which all had high youth unemployment levels in the 1960s.

The recession has accelerated the trend so dramatically that now about 40 per cent of the unemployment total in the world's 23 richest countries are young people under 25 years, although they constitute only 22 per cent of the total population.

In the nine Common Market countries those under the age of 25 looking for jobs have more than doubled since 1973 and now account for one out of every three of the 5 million unemployed.

Teenagers are hardest hit, especially those looking for their first job. Even in countries with relatively low levels of joblessness, such as Sweden and Norway, teenage unemployment is twice or thrice higher than that of other workers.

Statistics, however, underestimate the extent of the problem, ILO unemployment watchers point out. Youngsters often get tired of looking for a job and once they stop actively seeking work, they are not counted as jobless.

Moreover, as the number of people holding jobs starts slowly climbing up again, youth employment is marking time or eases very slowly.

Recent reports of the U.S. Bureau of Labor Statistics show, for instance, that the jobless rate for all American workers has dropped 15.7 per cent from October 1973 to April 1976, but the teenage unemployment rate has edged down only 5.4 per cent during the same period.

#### DEVALUATION

Why are young people so severely affected? And why will it be so difficult to cut youth unemployment even when prosperity returns?

One reason is that schools are becoming increasingly selective and competitive—a process which begins in primary school. This constant siphoning off of gifted and motivated youngsters leads to a devaluation of all others. They go to general and vocational schools where educational levels are also devaluing. When the youngsters leave them, they are confronted with a strange world of labor which requires skills, knowledge and behavior they have not acquired. Many of them will never have a second chance because the number of training places has decreased practically everywhere. Some enterprises are not ready or not able to meet higher training costs, and many small firms offering mostly on-the-job training have been phased out.

An estimated one-third of all unemployed teenagers in the European Community have finished compulsory schooling but have not received any additional vocational education. Also, increasing numbers of youngsters do not meet the standards required for training in modern industry.

Unprepared for the work game, many youngsters feel they face a stacked deck. This leads to apathy, stress, drifting and other social problems.

#### ROADBLOCK

Still another roadblock is the reluctance of many employers to hire young people because it costs more to break them in than older workers and because their output is lower, at least at the beginning of employment.

Paradoxically, young workers are disadvantaged by certain laws, originally adopted to protect them, that latter-day technological advances have rendered obsolete. Special rules are necessary for the safety and health of young workers; however, regulations which are relics of a more dangerous past should not block equal opportunity for the young.

#### REMEDIES

What is being done to cut youth unemployment?

Most industrialized countries have recently taken steps to improve education and training but their impact will be too late for 7 million jobless young people who virtually make up a 24th nation of the OECD.

As a stopgap measure, some governments have proposed that youngsters should stay longer in school to delay their entry into the labor market, which would mean an additional public as well as family burden.

In other places, school-leavers and drop-outs are enrolled in new and more differentiated training facilities, but in some cases it is training for training's sake.

#### NO SOLUTION

Moreover, training extension does not help much, ILO experts warn, if it is not accompanied by vigorous job creation programs, including public works, or bolstered by subsidies to enterprises to encourage employment of young workers.

In the United Kingdom something like 5,000 youngsters have been taken on by firms to gain experience of work without actually being employed or taking someone else's job. For this the firm gets some willing hands, and is reimbursed about \$29 a week it pays to the trainee by the government.

Under a French plan a bonus of \$700 is given to any artisan for accepting and training a young person as an apprentice.

The Dutch are trying an unconventional approach—job sharing—whereby two teenagers do the same job and each receives half the wage and half of the unemployment benefits.

All these measures can bring some relief. But no one has yet figured out a quick, permanent solution—nor has the tide yet turned in favor of the young unemployed.

#### MEMORIAL DAY

Mr. THURMOND. Mr. President, as all of my colleagues in the Senate know, Monday is Memorial Day. On this occasion our Nation pays solemn tribute to the casualties of all the wars in which we have participated.

The first National Memorial Day is generally agreed to have been held on May 30, 1868. The date of May 30 was selected because it was considered to have been the peak of the flower season. The Nation's Capital was a focal point of the 1868 observance, particularly at Arlington Cemetery at the site of the

Tomb of the Unknown who fell in the Civil War.

The origin of Memorial Day, however, is generally credited to the South where more than one State claims to have held the first official observance of honoring the Civil War dead. In South Carolina a few weeks after the Civil War, it is reported that an individual named James Redpath was saddened by the unkempt condition of a Union graveyard near Charleston. Redpath with the aid of volunteers enclosed the cemetery with a fence and secured permission for a dedication holiday. On the morning of May 1, 1865, a number of citizens, led by children, marched around the graves and covered them with flowers. They then adjourned to neighboring groves for picnics. This event has been reliably acknowledged as America's first Memorial Day. Confederate Memorial Day is now observed in South Carolina on May 10, the anniversary of the death of Gen. Stonewall Jackson. The separate observance of Memorial Day is also a custom in other Southern States.

The tribute which our country will pay on Monday to those who have died on the field of battle is by no means confined to the Civil War dead, however. In the wars which this country has been engaged since 1865, human sacrifice has been costly. The Spanish-American War saw 385 battle deaths; World War I, 53,402; World War II, 291,557; the Korean War, 33,629; and the Vietnam conflict, 45,941.

On December 7, 1976, there appeared in the Charleston Evening Post a short editorial memorializing the American soldiers who had died at Pearl Harbor 35 years previously. Thomas Wolfe at his best could not have fashioned a more poignant reminder of the obligation that this country owes to those who gave their lives, not only at Pearl Harbor or in World War II, but in all the wars.

Mr. President, I ask unanimous consent that this memorial be printed in the RECORD.

There being no objection, the memorial was ordered to be printed in the RECORD, as follows:

[From the Charleston (S.C.) Evening Post, Dec. 7, 1976]

#### PEARL HARBOR: R.I.P.

They never tasted the victory. Nor for them the exultance, the hysteria of V-J Day—the clashing arms of beautiful women, the dancing in the streets, the drinking, the shouting, the sheer joy of it all.

They never tasted the victory. Nor for them they never joined the Fifty-two-twenty club. They never moved into the Levittowns, never bought the big, new, gas-guzzling powerful cars of post-war America. They never sent their sons and daughters to college. They never went themselves. They never lived the best years of their lives.

The Cold War passed them by. They never watched, breathless, a Cape Canaveral countdown. Kentucky Fried Chicken, freeways, Lee Harvey Oswald meant nothing to them. Vietnam? They never heard of it.

Their bones are covered now by soft, sea-slime, and they sleep the long sleep in an iron, watery tomb. They repose in the twisted puzzled, frantic, prayerful and resigned attitudes the Japanese bombs found them in on a Sunday morning 35 years ago today.

In memoriam: Pearl Harbor, Dec. 7, 1941.

# AWARD OF ATTORNEYS FEES IN TAX CASES

Mr. CRANSTON. Mr. President, I am very pleased to cosponsor with my distinguished colleague from Alabama (Mr. ALLEN) S. 1610, legislation to authorize the discretionary award of attorneys fees to taxpayers who prevail against the IRS in tax litigation.

As part of the compromise on the civil rights attorneys fees bill last year, the Senate accepted an amendment offered by Senator ALLEN to provide for the award of attorneys fees when the taxpayer prevails against IRS.

On May 16, the U.S. Tax Court in Key Buick against Commissioner of Internal Revenue held that the Tax Court was not authorized by the provisions of Public Law 94-559 to award attorney fees to the prevailing taxpayer.

The court read the language of the statute to permit the award of attorneys fees only when IRS sues the taxpayer, not when the taxpayer challenges IRS. In addition, the Tax Court ruled that the statute applies only to the Federal district and appellate courts, not to the Tax Court which is an administrative law court.

The decision appears to me to be correct reading of the words of the act. Nevertheless, it was my understanding and that of Senator ALLEN, and I am confident, of other Senators, that the intent of the amendment, no matter how inartfully drafted in the heat of debate, was to permit taxpayers to be awarded attorneys fees when they prevailed against IRS in all courts.

Therefore, I am pleased to join with Senator ALLEN in seeking restoration of our original intent. Our purpose is to make sure that IRS is not tougher on low- and middle-income taxpayers just because they cannot afford to contest a tax assessment in the courts.

We want to make IRS think twice about pushing a tax assessment beyond the point of fairness. And taxpayers who think they are in the right should not be deterred from fighting IRS because of high legal fees.

I wish to emphasize that the award of attorney fees will be discretionary with the court. Among the factors the court will consider under our proposal will be the resources of the litigant and what is at stake. The individual taxpayer, of course, will have to weigh the risks of losing and consequently facing the payment of significant legal fees. The litigious taxpayer would not get a free ride.

Our courts should be a source of individual tax equity. Easing the costs of litigating tax questions can help reduce pressure on Congress to respond legislatively to individual tax problems whose solutions ought to be attempted first in the courts. Anything done in this direction will be to the good.

Mr. President, Paul Ziffren of Los Angeles, a tax attorney and former Democratic National Committeeman, has written an article on this subject in the Los Angeles Times of May 11. I ask unanimous consent that his article be printed in the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times, May 11, 1977]

## TILTING AT THE IRS WINDMILL? TAKE HEART (By Paul Ziffren)

Most Americans have already completed their annual joust with the federal tax man, but for many others the battle has just begun. Their returns will be questioned by the Internal Revenue Service, and so they will have to justify each debt deduction.

Everybody makes simple mistakes in addition. Beyond that, many of us claim small deductions to which, as it turns out, we have no right. This year, with the revision of Form 1040, such minor taxpayer errors have increased greatly.

But what happens if your version of your tax liability differs significantly from that figured by the IRS? Last year, many taxpayers who were found in arrears made their peace with the government by paying up—whether or not they felt they owed the money. They did so in the knowledge that the cost of obtaining an attorney to defend their position was bound to consume part, if not all, of the money they stood to gain.

From now on, however, disgruntled taxpayers may be more willing to press such cases in court because judges have the right to award a victorious taxpayer his "reasonable" attorney's fees along with the judgment ("reasonable" fees are set by the judge, and may well be less than what your attorney actually charges). This much-needed revision of the tax laws was passed last year as a clause of the Civil Rights Attorney's Fees Award Act, a measure allowing federal courts to award legal fees to citizens who successfully bring suit under various civil-rights laws.

The tax clause has yet to be tested in the courts, but if it proves to say what it seems to, its application will dramatically extend taxpayers' rights.

The apparent meaning of this clause is that a citizen who believes that he is right about a tax question at least gains the prospect of winning a full and equitable award—including reimbursement of attorney's fees—if he proves his point.

This contrasts with the previous practice under which a taxpayer is practically forced to plunk down money he cannot hope to see returned—either to the IRS in a settlement or to a private attorney if he seeks to contest the findings—at the first flick of the tax auditor's pen.

I do not mean to malign the IRS, for few of its agents callously and consciously set out to put the squeeze on taxpayers. In fact, most IRS employees are conscientious and sensitive to the rights of taxpaying Americans. But the new law will exert a balancing effect on the practical workings of the IRS system as a bureaucracy.

For example, it has been easier for an IRS auditor to set up a "deficiency"—a formal recommendation that more tax is owed—than it has been to justify not doing so (especially since his bosses already knew the return had been questioned for one reason or another).

Indeed, though IRS officials have vigorously denied it, most tax lawyers are convinced that an unwritten quota system forced auditors and agents to be harder on taxpayers than was necessary or appropriate.

Under the new law, an overzealous IRS auditor—and, perhaps more important, his superiors—will soon realize that recommendations of a "unjustified deficiency" may publicly reveal IRS mistakes and also force the government to make penalty payments.

Some tax experts claim that, on testing in the courts, the clause may prove less significant than had been thought because it would apply only to cases where the govern-

ment has been found guilty of harassment or bad faith. But a simple reading of the statute shows no such limitation. (These observers may be confusing an earlier proposal that the Senate rejected with the version that became law.)

Other critics contend the law applies only to cases where the IRS, as plaintiff, sues the taxpayer—not the other way around. But the author of this section of the law, Sen. James B. Allen (D-Ala.), disagrees.

"I find that suggestion ludicrous," Allen said not long ago. "There is only one kind of tax dispute regardless of who is a named plaintiff or a named defendant, or who is an appellant or an appellee. A tax dispute is inherently a taxpayer asserting that he is not liable for a tax and the government insisting that he is. The reasons of public policy which would make proper a discretionary award of fees are thus present or not present in a given tax controversy regardless of the formal position of the parties."

If Allen's view is sustained by the courts, this law not only brings good news to federal taxpayers but also establishes a principle that could be extended to other government agencies.

Why not grant reasonable attorneys' fees, for example, in every case where a citizen prevails against unjustified attacks by the Securities and Exchange Commission, the Federal Trade Commission or the Department of Justice? Why not such laws on the state level? These reforms would be significant in controlling a bureaucracy that too often has oppressed the individual.

In far too many cases these days, the problem in America is not protecting government from citizens but protecting citizens from their government. Allowing taxpayers to fight a sometimes overbearing U.S. bureaucracy without fear of financial hardship is a step in the right direction.

## AN UNTAPPED 500-YEAR SUPPLY OF NATURAL GAS

Mr. HELMS. Mr. President, as a nation we are deeply concerned about the future sources of energy which will be available to us, and about the political and economic concerns which could place severe restraints upon our economy and our way of life. On many occasions in the past it has likewise appeared that we were about to run out of energy supplies; yet time and time again entirely new sources of supply are discovered, and the gloomy predictions were proved wrong.

Even now, some geologists are beginning to point to a completely untapped domestic supply of natural gas that could furnish the needs of this Nation, by conservative estimate, for 500 years. No one knows exactly how much gas could be available, but for practical considerations the 500-year estimate is based upon recovering only 10 percent of the supply.

The reason why this gas has been overlooked is because it lies in unconventional geological strata, in depths up to 25,000 feet, and is dissolved in water in geothermal pressure zones. It is not associated with petroleum.

The technology exists today to tap these pressure zones. The methane is dissolved in hot salt water which must be recovered to separate out the gas. The temperatures of the waters range up to 425° F. and the heat can be converted to generate electricity; in some cases the pressure is great enough to drive turbines.

The methane exists in its purest form and can be converted into methanol at the wellhead. Recent technology indicates that methanol, either straight or in blends with gasoline, can be used to fuel automotive engines efficiently and cleanly. So we are talking not only about gas for heating, but also for transit.

I am told that the best locations to tap these geothermal pressure zones lie along the gulf coast, both onshore and offshore.

Mr. President, I do not pretend to be an expert in the technology of locating or assessing such energy resources. I am only repeating here what is being discussed in some scientific circles. However, I am also told that there is at least one test well operating which has been very successful. Yet, because this theory proposes that an unconventional source be tapped, it has been generally ignored both by industry and by Government.

Mr. President, I would like to call attention to the work, in particular, of an eminent geologist from Louisiana State University in Baton Rouge, Dr. Paul H. Jones. Dr. Jones has written a number of scientific papers on this topic, but unfortunately most of them are dependent upon charts and diagrams which cannot be reproduced in the CONGRESSIONAL RECORD. However, he has one technical paper, "Natural Gas From Unconventional Geologic Sources," delivered last year to the Board on Mineral Resources of the Commission on Natural Resources of the National Academy of Sciences, which is not completely dependent upon the diagrams, and would be of interest to my colleagues.

Mr. President, I ask unanimous consent that Dr. Jones' paper be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

#### NATURAL GAS FROM UNCONVENTIONAL GEOLOGIC SOURCES

#### CHAPTER 1.—NATURAL GAS RESOURCES OF THE GEOPRESSURED ZONES IN THE NORTHERN GULF OF MEXICO BASIN

##### Introduction

(By Paul H. Jones)

The world's natural gas resources occur within or adjacent to petroliferous sedimentary basins, but most of the gas is not found associated with oil. More than 80 percent of the natural gas produced in Louisiana in 1972, and 82 percent of the reserves, were classified as nonassociated (Carleton 1974: 10-11). Methane, the principal constituent of natural gas, is a stable and end-product of the thermal diagenesis of petroleum hydrocarbons in the zone of abnormally high interstitial fluid pressure—generally known as the geopressured zone. At depths where the temperature exceeds 300°F (150°C) very little petroleum is found; this is the domain of natural gas (Fertl and Timko, 1972).

Wherever methane gas is associated with reservoir waters, those waters are saturated in dissolved methane. Saturated formation waters associated with the more than 8,000 producing gas reservoirs in the geopressured zone of the Gulf Coast occur in a depth range from about 9,000 to 22,000 ft. (about 3 to 7 km). The solubility of methane in water is a function of temperature, pressure, and water salinity; the methane content of formation waters in any reservoir at saturation can be estimated if data on these par-

ameters are available (Dodson and Standing 1944:173-179, Culberson and McKetta 1951: 223-226).

The maturation of petroleum hydrocarbons (or more properly the conversion of insoluble organic matter known as kerogen to water-soluble hydrocarbons), is primarily a temperature-controlled process (LaPlante 1974:1288). In young, deep sedimentary basins filled primarily by noncarbonate clastic rocks, sand and clay) where the sediments are being exposed to geothermal heat for the first time, the conversion of kerogen to petroleum hydrocarbons progresses with increasing depth of burial, at a rate controlled by the geothermal gradient. At a depth where the "threshold" conversion temperature is exceeded, petroleum maturation accelerates. At some greater depth (and higher pressure and temperature) natural catalytic cracking of trapped liquid hydrocarbons begins. And at even greater depth, pressure, and temperature, all but the heaviest (tar) molecules have been converted to methane (Fertl and Timko 1972).

If the amount of hydrocarbon generated by maturation of kerogen is great enough, and if the escape of petroleum liquids is sufficiently retarded, then this natural cracking process yields sufficient methane to saturate all of the formation waters in the geopressured zone, and more. The excess methane in reservoir rocks collects in structural highs, forming the gas reservoirs commonly tapped by wells for commercial production. Most of the gas occurs in reservoirs having pressure gradients greater than 0.7 pounds per square inch per foot of depth (psi/ft.) (FPC 1966 unpublished data, Meyerhoff 1968, Perry 1969).

Methane-saturated formation waters of the geopressured zone escape upward into the hydro-pressured zone (Stuart 1970:2) and out of the sedimentary basin as natural compaction and consolidation of the sediments occurs. As these waters move to shallower depths and zones where the temperature is lower and the confining pressure is less, gas comes out of solution. This gas collects in reservoir rocks or escapes at outcrop.

Extensive studies of the dissolved hydrocarbons in subsurface waters in the hydro-pressured zone of the Gulf Coast, reported by Buckley et al. (1958), show that "the concentration of dissolved hydrocarbons in a particular formation increases with depth and increases basinward up to a certain degree" (p. 850), and that "throughout the region sampled the Frio water . . . [was] either saturated or nearly saturated with dissolved (methane) gas in nearly every well sampled" (p. 868). The bubble point of Frio water increased linearly with depth over the interval from 3,700 to 8,000 feet (1.15 to 2.5 km) and closely followed the hydrostatic pressure in the formation. No anomalous local enrichment of methane content was observed in samples taken in close proximity to Frio oil or gas fields.

More recently (1972), water from an aquifer at a depth of 3,200 ft (1 km), pumped from an offshore water-supply well in Block 16, Grand Isle, Louisiana, was found to contain 14.1 cubic feet (cf) of methane per barrel—its saturation content at the in situ pressure and temperature of the aquifer. At a pumping rate of 900 gallons per minute (gpm), this well produced some 400,000 scf/day.

All subsurface waters below a depth of about 3,000 ft (about 1 km) in Cenozoic deposits of the Gulf of Mexico Basin are probably saturated in methane.

#### Nature and physical dimensions of beds containing source of gas

Cenozoic deposits, mainly sand and clay of alluvial or deltaic origin, fill the Gulf Coast geosyncline (Figure 1.1) to depths greater than 50,000 feet (about 15 km)

(Hardin 1962:1). Geopressure (Stuart 1970:2) occurs below depths of about 9,600 to 16,000 ft (3 to 5 km) beneath an area greater than 150,000 mi<sup>2</sup> (388,000 km<sup>2</sup>) (Jones 1975:1), and it probably extends downward to the base of the Cenozoic deposits (Figure 3.6). Growth-faulted sand and clay bed systems, formed as prograding deltas encroached upon the northwestern margin of the Gulf, extend to depths averaging about 25,000 feet or about 8 km (Figure 1.2) (O'connor 1961:139, Jones 1975:32). "Stacked" sand-bed aquifers in growth-faulted blocks are the reservoirs to be tapped by wells designed to produce the hot, high pressure water and its dissolved methane.

The areal extent of growth-faulted blocks (Figure 1.2) ranges from about 120 to 400 mi<sup>2</sup> (about 300 to 1,000 km<sup>2</sup>), but they may be grouped geologically into larger areas for purposes of resource assessment (USGS 1975: 126). Within each block, the sand-bed reservoirs are commonly 50 to 160 ft. (about 15 to 50 m) thick, and their cumulative thickness is perhaps half the total vertical thickness of the fault block. Between linear fault-block trends, in long ridges sub-parallel to the Gulf margin, are "whale-backs" of geopressured shale (Figure 1.2). Separating major delta fault-block systems are subembayment shale wedges which tongue landward between them, transverse to the Gulf margin. These shale deposits underlie perhaps 30 percent of the area of the geopressured system described in the previous paragraph.

Detailed mapping of "stacked" sand-bed sequences in each of the major Cenozoic deltaic systems will be necessary to enable definition of potential reservoirs for development. Sediment facies maps should be made, in addition to cumulative sand-bed thickness maps, for each major prograding delta system. These maps, together with detailed structure maps of the same units, will be necessary for well design and well-field layout. Information is readily available for the mapping, and it should be done at appropriate scale—perhaps 1:250,000.

Faulting of host beds may cut off sand-bed reservoirs, resulting in hydraulic barriers and reduced yield from wells. Thermal diagenesis of the clay mineral montmorillonite releases water containing large amounts of silica, and this precipitates where pressure and temperature drop. Flush of the waters of diagenesis from clay beds and the cementation and consolidation of sand beds have greatly reduced the permeability and porosity of reservoirs, especially where large amounts of high-temperature water have escaped through them—as in parts of the lower Rio Grande Embayment of Texas. Modification of permeability distribution in host beds by natural processes must be analyzed, and the most suitable zones for development must be identified and mapped.

#### Extent of resource (gas in place)

The amount of gas dissolved in geopressured zone formation waters in Cenozoic deposits of the Gulf Coast can be estimated, using the following assumptions:

1. All formation waters of the geopressured zone are saturated in methane;
2. The top of the geopressured zone can be mapped;
3. The total volume and depth distribution of sand-bed reservoirs and associated shale deposits in the geopressured zone can be calculated (areal extent and cumulative thickness);
4. The porosity of sand-bed reservoirs and associated shale deposits can be described numerically, with reference to depth below the top of the geopressured zone; and
5. The pressure, temperature, and salinity of formation waters can be described with reference to depth below the top of the geopressured zone.

These assumptions enable calculation of (1) the gas content of sand-bed formation water at selected depths, with reference to the top of the geopressured zone, and (2) estimation of the total amount of gas in solution in sand-bed formation waters. Factors involved in the calculations include the following:

1. The methane content of fresh water at saturation, for pressures ranging up to 10,000 psi and temperatures up to 350°F (177°C), is described by the curves of Culberson and McKetta (1951: 226), illustrated in Figure 1.3. These curves must be extrapolated to about 25,000 psi and 525°F (273°C) for conditions in the geopressured zone to a depth of 15,000 ft (about 8 km).

2. The depth to the top of the geopressured zone onshore has been mapped by the U.S. Geological Survey (USGS), for Cenozoic deposits of the Gulf Coast. The average depth, given for subareas identified by Popadopoulos, Wallace, Wesselman, and Taylor ranges from about 6,000 to 12,700 ft (1.82 to 3.88 km) (USGS 1975: fig. 15, p. 126, and table 21, p. 128).

3. The cumulative thickness of sand beds between the top of the geopressured zone and the deepest part of each growth-faulted block in the subareas mapped by the USGS as described above has not been determined. Information on representative dip sections and a proved rationale for assignment of regional sediment facies distributions were used to develop the numbers used in making the following estimate.

4. Porosity determinations have been made and reported for many thousands of sand-bed reservoirs in the geopressured zone (in

rate-case hearings of the Federal Power Commission 1962; 1966; 1972). A generalized plot of porosity at indicated depths is shown in Figure 1.4 (Stuart 1970), for sand beds and shale beds. In the following estimate, only porosity data for sand-bed reservoirs in the geopressured zone are used; Stuart's curve has been extrapolated to 25,000 ft (7.8 km), where porosity of sand beds may be expected to average about 15 percent. The decrease of porosity, with increasing depth, from 37 percent at 13,000 ft to 15 percent at 25,000 ft (22 percent in 12,000 ft) amounts to 1.8 percent per 1,000 ft, or 5.85 percent per kilometer of depth.

5. Pressure and temperature gradients in the geopressured zone range widely, from area to area as well as locally; reliable estimation to the dissolved methane content of formation waters, requires detailed pressure gradient maps and isothermal maps. For this purpose, regional maps of the 0.6, 0.7, 0.8, and 0.9 psi/ft isopressure surfaces will be required for each major geopressured deltaic system. The 212°F (100°C), 250°F (120°C), 302°F (150°C), 356°F (180°C), 302°F (200°C), 428°F (220°C), and 482°F (250°C) isotherm maps will also be needed for each such system. Formation water salinity must be mapped wherever it exceeds about 20,000 mg/l because methane solubility decreases appreciably as dissolved solids increase (Dodson and Standing 1944:173).

Although the pressure, temperature, and water salinity maps described above are not available at this time, reasonable generalizations of them can be made using available maps and knowledge of gradients and regional trends (Jones 1975: figs. 18-21, 24,

25, 32, 34-40, 45, 47-49). Popadopoulos et al. (USGS 1975: fig. 15 and table 21) estimate the total reservoir thickness of the geopressured zone onshore to be 9,840 to 13,120 feet (3 to 4 km), sandbed porosity to range from 18 to 21 percent, and shale-bed porosity to range from 9 to 12 percent. They estimate the total amount of methane in water solution in these sediments to be  $236.18 \times 10^{14}$  cubic feet, or  $669.3 \times 10^{12}$  cubic meters (USGS 1975: 132, table 24).

This figure,  $236.18 \times 10^{14}$  cf, or 23,618 Tcf of methane in formation water solution, is a conservative estimate for the onshore area of the geopressured zone in Cenozoic deposits of the Gulf Coast. The thickness of the zone for development is probably 13,120 to 19,680 ft (4 to 6 km) rather than 9,840 to 13,120 ft (3 to 4 km); and the average porosity of sand beds is probably close to 25 percent, rather than 18 to 21 percent. But only about 50 percent of the area is underlain by deltaic or delta-front deposits which contain sand beds that would serve to drain the shales.

The calculation in Table 1.1 of the methane dissolved in sand-bed formation waters beneath one square mile of Subarea DT-2 (USGS 1975: fig. 15, p. 126) illustrates the method used in making the estimate given in this paper. Extrapolation of the gas saturation curves of Culberson and McKetta (1951:4) may be open to question, as no experimental data are available to support it; and the effects of water salinity on methane solubility at high temperature and pressure are unknown. The temperature and pressure gradients in Subarea DT-2 can be closely approximated, however, and the calculated methane contents are believed reasonable.

TABLE 1.1—METHANE DISSOLVED SANDBED FORMATION WATERS

| Depth                | $\Delta P$ (psi/ft) | Pressure <sup>1</sup><br>(psi $\times 10^3$ ) | Temperature<br>(°F) | Gas in<br>solution <sup>2</sup><br>(scf/bbl) | Sandbed<br>porosity <sup>3</sup><br>(percent) | Cumulative<br>thickness of<br>sand (feet) | Volume of<br>water (ft <sup>3</sup> $\times 10^9$ ) | Water<br>(bbl/mi <sup>2</sup> $\times 10^9$ ) | Gas in solution<br>(scf/mi <sup>2</sup> $\times 10^{10}$ ) |
|----------------------|---------------------|---|---------------------|--|---|---|---|---|--|
| Feet $\times 10^3$ : |                     |   |                     |  |   |   |   |   |  |
| 8.....               | 0.55                | 4.8   | 194                 | 18.8   | (?)   |   |   |   |  |
| 9.....               | .60                 | 5.4   | 199                 | 20.0   | 27.0  | 200                                       | 1,505   | 268   | 0.537  |

<sup>1</sup> Ferti and Timko (1972).<sup>2</sup> Culberson and McKetta (1951) curves extrapolated by Jones (this volume).<sup>3</sup> Stuart (1970).

According to these calculations, the amount of methane dissolved in sand-bed formation waters of the geopressured zone beneath each square mile of Subarea DT-2, above a depth of 25,000 feet, is 634 billion cubic feet (Bcf). The total area of Subarea DT-2 is 5,155 km<sup>2</sup>, or 1,902.95 mi<sup>2</sup>. The dissolved gas resource of this subarea is estimated to be about 1,200 Tcf. About 70 percent of the onshore geopressure zone in Cenozoic deposits of the Gulf Coast is believed to be underlain by deltaic and/or delta-front sand-bed systems, and perhaps 30 percent of the area of these systems is underlain by high-pressure shale ridges subparallel to the Gulf shoreline (Bruce 1973: 879). The onshore area underlain by sand-bed systems in which the dissolved methane resource occurs is therefore about half of the 145,265 km<sup>2</sup> (53,624 mi<sup>2</sup>) of the onshore geopressure zone, or about 26,812 mi<sup>2</sup>. The onshore resource is, on this basis, about 17-100 Tcf of dissolved methane. If conditions

offshore are comparable, sand-bed systems underlie about 50,000 mi<sup>2</sup>, and the dissolved methane in them amounts to some 31,900 Tcf. The total estimated dissolved methane resource in Cenozoic geopressured sand-bed systems of the northern Gulf of Mexico basin is, on this basis, about 49,000 Tcf. A comparable volume of methane-saturated water is present in the associated geopressured shales, an appreciable part of which might migrate into pressure-depleted sand-bed reservoirs as production occurs. Perhaps 100,000 Tcf of dissolved methane is present in Cenozoic deposits of the geopressure zone in the northern Gulf of Mexico basin.

Additional critical data needed to establish the extent of the resource include:

1. Dissolved methane gas content, as well as temperature, pressure, and dissolved solids of formation waters of the geopressured zone; sand and clay bed texture, porosity, and permeability determinations; geologic studies of the sediments; and hydraulic test

data for aquifer systems, to enable calculation of production characteristics of reservoirs.

2. Detailed maps of sediment facies, isothermal surfaces, pressure gradients, and salinity of formation waters, with respect to depth and sediment facies distribution.

3. Representative information on sediment facies and mineralogy, geologic structure, temperature, pressure, and formation water dissolved solids and gases sufficient for processing into computer data banks; and a mathematical model of the basin adequate to define its structural, hydrologic, geothermal, and hydrochemical evolution.

No serious geologic uncertainties need be overcome to create recoverable reserves from this resource base.

#### Recovery

Recoverable reserves of dissolved methane from the geopressured zone of the northern Gulf of Mexico basin are believed to exceed

258.2 Tcf, the proved domestic natural gas reserves as of Dec. 31, 1970, reported in 1973 in the publication National Gas Reserves Study (FPC 1973). They could very well exceed 1,146 Tcf, the potential U.S. natural gas supply estimated in 1972 by the Potential Gas Committee (FPC 1975:218, Table 9-2). The "dissolved-in-water" source was not included in either estimate.

This estimate of recoverable gas dissolved in geopressure zone formation water is based upon a development concept involving the installation of thousands of large-capacity wells flowing hot, gas-saturated water through turbines and gas separators.

All geopressed gas reservoirs now in production derive much of their gas from this "dissolved-in-water" source (Figure 1.5); exsolution of methane from associated formation waters occurs with gas production and resulting reservoir pressure decline; exsolved gas moves to the gas cap. No water wells have yet tapped the geopressured zone, but wells pumping gas-saturated aquifer waters from the overlying hydropressured zone produce gas. Production technology is well advanced, but as yet unproved; it could probably be proved in less than one year.

Ultimate volumes and flow characteristics of a single project that might be carried out are limited only by water well production rates. A reasonable facility might include 20 water wells, each flowing 50,000 barrels per day (bpd) at 30 cf/bbl, producing 30 million cf/day of methane. Installations ten times this size are believed possible in some areas.

A project of 20 wells could be on stream in less than 2 years; if in a "crash program", in less than 1 year.

Gas can be recovered from this source through several different development schemes. Multi-use systems, in which geothermal energy, hydropressure energy, and natural gas are derived simultaneously from wells, appear to be most attractive economically. Technology is sufficiently advanced on all aspects of such developments to make them possible now, but no field projects have yet been undertaken. They are, however, in the planning stage, and field demonstration should occur within a year or two under present schedules.

Production records for many geopressed gas reservoirs show two distinct slopes in the plot of shut-in pressure vs. cumulative production (P/Z plot), used to predict reserves (Hammerlindl 1971:7). The initial slope is much flatter than the final slope, and this is generally explained as due to gas expansion, formation compaction, water expansion, or influx of water from shale beds bounding the reservoir. Although exsolution of natural gas dissolved in associated reservoir water has not been considered in published papers, it is believed to be the most important factor in the P/Z curve trend with production.

This conclusion leads to an interesting and important concept with regard to the development of the dissolved-in-water gas resource of the geopressured zone. It could increase enormously the recoverability of natural gas from this source. It is as follows:

Withdrawal of formation water at large rates by multiple-well systems tapping large geopressed reservoirs will lower fluid pressure over broad areas. As reservoir pressure declines, dissolved gas throughout the reservoir will be released from solution; this gas, when its volume exceeds 4 or 5 percent of the pore volume of the reservoir, will collect and move to structural highs in the reservoir, forming gas caps. When these gas caps have grown to sufficient size, they can be tapped by gas wells and produced in the same way as some 8,000 gas reservoirs now in production. In effect, water production to obtain dissolved gas simply speeds up the natural process of pressure decline that has resulted in the known gas reservoirs.

Such artificially-formed gas caps can be found by seismic survey, first by locating the structural highs, and then by observing gas cap formation as re-surveys detect it, by growth of a "bright spot" or "bright zone" in the record.

No serious technological problems need to be overcome to create recoverable reserves from this resource base.

#### *Economic and institutional considerations*

A. The economics of a typical project to secure gas from this source are unproved, but conceptual studies by Wilson et al. (1974) and House et al. (1975) indicate that economical development projects are possible under 1975 market conditions. The gas is so pure that it can be converted to commercial grade methanol or marketed directly; it is the same gas that is produced (nonassociated) from some 8,000 geopressed gas reservoirs in the Gulf area.

B. Capital and basic goods and service requirements necessary to make this an important source of gas are essentially "on the shelf"; some modifications of technique in drilling and completing wells in the geopressure zone, already pioneered, will be necessary; and specialized above-ground equipment designed to handle the fluids in new ways, already well along in conceptual and engineering aspects, will be needed. Expanding comparable effort in exploration and production of gas from conventional sources could not produce comparable results, in terms of gas production, under the most favorable circumstances.

C. Legal, institutional, and environmental problems associated with exploitation of this resource have already received considerable attention in connection with geopressed geothermal resources research since the production effects are identical. The principal legal problem relates to ownership of the gas dissolved in formation waters: Does the mineral lease include it, or is it a part of the ground water (which must be produced for its recovery) and thus governed by groundwater law? Institutional problems are largely those of governmental regulation (federal, state, or local) and the determination of which agency or agencies have prior authority in this matter. Environmental problems relate to disposal of saline water produced to obtain the gas, and land subsidence that may result from the large-scale withdrawal of formation water. These problems are not unique to this resource development, and have already received adequate study for effective management policy decisions.

D. Multiple use of fluids produced in the gas production strategy have received sufficient study for feasibility evaluation (Wilson et al. 1974, House et al. 1975), even though gas recovery alone may not be economic under 1975 market conditions.

E. The energy balance between the total energy required in a project to explore, develop, and produce gas from this source, compared to the energy of gas ultimately recovered from the project, is highly favorable indeed. This is because the exploration effect has already been largely accomplished by the oil and gas industry; development technology has been perfected, and equipment required has been fabricated by the oil and gas industry and the water well industry; and because the production technology and equipment already exist or are well advanced. The energy resulting is in the most desirable form; it can be converted to methanol at the well head, used to produce electric power at the well head, or shipped by pipeline to users through an existing and highly effective distribution system.

#### *Assessment of potential of the source*

The key decision required for development of this source is the choice of location of the first project installation. Government can fund and make available government lands

for such development, under a favorable lease and cost-sharing arrangement. Industry (the oil and gas industry, a major utility, or a major power users such as Dow Chemical, USA) could contribute all of the management and operational requirement. The project could be entirely done under contract.

Key differences in judgment covering the quantity of resources or reserves relate to (1) percent saturation of formation waters in methane; (2) recoverability of formation waters for extraction of dissolved methane; and (3) abundance of aquifers in the geopressured zone, suitable for development by production wells. Key differences regarding the state of recovery technology relate mainly to methods of well construction and well field design, and to reservoir permeability. Continuous rock cores for intensive laboratory study, and a series of production tests using carefully designed well fields, are needed to narrow the range of judgment.

The upper limit of contribution, in annual volume, from this source of gas cannot be estimated with confidence at this time, but it should be at least 1.5 Tcf/yr, or about 5 percent of the total U.S. requirement of 28 Tcf forecast for 1975, made by the Denver Research Institute (University of Denver 1973) cited in Table 7-1, p. 184, v. 1, Federal Power Commission Report, National Gas Survey, 1975. This estimate is based upon 1,000 wells each producing 4 million gpd of water containing 1 cf/gal, or 4 Bcf/day. It is possible that this source might ultimately produce ten times this amount, mainly from the Outer Continental Shelf—perhaps half the total U.S. annual natural gas requirement.

This source could contribute very significantly to the U.S. gas supply in the immediate future (2 to 5 years), perhaps 2 percent of the U.S. requirement within 4 years.

The contribution of gas from this source could be half the U.S. annual requirement in 10 years, and perhaps 80 percent of the annual requirement in 25 years.

The methane dissolved in formation waters of the geopressured zone is by far the largest, most readily accessible, and least expensive alternative source of natural gas in the United States.

T. Bock of Phillipsburg, N.J., president of Bock Plastics, as New Jersey's Small Businessman of the Year. I offer my congratulations to him for his achievements which have brought him recognition and honor as New Jersey's Small Businessman of the Year.

Mr. President, in addition to their central role in our economy, small businesses must survive and prosper if we are to further the important human values that prompt people like Mr. Guy Bock to initiate enterprises. Initiative, creativity, self-reliance, perseverance—characteristics possessed by Mr. Bock, are traits which must be encouraged and developed if we are to continue to be a society admired throughout the world. The challenge of successfully operating a small business nurtures these characteristics. We must provide a climate which promotes the growth and development of new, small and independent enterprises.

There are certain actions which can and should be taken at the Federal level to create a better environment for the success of small business. Both the legislative and executive branches of Federal Government should, for example, search for ways to eliminate unnecessary regulatory controls and excessive reporting requirements which are burdensome to the small businessman.

An example of another kind of initiative which can be taken to help small business is the Business Opportunity Conference which I have joined in sponsoring with my distinguished colleague, Senator CASE, to be held in Cherry Hill, N.J., on June 17. At this conference, representatives of major industries and of Federal, State, and local government agencies will counsel local business people from across the State on the problems, techniques, and opportunities involved in the development of Government markets.

Let us, this week, not only pay tribute to the small business sector for its many contributions, but also focus on the present needs of the small business sector and consider how we may assist it in meeting its needs in the future.

#### RETIREMENT OF EDWARD STILLWELL

Mr. THURMOND. Mr. President, an outstanding public educator, Edward Stillwell principal of North Augusta High School in South Carolina will retire June 30.

Mr. Stillwell has devoted 32 years of his life to the North Augusta school system. During that time he has given outstanding leadership not only in the educational process, but in the community as a whole.

Too little recognition is given to our educators whose efforts and counsel are so critical in the education of our children.

Mr. Stillwell is a man of considerable executive ability as is testified by the efficient operation of North Augusta High School over the years. He is a man of character integrity, and competence, and the citizens and young people of his community have benefited because of his unselfish attention to his duties.

In recognizing Mr. Stillwell I would

like to also recognize other school administrators and teachers who, in giving their lives to public education, achieve one of the most worthwhile goals in our great Nation.

Mr. President, I ask unanimous consent that an article appearing in the Augusta Chronicle newspaper May 14, 1977, under the title "Retiring Principal Believes Students Haven't Really Changed," by J. C. Hixenbaugh, be printed in the RECORD.

#### RETIRING PRINCIPAL BELIEVES STUDENTS HAVEN'T REALLY CHANGED (By J. C. Hixenbaugh)

Students come and students go, but North Augusta High School Principal Edward Stillwell said that in the 38 years he's been an educator, they haven't really changed.

"Human nature hasn't changed one whit," he said. However, he added, "In students today I do see a new interest in morality and religion and this encourages me."

Stillwell is retiring June 30 after 32 years in the North Augusta school system and 26 years as principal at North Augusta High School.

Friday was "Stillwell Day" in North Augusta, beginning with an assembly of the student body.

The Greater North Augusta Chamber of Commerce honored him at a luncheon and a reception was held in the North Augusta High School gymnasium Friday night, sponsored by the North Augusta High Parent-Teacher Association.

When Stillwell came to North Augusta High School in 1945 as teacher and coach, 250 students were enrolled in the school, compared with 1,350 students this year. He came to North Augusta from Dillon, S.C., where he taught and coached athletics for six years.

Some differences exist between students of the 1950s and today, one of which is the attitude students take toward discipline today, he said.

"Students today are a little less accepting of discipline you mete out. There was a time when a teacher's word was law."

"Now, questions are asked, as they ought to be, and acceptance of discipline is not as ready as it used to be." Students today know more about their constitutional rights regarding discipline than earlier, he added.

The students and faculty have a good relationship at North Augusta, he said.

That relationship was the subject of a commendation in a five-year interim examination of the school in April by the Southern Association of Secondary Schools and Colleges.

According to the report: "It is obvious that the administration and staff take great pride in the school, its reputation and accomplishments."

"The genuine respect and affection for the principal by the staff contributes decisively to the outstanding achievements of North Augusta High School."

One of the major changes since he has been principal has been the impact of the Savannah River Plant, Stillwell said.

Within a couple of years, school enrollment doubled and the buildings had become inadequate, he said.

That resulted in the first of two moves the high school would make. In 1954, the classes were moved from the school building on Georgia Avenue to the building that now houses North Augusta Junior High School. In 1969, classes were moved to the new building on Knobcone Avenue.

The native of Johnston, S.C., said one of the changes in education at the school has been to do more for the students who do not plan to attend college by offering more vocational education.

#### NATIONAL SMALL BUSINESS WEEK

Mr. WILLIAMS. Mr. President I am pleased that President Carter has proclaimed this week, May 22-28, National Small Business Week to give special recognition to the tremendous contribution the small business community has made to the growth and development of our Nation and the stability of our economy.

About 97 percent of all U.S. enterprises are defined as small business. Small business produces 43 percent of the country's gross national product. Small enterprise plays a vital role as a provider of jobs, employing 52 percent of all the country's non-Government employment. Studies show that individual inventors and small firms continue to account for more than one-half of all inventions and innovations. These statistics underscore the central role small business plays in our national economy.

Each year the Small Business Administration selects one person from each State as Small Businessman of the Year. This year the SBA has chosen Mr. Guy

"North Augusta has traditionally been a college preparatory school," he said. Of last year's graduating class of 346, 214 entered college or a technical school, he said.

Stillwell, a member of the University of South Carolina football team during his undergraduate years at the school, spoke proudly of the school's successful athletics teams.

## THE FEDERAL FLOOD INSURANCE PROGRAM

Mr. EAGLETON. Mr. President, on Monday, June 6, the Senate will take up S. 1523, the Housing and Community Development Act. At that time, I will offer an amendment to allow communities which for good reason of their own decide not to participate in the Federal flood insurance program, at least to have access to private bank financing.

Mr. President, the Federal Register of May 16, carries notification of the suspension of 44 additional communities from this program for failure to adopt or enforce HUD land use regulations. These communities represent only a small fraction of the thousands of towns and cities against which HUD is applying sanctions, including elimination of virtually all private construction credit.

The amendment I will offer on Monday seeks to restore a small degree of self-determination to those local communities, and to put an end to some of the worst excesses of this Federal land use program. I ask that a copy of the HUD notice, which was printed in the

Federal Register of May 16, be printed in the RECORD.

There being no objection, the notice was ordered to be printed in the RECORD, as follows:

### TITLE 24—HOUSING AND URBAN DEVELOPMENT CHAPTER X—FEDERAL INSURANCE ADMINISTRATION, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

#### Subchapter B—National Flood Insurance Program

[Docket No. FI-2883]

#### Part 1914—Areas Eligible for the Sale of Insurance

##### Suspension of Community Eligibility

Agency: Federal Insurance Administration, HUD.

Action: Final rule.

Summary: The purpose of this rule is to list communities where the sale of flood insurance as authorized under the National Flood Insurance Program will be suspended because of noncompliance with the program regulations.

Dates: The last date that appears in the fourth column is the effective date of the suspension of the sale of flood insurance.

For further information contact: Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, (202) 755-5581 or Toll Free Line 800-424-8872, Room 5270, 451 Seventh Street, Southwest, Washington, D.C. 20410.

Supplementary information: The Flood Disaster Protection Act of 1973 (Pub. L. 93-234) requires the purchase of flood insurance as a condition of receiving any form of Federal or Federally related financial assistance for acquisition or construction purposes in a

flood plain area having special hazards within any community identified by the Secretary of Housing and Urban Development.

The requirement applies to all identified special flood hazard areas within the United States, and no such financial assistance can legally be provided for acquisition or construction in these areas unless the community has entered the program and insurance is purchased. Accordingly, for communities listed under this Part such restriction exists as of the effective date of suspension because insurance, which is required, cannot be purchased.

Section 1315 of the National Flood Insurance Act of 1968, as amended (42 U.S.C. 4022) prohibits flood insurance coverage as authorized under the National Flood Insurance Program (42 U.S.C. 4001-4128) unless an appropriate public body shall have adopted adequate flood plain management measures with effective enforcement measures. The communities suspended in this notice no longer meet that statutory requirement for compliance with program regulations (24 CFR Part 1909 et seq.). Accordingly, the communities are suspended on the effective date in the list below.

The Federal Insurance Administrator finds that delayed effective dates would be contrary to the public interest. The Administrator also finds that notice and public procedure under 5 U.S.C. 553(b) are impracticable and unnecessary.

Section 1914.6 of Part 1914 of Subchapter B of Chapter X of Title 24 of the Code of Federal Regulations is amended by adding in alphabetical sequence new entries to the table. In each entry, a complete chronology of effective dates appears for each listed community.

The entry reads as follows:

§ 1914.6 List of eligible communities.

Effective date of authorization of sale of flood insurance for area

| State        | County         | Location                        | Emerg.        | Reg.          | Susp.         | Hazard area identified            | Community No. |

(National Flood Insurance Act of 1968 (title XIII of the Housing and Urban Development Act of 1968); effective Jan. 28, 1969 (33 FR 17804, Nov. 28, 1968), as amended (42 U.S.C. 4001-4128) and Secretary's delegation of authority to Federal Insurance Administrator 34 FR 2680, Feb. 27, 1969, as amended 39 FR 2787, Jan. 24, 1974.)

Issued: April 29, 1977.

J. ROBERT HUNTER,  
Acting Federal Insurance Administrator.

## NATIONAL SMALL BUSINESS WEEK

Mr. THURMOND. Mr. President, I am happy to join my colleagues in recognizing National Small Business Week.

Not enough Americans realize the tremendous importance of the small businesses and small businessmen of this country. For example, small businesses provide 55 percent of all employment in the private sector. They contribute 48 percent of the gross national product, and 53 percent of the business output. In addition, 97 percent of all U.S. enterprises, or nearly 13 million, are small businesses. These include some of America's fastest growing companies. Small business is the source of most of the new jobs created in the private sector.

In my opinion, small businessmen are the backbone of our Nation. As a group, they exemplify the traits which made America great. They are willing to work for their rewards, depending on resourcefulness, ingenuity, and innovation for their success. They believe in the marketplace; they believe in economic freedom. I have supported and will continue to support measures in Congress to limit regulations and restrictions that overburden small businessmen. Furthermore, I believe that Congress needs to work to provide an atmosphere conducive to the strengthening and growth of small business.

In conjunction with this annual occasion, the Small Business Administration selects a "small business person of the year." This year, Mr. Matz Lischerong of Spartanburg, S.C., was selected for this honor from my home State.

In the finest tradition of American business, Mr. Lischerong worked his way up from a humble beginning. Born in Strasburg, Germany, in 1934, he went to work as a mechanic after his secondary education. Developing an interest in the textile business, he thereafter attended a special school in Reutlingen and became a textile engineer. Over the next 6 years he gained further expertise, and put it to work, in his job with a manufacturer of textile machines in Germany. He also traveled all over Europe setting up facilities for the production of knitted goods.

In 1961, an American businessman from the Piedmont section of South Carolina, meeting Mr. Lischerong in Germany, invited him to come to the United States to set up a knitting plant. To the great good fortune of my State, he accepted.

Eight years later, still in South Carolina and full of the American entrepreneurial spirit, he launched his own firm, Primaknit, Inc., a manufacturer of double knits. This was a courageous act. A new business is a risky proposition under the best of circumstances, and Mr. Lischerong had the added burden of being a relative newcomer to our country, and its economic practices.

The gamble paid off handsomely. So successful was Primaknit that Mr. Lischerong established a companion corporation, Litex International, Inc., only 3 years later.

These two companies, Primaknit and Litex, are a model of sound and responsible management. Our country needs

more like them, and more men like Mr. Lischerong. His story is an inspiring one, for it shows the continuing vitality of the American free enterprise system. By initiative and dedication, Mr. Lischerong has not only made an abundant lift for himself, but has benefited many of his friends and neighbors in the process.

It gives me great pleasure to join friends and associates of Matz in congratulating him for the honor that has crowned his efforts, and in extending best wishes for continued success.

## THE GENOCIDE CONVENTION: A HIGHER RESPONSIBILITY

Mr. PROXMIER. Mr. President, the Genocide Convention cannot be categorized along with the routine items on the Senate's agenda. It does not involve appropriations. It does not present a plan for Government reorganization. If the convention fell into any of the areas of legislation normally considered by the Senate, it would receive quick attention. But the convention's uniqueness should not provide an excuse to overlook the Senate's responsibility to act upon the convention.

It is a special sort of commitment which calls upon us to pass the Genocide Convention. President Kennedy, in presenting three related human rights treaties to the Senate, summarized that commitment:

The day-to-day unfolding of events makes it ever clearer that our own welfare is interrelated with the rights and freedoms assured the peoples of other nations. . . . There is no society so advanced that it no longer needs periodic recommitment to human rights. The United States cannot afford to renounce responsibility for support of the very fundamentals which distinguish our concept of government from all forms of tyranny.

Mr. President, let us not evade this important responsibility. I urge my fellow Senators to join me in supporting the Genocide Convention.

## COMPREHENSIVE YOUTH UNEMPLOYMENT ACT

Mr. HATCH. Mr. President, the Senate yesterday overwhelmingly passed S. 1242 to provide additional employment and training opportunities for youth. Unfortunately, I was unable to be present on the floor for the vote. As a member of the Subcommittee on Handicapped, I was participating with Senators RANDOLPH and STAFFORD at the President's National Conference on the Handicapped at another location here in Washington. I am anxious to indicate my support for this important legislation.

While initially I had some reservations about this bill, I have decided to support it and indeed cosponsor it because the problem of youth unemployment in the United States has stayed with us far too long. I believe extraordinary measures are justified in dealing with this phenomenon which is not responsive to the normal phases of the business cycle. I think it is fair to say that the basic problem of youth employment is far different from that which prevails among other groups. Whatever stimulus does ensue

from such monetary and fiscal measures as may be imposed for the general economy does not often trickle down enough to make a significant dent on youth unemployment. Hence, I think this bill represents a step on the right road in considering programs which will specifically target on the youth group.

I continue to have some reservations about some of the elements of this bill. I am concerned that the young men and women after participating in the various programs will for the most part leave the government payroll with no more job skills, employability, than they had when they entered. I am most concerned that some of the program sponsors will fail to give our youth something of real value—job experience and training that will make them truly employable in the future in unsubsidized jobs. And to the maximum extent possible, we should provide for the greatest involvement of the private sector in job experience and job training with a view to providing a transition for the youth to permanent jobs.

I hope and expect that program sponsors will deal with those concerns and will insure a successful implementation of the various programs authorized in this bill.

I am pleased to note that one of the serious problems in this bill was resolved at the committee level. I call your attention to part A of the bill which establishes a National Youth Adult Conservation Corps to be administered by the Department of Labor through interagency agreements with the Departments of Interior and Agriculture. While I did not particularly have a problem with regard to this program being opened to all those who meet the requisite age criteria, however, I did have a problem with building in a preference for employment of those youths who live in areas having unemployment rates of 6.5 percent or higher.

Needless to say that section as written could have in fact limited eligibility for participation for most youths residing in Utah, and I suspect in many other States.

For example, the unemployment rate of adults in my State is approximately 4.2 percent. And yet the unemployment rate among youth is calculated to be in excess of 10 percent. Since this bill's stated purpose is to provide employment and other benefits to youth, it only seems logical that any eligibility criteria consider the rate of youth unemployment rather than the rate of unemployment for all labor force participants. In this respect, the committee with my urging applied the rationale underlying the language of part B section 813(a) in determining an equitable distribution of the resources available for part A. Thus, with part A amended to insure minimum funding for all States the youth of Utah who can really permanently benefit by part A programs will have a chance to participate.

Moreover, unemployment among youth is very high in various geographic sections of the country. In 1976, for example, it was 23 percent in the inner cities of metropolitan areas, but was also as high as 13 percent in the suburbs, as well as 17 percent in nonmetropolitan areas. The particular problems of rural youth unemployment have been brought to the

attention of the committee by both Dr. Marshall and Senator CLARK, and I think it very significant that the committee in the final version of this bill recognized that the problems of unemployment, the lack of education and training and some of their other concomitants including crime, drug trafficking, et cetera, are not exclusive problems of particular classes, color, ethnic, or even income groups.

Therefore, the legislation will assure that groups with important differentials in joblessness are able to get full access to the programs which they might not otherwise have. I think it is important that we bar no group from such access if they need it and indeed could benefit from it, even if they come from a high family income class, for example. Accordingly, I think it is important to make some of these youth programs available regardless of the overall unemployment rate, adjusting their size in funding rather than their sheer availability to the trend in unemployment. I believe this is a more equitable and balanced approach and will be received more favorably by those unemployed youth whose hopes are heightened by passing a bill of this magnitude.

#### GUIDELINES NEEDED FOR DNA RESEARCH

Mr. METZENBAUM. Mr. President, the complex issue of recombinant DNA research has been before the Congress since early in this session. Extensive hearings have been held before several House and Senate committees. Careful balancing of the protection of the public health and safety and possible medical benefits is imperative.

In the Washington Post of May 24, 1977, Victor Cohn has written about the recent breakthrough in insulin production using recombinant DNA techniques. The world's diabetics are nearly outstripping the ability of current technology to supply sufficient insulin to maintain their lives.

This breakthrough holds the promise of producing virtually unlimited quantities of insulin. However, we must not allow the promise of future benefits to override careful consideration of the safety aspects.

Current guidelines from the National Institutes of Health cover only a part of the research now underway or proposed. They do not directly address the question of production of recombinant DNA products such as insulin.

As an interim measure the NIH guidelines must be extended to all research and careful study must be given to revising them if necessary.

I have introduced legislation to this end. S. 945 would extend the guidelines to all researchers and create a national commission to study the current and anticipated impact of recombinant DNA research and technology on health, safety, and society.

We must move quickly to meet potential threats to public health—but we must move with great care.

An article in the May 15, 1977, issue of the San Diego Union also speaks directly to this issue. I ask unanimous con-

sent that both articles be printed in the RECORD.

I urge all my colleagues to give serious attention to these articles.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Diego Union, May 15, 1977]

SOME SCIENTISTS FEAR BARRIERS TO RESEARCH

(By Clifford Grobstein)

Basic research has rarely been defined to everyone's satisfaction. A case can even be made that it exists only in the eye of the beholder and nowhere else. Nonetheless, most scientists find the idea of coupling regulation with basic research disconcerting.

Regulation suggests inhibitory control and basic research is often described as the untrammelled pursuit of knowledge for its own intrinsic interest. In fact, interference with the free pursuit of knowledge has raised hackles and still rattles skeletons extending back in time to the ancient Greeks. Yet recombinant DNA research was the subject of a temporary and self-imposed partial moratorium by involved investigators themselves. The research is currently under the quasi-regulation of federal "guidelines" and there is proposed regulatory legislation aimed at it in at least two state legislatures as well as in the Congress of the United States.

What is recombinant DNA research? Why has it drawn this attention? What are the public policy issues that it poses?

DNA is a chemical occurring in all living organisms. Its full name is deoxyribonucleic acid. It is a long thread-like molecule that was shown in the past quarter-century to carry in chemical language the basic hereditary information that is transferred between biological generations.

The chemical language involves only four "letters" or kinds of submolecules of DNA. These are strung along the length of the molecule by the thousands, in a sequence that is specific for particular organisms and their hereditary properties. So specific is the message that substitution or deletion of only one of the thousands of sub-molecules is sufficient not only to change a hereditary property but to threaten the survival of the "mutant" organism that results. This is true because the sequence of DNA determines the sequence of another class of submolecules that make up proteins and the properties of proteins are key to the structure and function of all organisms.

Recombination between DNA threads involves the transfer between them of sections containing specific sequences. Recombination has long been known to occur naturally, but molecular geneticists, in the past five years, have learned how to accomplish and control the process in a test tube almost at will. The result is the capability to transfer genes, the specific sequences that control proteins, and thereby determine hereditary properties.

Transfer is possible between strains and species regardless of their relatedness. This was first demonstrated between bacteria; it is now known to be possible between bacteria and essentially any other species—probably including man. The biological world, subject to technical obstacles, can be considered to contain a single gene pool, potentially exchangeable by human ingenuity well beyond natural probability.

The actual recombination of DNA is a biochemical technique and its procedures have been referred to as a technology. The procedures stem, however, entirely from basic research that originally had little direct motivation for practical application. Even now most investigators want to use the technique to fathom basic processes of heredity and its expression. Yet it takes no great imagination to conceive of practical consequences of the techniques, both inad-

vertent and deliberate. Harmless bacteria might be transformed to disease-producers, or disease-producers might be rendered more dangerous by addition or change of genes that affect antibiotic resistance. Also, bacteria might be endowed with the capacity to synthesize unnatural but useful products; for example, for bacteria to make human proteins just as they contribute to the making of beer or cheese. Humans with defective genes might even have these repaired and all species could conceivably be altered in their evolutionary courses by appropriate genetic intervention. Here pessimistic imaginings begin to generate shivers of a tyrannized world.

These currently are, however, all imagined consequences, each with its particular degree of probability and each certainty a different distance down the road of the technological future. Nonetheless, they have all been taken sufficiently seriously to be suggested to be potential immediate biological or social dynamite. For three years a debate has been rising to crescendo, fueled by these fertile imaginings.

The question I want to discuss is: With such potential, although it is as yet untested and surrounded by uncertainty, what is the appropriate public policy to guide the growth and use of this new knowledge? Alternatives have been suggested ranging from individual self-discipline and good judgment to a total federally imposed ban on the whole business. Today words like public liability, misdemeanor and felony are occurring in discussion of activities that were, less than five years ago, called fascinating, profound and filled with promise. A radical transformation has occurred and a hysterical overshoot is not impossible.

What should be the policy objectives of the legislation that now is being proposed at all levels of government?

First, to respect the fact that promoting the generation of new knowledge is a fragile process that we have not yet fully mastered. It still can easily be disrupted by hasty and ill-considered action.

Second, to accept the current quasi-regulation under the existing NIH guidelines as a reasonable first effort that contains means of modification and has not had opportunity to be fully tested. However, one basic deficiency of the guidelines already is clearly apparent. The quasi-regulation now operating is applicable only to research by federal grantees. The guidelines should be extended legally to all recombinant DNA research and use, including that getting under way in the private and commercial sectors.

Third, to address urgently the needs to reduce the uncertainty of risk-benefit assessment that surrounds recombinant DNA research at the present time. Given the recency of the technique, there is insufficient information to judge how great the risks or benefits of particular experiments may be. Before accepting regulation that conceivably may suffocate valuable research, the entire approach should be studied in all of its aspects to improve our sense of the directions to be taken safely and constructively.

I believe that a high-level federal commission is required to provide a wider perspective by conducting a comprehensive and objective appraisal to include all current concerns. The appraisal should include the probable effectiveness of the regulatory mechanisms already in place or planned. It should recommend means and provide resources to conduct, under suitable precautions, "regulatory research" to assess actual risk of experiments that are currently judged potentially hazardous. It should determine the directions now being taken by recombinant DNA investigators and should give "early warning" of potential applications.

It should consider priorities to be assigned to potential practical applications and should recommend arrangements under

which they should occur. It should examine the social and ethical implications of all aspects of genetic engineering. It should recognize, too, that recombinant DNA research to date has been a federal monopoly.

As with atomic energy a quarter-century ago, there is reason to consider carefully whether and when it will be appropriate for release of that monopoly.

The commission should, of course, give attention to longer-term arrangements. The debate to this point has put great emphasis on potential hazard, emphasizing threatened pandemics and suggesting fatal adulteration of the evolutionary process. These speculative possibilities should not be overlooked. But they should be recognized to be "worst possible cases" readily seized upon by "doomsday theorists."

It is entirely possible that a decade hence, biotechnology may prove either to have been exaggerated or to be readily controllable. By then recombinant DNA may be an accepted tool for more effectively cultivating genetic resources, maximally for domesticated species, perhaps very gingerly even with respect to humans. The responsible regulatory agency then may be focused not on controlling biotools but on furthering intelligent use of genetic information that has been hard won over eons of evolution and is now preserved in the sequences in DNA molecules that are only accessible in existing species whose genetic properties they control. As survival of these organisms is increasingly threatened, they may be conserved in wilderness areas or their precious information may also be stored in pristine form—as known sequences of DNA.

Of several bills already introduced in Congress, one adopts the cautious approach outlined. It is SB945, introduced by Sen. Howard Metzenbaum, D-Ohio, and referred to the Committee on Human Resources. The bill finds it necessary "to give the minimum safety procedures established by the National Institutes of Health the force of law over all recombinant DNA research." But it cautions that it would be "premature to establish a finalized policy with respect to the advantages of continued recombinant DNA research." Therefore, it mandates the establishment of a National Commission for the Study of Recombinant DNA Research and Technology.

The Commission would have 13 members appointed by the Secretary of Health, Education, and Welfare in the varied fields of medicine, law, ethics, theology, the biological, physical and environmental sciences, philosophy, humanities, health administration, government and public affairs. Included also would be six members active in recombinant DNA research.

Commission duties would encompass the entire range of issues addressed in the current debate, including special comprehensive study of ethical, social and legal implications. It would report finally to the President, the Congress and the secretary of Health, Education, and Welfare in not more than two years but might make interim recommendations along the way.

It is to be hoped that Senator Metzenbaum's bill will receive careful attention by both the general public and the public policy community. It would go far to reduce current tensions and to assure rational and orderly decisions. It may lead from the proposed interim commission to a more permanent mechanism to view recombinant DNA research as one aspect of our rising need and capability to conserve and utilize the world's genetic resources.

No one could now imagine trying to create the existing diversity of living organisms by randomly constructing DNA sequences. Modern organisms represent the DNA combinations that have proved themselves over eons

of time and the earth's complex changing circumstances. They constitute a resource at least as valuable as that of energy, natural products or even of human variety.

In a closing world society we cannot afford to waste or lose any of our remaining resources. They are part of the heritage of the species in facing its unpredictable but still promising future. This is the context in which we should view the uncertain opportunities and hazards of recombinant DNA. Their management may eventually become the responsibility of a permanent Commission on the Conservation and Cultivation of Genetic Resources.

#### SCIENTISTS DUPLICATE RAT INSULIN GENE (By Victor Cohn)

California scientists have successfully copied the genes that make insulin in rats, a breakthrough they feel could lead to easier and cheaper production of human insulin by 1979.

The development is one of the major accomplishments so far of the new "recombinant DNA" research by which scientists can insert genetic material from one species into cells of another.

What workers at the University of California in San Francisco reported yesterday is that they are growing, or "cloning," rat insulin genes (which consist, like all genes, of deoxyribonucleic acid, or DNA) in colonies of the bacterium called *E. coli*.

Their hope is to isolate and grow the human insulin gene in the same way, then again use harmless strains of *E. coli* as factories to make almost endless supplies of insulin for diabetics.

Insulin is now extracted from cattle or pig pancreases. It is essential for thousands of diabetics, who must inject it into themselves once or twice a day to make up for the insulin their own bodies fail to produce. But insulin has sometimes been in short supply, and some diabetics develop allergic reactions to cattle or pig insulin. The body requires insulin to metabolize sugar.

The California work was reported by Professors William Rutter and Howard Goodman, whose laboratories and workers have collaborated.

Normal insulin is produced by cells called islets of Langerhans in the pancreas. The Californians used genes from rats because fresh human pancreases are hard to get, and because any such work with human DNA would have to be done in a kind of tightly sealed laboratory that does not yet exist.

Safety guidelines set by the National Institutes of Health in Bethesda specify that such work must be confined to a so-called P4 laboratory, lest some unexpectedly dangerous genes or bacteria result and cause harm.

Two P4 laboratories will be completed soon at NIH and its satellite facilities at Ft. Detrick, Md., "and if necessary we'd go to Ft. Detrick to work," Rutter said.

Some scientists have said the manufacture of insulin in laboratory factories by genetic engineering is five to ten years away.

"But I believe it'll be done sooner than anyone has expected," Rutter said.

The Californians' next step will be to try to induce their new mass-produced genes to actually manufacture insulin—in biological language, to make the genes express themselves.

"This is a complicated business with a lot of complicated technology, and the insulin protein goes through several stages before it is completed," Rutter said. "But I have confidence that within a year we'll have demonstrated this."

He and Goodman believe they will do still more. For their achievement includes learning much that is new about insulin genes—rats have two separate genes that do the

job, not just one as in humans—as well as about insulin manufacture in animal cells.

Another benefit, Rutter said, could be "to understand what regulates gene expression," the way genes govern cells to make every living creature and every part of the body what it is.

#### A MODERN-DAY PARABLE OF THE 20 MEASURES OF OIL

Mr. BARTLETT. Mr. President, a noteworthy constituent of mine, Mr. Wayne E. Swearingen of Tulsa, Okla., has sent me a copy of a parable he recently wrote. It provides some useful insight into our current national energy predicament, and I would like to share it with my colleagues.

I ask unanimous consent that "A Modern-Day Parable of the 20 Measures of Oil" be printed in the Record.

There being no objection, the parable was ordered to be printed in the Record, as follows:

#### A MODERN-DAY PARABLE OF THE 20 MEASURES OF OIL

(By Wayne E. Swearingen and Warren H. Schmidt)

Once upon a time a great nation was formed. The people were fruitful and multiplied and took dominion over the land.

And it was good, wasn't it?

It was revealed that a wise and kind Providence had hidden 20 measures of oil under the land and the adjacent waters. The first nine generations used a total of three measures of that oil, leaving 17.

Some people in the ninth and tenth generations studied the geology of the land. They learned some of the subtle secrets of nature—and great gushers of oil were drilled. Others built automobiles and highways. There was little need for public transport systems, for oil was cheap. It was called progress.

And it was good, wasn't it?

And so it was that the tenth generation used as much oil as all previous generations leaving but 14 measures. Some people noticed this change and spoke out, but few listened to their warnings.

The eleventh generation used four measures of oil, leaving but ten.

Other nations on Earth not so blessed raised prices and enforced conservation. But this land was a free land and low prices for oil, gasoline, and electrical power always bring a great joy in the political system of a free land.

It was in the twelfth generation that others arose in the midst of the people and cried, "Our oil is diminishing. It is finite in quantity. It is becoming more costly to find. Soon our factories may stand idle and our schoolhouses may be cold." But the leaders of the people ignored them. "There will always be enough oil," they said to themselves "for we are creative and wise and wealthy in all things. We can buy oil from others."

And so they built great ships to carry the precious oil. But a sad day came when the ships did not sail from distant lands. In places with strange names, men withheld their oil. Prices were raised. And that marked the end of the era of cheap and abundant energy. There was much unrest in the world. The pain resulting from the great change fell unevenly upon the poor of that land and Third World Nations.

And so it was that the people learned that energy was controlled by others whom they could not understand or dominate. But suddenly the embargo was lifted. The ships sailed again and the voices of those who cried for action and moderation were lost in the celebration, for great was the joy in the land.

And so, in the twelfth generation five measures of oil were produced from that land and used, leaving only five for all future generations! Nearly half of all the oil used in the twelfth generation was imported from foreign places. This brought threats to the monetary system of the land. The military leaders were worried about the defense of the land.

Some who learned of the shortage grew fearful and were filled with despair. But others said, "The truth is not in these 'Prophecies of Doom'—they cry 'shortage' only to justify higher prices."

When the elected leaders could no longer ignore the danger, they counseled among themselves. "We dare not restrict use or allow prices to rise. We know we should encourage exploration and production of our own resources. But, if we do, the people might remove us from high office"—(for those were the days of public-opinion polls, where political popularity was computed each Thursday). So they spoke in tongues, but dared not to act.

But fortunately some who saw and heard did have courage. They bent their efforts to persuade their countrymen to curb their appetite and to husband the precious supply of oil and to encourage development of all possible sources of energy, so that their children and their children's children might have freedom.

History will tell us that this was a time of crisis and conflict, when the people learned a new morality of conservation. The political leaders, labor leaders, and Captains of Industry heard the people and were strengthened to make hard choices for the long-term good. And the young people of that twelfth generation understood that their parents did care for them. And that was the beginning of a new era in the land.

And that was good, wasn't it!

Wayne E. Swearingen is a Petroleum Management Consultant from Tulsa, Oklahoma. Swearingen recently served as Chairman of Oklahoma's Energy Awareness and Conservation Month. He is a member of the National Petroleum Council, and is Oklahoma Governor Boren's representative on the Interstate Oil Compact Commission.

Dr. Warren H. Schmidt is Senior Lecturer in Behavioral Science at the UCLA Graduate School of Management, Los Angeles. Dr. Schmidt authored an animated film, entitled, "Is It Always Right to be Right?" This won an Academy Award in 1971.

The two men wrote this parable while both served as speakers for the American Management Association.

#### FUTURE OF AIRLINE SERVICE IN SOUTH DAKOTA

Mr. McGOVERN. Mr. President, South Dakotans continue to be concerned about the future of airline service in our State and the upper Great Plains. The pending proposals on airline deregulation do not, in our view, provide sufficient protection for service to smaller communities.

The Old West Regional Commission, composed of the five States of South Dakota, North Dakota, Nebraska, Montana, and Wyoming, has gone on record against airline deregulation. In addition, their plans for supplemental air service have been set aside until a determination is made at the Federal level as to what the airline regulatory climate will be in the future.

Recent editorials in the Huron Daily Plainsman and the Aberdeen American

News, major newspapers in South Dakota, have addressed these concerns. I ask unanimous consent that these editorials be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Aberdeen (S. Dak.) American News, May 15, 1977]

#### THREAT OF LOSS OF AIRLINE SERVICE POSES SERIOUS PROBLEM FOR SOUTH DAKOTA

South Dakotans, preoccupied by problems of drought and need for irrigation, and concerned about how fuel shortages will affect farming and the tourist business, have still another major worry: the threat of loss of airline service through lifting of federal regulations governing it.

The immensity of the negative impact of reduced airline accommodations is beginning to make a profound impression upon people of this sparsely settled state. The possibility of cutting back or completely eliminating air service in most parts of South Dakota cannot be ignored. It can happen here. There was a time in earlier days of this state when people were certain the railroads were here to stay. But it has been proved to the alarm of the public that railroads can and do suspend service and dig up the ties and tracks.

It is understandable that South Dakotans, warned of the threat of a brush off by the scheduled airlines, are appealing to their representatives in Congress to resist legislation that would free the airlines of government guidance.

Indicative of the concern in South Dakota, the City Council of Watertown and the City Commission of Huron have adopted resolutions urging that two deregulation bills now in the Senate be defeated.

Those two cities are among the ones that could be without scheduled airline service if regulations are lifted and the commercial air carriers engage in cutthroat competition for the more profitable business of the nation's dense population areas.

The key to the thrust for deregulation, which appeals to supporters in Congress, appears to be the promise of lower air fares if air carriers are permitted to choose their own courses.

But opponents of deregulation contend that a "rate war" might reduce fares for a short time on a few major routes as new carriers enter potentially lucrative markets but they point out that deregulation will not change the cost of operating airlines and this will preclude anything more than temporary fare reductions.

Persons weighing the pros and cons of deregulation side with an opinion expressed in the Air Line Pilot magazine which said Congress "should not dismantle an industry under the guise of promising lower fares. This is a cruel hoax which should not be perpetuated any further."

South Dakotans can help discourage this hoax by continuing to support the efforts of their Washington representatives in opposition to deregulation.

[From the Huron (S. Dak.) Daily Plainsman, May 15, 1977]

#### KEEP OUR AIR SERVICE

Gov. Richard Kneip gave the Old West Commission delegates some good advice when he asked that they defer action on a plan to finance aircraft for commuter air service in the Old West states. As a result, the five governors went on record opposing airline deregulation.

There is no doubt that the proposals for airline deregulation now being considered in

the Congress will be bad news for South Dakota if adopted in their present form. Airline service as now scheduled would be sharply reduced here and in the other Old West states.

The plan presented in Sioux Falls would have the Old West Commission purchase some \$12.9 million worth of 19-passenger planes and lease them to commuter airlines. The problem seems to be that commuter airlines cannot get the money to buy their own planes. We expect that there are good reasons why the commuter lines cannot get the money and that these reasons are somehow related to service and public acceptance of that service.

Kneip argued, correctly we believe, that action on such a plan now would only encourage airline deregulation, and the other governors honored his request for deferral. However, the plan has been sent on to the respective congressional delegations for recommendations and comments and will probably surface again before the deregulation debate is over.

It is difficult to see how the government will effect savings by removing airline subsidies—one of the arguments for deregulation—and then turn around and substitute another type of subsidy for commuter lines—in the form of financing aircraft.

But it is easy to see how such a switch could diminish service, particularly at the smaller, scheduled airline airports. And with diminished service, experience has shown, comes diminished use.

South Dakota will be much better off if it can retain the airline service which it now enjoys, a point that seems to be well understood not only by Gov. Kneip but by the members of our congressional delegation. They should be encouraged to continue to fight.

#### BIOGRAPHY OF LINUS PAULING ON TELEVISION

Mr. HATFIELD. Mr. President, I would like to call to my colleagues' attention, a television program which will be aired on June 1 at 8 p.m. on PBS stations as a part of the Peabody Award "Nova" series. This will be a film biography of the acclaimed scientist and fellow Oregonian, Linus Pauling.

Linus Pauling is one of the world's unique contemporary figures, a Renaissance man of our times, with unparalleled achievements. He is the only person to have won two unshared Nobel awards—for chemistry in 1954, and for peace in 1962. I ask unanimous consent that the following information on the life of Linus Pauling be printed in the RECORD:

There being no objection, the information was ordered to be printed in the RECORD, as follows:

#### LINUS PAULING: CRUSADING SCIENTIST

LINUS PAULING: CRUSADING SCIENTIST is a "Nova" Public Television one-hour film to be shown nationally on June 1.

Pauling's scientific and human achievements may be unparalleled in world history. He is the only person to have been awarded two unshared Nobel prizes.

In 1954 the Nobel Committee presented him with the Chemistry prize, for his work on the nature of the chemical bond.

In 1962 Pauling was the recipient of the Nobel Peace Prize for 1962, for his international crusade to bring a halt to the testing of nuclear weapons in the atmosphere.

He received the Presidential Medal of Merit in 1975 in recognition of his contributions to a range of scientific fields—chemistry, biology, genetics, medicine, etc.

There are some who describe Pauling as the world's greatest scientist of this century, as a man who helped revolutionize chemistry. Others consider him a "confused health crusader" because of his Vitamin C controversy.

Linus Pauling was born in Portland, Oregon in 1901. He lived in Condon, a small cowboy town in eastern Oregon, where he first went to school. After his father died, when he was nine, Linus returned with his family to Portland, where he attended Washington High School. He went to Oregon Agricultural College (now Oregon State University) in Corvallis.

In his senior year in college he was asked to teach freshmen chemistry. The first day in this assignment he met Ava Helen Miller, a student who after a few years became his wife.

Pauling went to graduate school at Throop College—now named California Institute of Technology. His professors soon observed his genius, and he began to make original contributions to science when he was in his twenties. In 1926 he went to Europe after receiving one of the first Guggenheim Fellowships awarded.

In 1930 he made a revolutionary breakthrough in science, with his discovery of the nature of the chemical bond. His teachers accurately predicted that someday this insight would lead the young scientist to international renown and a Nobel Prize.

From study of the molecular structure of minerals and crystals Pauling moved to the study of molecular substances in the human body. His insights into the nature of the disease, sickle cell anemia, contributed to the beginning of an entirely new science, molecular biology.

During the Second World War Pauling helped develop rocket propellants for the Navy, and tried to develop artificial blood. He was asked to head the chemistry section of the Manhattan Project, but was too busy with other war work to take on this historic assignment.

Albert Einstein asked Pauling to join a small group of scientists after World War Two ended, to alert the world to the new dangers of the atomic age. Pauling soon began to speak out on this question, and after helping launch a petition calling for a halt in atmospheric testing of nuclear weapons, he became one of the nation's most controversial figures, the leading scientist spokesman for what became a ten-year crusade.

Pauling's activism made him a target during the "McCarthy era." He was branded as a Communist, a charge he consistently denied. Nevertheless, in 1952 he was refused a passport to England, where he was to give a lecture to the Royal Scientific Society, on his discovery of the alpha helix, a basic structure of protein in all life. Had he gone to London, some speculate Pauling would then have seen key data that would have assured his discovery of DNA—the so-called double helix—and thus perhaps been awarded a third Nobel Prize.

He was denied a passport again in 1954, but this decision was overruled by the State Department after it was announced that Pauling had been awarded the Nobel Chemistry prize.

In 1960 Pauling faced jail after he refused to tell a Senate Internal Security subcommittee the names of those who helped gather signatures for his world wide petition against atmospheric testing of nuclear weapons. With the signing of the Nuclear Test Ban Treaty in 1963 Pauling's crusade was culminated, and the day the treaty went into

effect it was announced that he had been awarded the Nobel Peace Prize.

During the Vietnam war Pauling spoke out against this conflict, but he had chosen after a few years of this kind of effort, to devote most of his time to science and teaching. He worked on the nature of memory, the nature of anesthesia, a field he terms "Orthomolecular Psychiatry" and Vitamin C, a basic part of his views on preventive medicine.

He has continued to gather awards from around the world for his monumental achievements.

These include the Pasteur Medal, the Davy Medal of the Royal Society, 28 honorary doctorates (including Princeton, Yale, Chicago, Oxford, Cambridge, London, Paris, Melbourne, Cracow and Berlin). He has also received the International Lenin Peace Prize, the Grotius Medal for Contributions to International Law.

In recent years Pauling has focused his activity at his Institute for Science and Medicine in Menlo Park, California. His work there has largely centered on preventive medicine.

Pauling is the author of about 400 scientific papers, 100 articles on social and political matters, particularly about peace; and several books. His college textbooks on chemistry are used internationally.

For the State of Oregon Pauling is one of its most renowned and revered figures. Linus Pauling: Crusading Scientist, produced, directed and written by Robert Richter (a former Oregonian), celebrates the life and times of a man whose achievements and humanity will be an inspiration to the millions of Americans who will see this film on June 1.

#### BUSINESS SUPPORT FOR CONSUMER PROTECTION AGENCY

Mr. METZENBAUM. Mr. President, perhaps no new Federal program has sparked as much public debate as the legislation which would create an independent Consumer Protection Agency to represent the interests of citizens before Government agencies. Virtually every consumer organization has made this issue their No. 1 priority. In the last Congress, it was thought by most that legislation to create this Agency would succeed but for the threatened White House veto. This assumption was an illusion. The opposition had no need for vocal demonstrations. They had their spokesman, allowing them silence and patience.

With a new administration, the White House becomes not only a consumer ally, but a vocal consumer leader. The illusion is over; the opposition—long silent—speaks again. With too few exceptions, a concerted effort by business has surfaced again to oppose the creation of a consumer advocacy agency.

As a former businessman I view such opposition as puzzling. Any good business person knows that the consumer's good is business' gain. In other words, what is good for the consumer is good for business.

I was heartened to read in a full page advertisement in the May 4 issue of the New Jersey Suburbanite, that Kings, a supermarket company, supports the Consumer Protection Act of 1977. Obviously, Kings knows what is good for business. I commend Kings for its leadership.

Under the heading, "Kings is Supporting the New Consumer Protection Agency Bill: Here's how you can, too," a major east coast business displays good business sense. Mr. President, I ask unanimous consent to print in the RECORD the full text of the advertisement illustrating Kings' support for the Consumer Protection Agency bill.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

[From the Madison Eagle-Chatham Courier, May 5, 1977]

#### KINGS IS SUPPORTING THE NEW CONSUMER PROTECTION AGENCY BILL

##### HERE'S HOW YOU CAN, TOO

Chances are, you've heard about the new legislative bill that would create a Consumer Protection Agency in Washington.

The agency would be independent and non-regulatory. It would have the power to represent the interests of consumers before government agencies and courts. And it would provide the public with information about consumer matters.

In short, it would give consumers in general a vital voice in decision making.

We've looked at the legislation and we think it works to the benefit of the consumer.

We've looked at the budget and, while we're concerned about adding to the federal bureaucracy, we believe it is a reasonable budget and is well worth it.

And we've looked at the list of people who support the bill—including President Carter and his newly-appointed Special Assistant for Consumer Affairs, Esther Peterson, who sent a strong message to Congress recommending passage of the bill—and we are impressed with its broad support.

Kathy LaPier, Kings' Director of Consumer Affairs, supports the Consumer Protection Agency bill. She urges you to send your voice of support to Washington.

Why is Kings, a supermarket company, supporting a Consumer Protection Agency?

If you're a Kings customer, you're probably not surprised. You've heard us say many times that, "What's good for you is good for us." The fact is, we believe very strongly that consumer participation in government decision making is good for consumers, business and government alike.

That's why we—as a company and as individuals—are writing to our senators and congressmen, urging them to vote in favor of the Consumer Protection Agency bill. And we urge you to do the same.

The bill is Senate Bill No. S. 1262 when writing to your senator and House Bill No. H.R. 6118 when writing to your congressman.

With all our support, the Consumer Protection Agency can become a reality and a real benefit to all Americans.

For, when you come right down to it, we're all consumers.

Kings is supporting the new Consumer Protection Agency bill.

Kings: Ridgewood, Chatham, Morristown, Maplewood, Orange, Millburn, East Orange, Montclair, Livingston, Summit, Ivy Hill, Cresskill.

Senators: Harrison A. Williams; Clifford P. Case. Addresses: Federal Office Building, Washington, D.C. 20510.

Representatives:

For Essex County: Peter W. Rodino, Joseph G. Minish, Joseph A. LeFante.

For Union County: Matthew J. Rinaldo.

For Bergen County: Andrew Maguire, and Harlod C. Hollenbeck.

For Morris County: Robert A. Roe, Mill-cent Fenwick.

Address: House of Representatives, Washington, D.C. 20515.

### THE PANAMA CANAL CAN BE DEFENDED

Mr. HELMS. Mr. President, the U.S. Department of State has been carrying on an extensive propaganda campaign asserting that the Panama Canal is indefensible. The purpose of this campaign is to frighten U.S. citizens into supporting the surrender of our sovereignty and rights in the Canal Zone.

The tactics of the State Department are deplorable, especially inasmuch as the canal has been successfully defended throughout many wars. For example, during World War II, the Nazi government had spread its influence in many countries in Latin America, and its spies and operatives moved freely throughout the hemisphere. Yet proper precautions were taken in the Canal Zone, and the attempts at sabotage were thwarted.

There is no doubt today among the military men with whom I have talked that the canal can be defended successfully if the proper steps are taken. The canal is protected against nuclear attack by the same nuclear umbrella that protects our entire Nation; guerrilla attacks and rioting require only certain precautions and preparations of which we are fully capable.

Now the U.S. Defense Department has confirmed what has been known all along. The canal can be defended. In a statement to Virginia Prewett, one of the most knowledgeable and experienced reporters we have reporting on the Latin American scene, the Defense Department confirmed not only that we could defend the canal, but also that we are better prepared to do so today than we were in 1964 when Communist-inspired riots broke out.

In her "Hemisphere Hotline" released today, May 27, Miss Prewett reports:

"Acting on a leak, Virginia Prewett last week formally asked the Defense Department to confirm or deny a report that U.S. forces there, commanded by Lt. Gen. Dennis McAuliffe, can indeed defend the Zone and Waterway from 'guerrillas' and/or 'rioters erupting into the Zone.' After due consultation with the powers-that-be, the official spokesman told Prewett that Gen. McAuliffe's command indeed can and will do just that.

A hint at the Pentagon shift came when Gen. McAuliffe, in a recent interview in Mexico, was asked about the Canal's defensibility. He replied that his 193rd Brigade in the Zone, some 7,000 men, are better trained and equipped than U.S. forces there in 1964 at the time of outbursts in the area. And that they can defend the Zone and waterway from any attack.

Mr. President, Virginia Prewett also points out in her "Hotline" that another dubious treaty rationale put forward by U.S. officials has also been weakened—and this time by the Panamanian dictator, General Torrijos himself. The State Department has been claiming that the new treaty is needed because "all of

Latin America" is demanding that the canal be handed over to Panama.

Mr. President, I know from my own personal experience in Latin America, and my private conversations with Presidents and foreign ministers of some of the most important countries in the southern continent that most of Latin America definitely opposes handing over the canal to a weak country like Panama. The idea that South America wants us out of the Canal Zone is a myth manufactured in the State Department.

But now, as Virginia Prewett points out, Torrijos himself has admitted that he is under pressure from South American governments that think the United States is giving away too much to him. Indeed, he is supported only by Mexico, Costa Rica, Colombia, and Venezuela—and incidentally, the last three have a special client status because of treaties with Panama by which they hope to get favorable concessions if Panama is given the canal.

Mr. President, since Miss Prewett's entire report contains many interesting details about the situation in Panama, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

#### DEFENSE DEPARTMENT CALLS CANAL "DEFENSIBLE"

[From Hemisphere Hotline Report]

WASHINGTON, D.C.—The Pentagon—which would have to have had approval from the Carter White House to do so, is reversing a long-standing State Department argument for a concessionary new Panama Canal treaty. The Department of Defense nowadays is quietly saying that the U.S. military can indeed defend the Canal and Zone against any attack.

Apparently, it has occurred to somebody in the administration that if Pres. Carter gets a new treaty including the U.S. right-to-defend, as he promised in his campaign, it should not be said U.S. forces are unable to defend the Canal. Henry Kissinger in 1975 got the Ford White House to make the Pentagon go along fuzzily with the State Department's opposite contention.

Acting on a leak, Virginia Prewett last week formally asked the Defense Department to confirm or deny a report that U.S. forces there, commanded by Lt. Gen. Dennis McAuliffe, can indeed defend the Zone and waterway from "guerrillas" and/or "rioters erupting into the Zone." After due consultation with the powers-that-be, the official spokesman told Prewett that Gen. McAuliffe's command indeed can and will do just that.

A hint at the Pentagon shift came when Gen. McAuliffe, in a recent interview in Mexico, was asked about the Canal's defensibility. He replied that his 193rd Brigade in the Zone, some 7,000 men, are better trained and equipped than U.S. forces there in 1964 at the time of outbursts in the area. And that they can defend the Zone and waterway from any attack.

Torrijos' personal Canal Treaty negotiator, Panama's Rómulo Bethancourt, assailed Gen. McAuliffe, saying he had contradicted a 1976 stance of U.S. Joint Chiefs Chairman Gen. George S. Brown. In Hill testimony then, Brown had inferred grave perils from guerrillas or mobs.

But last week, exclusively, the DOD spokesman cheerfully told Prewett that McAuliffe's statement does not "run counter" to Gen.

Brown's stance. As a by-product, the DOD destroys State's main rationale for making the new treaty.

Panama Strongman Omar Torrijos has threatened in many ways and on many occasions that if he doesn't get the treaty he wants, guerrillas or direct attack (which he himself might lead) will overwhelm the Zone. He threatened violence recently in his own interview in Mexico.

Kissinger put pressure on the White House to get Gen. Brown to head a very high-level U.S. mission to Panama in September 1975 to shore up the then-teetering Torrijos. From then on, State's thesis of Canal indefensibility had at least implied Pentagon concurrence.

#### TORRIJOS AND THE BANKERS

Prewett has also learned the following from a source many times proved reliable: Torrijos is heavily trying the patience of the big U.S. banking interests that have given major private-sector support for the Kissinger-type treaty.

Torrijos, it is learned, must have around \$65 million in new foreign loans by June 1, else important payrolls may go unpaid. Big New York banks already much exposed in Panama will arrange a package of some \$300 million to pay debt service, with some money in an early installment for payroll purposes, it is learned. That is, if Torrijos will sign the kind of treaty he is now being offered.

That treaty, it has been understood from the time Carter took office, must allow the U.S. to play a continuing defense role in Panama—to "guarantee the Canal's neutrality" for as long as the waterway has a useful life.

Carter named Amb. Sol M. Linowitz, energetic spokesman for the New York banks' point of view, as co-negotiator on a Kissinger-type treaty. After he began negotiating, it was pointed out that Linowitz held two high posts with the Marine Midland Bank of New York, which has made loans to the Torrijos regime. Under fire for a conflict of interests, Linowitz resigned the bank posts. But the New York banking community in effect has in Linowitz a representative of their viewpoint on the present negotiating team.

Ironically, a charge made by the pro-treaty camp is that the old treaty, made in the early 1900's, was too strongly influenced by U.S. financial interests.

#### ANOTHER TREATY RATIONALE WEAKENS

Another oft-heard rationale for concessions to Torrijos has been materially weakened by the Panamanian strongman himself.

In an interview with several foreign women journalists, Torrijos, expansive and indiscreet, confessed that only four Latin American presidents are willing to go to bat for him. (They are those of Mexico, Costa Rica, Colombia and Venezuela.) He said that "rightist" South American governments think the U.S. is giving away too much to him—and that under their pressure, he will allow the U.S. a continuing right to intervene for defense "against third nations". He said, however, he would never sign a "written" agreement to allow U.S. intervention "in Panama"—presumably against rioters or guerrillas, his repeated threat.

Torrijos' group has frantically tried, without success, to deny he ever made the statements. The Hotline has reported for some ten months that Torrijos was losing, and now has lost, most of Latin America's support. The State Department, in reference to Torrijos' admission that he now has real support from only four neighbor regimes, said that all Latin American governments are "on the record" as favoring the new treaty—at least "publicly".

So much for the second rationale for the Kissinger-type Canal treaty.

Torrijos' indiscretions to the lady reporters is of a piece with other private admissions and boasts his group has made on informal occasions, such as cocktail parties. When Rep. Robert Dornan (R, Cal.) was in Panama with a House Subcommittee earlier this year, a Torrijos official at a party boasted that when they get the Canal, they can "make a big profit" with preferential toll charges. If Japan ships Toyotas to New Orleans, the ship carrying them may pay very high, was the example. Russia and Cuba might get much better rates.

Such concerns are hardly ever broached in the U.S. national press, though Washington Post editorialists now admit that 48 "hard" votes in the Senate oppose the treaty. But proteate legislators and their staff members are concerned.

Delta Lines Pres. J. W. Clark told the Institute on Foreign Transportation and Port Operations in New Orleans May 6 that "Communist shipping has become a real threat to U.S. flag lines and our Western trading partners."

"Their prime target seems to be the lucrative U.S. trades. Insidious rate-cutting practices, on a non-commercial basis, prompted even the chairman of the U.S. Federal Maritime Commission to initially endorse . . . giving the Communists rate advantages as a lesser evil to 'confrontation' between governments. . . . Private steamship lines alone can hardly stand up to state-owned, politically motivated, raw maritime power."

Russia and Communist China each have 100 ships under Panamanian registry, Capt. Clark said.

#### HOUSING: STILL ON THE SAME OLD DANGEROUS ROLLER COASTER

Mr. HUMPHREY. Mr. President, a recent article by Robert Simson, in the Wall Street Journal, provides some interesting facts about the housing boom which is sweeping this Nation.

Although I am delighted with this long-awaited good news, I am disturbed by the lack of stability which plagues the housing industry. Each turn that the economy takes is magnified in the housing industry—a recession in the rest of the economy will insure a housing depression, as we have recently seen. This depression, of course, is felt throughout the housing-related industries such as the lumber, insulation, concrete, furniture, appliance industries, and the like.

Our economy simply cannot afford to have the housing industry fluctuate so severely in response to swings elsewhere in the economy. Housing simply should not be a boom or bust industry. Not only is this phenomenon detrimental to the rest of the economy, but it also deprives Americans of the opportunity for home ownership. It is important that each American be assured of a decent and affordable home. A housing slump not only limits the units available, but, in doing so, drives up their prices. The March 1977 median price of a new home was \$46,000, up 6 percent from March 1976, and 18 percent from March 1975. At this pace, it is becoming increasingly difficult for young families to purchase homes.

At this point I would like to call your attention to the legislation I have intro-

duced to create a Federal Housing Bank. This bank would make mortgage funds available for home purchases at no more than 6 percent for most mortgages and on a consistent basis related to housing needs. I cannot overstate the importance of such legislation. The Federal Government must not leave the fluctuations of this important sector to the capriciousness of the private market exclusively. We must insure potential homeowners low interest rates, market stability, and affordable homes. Without these, homeownership will become a privilege reserved only for the wealthiest segments of our population.

Mr. President, I ask unanimous consent that the Wall Street Journal article discussing the happy side of our boom-or-bust housing industry be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING BOOM SPREADS FROM COAST TO COAST: FEARS OF INFLATION HELP—SOME TRACTS ALREADY EXCEED SALES FOR ALL LAST YEAR; A QUICK-TRADING FAMILY—SUN BELT AND SNOW BELT BUSY.

(By Robert L. Simpson)

What started last year in California is a regional flurry of frenzied home buying has spread eastward and is developing into the biggest single-family housing boom on record.

From Southern California, where lotteries often determine who gets to order a new house, all the way to New Jersey, where some developments this year have already exceeded sales for all of 1976, demand is far outstripping builders capacity to deliver new houses.

Instead of a firm sales contract, more and more prospective buyers in places like Denver, Houston and Washington, D.C., are being offered only a spot on a waiting list. While the pace is clearly hottest in the West, "there are no bad markets anywhere," says Michael Sumichrast, chief economist of the National Association of Home Builders.

Fueling the boom are favorable mortgage conditions and a growing demand from newly formed households. But especially important this year is fear of renewed inflation. New-house prices have doubled since 1970 and show no signs of leveling off. "A lot of the buying in this country is panic buying," says a Denver home builder. "People are buying because they think they will never have another chance."

#### A HOUSE IS A HEDGE

"The price of the house is the only thing that's holding up for people," says Judy Mackey, a consultant at Townsend-Green-span & Co. of New York. "The stock market failed them, gold failed them and their savings accounts aren't keeping up with inflation. Families are buying houses more freely and putting more of their incomes into them as a hedge against inflation."

Thus, Terence and Sheryllyn Odo, both airline employees in their early 30s, are buying their second house in just six months. "We don't have a lot of money," Mrs. Odo says. "There's no way we could save \$40,000, and yet we've made that much in six months on our house."

After taking an \$18,000 profit last August on the sale of a condominium they had owned three years, the Odos, who have two children, bought in November a new, \$71,000, three-bedroom house in Foster City, Calif., near San Francisco. Now they're confident of

selling the same house for well over \$110,000, even though "it's just a pleasant house that nobody would go screaming after," Mrs. Odo says.

The Odos recently took turns standing in line for two nights and a day so that they could sign up to buy a new, \$111,500, four-bedroom house not far from their old one. To keep their monthly housing payments at about \$630 and within reach of their combined monthly income of \$2,000, they plan to put \$60,000 down on the new house.

#### SPECULATION A FACTOR

Rampant speculation is helping to overheat the California market. Many buyers don't want a house; they want a quick profit. Such speculation doesn't seem to be spreading to other states, but frantic buying like the Odos' is.

"What happened in California last year is happening here now," says William Tucker, executive vice president of Wood Brothers Homes Inc. of Denver. "We're selling faster than we can build." The firm doubled its year-ago sales pace in the city to 600 units in the first four months. At Writer Corp. of Denver, "I put the brakes on" sales after April, says George S. Writer Jr., president. First quarter sales of 164 units were 30% ahead of schedule; April sales of 83 units were 76% ahead.

Near Phoenix, sales at Del E. Webb Corp.'s Sun City retirement community hit 2,400 units in the first quarter, ahead of 1,695 units for all of 1976 and close to 1973's one-year record of 2,516. U.S. Home Corp., a national builder based in Clearwater, Fla., reported 55% year-to-year sales gains in March and April after a 40% gain in February. Kaufman & Broad Inc., with operations in California, Chicago and New Jersey, posted a 76% increase in March orders over the year-earlier level. In the previously depressed New York-Long Island market, single-family building permits rose 70% in the first quarter from a year earlier.

#### BEST YEAR ON RECORD?

Such sales rates indicate that single-family home building is on the way to its best year since the Census Bureau started recording such starts in 1959, experts say. The National Association of Home Builders has forecast 1.4 million single-family starts for all of 1977, up from a healthy 1.16 million in 1976. (The record year at present is 1972, when 1.3 million single-family units were started.) In March, single-family starts hit a 1.33-million-unit annual pace, aided by starts that were delayed by bad weather in January and February. The April rate was 1.44 million, down from March but 35% ahead of the April 1976 pace.

The single-family boom is good news for both the housing industry and the economy in general. With multifamily starts expected to rise to between 460,000 and 500,000 units from 1976's anemic 373,800, total 1977 housing starts are expected to approach 1.9 million units, a robust 23% ahead of 1976's 1.55 million starts. Some forecasters are raising their 1977 predictions to two million units.

A booming housing industry generally helps stimulate the rest of the economy, for new-house production affects sales not only of such building materials as lumber, insulation and concrete but also of household items like appliances and furniture. Housing's job impact is similarly broad.

One key to the boom is a favorable financing situation. Savings flows into savings and loan associations are continuing at high levels and are expected to total \$46 billion for the full year, only slightly below 1976's record \$49.7 billion, according to Donald M. Kaplan, chief economist of the Federal Home Loan Bank Board. As a result of such inflow, S&Ls are expected to make a record

\$98 billion of mortgage loans this year, up \$10 billion from 1976.

After declining steadily the first four months to an average of 8½% to 8¾% on loans for 80% of the purchase price, mortgage interest rates at lending institutions are only now starting to firm and edge up in some markets. Rates as low as 8¼% are available in some places, and industry experts forecast only a gradual rise in rates to about 9% by year-end.

Another key: The Census Bureau reports continued high levels of new-household formations—1.7 million, last year, up from 1.3 million in 1975. "We have ideal circumstances with the post-World War II babies coming through and buying houses," says Frank Crossen, chairman of Centex Corp., which posted a March 31 backlog of 3,049 orders for new houses, up 40% from the year-earlier level of 2,185.

But skyrocketing prices make it increasingly difficult for first-time buyers to afford new houses. In 1976, the median sales price of new houses rose 12% from the previous year, and the March 1977 median price of \$46,400 was up 6% from March 1976.

Without a house to trade in, Dennis Sprovero, 29 of Hercules, Calif., and his wife "had to scrape" to come up with the 10% down payment they needed to buy a \$50,000 house. Although their combined income is \$25,000 a year—he is a merchandise manager at a Richmond, Calif., store; she is a schoolteacher—they had to borrow from their parents to raise the down payment.

The rise in the median price partly reflects sales of bigger new houses, with added amenities like fireplaces and air conditioning, but inflation is rapidly closing the existing-home market, too, to first-time buyers. The median existing-home price in March was \$41,000, up 10% from a year earlier, according to the National Association of Realtors. At those prices, the median home-buying family's income in 1976 was \$21,615, well above the national median income of \$14,750, according to the home builders' Mr. Sumichrast. He notes that only 35% of the new-home buyers are in the housing market for the first time.

At the same time, escalating resale prices mean that young homeowners like Stephen Bieri of Denver can rapidly trade up. He and his wife, Barbara, who both work for the Denver Rockies professional hockey team, are buying a new, \$72,500 house, their third house in two years.

The Bieris had to borrow from his parents to buy their first used house two years ago in California. But a \$5,000 profit from the sale of that house after six months gave them a down payment for a used house they bought last August in Denver for \$49,500. After seven more months, the Bieris sold that house at an \$8,000 profit, and they had saved enough to make a \$14,500 down payment on the new house they're now buying. With an income of more than \$30,000 a year, they expect to easily afford the \$550 monthly payments.

Because the price of such a house has gone up \$3,100 since they ordered one in February, Mr. Bieri figures "we can't lose money on it, and if we'd waited any longer, it would have been an \$80,000 house, and we couldn't swing that."

Recognizing that buyers are more and more limited to those with two incomes and sizable equities in existing homes, builders are introducing bigger, fancier houses with the more affluent buyer in mind. "We're catering to the trade-up market now instead of the 'no frill's home' market," says a spokesman for Kaufman & Broad. During the recession, Kaufman & Broad helped lead a building trend toward scaled-down, "back-to-basics" houses with modest price tags, but

now it is having success with larger, more expensive models.

In Denver, Sanford Homes, Inc., which sells most of its houses in the \$65,000-to-\$85,000 range, has introduced a plush, 2,800-square-foot "manor house" that now sells for \$95,000 to over \$100,000. After selling eight of the houses, Sanford has a waiting list of 20 buyers for the next manor house it builds in a planned subdivision.

Also contributing to higher prices are rising costs of materials and labor. In recent weeks, price increases have been posted covering cement, roofing, hardboard, insulation and other building products. In especially hot areas of the Southwest, some builders are temporarily running out of such supplies as wallboard and insulation as manufacturers ration production. Spot labor shortages are developing. In Dallas, Jim Walter Homes runs newspaper ads urgently asking for carpenters. In the Los Angeles area, carpenters command a \$20-a-day premium in addition to base pay of \$12 to \$13 an hour, according to Centex Homes.

#### LOT PRICES SOAR

But probably the biggest cause of the rising home prices is the dizzying climb of land costs. In California, "the top price for a single-family lot, with improvements, was \$12,000 two years ago, but now the standard price is \$20,000, and they go up to \$75,000 for a finished lot in the San Francisco Bay area," says John Hensley, president of Centex Homes of California.

Builders say that a major cause of the rising land costs is the long delays often forced by environmentalists and opponents of growth after a developer buys property but before he sells it to builders. A delay may last 2½ years. The developer has to spend money fighting the objections and has to carry the debt that much longer, all of which raises his price to builders.

And sometimes he is forced to drop the project. Partly because of such obstacles, home-building sites are harder to come by. According to Advance Mortgage Corp., California builders face an imminent shortage of buildable land, and home prices are rising by 2% to 4% a month.

Thus, mob scenes often result when California builders try to sell houses. In Garden Grove, Shappell Industries Inc. recently held a lottery to choose 91 buyers out of 1,000 applicants for its \$115,000 houses. "There was nothing else we could do," says a spokesman. Hopeful customers offer to bribe salesmen, and disappointed buyers threaten to injure them. "It's just no fun selling any more," laments Bob Moon of Oakridge Realty in San Jose.

Builders face site problems in other parts of the country, too. In the Denver area, Public Service Co. of Colorado, facing restraints on natural-gas supplies, puts builders on a 12- to 15-month waiting list for new gas taps. Tight supplies of water also hold up building there; the Denver suburb of Westminster recently began a building-permit allocation program after a 130% increase in permits in the first quarter threatened to jeopardize the suburb's water supplies.

A typical single-family lot in the Denver area, with utilities and streets, sells for \$12,000 now, up 14% from a year ago. New-house prices are rising by at least 1% a month, builders say.

Signs of a land rush are appearing in Denver. Most builders have sold all the houses they can build through the summer, and some have stopped taking firm orders. "We don't want to get too far ahead of building with sales because we might get locked into unfavorable costs or a poor money market," says William Butler, sales and marketing director at Wood Brothers Homes,

which is taking lot reservations for houses it won't deliver until late fall. U.S. Home's Witkin Homes unit in Denver says that 185 new houses priced between \$30,000 and \$70,000 were ordered in two months at the builder's Summer Valley Ranch development—before models were built and the project was officially opened.

"I guess you either afford it now or it's worse later," sighs Carol Schenderlein, who with her husband, Robert, is buying a new, \$53,500 house in the Denver area after selling their old one for \$37,500.

Last winter's cold weather has apparently sparked a new movement to the sun spots of Arizona and Florida. Other Phoenix and Tucson builders besides Sun City are doubling year-ago sales levels, and "Florida is in a full bloom situation," according to James J. Shapiro, president of U.S. Home's Countryside Division in Clearwater, Fla. "This winter we found the walkaway Northern homeowner who said, 'That's it,' closed the door on his house and moved to Florida," Mr. Shapiro says. At Countryside, U.S. Home is building condominiums for the first time in two years, and single-family sales are double the level of two years ago.

But new-house sales are also up in colder areas—up 42% in Chicago, according to Home Data Corp. in hard-hit Buffalo, N.Y., Marrano Enterprises Inc. posted a 10% sales gain in the first quarter despite the weather and expects to increase production by 20% for the full year. James Chiswell, executive vice president of the Buffalo builders' association says:

"People found out the old house just wasn't what they thought it was and are buying houses with more insulation."

#### S. 790—FICTION AND FACT ON WATERWAY USER CHARGES

Mr. DOMENICI. Mr. President, several recent letters and statements analyzing the effects of S. 790 and waterway user charges have come to my attention. These assessments by the barge industry are designed to show that the waterway user charges in S. 790 will bring "destruction" to the waterways. There is only one difficulty with this case: It is built on a foundation of fictional figures. The doom-speakers of the barge industry ignore the 10-year phase-in of waterway user charges in S. 790. They ignore the congressional veto in S. 790. They ignore the opportunity for a mid-course correction in S. 790. They ignore the full Federal subsidy now spread among the big barge companies. They ignore the many evaluations by various independent Federal agencies. And they ignore the language in S. 790 that protects existing waterways against user charges that would cause serious economic impacts.

Worst of all, they ignore the facts.

Most of the barge industry lobbying against waterway user charges, which would give the taxpayers a fair shake, has been based on an argument that "we don't know enough." If we only consider the barge industry's figures, I would agree. But I believe a look at independent analysis, and some simple mathematics, will enable my colleagues to come to the reasonable conclusion that the arguments of the barge industry can be safely dismissed.

To give my colleagues a flavor of these statements, I shall share with you sev-

eral of these flights of fictitious fancy, and show how the real impact of S. 790 is far more reasonable.

## FICTION

The Ohio Valley Improvement Association has been a leader in the dissemination of information that inflates the effect of user charges. For example, they state that a barge trip from Huntington to Charleston, W. Va., will bring with it a user charge of \$1.93 per ton of commodity. Since this involves a voyage of about 100 river miles, the OVIA user charge works out to about 2 cents per ton-mile.

## FACT

According to the Corps of Engineers, some 162 billion ton-miles of traffic moved by barge on the Mississippi River system in 1972. If you multiply that OVIA figure of 2 cents per ton-mile by the 1977 traffic levels, you quickly find that the Ohio Valley Improvement folks have come up with a user charge that raises \$3.2 billion a year on just the Mississippi system alone.

Since the Corps of Engineers spends only \$400 million yearly on inland waterway improvements, and S. 790 recovers only a percentage of that expenditure, I think it is a bit unfair to base your arguments on figures that go up to \$3.2 billion. Other barge operators have told me privately that S. 790 would add an average of 1 mill to ton-mile shipping costs after 10 years, which I think is high.

## FICTION

The President of Jones and Laughlin Steel Co. is quoted by the barge industry as saying: "Unless we can ship our steel down the river by the bargeload, it will be more difficult—maybe \$20 a ton more difficult—to compete with foreign products."

## FACT

In its thorough study of the impact of waterway user charges, the Department of Transportation estimates that a user charge system for full recovery would add from 4.7 to 14.9 cents to the cost of a ton of steel by the basic oxygen process. That seems to me to be a bit at variance with "\$20 a ton." The DOT study goes on to make these points:

The average user charge on barge coal in this region would be between 6.7 and 12.2 cents under the segment toll and between 4.0 and 10.9 cents for a uniform fuel tax. This compares to a delivered price of metallurgical coal in this area for forty-five dollars in 1976—including transportation of \$1.50 to \$2.50 per ton. These increases in the delivered cost of coal would add between three to ten cents to the cost of producing one ton of steel, depending on the plant and the form of the user charge.

User charges for the recovery of 100% of Federal OM&R (operation, maintenance, and repair) expenditures on the inland waterway system would have small impacts on the cost of producing steel in the areas bordering the river system—a fraction of one percent of total costs even for the worst case.

## FICTION

The President of one barge company is quoted by Inland Waterway Weekly as saying "there is no logic in taxing navigation and not irrigation, reclamation, and flood control."

CXXIII—1076—Part 14

## FACT

I agree. Irrigation water and reclamation projects are now subject to cost recovery. They have been for decades. Flood control, when specific beneficiaries can be identified, is also subject to recovery. To make certain that such a policy is carried out effectively, I sponsored a section that is incorporated in S. 1529, now on the Senate Calendar, to assure the recapture of windfall land-encroachment benefits from flood control projects.

## FICTION

I also recently came across a statement by the president of the United States Steel Corp., warning that waterway user charges would reduce operations at United States Steel plants employing 100,000 persons, and reduce "tax revenues collected by all levels of government."

## FACT

Such an assessment must be placed in context. As noted above, waterway user charges would add a few pennies to the cost of a ton of steel. That is not even 1 percent of United States Steel's recent \$22 a ton increase in its price on cold-rolled sheet steel, the industry's No. 1 product. United States Steel now charges \$338 per ton for cold-rolled sheet steel. User charges might add a dime to the cost of some of that steel. The executive also fails to mention the United States Steel is one of the Nation's largest barge companies. It has been so successful that United States Steel's 1976 barge business rose 21 percent from the year before, and now includes more business each year than the entire Missouri and Arkansas Rivers systems combined. It is probably safe to assume that the "free-enterprise" worries of United States Steel center more on the fate of their captive barge companies, than any worry over steel prices.

## FICTION

An executive of Martin Marietta aggregates wrote to the Congress, noting that the company dredges some 500,000 tons of sand and gravel annually from the bed of the Ohio River, then ships it by barge 20 miles or so to Louisville. "Any increase in costs will be reflected in higher consumer charges," the company warns.

## FACT

That may be true. But even using the outside figure of S. 790—adding 1 mill per mile to costs—estimates by other barge operators—the price of sand or gravel will rise about 2 cents a ton as a result of that 20-mile trip, after 10 years. I hardly think that merits the ominous warning of "higher consumer charges."

## FICTION

Harry M. Mack, President, Ohio Valley Improvement Association, warned the Congress that:

Waterway use taxes at the high levels proposed in the bills before your committee, associated with the consequent probably disallowance of modernized navigation works, would inevitably generate a sharp increase in the price of gasoline paid by millions of motorists in the Upper Ohio Basin.

## FACT

Let us look at the costs of shipping gasoline on the waterways. Representa-

tives of the barge industry have told me that they believe that the charges in S. 790 would add 1 mill to their ton-mile costs, after the decade long phase-in. A ton of gasoline contains about 8 barrels, with each barrel containing 42 gallons. Thus a ton of gasoline contains approximately 336 gallons of gasoline. Gasoline today carries a wholesale price of about 40 cents a gallon at the refinery, before any normal distribution costs. Thus, a ton of gasoline has a wholesale value at the refinery of about \$134.40. When gasoline is barged for 400 miles—the average distance of a waterway shipment of petroleum products—the cost of that ton of gasoline would carry with it a user-charge increase of 400 mills, or 40 cents. That is after the decade-long phase-in. And that assumes the barge industry's estimate of costs. Thus, the waterway user charges in S. 790 would add 40 cents to a cost of \$134.40 after 10 years. It would add less than one-eighth of a penny to the price of a gallon of gasoline shipped on the waterway, after 10 years. Does anyone really believe that one-eighth of a penny per gallon after 10 years represents a "sharp increase?"

## FICTION

Another barge representative said this:

This is hardly a time to commit the country to taxes which would close down some rivers and divert traffic to less energy efficient transport modes.

## FACT

This statement makes two erroneous assumptions. Barge traffic is not more energy efficient than competing modes. In fact, it appears to be less energy efficient on a point-to-point basis. The Congressional Budget Office surveyed 11 reports and found energy use for barge traffic was greater than for rail. That's on a ton-mile basis. After you count in the meandering nature of rivers, the barge disadvantage becomes far greater.

Nor will S. 790 "close down some rivers." There is specific language on page 8 of S. 790 that assures against this: "In establishing user charges under this section, the Secretary is directed to assure that user charges that apply to any particular existing segment of the inland waterways of the United States shall be set at a level so as not to cause serious economic disruption among the commercial users of such segment."

## FICTION

J. W. Hershey, president of the National Waterways Conference, Inc., termed S. 790 "the product of either a grievous lack of understanding, preparation and study of the complexities of waterway transportation and related water resource functions or, as we trust is not the case, a contempt for water transportation so profound that, for the sponsors of these bills, any weapon is acceptable for the destruction of the water transportation system."

## FACT

I fail to understand how support for legislation to gradually recover a portion of the annual taxpayer investment in navigation improvements qualifies as "contempt" for water transportation, or how it shows a "lack of understanding,

preparation, and study." Nor do I believe such a characterization is fair to the Secretary of Transportation or the President of the United States, both of whom support waterway user charges. Rather, I believe it shows an interest in fairness, and a desire to achieve a measure of balance in our national transportation program before it becomes necessary that the American family taxpayer must subsidize all modes of transportation to the degree the barge industry is currently subsidized.

FICTION (ALICE IN WONDERLAND CATEGORY)

Mr. President, I guess the most bizarre comment I have come across is the statement by a Louisville sand and gravel executive. The executive said:

The imposition of user taxes or tolls could very well make our mode of river transportation into a non-profitable one that would possibly require a subsidy like the railroads and airlines now require.

FACT

A Federal subsidy now exists exceeding 40 percent of industry revenues for the barge companies. One river, with one commercial user, carries a subsidy of nearly half the total value of the products shipped yearly on that waterway. Granted, there are many who oppose user charges, and say, "Why bother; we'll give the railroads their share, too." That is not the point. Giving industrial welfare to all does not make welfare any more responsible. User charges will bring a better balance in national transportation policy. They will bring a measure of relief to the overburdened American taxpayer. They will stave off the day when we might have to pour billions of relief, your tax dollars and mine, into the railroads. They will bring a little more fairness to national policy. They might also bring a little hope among the public that the big interests do not always get what they want.

#### RECOGNIZING THE FAMILY FARM

Mr. McGOVERN. Mr. President, farmers in South Dakota have come upon hard times the last few years. A series of drought years has plagued our State, operating costs continue to rise, and prices resulting from abundance in other areas have been driven down to levels where many farmers are faced with severe credit restraints. All this is compounded by the hard view the administration has taken with respect to the recently passed Senate Farm bill.

John Bohr of Pierre, S. Dak., has sought to dramatize this situation by the formation of an organization called the South Dakota Drought Aid Association. Recently the association adopted a policy resolution regarding the importance of the family farm in America. Permit me to seek unanimous consent that the text of this resolution be printed in the RECORD.

There being no objection, the text of the resolution was ordered to be printed in the RECORD, as follows:

#### RESOLUTION

Whereas the basic productive unit of agriculture since the Congressional passage of

the Homestead Act of 1862 has been and continues to be the small family farm, we herein seek to recognize and define the place of the family farm within our nation.

The family farm is herein recognized as that portion of land in a given area which can be practically and economically tilled and operated by the members of one family group.

Whereas the family is recognized as the stabilizing influence in our national life we herein recognize the family farm as the stabilizing influence in agricultural production.

Whereas our people and institutions have sprung from the land we seek to preserve the agricultural community which has provided unquestioningly through all national emergencies, two world wars, and two world wide droughts.

Therefore, be it resolved that the family farm be recognized and declared to be the basic unit of American agriculture.

#### PROBLEMS WITH COMMUNITY RE-INVESTMENT PROVISIONS IN THE HOUSING BILL

Mr. SCHMITT. Mr. President, very soon the Senate will consider S. 1523, the Housing and Community Development Act of 1977. I am extremely concerned about title IV of the bill which hints at the need for credit allocations and promises to increase the paperwork burden of our financial regulatory agencies and the institutions which they supervise.

Title IV of S. 1523 was originally introduced as the Community Reinvestment Act. In its present form, it would require lending institutions to provide information necessary to assist the regulatory agencies in specifying where loans should be made. The institutions concerned include commercial banks, savings banks, and savings and loan institutions. With this information, directives of a Federal regulatory agency would then be substituted for the judgment of individual banks and savings and loan officials.

In addition to major new paperwork requirements, I have serious reservations about the wisdom of title IV. By allowing Federal examiners to determine who is a worthy recipient of a loan, the bill would remove the decision from the hands of the local lending specialist, who has the skills to analyze the local housing market. This decision now would be turned over to a Federal agent whose primary skill is in the area of financial accounting and auditing.

In addition to a substantive thrust which goes in the wrong direction by providing the groundwork for credit allocation, the wording of title IV leaves key words and phrases undefined, thus opening the door to possible misinterpretation of the legislation and the possibility of vast pages of regulations designed to accommodate this lack of precision. Regulatory agencies would be required to establish guidelines in each market area—guidelines which could easily become out-of-date in many dynamic neighborhoods.

In testimony before the Senate Banking Committee, the Acting Chairman of the Federal Home Loan Bank Board testified that one criteria used by the Board

in its decision to grant charters is the "convenience and needs" test which looks at the possibility of aiding depressed neighborhoods. Other regulatory agencies use similar criteria in determining whether financial agencies should be permitted to branch. Thus, the needs of the community are evaluated under present regulations.

Rather than attempting to allocate credit through the Federal financial regulatory agencies, we should be making every effort to improve the flow of capital across cities, States, and the country to provide credit where it is required. Unfortunately, title IV goes in the wrong direction. The Federal Government should instead be encouraging local governments to provide the type of environment necessary for the encouragement of private assistance necessary to improve public services—including sewage, police and fire protection, and road and highway service—for the affected areas.

Too often in the past, we have passed legislation which is well-intentioned but misses the mark widely in really solving the problem. The Real Estate Settlement Procedures Act is an example from history of the regressive and burdensome regulation which can develop through careless legislation. I urge my colleagues to join me and other Senators from the Banking Committee in our efforts to strike title IV of S. 1523.

#### THE PRIORITIES DEBATE

Mr. McGOVERN. Mr. President, in recent days I have attempted to encourage public examination of the priorities that ought to be set by the new administration.

Some have chosen to interpret my remarks as a political attack on the President. Others have cast the question in terms of liberal versus conservatives, or the old New Dealers versus the new realists. Another interpretation has been that the crux of the debate was spending or not spending.

All of those are incorrect. Two newspapers in my State, one of them in my hometown of Mitchell, have accurately captured the sense of what I and a few others have been trying to say.

I ask unanimous consent that the editorial from the May 25, 1977, Sioux Falls Argus Leader, and the May 18, 1977, Mitchell Daily Republic be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Mitchell (S. Dak.) Daily Republic, May 18, 1977]

#### McGOVERN VERSUS CARTER

As long as there is a democracy in this country there is a freedom to voice opinions, whether it be to support the actions of a president or whether it be to offer constructive criticism.

There may be an unwritten law that says it is unpopular to criticize a president early in his Administration, especially if he is of our own party, but there is also a duty of conscience to voice criticism if there is genuine reason for concern.

The feud that has erupted between President Carter and Sen. George McGovern is

drawing much attention. In this exchange of suggestions, we find two men of the same party exercising their freedom of speech.

Much of what South Dakotans should be concerned about that frustrates McGovern did not get attention in the national press.

But during that Americans for Democratic Action speech, he reviewed his concerns for the fate of the South Dakota farmer and for the future of water development due to early positions taken by Carter.

Just as there has been a period of silence by foes in the past, there has also been a traditional transition with caution by the new president. But with Carter it has been different.

Intent on giving the country an early indication of what they bought in the November election, he has made some early and bold moves that have given supporters and opponents of his policies fuel for compliment and criticism.

We depend on the Chief Executive as members of his constituency, to look after our best interest. And when segments of his constituency are upset with his direction, we look to officials who represent our state to call attention to our concerns.

For this we give Sen. McGovern credit. He opened himself to attack by his own party members, but he also gave the first real national signal that the honeymoon for Carter was in danger.

Again it is through the efforts of our senior senator that we hear a call for accountability. No elected official relishes the thought of chastizing one of his own party, but when the motive becomes legitimate, delaying criticism for the sake of tradition is allowing the problem to compound.

Unless someone like McGovern steps forward and seeks an explanation for the course being pursued, we as South Dakotans, can face another era of neglect by the powers in Washington.

[From the Sioux Falls, Argus-Leader, May 25, 1977]

#### McGOVERN MAKES POINT FOR DISAGREEING WITH PRESIDENTS

Should a United States Senator go along with the majority or his party's president in the interest of unity and harmony?

No, says U.S. Sen. George McGovern, who said his vote for the late President Lyndon B. Johnson's Gulf of Tonkin resolution in 1964 left him with a bitter memory. McGovern said he felt at the time that this country's participation in the Vietnam War was wrong, but voted for the congressional endorsement of Johnson's policy of escalation for reasons of harmony.

McGovern told a Downtown Rotary Club audience this week that if the resolution had drawn more opposition than the two Senate votes recorded against it history might have been different. Later, McGovern's criticism of the Vietnam War irritated LBJ.

McGovern believes the proper course for him is to speak his mind, even if it involves criticizing another Democratic President—Jimmy Carter—for attempting to halt water projects or for espousing a farm bill the Senator feels is not in the state's best interest.

Former President Gerald Ford, a Republican, last September named McGovern as one of 10 representatives in this country's delegation to the 31st session of the United Nations. Ford did so despite the fact that McGovern differed with the President's decision to veto membership in the United Nations for Vietnam. Ford saw a plus for this country in having McGovern in the delegation.

South Dakotans have often disagreed with McGovern, but most of them, we think, appreciate the fact that he speaks his mind.

Positions taken for the sole purpose of unity or harmony do not endure and do not contribute either to public understanding or better government.

#### COAL CLEANING—A VEHICLE FOR MORE EFFECTIVE COAL UTILIZATION

Mr. RANDOLPH. Mr. President, coal production for electric generation alone will expand from approximately 447 million tons in 1985 to 1,315 million tons in the year 2000. The continuing shift to electricity and the number of converted and new coal-fired powerplants and industries will require that serious attention be given to new technologies for cleaning coal.

As chairman of the Environment and Public Works Committee, I will make a determined attempt to assure that we have an institutional structure which will provide the necessary capital funding coupled with environmental safeguards for a meaningful national energy policy. Effective coal cleaning is essential as we convert our industries from oil and gas to coal or to synthetic fuels processed from coal, to protect the health of our citizens.

Mr. President, I bring to the attention of my colleagues the address I made on May 25 at the Conference on Coal Cleaning sponsored by the Environmental Protection Agency and the Battell Institute, in Arlington, Va., and I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### COAL CLEANING—A VEHICLE FOR MORE EFFECTIVE COAL UTILIZATION

(By Senator JENNINGS RANDOLPH)

The energy problems we face stem from a long history of unintentional neglect and the manner in which we have attempted to shape the components of the United States energy policy. No single villain has brought us to our present situation, just as no simple and single action will suffice. It is essential that conferences such as this one—on coal cleaning—continue to provide the opportunity to counsel together. We must try to mold pieces of the puzzle which will ultimately provide our total energy approach.

A recent report stated that the annual United States consumption of wood, coal, crude oil, natural gas, hydroenergy and nuclear energy from 1850 to 1971 totalled 158 quadrillion B.T.U.'s. A tremendous amount of fuel was used to create this energy output.

This serves to highlight that individually we enjoy a short span of responsibility and involvement with energy problems. We tend to ignore how similar, in certain areas, the past patterns of energy growth or replacement have been to those of today. Because our figures are dramatically large now it does not mean that all changes of recent significance have occurred in the last few years.

A fact is that our use of energy has been moving constantly upward since before the turn of the century. So the energy gap which exists today has not been a product of the last two or three decades, but one of a much longer period. We must now as a Nation reach toward a consensus on exactly what is the energy problem. The problem has several parts, each of which influences and is influenced by other national goals such as a

clean environment, full employment and national security. I believe the diversity of our natural resources—with coal as a base—with the capacity and desire we possess for using energy more efficiently will give us room to maneuver and finally solve these problems.

The pattern of coal consumption has changed significantly since 1945. At the end of World War II, coal had major markets in the railroads, manufacturing industries, home heating and in coking plants for steel. Since then, however, America has left the coal bucket behind, and is not likely to bring coal back as originally used. Homes, businesses, factories and transport systems today require energy in three basic forms: electricity, pipeline gas, and a variety of petroleum products. Thus, coal must be converted to these forms. Why? Because our coal reserves are sufficient to last for several hundred years and can supply power, gas, and oil in large commercial volumes.

Coal is the one fossil fuel that is likely to remain in abundant supply at relatively low cost for the remainder of this century and into the next. It is the one major alternative replacement fuel that can bridge the gap from our current dependence on oil and gas to a future era of renewable energy resources.

In 1976, United States coal production reached 665 million tons, up 10 percent from the 1974 level but only 3 percent over 1975. Those most closely involved with energy problems in our country would like to see coal production increased to at least 1.2 billion tons per year.

Coal is an effective source of heat and can be converted into gaseous and liquid fuels and chemicals. The role for coal as a natural successor to oil and gas is thus established. Realizing coal's potential will, however, depend on a recognition of the need to use coal, and the necessary policies to make such use possible.

The Energy Supply and Environmental Coordination Act of 1974 has required the Federal Energy Administration, under certain circumstances, to issue orders to power plants and some major industrial installations to convert or start using coal, rather than oil or gas boilers. On May 11, 1977, the Federal Energy Administration announced its first round of orders to major industrial plants under the provisions of the 1974 Act.

The "notices of intent" will require industries to convert to coal utilization in plant activities. A total of 56 "notices of intent" were issued in 25 states. Of these, 24 were to plants currently burning oil and gas as fuel. The other 32 are construction orders to plants in the planning stage which will from "day one" burn coal.

The first round of "notices" to utilities were announced in June of 1975. A second round was issued in April of this year. If all 102 boiler operations at the 50 sites told to convert to coal by the Federal Energy Administration comply, the yearly energy savings would be 84 million barrels of oil and 59 billion cubic feet of natural gas.

The question still remains as to whether to continue intervention by the Federal government as a necessity to increase the use of coal in utilities and industry. To encourage greater coal utilization, I introduced S. 273, the Natural Gas and Petroleum Conservation and Coal Utilization Act of 1977 on January 14. This bill would prohibit construction of new electric power plants and major fuel-burning installations not using energy sources other than gas or oil. In addition, it would extend the Federal Energy Administration's authority to issue construction and prohibition orders until September 30, 1980. Installations constructed to use alternative energy sources, of course, must

be consistent with environmental policies. This measure would provide a stability to future energy supplies not presently afforded by oil imports.

Last week the Senate passed S. 1469, a measure that would extend the Federal coal conversion program for six months under Section 2 of the Energy Supply and Environmental Coordination Act of 1974. This would allow for the Federal Energy Administration to consider a second round of construction and prohibition orders until January, 1978. It would also give the Energy and Natural Resources Committee extra time for full consideration of proposals for broader coal conversion authorities. Evaluation of these proposals can now proceed without disruption of the present coal conversion program.

Participants in this conference know that a major proposal before the Energy and Natural Resources Committee is the Coal Utilization Act of 1977, which incorporates provisions from my bill, S. 273, and reflects the findings of the Senate's National Fuels and Energy Policy Study started six years ago. The Committee is expected to conduct its final day of hearings on this bill soon and mark up will begin in early June.

Realizing coal's potential also will require satisfactory solutions to the environmental problems associated with its mining and burning. Congress has determined that where the physical and economic capabilities to burn coal exist, coal should be burned—but only to the extent that environmental constraints permit. As Chairman of the Committee on Environment and Public Works, I am concerned that we maintain the momentum of recent years in achieving a cleaner and healthier environment. Energy production and environmental improvement need not be conflicting goals. We can have a wholesome society at the same time we have a productive society. But we must agree that the issues surrounding growth and environmental quality are reconcilable. That has yet to occur. I am encouraged by conferences such as this in which I see advocates of both environmental protection, and growth and production working together to find better ways to clean our coal.

On May 10, 1977, we reported the Clean Air Amendments of 1977 (S. 252). The underlying premise of this legislation was the continuing preservation of the fundamental belief that public health should not be compromised in the pursuit of economic growth. Federal minimum source performance and ambient air quality standards are essential.

The bill does contain modifications that will facilitate our national conversion effort to coal. Under its provision the States that originally established more stringent emission standards than necessary to meet national ambient air quality requirements, can revise them to assure they are reasonable and equitable.

Citizens of a state or regional area will be afforded an opportunity to influence the character of economic growth in their region by making their own decisions on certain aspects of new sources. This will enable some industries to burn a lower grade of coal and allow increased sulfur emissions in some areas. When national ambient air quality standards for protection of public health are being achieved and maintained; and when Federal new source performance standards will be met; then the States, in my judgment, should have sufficient flexibility to determine what are the appropriate environmental requirements to achieve economic growth with environmental quality.

Such decisions should be reached with public participation. The burden of proof should be placed on those individuals proposing new construction to justify its associated environmental impacts.

Another provision of the 1977 amendments, which I introduced during Committee consideration recommends that one state may no longer allow emission of pollutants which adversely affect a neighboring state. A facility located in one state must notify the adjoining state of the potential impact of its emission prior to the commencement of construction of a new facility or modification of an existing stationary source. The amendment also provides that a state or local subdivision may petition the Administrator of the Environmental Protection Agency for relief if a facility would be in violation of the adjoining state's air pollution standards.

It is essential that the Clean Air Act provide a rapid mechanism for equality of enforcement of applicable air pollution laws among the states with a minimum of uncertainty and a lessening of red tape. The Clean Air Amendments of 1977 are scheduled to be debated in the Senate next week.

I emphasize that we need to remain vigilant in our quest to achieve acceptable methods of removing most of the sulfur from the coal we burn. Almost one-half of the electric energy in America is generated today by coal-fired plants. But one of the biggest problems the coal industry faces is that the bulk of recoverable reserves, as well as much of present capacity, does not meet today's sulfur standards. Forty-one percent or 176 million tons of the coal burned by electric utilities in 1975 did not meet sulfur standards. In the East, 48 percent of the coal burned could not comply. So the question is: "How can we best clean coal to make electricity?"

Scrubbers will be improved and used. By the year 2000, most of the electricity made from coal will still be made, as it is now, by burning it in pulverized fuel boilers—large numbers of these boilers will probably be fitted with scrubbers. There are some 6,000 megawatts of scrubbing capacity now in existence, and some 40,000 more are in design or construction. Scrubbing adds about 20 percent to new power plant investment. Moving Western low-sulfur coal to the East, to avoid scrubbing, requires the same 5-8 percent energy loss for transportation as does the scrubbing process itself. The cross-country transportation of Western coal to avoid scrubbers, therefore, is not economical.

In the long term, significant improvements also are possible in the direct utilization of coal by fluidized bed combustion. This technology offers dramatic improvements in the efficiency of coal utilization and in reducing adverse environmental impact when compared with conventional systems. A fluidized bed test facility is planned at the Morgantown, West Virginia, Energy Center by the Federal Energy Research and Development Administration.

Development of coal-related technologies will be accelerated. As we develop these technologies (especially scrubbing techniques) I hope to see the Environmental Protection Agency, and the new Energy Department do more extensive research into the extent that sulfur oxide and other sulfur compounds cause major health hazards.

When and if a final consensus is reached on coal conversion, the policy on which it is based should state that:

High sulfur coals must be used in producing a large part of our power.

Scrubbers constitute the best immediate answer to pollution control until technologies such as fluidized bed are commercially developed.

Where air quality standards are not impaired, coal washing and regional coal blending can meet the requirements of sound public policy, and scrubbing devices can be delayed or further improved.

A National Commission on Energy Policy

might be the forum on which to build such a consensus. A Commission could make a complete investigation of the 71 separate measures that have been enacted into law over the last five years. I introduced legislation creating such a body on March 15 of this year.

Total recoverable reserves of low sulfur coal in the United States are estimated at about 67 billion tons. Of this amount, only about 14 billion tons are in the East, and much of this is high quality metallurgical coal already owned by or dedicated to the steel industry. These facts, however, should not keep us from mining what is available. The Appalachian region contains abundant coal resources that can only be competitively mined by small producers. Eighty percent of the low-sulfur coal reserves east of the Mississippi are in states where small producers predominate.

Small coal producers in Appalachia often are unable to obtain necessary financing to expand production. The Federal loan guarantee program enacted by the Congress in December, 1975, has never been utilized by the Federal Energy Administration despite the congressional mandate and the urgent need for financing by hundreds of coal producers in the region.

To encourage the production of environmentally acceptable coal supplies, the 1975 Act authorized loan guarantees to small producers for expansion of new underground low-sulfur coal production. This program was reaffirmed by the Congress in August, 1976, but the Federal Energy Administration has not implemented the program. The Bureau of Mines estimates that over 52 billion tons of Eastern low-sulfur coal reserves would be potentially eligible for Federal loan guarantees if the program is implemented. Under the loan guarantee program an estimated 20 to 40 million tons of coal could be produced annually by 1982. By comparison, only 14 million tons of Eastern low-sulfur coal were delivered to utilities in 1975.

The entire United States economy is at present three-fourths dependent on diminishing domestic supplies of petroleum and its geological partner, natural gas. President Carter is making a praiseworthy effort to persuade American citizens to come to grips with the genuine energy crisis facing our nation. I have commended the President for his recent energy proposal to Congress. The previous five consecutive administrations have failed to come to grips with this problem.

His proposals to increase coal production and utilization need some modification. When we get into specific details on legislation it is quite likely that this can be worked out.

His proposal to Congress does not include a comprehensive plan for synthetic fuel development. Coal conversion can rapidly increase coal utilization for heating the power. At the same time, we must advance the production of synthetic fuels to supplant oil and natural gas.

The coal industry faces tremendous problems in increasing its annual output by two-thirds, to 1.2 billion tons by 1985. I had hoped that the Carter energy program would recognize these problems, the potential shortages of manpower and materials, and the tremendous capital investments that will be required. Above all, there must not be unnecessary restrictions which would impede the production of coal.

His proposal to significantly increase gasoline taxes presents problems. It will require that American people change their travel habits. I believe that consumers are ready to make sacrifices, if they are convinced that such sacrifices are equitable and fair. But

they are not ready to assume hardships that will not produce results.

In West Virginia for example, many coal and industrial workers must drive as much as 80 miles a day to get to and from their jobs. There is no public transportation in most of these rural areas. Something will have to be worked out in cases such as this, when long auto travel is necessary. Hearings are scheduled to begin in June on the non-tax provisions of the President's energy proposal in the Energy and Natural Resources Committee.

Choices that we make today will seriously affect our options for the future. The decisions we make in the next few years will have reaching consequences. International policy is closely linked to how we handle our energy problems and we must develop them together. Environmental policy is, as I have emphasized, intertwined with energy production. Federal energy resource management also has an essential bearing on energy issues. It affects adequacy of domestic energy supplies, energy prices, and environmental protection because most of the nation's undeveloped energy resources are on government land.

Coal conversion is one energy choice we have before us. There is more than one path before us involving the development of energy—nuclear, solar, hydro, wind and synthetic fuels—each has its own advantages and pitfalls. Our primary task as members of the concerned energy community and energy-conscious citizens is to inform ourselves of what lies ahead before we choose our way.

#### A VETO OF THE FARM BILL WILL PRODUCE MORE GOOBERS

Mr. MELCHER. Mr. President, after transmitting veto threats against the Senate farm bill to us at least three times through Secretary of Agriculture Bob Bergland, President Carter yesterday, at his press conference, personally raised that possibility.

It is a lot of hot air because the President is not going to veto a bill that saves the Treasury \$871 million on peanut program costs over the next 5 years just to avoid a \$400 million exposure on wheat target prices.

I called the Senate's attention to this situation during the debate on the farm bill when Secretary Bergland wrote us about the President's concern over the 1977 wheat target price. Since the President has again raised the veto threat personally, I believe the effect of that on the outlays for the peanut crop should be examined.

President Carter's repeated threats to veto the farm bill if wheat price supports are not reduced are straight hot air because a veto would cost the Treasury \$871 million on peanut payments to save half that amount on the 1977 wheat crop.

A veto would not help anyone but the peanut growers, who would get \$871 million more subsidies in the next 5 years if the bill is vetoed than they would if it passes. If there is a veto, peanut growers would go back to the present peanut program required under existing law. The estimated cost of the peanut loan program over the next 5 years under the present law is \$1.148 billion. By reducing the loan rate on peanuts to \$420 a ton and cutting minimum poundage

quotas about 240 million pounds over 5 years, the Senate bill reduces the estimated cost of the peanut program through 1982 to \$277 million—a savings of \$871 million.

A veto would eliminate those savings to reduce supports on wheat about \$400 million.

The peanut growers still have a good deal. At \$420 a ton or 21 cents a pound their minimum support is about twice the world market price and about 150 percent the Department of Agriculture's estimate of their cost of production. The total acreage of peanuts grown in the United States is about 1½ million acres as compared to about 70 million acres of wheat.

At \$2.25 per bushel the wheat loan is only 45 percent of parity and the target price, at \$2.90, is only 57 percent of parity. It is a half dollar a bushel under USDA's most honest cost of production figure.

Wheat prices are now below cost of production but if the Senate farm bill gets to Mr. Carter's desk for signature, he will have a choice of signing it and increasing wheat supports \$400 million more than he intended this year, or vetoing it and giving peanut growers \$870 million more than he had budgeted during the next 5 years.

If his talk about vetoing the Senate farm bill is not straight poppycock, then his talk about trying to balance the budget is.

The President is evidently trying the technique of the old doctor who threw patients whose ills he could not diagnose into a category he termed fits because he was hell on fits.

Unfortunately for the President, Congress has a lot of experience with the fits technique and has developed considerable immunity to it. It is not frightened by repeated veto threats, particularly when the threat is to put a billion dollars into peanuts to save half that on wheat in a world that depends more on flour than goobers.

#### NATIONAL SMALL BUSINESS WEEK

Mr. BUMPERS. Mr. President, I am pleased to have this opportunity to mark National Small Business Week.

Happily, this observance coincides with a renewed awareness of the importance of small businesses to our economy, and to our national well-being. The openness of our economic system has been the key to its success; and that openness has been maintained through the constant birth and growth of small businesses. A new small business' chances for survival are only one in four; and yet, every year, thousands of entrepreneurs test the odds. Thanks to them, our country has never become the rigid, stratified place it might have become if it were not possible for individual Americans to present their ideas in the marketplace.

Although small business accounts for only 43 percent of our gross national product, they employ 52 percent of our workers—and they make up 97 percent

of all U.S. businesses. They are the roots of the American economy—largely invisible, but vital to the economy's health and prosperity.

Unfortunately, the Federal Government's attitude toward small business could be characterized, too often, as "out of sight, out of mind." Big business dominates Government contracting—especially for research, where 90 percent of all contracts have been awarded to big corporations. At the same time, the number of Federal regulations has grown tremendously, and although big business has made the obligatory complaints, it is small business that has felt the crushing weight of these regulations. Big business can, in many instances, absorb the cost of regulation and, through control of markets, pass them on to consumers; small businesses enjoy no such opportunity. They have been squeezed between big business and big Government.

Now, we are seeing a reversal of this destructive trend. In both Congress and the White House, attention is being paid to small business, and there is determination to relax the regulatory burden and to break up the frequently cozy relationships of large corporations and Government agencies. We have a small businessman in the White House, and he has already demonstrated his desire to give small business its place in the Sun.

It will take a sustained effort to root out the bad habits of many years, but I am confident that the effort will be made.

#### NOTICE OF THE DETERMINATION AND WAIVER UNDER RULE XLIII BY THE SENATE COMMITTEE ON ETHICS

Mr. STEVENSON. Mr. President, under paragraph 4 of rule XLIII of the Senate, Members who contemplate acceptance of invitations to participate in educational programs sponsored by a foreign government or organization involving foreign travel paid for by the sponsor, and Members who wish to make similar arrangement for staff under their supervision, are required to notify the Select Committee on Ethics in writing.

At the request of Senator CULVER, Senator ROTH and Senator HEINZ, the select committee found at its meeting on May 19, 1977, based upon the information submitted by the Senators, that the principal objective of the program to be sponsored by the Center for Strategic and International Studies of Jakarta, Indonesia, near Jakarta, May 30, 1977, through June 1, 1977, is educational. We are advised that representatives of the Department of State will attend, along with representatives of other foreign governments. The committee also found that participation in the program by Senator CULVER and Senator ROTH, and Mr. Charles Morrison of Senator ROTH's staff, and Mark Bisnow of Senator HEINZ' staff is in the interest of the Senate and the United States.

(This concludes additional statements submitted today.)

## COMMITTEE REPORTS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the committees may have until 6 p.m. today to file committee reports.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## AUTHORITY FOR COMMITTEES TO FILE REPORTS DURING RECESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Friday, June 3, 1977, between the hours of 9 a.m. and 3 p.m., committees be authorized to file reports.

The PRESIDING OFFICER. Without objection, it is so ordered.

## S. 1620—FOREST AND RANGELAND RENEWABLE RESOURCE RESEARCH

Mr. HUMPHREY. Mr. President, I understand my distinguished friend from Mississippi has to catch a plane and I have a bill I am going to introduce.

Mr. President, on this other subject I want to introduce legislation today known as the Forest and Rangeland Renewable Resources Research Act.

I am the author, Mr. President, of the Forest and Rangeland Renewable Resources Planning Act, which was the bill in the year 1974.

It may be one of the most far-reaching pieces of legislation for the proper planning and use of conservation of our natural resources that the Congress has ever passed.

Mr. President, in 1974, when the Forest and Rangeland Renewable Resources Planning Act became law, we embarked on a policy of identifying the opportunities to improve the usefulness of the 1.5 billion acres of forest and rangeland that Americans enjoy.

Today, I am introducing on behalf of myself and Senator STENNIS a bill in keeping with the 1974 act. It repeals outmoded research authorities for forest, rangelands, and their resources, replacing them with a modern set of research authorities. This bill has been developed by the American Forestry Association with the support of foresters throughout the country and the able assistance of the colleges and universities—the departments of these universities and colleges—that give their attention to forest and rangeland.

This bill should not be considered as the last word on this subject. I am introducing this bill to stimulate discussion and to receive constructive comments.

Another point that should be stressed is that this bill does not contain a specific dollar authorization level for research. The 1974 act created the machinery to develop a program with a research component. The program is developed in 5-year blocks and submitted to the Congress which can accept or modify it. When approved, the program becomes a budget guide for the next 5 years. The President is required to inform the Congress when he submits the

budget as to why the budget does not request the full program level if that is the case. Congress retains the complete flexibility to appropriate annually the sums it finds will be required.

There is no doubt in my mind that we need to do more research on the ecological and economic fabric of our 1.5 billion acres of forest and rangeland. We also need to improve the dissemination and effective application of research. We need to improve the process from the laboratory stage to the field application stage.

It is this last statement which expresses the thrust of this bill, rather than an effort to define areas for research that may seem to be of importance to one or another group.

Further, this bill recognizes that there must be close coordination and cooperation among those who conduct research in forestry and rangeland. I especially want to call attention to the close linking that this bill provides between the Forest Service and the 61 forestry schools of the Nation whose research is supported in part by the McIntire-Stennis Act of 1962. I am pleased to note that the Association of State College Forestry Research Organizations, representing the 61 forestry schools, has already endorsed the essential content of this bill.

It is my hope that as we move to modernize the research charter for forests and rangelands that all who are concerned will come forward with constructive contributions.

I am pleased to have with me as a cosponsor of this legislation the distinguished Senator from Mississippi, JOHN C. STENNIS. There are few Members of this body with a record as distinguished as his on forestry issues. I take great pleasure in having him as a cosponsor of this bill.

Mr. President, I ask unanimous consent that the text of the bill be printed in the Record and that the bill be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the bill is as follows:

S. 1620

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Forest and Rangeland Renewable Resources Planning Act of 1974 (88 Stat. 476, as amended) is redesignated as "TITLE I—FOREST AND RANGELAND RENEWABLE RESOURCES PLANNING" and sections 1 through 16 are redesignated as sections 101 through 116, respectively.*

*SEC. 2. The Forest and Rangeland Renewable Resources Planning Act of 1974 (88 Stat. 476, as amended) is amended by adding a new title II as follows:*

*"TITLE II—FOREST AND RANGELAND RENEWABLE RESOURCES RESEARCH*

## RESEARCH PROGRAM

*"SEC. 201. (a) The Congress declares that scientific discoveries and technological advances must be made and applied to support the protection, management, and utilization of the Nation's renewable resources. It is, therefore, the purpose of this title to authorize and direct the Secretary of Agriculture (hereafter the "Secretary") to carry out a*

*comprehensive program of forest and rangeland renewable resources research, and research dissemination.*

*"(b) The Secretary is authorized and directed to conduct, support, and cooperate in investigations, experiments, tests, and other activities he deems necessary to obtain, analyze, demonstrate, and disseminate scientific information about protecting, managing, and utilizing forest and rangeland renewable resources in rural, suburban, and urban areas. The activities conducted, supported, or cooperated in by the Secretary under this title shall include, but not be limited to, the five major areas of renewable resource research identified in paragraphs (1) through (5) of this subsection.*

*"(1) Renewable resource management research may include activities related to reproducing and growing, forest and rangeland plants; planting and managing vegetation on forest and rangelands for wood, forage, water, wildlife and fish, aesthetics, recreation, wilderness, and other products and purposes.*

*"(2) Renewable resource environmental research may include activities related to understanding and managing surface and subsurface water flow, preventing and controlling erosion, and restoring damaging or disturbed soils on forest and rangeland watersheds; maintaining and improving wildlife and fish habitats; managing trees and shrubs to change weather and climatic conditions, reduce air and water pollution, provide amenities and for other purposes; and understanding, predicting, and modifying weather, climatic, and other environmental conditions that affect the protection and management of forests and rangelands.*

*"(3) Renewable resource protection research may include activities related to protecting vegetation, and other forest and rangeland resources, as well as wood and wood products in storage or use from fires, insects, diseases, noxious plants, animals, air pollutants, and other agents through biological, chemical, genetic, silvicultural, and other control methods and systems; and protecting people, natural resources, and property from fires in rural areas.*

*"(4) Renewable resource utilization research may include activities related to harvesting, transporting, processing, marketing, distributing, and utilizing wood, and other materials derived from forest and rangeland renewable resources; recycling and fully utilizing wood fiber; testing forest products, including those grown or produced in other countries, including necessary field work associated therewith; determining the role of forest and rangeland management in diversified agriculture, in the productive use of forests and rangelands, and in mining, transportation, and other industries; and developing economic and social alternatives for the management of forests and rangelands that will make possible the fullest and most effective use of their multiple products and services.*

*"(5) Renewable resource assessment research may include activities related to developing and applying scientific knowledge and technology in support of the survey and analysis of forest and rangeland renewable resources described in section 103(b) of this Act.*

## RESEARCH FACILITIES AND COOPERATION

*"SEC. 202. (a) In carrying out this title, the Secretary is authorized to establish and maintain a system of experiment stations, experimental areas, and other forest and rangeland research facilities. The Secretary is authorized, with donated or appropriated funds, to acquire by lease, donation, purchase, exchange, or otherwise, land or interests in land within the United States needed*

to carry out this title, to make necessary expenditures to examine, appraise, and survey such property, and to do all things incident to perfecting title thereto in the United States. The Secretary may receive money and other contributions from any State, other political subdivision, organization, or individual for the purpose of establishing and operating any forest and rangeland research facility.

"(b) In carrying out this title, the Secretary may cooperate with Federal, State, and other governmental agencies, with public or private agencies, institutions, universities, and organizations, and with businesses and individuals in the United States and in other countries. The Secretary may receive money and other contributions from cooperators under conditions he may prescribe. Any money contributions received under this subsection shall be covered into the Treasury as a special fund which is hereby appropriated and made available until expended as the Secretary may direct for use in conducting the research activities authorized by this title and in making funds to contributors.

#### COMPETITIVE RESEARCH GRANTS

"Sec. 203. In addition to any grants made under other laws, the Secretary is authorized to make competitive grants to Federal, State, and other governmental agencies, to public or private agencies, institutions, universities, and organizations, and to businesses and individuals in the United States that will further the research activities authorized by this title. In making these grants, the Secretary shall emphasize basic and applied research activities that are important to achieving the purposes of this title, and to obtain, through review by qualified scientists and other methods the participation, in research activities, of scientists throughout the United States who have expertise in matters related to forest and rangeland renewable resources. Grants made under this subsection shall be made at the discretion of the Secretary under whatever conditions he may prescribe, after publicly soliciting research proposals, after allowing sufficient time for submission of the proposals, and after considering qualitative, quantitative, financial, administrative, and other factors which he deems important in judging, comparing, and accepting the proposals. The Secretary may reject any or all proposals received under this section if he determines that it is in the public interest to do so.

#### GENERAL RESEARCH PROVISIONS

"Sec. 204. (a) The Secretary may make funds available to cooperators and grantees under this title without regard to the provisions of section 529 of title 31 of the United States Code, which prohibits advances of public money.

"(b) To avoid duplication, the Secretary shall coordinate cooperative aid and grants under this title with cooperative aid and grants he makes under any other authority.

"(c) The Secretary shall use the authorities and means available to him to disseminate the knowledge and technology developed from research activities conducted under or supported by this title. In carrying out this responsibility, the Secretary shall cooperate, as he deems appropriate, with the organizations identified in subsection (d) (3) of this section and with others.

"(d) In carrying out this title, the Secretary, as he deems appropriate and practical, shall—

"(1) Use, and encourage cooperators and grantees to use, the best available scientific skills from a variety of disciplines within and outside the fields of agriculture and forestry;

"(2) Seek, and encourage cooperators and grantees to seek, a proper mixture of short term and long term research and a proper mixture of basic and applied research;

"(3) Avoid unnecessary duplication and coordinate his activities under this section among agencies of the Department of Agriculture and with other affected Federal departments and agencies, State agricultural experiment stations, State extension services, State foresters or other appropriate State officials, forestry schools, and private research organizations; and

"(4) Encourage the development, employment, retention, and exchange of qualified scientists and other specialists through postgraduate, post-doctoral, and other training, national and international exchange of scientists, and other incentives and programs to improve the quality of forest and rangeland research.

"(e) This title shall be construed as supplementing all other laws relating to the Department of Agriculture and shall not be construed as limiting or repealing any existing law or authority of the Secretary not specifically repealed.

"(f) For the purposes of this title, the terms 'United States' and 'State' shall include each of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, and the territories, possessions, and trust territories of the United States.

#### RESEARCH APPROPRIATIONS AUTHORIZATION

"Sec. 205.—There is authorized to be appropriated annually such sums as may be needed to carry out this title and for administrative expenses associated therewith. Money appropriated under this title shall remain available until expended."

Sec. 3. Section 103(b) of the Forest and Rangeland Renewable Resources Planning Act (88 Stat. 476, as amended), as redesignated by this Act, is amended to read as follows:

"(b) To assure the availability of adequate data and scientific information needed for development of the Assessment, the Secretary of Agriculture is authorized and directed to make and keep current a comprehensive survey and analysis of the present and prospective conditions of and requirements for the renewable resources of the forests and rangelands of the United States and of the supplies of such renewable resources, including a determination of the present and potential productivity of the land, and of such other facts as may be necessary and useful in the determination of ways and means needed to balance the demand for and supply of these renewable resources, benefits and uses in meeting the needs of the people of the United States. The Secretary shall carry out the survey and analysis under such plans as he may determine to be fair and equitable, and cooperate with appropriate officials of each State, territory, or possession of the United States, and either through them or directly with private or other agencies. There is authorized to be appropriated annually such sums as may be needed to carry out this subsection, and money appropriated under this subsection shall remain available until expended."

Sec. 4. The McSweeney-McNary Act of May 22, 1928 (45 Stat. 699, as amended: 16 U.S.C. 581, 581a, 581b-581i) is hereby repealed.

Mr. STENNIS. Mr. President, first, I thank warmly the Senator from Minnesota for an opportunity to join him in connection with this bill and to work with him not only for such fulfillment

as we may be able to bring about in passing the measure but also in other phases of nationwide forestry programs.

The passage of comprehensive forestry legislation in the last two Congresses, and the passage of time since the basic law on forestry research, make it very appropriate that the research legislation be brought up to date.

The bill Senator HUMPHREY is introducing, with my cosponsorship, is offered as an additional title to the Forest and Renewable Resources Planning Act of 1974, as amended by the National Forest Management Act of 1976. It would be title II, Forest and Rangeland Renewable Resources Research.

This bill would repeal the McSweeney-McNary Act of 1928, which has served well as basic authority for research on forestry, but needs to be broadened in some ways and made more specific in others, in order to meet the objectives established by the legislation of recent years.

The Renewable Resources Planning Act requires specific processes for assessment, program, and planning purposes. This bill provides for research to improve those processes. It is also aimed at the expanding scope of multiple-use forest management for environmental purposes, and it recognizes the growing importance of forestry research to meet urban needs.

This bill gives the Secretary of Agriculture better flexibility and broader authority in cooperative research efforts and the acceptance of contributions thereto, and it expands foreign cooperation in pursuit of mutual objectives.

Weather, climatic, and other environmental conditions as they affect forests are stressed. The fire research provisions recognize the great importance of rural community fire protection.

The Secretary presently has, of course, certain general granting authorities for research purposes. These would remain unchanged. Among them are the cooperative State research grants under the 1962 act which I cosponsored with then Congressman Clifford McIntyre of Maine. These grants are commonly called McIntyre-Stennis grants, and they will continue without change.

This bill will specifically authorize the Secretary to make competitive grants for forest and rangeland research, and permit him to involve selected sources across the scientific community. By competitive grants is meant not only a dollar comparison, but the inclusion of qualitative factors.

Under the bill, money appropriated for research would be available until expended, in order to plan multiyear research projects and provide flexibility to make the most effective use of the money provided.

Mr. President, this bill will strengthen forestry research that is aimed at the objectives set forth in the Forest and Rangeland Renewable Resources Planning Act. It will help to show the Nation how to attain the growth in forest productivity that we know we must have

in the foreseeable future. It will improve research management and cooperation.

I am proud to offer this bill as a co-sponsor with the distinguished Senator from Minnesota. I am confident that the Senate Committee on Agriculture, Nutrition, and Forestry will agree on its merit and that it will receive the approval of the Senate when it is considered on the floor.

As the Senator from Minnesota said, this bill opens the door for constructive suggestions from all sources—at committee hearings, by testimony, of a Senator or anyone else.

This is really a comprehensive bill and is an attempt to bring up to date various acts we already have.

One special word, Mr. President: I can recommend this subject to any Senator who comes from a State where there is an appreciable amount of forest land. It is a subject that is open to great possibilities in the decades ahead. It deals with reproducible resources—the growing of various kinds of timber, for example.

One morning last week, I had an ordinary ham and egg breakfast, and I counted the items surrounding me that were made from forest products, many of which were not used at all and only a few of which were used as short a time as 10 years ago. There were nine items connected with that breakfast, beginning with a paper napkin and going on to the milk container, then on to the half-and-half cream container, and on to other items in which had been wrapped some of the things that constituted the breakfast. This shows a tremendous expansion in the use of various products within the last few years.

I recall that during the time I have been in Congress, many of the dedicated people in forest research, for example, in the National Forest Service, have been working out in the woods, in shacks, and the only desks they had were made from boxes, because of the lack of better facilities. Still, they were out there, with great dedication, those fine minds, with imagination; and they transformed the forests of this great Nation so that the production of these useful products has been increased a hundredfold or more.

I am proud that my home State, years ago, exempted growing timber from ad valorem taxes, which was an easy and simple thing to do. Not many people appreciated the significance of it at that time. We paid, however, a severance tax at the proper time. When the tree had produced income, it paid its part in the form of tax.

We have not one, two, or three but several of the finest forest production mills in the Nation—Georgia Pacific, Weyerhaeuser, and many others—growing more timber now per year than we did back in the days when we had many thousands of grown, mature pine forests—pine in particular, although we grow the other kind, too.

This is one of the great, reassuring things in the future of our country, as I think about the possibilities of the reproducible forests of our Nation.

Those are some of the things that the Senator from Minnesota and other Members of this body have been working on, and additional great results will come from his bill. I thank him again for his very fine words and for the work he put into this matter.

The late Representative from Maine, Clifford McIntire, a longtime Member of the House of Representatives, and I worked together on what has become known as the McIntire-Stennis Act with reference to forestry research. Under this act, small grants—no great sum of money—now go to 61 State institutions and perhaps two or three privately owned institutions throughout this Nation for forestry research. That has paid off tremendously. It indicates not only the possibilities of what can be done but also the eagerness and willingness of that many institutions and more which want to share in this forward-looking program.

#### ORDER FOR RECORD TO REMAIN OPEN UNTIL 5 P.M. TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Record may remain open until 5 p.m. today for the introduction of petitions and memorials, bills, joint resolutions, and statements into the Record.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### SMALL BUSINESS ADMINISTRATION AUTHORIZATIONS AND DISASTER LOAN PROGRAM AMENDMENTS

ORDER TO PRINT H.R. 692, AS AMENDED

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 692, SBA authorizations, which passed the Senate on May 19 be printed with the Senate amendments.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### ORDER FOR CHANGE OF REFERENCE—H.R. 5638

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation be discharged from further consideration of the bill H.R. 5638, an act to amend the Fishery Conservation Zone Transition Act in order to give effect during 1977 to the reciprocal fisheries agreement between the United States and Canada, and that the bill be referred to the Committee on Foreign Relations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection it is so ordered.

#### JOHN F. KENNEDY CENTER ACT AMENDMENTS—CONFERENCE REPORT

Mr. ROBERT C. BYRD. Mr. President on behalf of the Senator from North Dakota (Mr. BURDICK) I submit a report of the committee of conference on S. 521 and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The report will be stated by title.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 521) to amend the John F. Kennedy Center Act to authorize funds for the repair of leaks, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The ACTING PRESIDENT pro tempore (Mr. MATSUNAGA). Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of June 2, 1977.)

Mr. BAKER. Mr. President, this is the conference report, as I understand, making good the \$4.5 million appropriation for the repair of the Kennedy Center, which was included in the fiscal 1977 supplemental appropriations bill on the motion of the distinguished majority leader, who is also chairman of the Appropriations Subcommittee for Interior and Related Agencies. That is, it completes the authorization process for the repair, renovation, and reconstruction of the John F. Kennedy Center for the Performing Arts as necessary to correct water leaks in the roof and terraces and drive—both to restore the interior from resulting damage and to prevent any recurrence in the future.

The action of the distinguished majority leader was particularly helpful in securing the necessary funds at the first legislative opportunity in this session, and that appropriation was conditioned upon later completion of the authorization through the passage of "S. 521 or similar legislation." This conference report fulfills that condition, and I am advised that it is in the form consistent with the appropriations language and report, and further with the bill as adopted by the Senate on February 24.

I think it appropriate to recognize at this point the efforts of Senator BURDICK,

who as chairman of the Public Works Subcommittee having jurisdiction, would be managing this conference report if he were here today. Senator BURDICK studied faithfully, as he always does, this matter and has steadfastly supported the Senate position. He has asked that we proceed with the adoption of the conference report at this time.

We all owe our particular thanks to Senator JIM MCCLURE, who made a special effort this week to bring this matter to a successful conclusion, who is the ranking Republican member of the subcommittee, and who also cleared the conference report before his necessary departure. It was Senator MCCLURE's amendment that was adopted by the Senate, and he has devoted a great deal of time and attention to this subject. I know his interest will continue.

As I recall, it was Senator MCCLURE who, as a member of the Committee on Environment and Public Works, assured in a colloquy on the Senate floor with Senators CANNON and HATFIELD during reorganization that the Kennedy Center jurisdiction would be retained by that committee—including the authorities and relationships through the National Park Service of the Department of the Interior, which is charged by existing law with the operation and maintenance of the facility itself as distinguished from the performing arts functions, and to which this authorization and appropriation are also directed. The conference report, I note, confirms in the statement of managers that jurisdiction is retained by the House and Senate Committees on Public Works which, as we know, originated and have amended as necessary the Kennedy Center Act.

The majority leader will also recall, I believe, that our colleague, Senator PERCY, who is also Vice Chairman of the Board of Trustees of the Kennedy Center, wrote and spoke to him during markup on the supplemental, asking that funds be included for the repair of the Center. He did so with my full support, as did Senator MCCLURE. While Senator PERCY is not in the Chamber at this moment, we expect him later today and are sure that he will be pleased.

We all discussed this matter at the time—when Mr. Roger Stevens, Chairman of the Board of Trustees visited also with each of those I have named.

Since that time we are glad that work has begun—I believe the scaffolding is now up—and we trust that the House of Representatives will act on this conference report immediately upon its return.

Mr. President, I might also note, parenthetically, that my wife is a member of the Board of Trustees of the Kennedy Center. The Kennedy Center has an effective lobbying agent in Mrs. Baker, who insisted that her roof be fixed.

Mr. President, I ask unanimous consent that I may have printed in the RECORD a statement by the distinguished Senator from Idaho (Mr. MCCLURE) in support of the conference report.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### STATEMENT OF SENATOR MCCLURE

I am pleased that the Senate and House Conferees have agreed to the conference report on S. 521 and I strongly recommend it to my colleagues.

The conference agreement authorizes funds to the Secretary of Interior, acting through the National Park Service—rather than to the Board itself—which is consistent with the Senate-passed bill, S. 521, and with the appropriation contained in the 1977 Supplemental Appropriations Act. This provision will enable the appropriation to be obligated and the necessary and urgent repairs to commence without delay. It is important to begin emergency repairs as soon as possible to avoid further deterioration and to correct existing damage.

While the House receded on the point of authorizing funds directly to the Board of Trustees of the Kennedy Center, the Senate accepted language giving the Board authority to approve any contract before the Park Service may enter into such contract. In addition, no final payment can be made under a contract unless it has been approved by the Board. I believe it is appropriate that the Park Service—which has continuing authority for operation and maintenance of the non-performing arts functions, which is familiar with the necessary repairs, and which has already done preliminary work—should do the work and disburse any public funds. I believe it is also appropriate that the Board share in the decisions and responsibility.

The Statement of Managers directs the Park Service and the Board of Trustees to submit separate reports monthly to the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation regarding the progress of the work. The reports should identify the progress of work authorized by this legislation; a listing of expenditures to date; any problems or difficulties encountered; and any change in projected plans, cost, or required work.

On other matters, the Senate accepted House language directing that no funds shall be expended under any incentive-type contract and it accepted the House authorizing amount of \$4.7 million instead of \$4.5 million contained in the Senate bill. While further review and scrutiny of financial needs and operations is needed before additional relief to the Kennedy Center is considered, I recommend the Conference Report to my colleagues and urge its passage.

I have been very glad to work on this subject with Senator Burdick and other Senators, and with Chairman Johnson, Congressman Mineta, and our colleague Congressman Walsh. There is keen interest in the Kennedy Center and its continued success.

I trust the constructive association we have established through working on this bill—including the relationship between the Center and the Park Service—will continue to serve us well in the future.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### MILITARY CONCERN DISCLOSES WEAKNESS OF ADMINISTRATION'S KOREAN POLICY

Mr. DOLE. Mr. President, I am seriously disturbed by the President's decision on May 21 to dismiss Maj. Gen. John K. Singlaub as Chief of Staff of the 8th U.S. Army in South Korea. I believe the President's action in firing this outstanding veteran officer of three wars was a glaring overreaction to the circumstances at hand. President Carter's decision clearly sheds doubt on his willingness and ability to accept responsible questioning of his foreign policy program, and reflects a rather thin-skinned reaction to criticism. It is for this reason that I have already requested that the Senate Armed Services Committee conduct open hearings on the situation, in order to accept testimony from Major General Singlaub, Secretary of State Cyrus Vance, Secretary of Defense Harold Brown, and Gen. John W. Vessey, Jr., head of United Nations Forces in South Korea.

#### A MUZZLE ON THE MILITARY

Whether intended or not, the President's decision to dismiss General Singlaub will have the effect of placing a muzzle on military officers who have firsthand knowledge of strategic circumstances in critical areas throughout the world. It is counterproductive to U.S. policy and security interests to effectively stifle informed input in this way. In his interview with the Washington Post in Tokyo, General Singlaub advised that, "An intensive intelligence effort over the last 12 months has discovered North Korea to be much, much stronger than we thought." This is vital information which should bear on American policy in South Korea and, in my opinion, the President should have summoned the general to the White House to request further information about these intelligence reports.

It appears to many of us that there is a double standard in this administration when the U.N. Ambassador can say almost anything and General Singlaub, with greater expertise and experience, can say nothing.

General Singlaub's comments regarding the risks involved in U.S. troop withdrawals are not unique among those military personnel most familiar with the strategic situation in Korea. Three weeks ago, Gen. John W. Vessey, Jr., head of United Nations forces in South Korea, said essentially the same thing about the risk of withdrawal, when he stated:

In my view, the withdrawal of all the American ground troops would raise the possibility of war in Korea.

The Deputy to the Commander of U.N. and U.S. Forces in Korea has also em-

phasized the importance of retaining American ground troops in Korea. According to some reports, most U.S. military officers feel that the President's announced intention of withdrawing U.S. ground troops from South Korea within 4 to 5 years is a mistake that can only lead to a North Korean invasion of the South. In the future, however, military leaders will likely be reluctant to express their personal views on such matters for fear they will suffer a fate similar to that of Singlaub.

I certainly understand that, under our constitutional system, civilians are responsible for the determination of U.S. foreign policy, and that is as it should be. Active duty military officers should not ordinarily be taking personal positions in public on national defense policies which they are sworn to execute. This does not mean, however, that military officers should be prevented from expressing their considered professional judgments, through properly constituted channels, to their superiors in the Defense Department or to the committees of Congress. I should not want to see this form of policy advice curtailed or inhibited.

As much as President Carter might like to draw a parallel between the present situation and President Truman's dismissal of Gen. Douglas MacArthur in 1951, the scenarios are entirely different. General MacArthur openly defied direct orders from the White House in the midst of Korean warfare. Major General Singlaub, in a much different context, expressed personal concern about a policy decision, but pledged to "execute it with enthusiasm and a high level of professional skill" if implemented.

#### KOREAN WITHDRAWAL SHOULD BE RECONSIDERED

In view of widespread concern among U.S. military officers about the impending withdrawal of 42,000 American ground troops from South Korea, and in light of recent intelligence reports that support such concern, the President should carefully reconsider his pronounced military policy in Korea. Clearly, North Korean aggression has not subsided. Only last August, North Korean troops stationed along the demilitarized zone brutally attacked and murdered two American officers stationed in the area with U.N. forces. That attack, instigated by North Koreans, was in clear violation of United Nations peace-keeping efforts in the demilitarized area between North and South Korea. Currently, there is no military or strategic logic for withdrawal of U.S. troops from the United Nations peace-keeping force, which continues to provide overall stability on the Korean peninsula. The withdrawal of about 40,000 U.S. troops within 5 years will unquestionably create a power vacuum in the South that North Korean aggressors cannot ignore. The military situation in Korea today is essentially stable; if U.S. ground troops are withdrawn, I fear we will have another Saigon on our hands.

It is not only a question of military stability, but one of American credibility and resolve as well. The significant re-

duction of U.S. troops from South Korea will be interpreted by our allies and foes alike as a disengagement of U.S. interests in the area. It will throw into question the whole matter of U.S. defense of the South Pacific region. There is no question that it will be interpreted by the North Koreans as a lessening of our commitment to South Korean sovereignty.

Japanese leaders have already expressed serious concern about the erosion of a U.S. defensive posture in the South Pacific, which has served to counterbalance Soviet and Communist Chinese power. There can, indeed, be no question that the withdrawal of tens of thousands of American troops from Korea will shed doubt on the role of the United States as a trusted ally and as a force for peace in the Pacific. It will most likely require the involuntary remilitarization of Japan as the sole counterbalancing force to Soviet and Chinese expansion in the area, and it may well lead to aggressive initiatives by North Korean troops. The President was prepared to bear the responsibility for the consequences of American troop withdrawals.

#### HEARINGS WOULD BE USEFUL

In the wake of Major General Singlaub's dismissal, I believe it would be extremely useful for the Senate Armed Services Committee to schedule hearings and request relevant testimony from the general himself, from his own commanding officer, Gen. John W. Vessey, Jr., and from Secretaries Cyrus Vance and Harold Brown. Such testimony should address itself to the question of U.S. strategic interests in the South Pacific, the future security of South Korea, the consensus of military attitudes about U.S.-Korean policy, and the appropriateness of public statements about that policy by military personnel. The President's decision, beyond having an immediate negative impact on the outstanding military career of Major General Singlaub, has certain implications for the future foreign policy advisory role of U.S. military officers.

It is distressing to me that our President, who has championed the concept of broad public input into national policy decisions, should react so adversely to expressions of concern about his Korean policy. Instead of offering a receptive ear to advice from those who are most directly familiar with the military situation in Korea and elsewhere, the President has taken action that will only serve to intimidate those who would question his policy plans. Major General Singlaub and his colleagues have something to say and they should be heard. If military officers on the scene believe troop withdrawals will lead to war our Nation's policymakers should know about it.

The Undersecretary of State and the Chairman of the Joint Chiefs of Staff, as the President's special representatives, held discussions with South Korean officials earlier this week on the scheduled withdrawal of U.S. troops. I believe it would be best for Congress to carefully examine the President's proposed disengagement of U.S. ground forces before

any irreversible plans are made to initiate the policy. Time is short and we must direct our attention to this matter without delay.

#### BIRTHDAY GREETINGS TO THE HAPPY WARRIOR

Mr. DOLE. I join my colleagues, Mr. President, in wishing the happiest of birthdays to the senior Senator from Minnesota (Mr. HUMPHREY), that unflappable happy warrior of the Democratic Party. For many years, HUBERT has been both personal friend and political foe of the highest integrity. His unbounded enthusiasm is an inspiration to all men and women who aspire to success, personal and political. His honorable record of service in the Senate adds luster to this great institution. On this day, the 66th anniversary of the birth of HUBERT HORATIO HUMPHREY, it is a special privilege for his friends on the Republican side to express our affection for our distinguished and beloved colleague.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. FORD). Without objection, it is so ordered.

#### BIRTHDAY GREETINGS TO SENATOR HUBERT H. HUMPHREY

Mr. MATSUNAGA. Mr. President, today we commemorate the birthday of one of the greatest, if not the greatest, living statesmen, not only in America, but in the entire world, HUBERT H. HUMPHREY.

Of course, the fact that this happens also to be my daughter Merle's birthday does not color my views in any manner. But, for the record, I would like it to be known that I got to know HUBERT H. HUMPHREY rather well when he was Vice President because it was then that I traveled with him to Korea and to Alaska, and greeted him when he visited Hawaii.

In all of my experience, I have never met anyone with a more voracious mind than HUBERT H. HUMPHREY. With him life seems to be a constant learning process.

When he was in Korea, for example, he picked up the customs of the people there so rapidly that the people immediately accepted him as one of their own champions and loved him.

I accompanied the then-Vice President HUMPHREY to attend the second inauguration of President Park in 1967, and I must relate this funny incident for the record. When we arrived at the airport in Seoul, we were greeted by the Korean protocol officer, Mr. Lee, who mistook me as the Vice President's Korean interpreter.

He came up to me and addressed me

in Korean, whereupon I responded in Korean because I do, in fact, speak the Korean language.

Mr. Lee was convinced that I was a Korean interpreter for the Vice President of the United States and not a representative of the Congress with the rank of ambassador to attend the inauguration of President Park.

When I was introduced to him as SPARK MATSUNAGA his ears, evidently, were attuned to hearing a Korean name and he heard "SPARK" as "Park" and he kept calling me "Mr. Park."

After I convinced Mr. Lee my name was SPARK MATSUNAGA, not "Park Mat Song," and that I was an American of Japanese ancestry, not of Korean ancestry, he committed an error which he himself called the most embarrassing moment in his life. It all happened as follows: During the inaugural ceremonies whenever we proceeded from one function to another, we would proceed in the order of protocol. The order of protocol being that the delegation from the oldest nation would proceed first, followed by the delegation of the second oldest nation, then the third, and so on.

When we were finished with the state dinner, Mr. Lee, the Korean protocol officer, stood up and announced, "We will now proceed to the theater to view the cultural show in the usual order of protocol."

Whereupon, Vice President Yen of the Republic of China and his Chinese delegation stood up and headed toward the exit where the vehicles were waiting for us to take us to the theater. Prime Minister Sato and his Japanese delegation then followed, and Vice President HUMPHREY and his American delegation then joined the procession to the exits and the waiting vehicles.

As I was walking along leisurely, chatting with Vice President HUMPHREY following in double line, behind the Japanese delegation, along came Mr. Lee from the head of the line, rushed over to me, grabbed me by my elbow and ushered me to the head of the line and nearly shoved me into the car already occupied by Prime Minister Sato of Japan.

Fortunately for me, the great Vice President of the United States, HUBERT HUMPHREY, sharp as a flash of lightning, immediately saw what was happening, and yelled out, "Hey, wait a minute, he's one of us."

Being saved by Vice President HUMPHREY, I returned to the United States and supported him enthusiastically and strongly for President of the United States.

There were other instances wherein we had good times together, as in Alaska when we went fishing and caught over 200 fish within a period of less than 2 hours. But those stories must wait for an appropriate time—my colleagues are obviously anxious to go into recess. While I still have the floor, I would like to say this about the senior Senator from Minnesota. In the person of HUBERT HUMPHREY is embodied the true spirit of

America, the spirit of freedom, the spirit of equality, the spirit of courage to speak up and to do what is right, not what is politically expeditious.

So today I stand in the Senate to extend my congratulations and best wishes for many, many more productive and happy years to HUBERT HORATIO HUMPHREY on his 66th birthday. "Hauole la hanau, Hubert!"—meaning "happy birthday" in Hawaiian.

Mr. President, I thank the Chair, and yield the floor.

#### HAPPY BIRTHDAY SENATOR HUMPHREY

Mr. THURMOND. Mr. President, I rise today to extend warm wishes for a happy 66th birthday to Senator HUBERT H. HUMPHREY. Although Senator HUMPHREY and I have differed philosophically a number of times over the years, he is a dynamic force in the country and has millions of admirers. His enthusiasm, his optimism, and his cheerful disposition have turned many a political foe into a personal friend.

Mr. President, I wish my friend, HUBERT HUMPHREY, many happy returns, the recognition his career deserves, and long life and much happiness with his lovely wife, Muriel.

Mr. CRANSTON. Mr. President, I, too, would like to rise to congratulate our distinguished and beloved colleague from Minnesota on the occasion of his 66th birthday.

His lifetime is marked by a singular record of devoted service to the Nation.

I know I express the unanimous view of this body in saying that, like some of his speeches, we hope he will go on and on.

On this occasion, I want to wish him all the happiness and good health he so richly deserves.

The PRESIDING OFFICER (Mr. RIEGLE). Does any Senator desire recognition?

#### QUORUM CALL

Mr. MATSUNAGA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### STATUTE OF LIMITATIONS FOR INDIAN CLAIMS

Mr. ROBERT C. BYRD. Mr. President, S. 1377 has been reported unanimously by the Select Committee on Indian Affairs. Action on this measure has been cleared all the way around, by unanimous consent. I ask unanimous consent

that the bill be considered as having been read the first and second times and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1377), to extend the time for commencing actions on behalf of an Indian tribe, band, or group.

The Senate proceeded to consider the bill, which had been reported from the Select Committee on Indian Affairs with an amendment to strike all after the enacting clause and insert the following:

That (a) the third proviso in section 2415(a) of title 28, United States Code, is amended by deleting the words "more than eleven years after the right of action accrued" therein, and substituting the words "after December 31, 1981" in their place.

(b) the proviso in section 2415(b) to title 28, United States Code, is amended by deleting the words "within eleven years after the right of action accrues" therein, and substituting the words "on or before December 31, 1981" in their place.

The PRESIDING OFFICER. The question is on agreeing to the amendment. The amendment was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The bill (S. 1377) was read a third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. ABOUREZK, I move to reconsider the vote by which the bill was passed.

Mr. HATCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, appoints the Senator from Rhode Island (Mr. PELL) as Congressional Adviser to the SALT Delegation, Geneva, Switzerland, during 1977.

#### AUTHORITY FOR THE SECRETARY OF THE SENATE TO RECEIVE MESSAGES DURING RECESS OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, the Senate will be recessing until Monday, June 6, at 12:30 p.m. I ask unanimous consent that during that non-legislative-day period, the Secretary of the Senate be authorized to receive messages from the President of the United States and the House of Representatives and that such messages may be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

# AUTHORITY FOR CERTAIN ACTION TO BE TAKEN DURING RECESS OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the same period, the Vice President of the United States, the President pro tempore of the Senate, the Acting President pro tempore of the Senate, and the Deputy President pro tempore of the Senate be authorized to sign all duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

## EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session, to consider nominations on the Executive Calendar, following "State Department." I understand they have been cleared on both sides of the aisle.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. The nominations will be stated.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all the nominations, other than No. 219, be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations referred to are considered en bloc and confirmed en bloc.

The nominations considered and confirmed en bloc are as follows:

### EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Eleanor Holmes Norton, of New York, to be a member of the Equal Employment Opportunity Commission.

### DEPARTMENT OF JUSTICE

Robert L. Wright, of Kentucky, to be U.S. marshal for the western district of Kentucky.

### DEPARTMENT OF DEFENSE

Robert L. Neison, of the District of Columbia, to be an Assistant Secretary of the Army.

Sundry nominations in the U.S. Air Force, U.S. Army, U.S. Navy, and U.S. Marine Corps.

Sundry nominations placed on the Secretary's desk in the Air Force, Army, and Navy.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate

return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, are we still in morning business?

The PRESIDING OFFICER. We are. Mr. ROBERT C. BYRD. That is fine.

I will just suggest that we stay there for a little while.

## PURPOSE OF NONLEGISLATIVE PERIODS

Mr. ROBERT C. BYRD. Mr. President, before the Senate goes out for the Memorial Day nonlegislative period I wish again to state, as I have stated before, the purposes of such nonlegislative-day periods. The purposes are manifold.

As an example, during the last nonlegislative-day period, the Easter holiday, I went to West Virginia to visit some of the areas that had been severely stricken with floods. That trip consumed 1 day. On 3 additional days thereafter during that week, I spent practically the better part of each of those 3 days in meeting with U.S. Army Engineers and various Federal officials who have jurisdiction over Federal disaster programs.

I also had a great deal of work in my own office that needed to be completed. The work in my office backs up considerably from time to time when the Senate is very busy.

I do not recall ever having taken a vacation during these so-called nonlegislative-day periods. There is always work to be done. And I can remember several non-legislative-day periods in which I have conducted committee hearings and in which I have conducted markup sessions on bills. The Budget Reform Act is a good example. I spent an entire non-legislative-day period—many people call them recesses, and one can call them whatever one wishes—but I spent that entire non-legislative-day period upon that occasion working with staff members of committees. I, as a member of the Rules Committee—and at that time as the chairman of the then Subcommittee on Rules—spent that entire non-legislative-day period—call it recess if you will—working with staff people on that bill, revising it, and preparing it for final committee action.

I am sure that many other Senators use the periods, from time to time, to conduct hearings here in the city, in their home States, or elsewhere around the country.

(At this point, Mr. MATSUNAGA assumed the chair.)

Additionally, the correspondence load of a Senator is something that very few people really understand. Many Senators get from 5,000 to 10,000 or 15,000 communications a week, and many of these communications have to be read and responded to by Members themselves. Much of this workload has to be given attention at such times. Meetings with Federal agencies on constituents' problems are often conducted during these holiday periods.

Congress is the people's branch. It is the people's forum. It is the people's hope. Members need to get back to their

respective congressional districts and States to talk with their constituents and to speak at various events occurring within their States and congressional districts.

For example, I have two speaking engagements during the forthcoming Memorial Day holiday. I could have had many more. I had to turn down a good many invitations. I normally try to limit my speaking engagements only to West Virginia, the District of Columbia, or, in the event another Senator asks me to go to his State, if I can go I will. These two engagements are at high school commencements where I will be speaking to graduating classes. A part of a Senator's many responsibilities is to speak to the youth of the country, to get back and look his people in the eye, answer their questions, and to find out from them their feelings on the issues. This is an important part of the American legislative process.

Some of our Members have to go to Canada and to Mexico this weekend. These countries are our neighbors. And I would imagine that many countries in the world envy the United States, situated as it is, and envy the countries of Canada and Mexico situated as they are. We are neighbors. We have no armies. Mr. President, on our borders with these states. These are three peace-loving, neighborly, friendly states.

It is important that the Senate of the United States, which is vested with certain responsibilities that are not incumbent upon the House of Representatives—for example, the consideration and ratification of treaties, and so forth—it is important for Members to visit other countries and particularly our neighbors, so we have a few Members from both Houses attending interparliamentary conferences in Mexico and Canada during this next week.

And I want very much that such important business meetings be conducted with other countries when the Senate is not meeting. So I insisted, for instance, that the meeting in Mexico not occur at a time when the Senate is in session, because otherwise either Senators cannot go and represent the United States—which would be an affront to the Mexicans if Members of the Senate or Members of the House of Representatives did not go, or if such interparliamentary meetings occur when the Senate is in session, then Senators are obliged to miss rollcalls and committee meetings which sometimes causes the Senate to delay its action on particular bills because those Senators may have the responsibility of floor managing bills at such times.

These periods of non-Senate workdays are utilized necessarily by most Senators, surely, in a way that carries out their responsibilities under the Constitution. A Senator who does not get back home until election year may have some problems in being reelected to the Senate.

I know there are those who say, "Well, Senators are campaigning when they go back home."

A Senator is always campaigning. A Member of the House of Representatives is always campaigning. Any elective public official is always campaigning, be-

cause every action he takes, every speech he makes, has an impact, slight though it may be—sometimes it may be an adverse impact—on his political future.

But that is the legislative process; and, especially where the members of the people's branch are concerned, it is important that there be times when Members can go back to their States, can commit themselves to engagements weeks in advance, without fear or concern that such engagements will have to be canceled because of Senate floorwork. Otherwise, they cannot schedule such commitments with assurance that they can live up to them.

During the Memorial Day weekend and early June, high schools all over the country are having commencements, and Members of Congress are asked to deliver commencement addresses. That is a service to the people, and it is a responsibility of a Member of Congress. The Members of the people's branch need to stay in touch with the people. If we were not to have had this forthcoming week, many Members would have had to turn down commencement addresses; either that or accept them and run the risk of missing rollcall votes in the Senate.

So, by way of brief explanation, Mr. President, I hope there will be a little better understanding on the part of those who read the CONGRESSIONAL RECORD as to the purpose of these holiday periods.

Incidentally, the attendance during the Senate workdays has been exemplary. The attendance on rollcalls this year in the Senate has averaged 88.19 percent. That is a good attendance.

So having the scheduled recesses—I will use that word for the moment because it is better understood—having a nonlegislative period scheduled for the Senate enables Senators to make their engagements in advance for times when the Senate is not in session, and to be on hand for Senate floorwork at times when the Senate is in session.

I repeat, that is a splendid attendance record. That is the average. Senator PROXMIER has not missed a rollcall in more than 5,000 rollcalls. Many Senators have rollcall attendance records in the high 90's. Such good attendance is made possible in part because Senators do have these times when they know in advance that they can schedule visits back home without fear of missing rollcall votes and floor debate on important legislation.

The Senator who loses touch with his constituents may find that they have also lost touch with him. The road to Washington leads back home. One always has to be a politician before he can be a statesman. A Senator cannot be a statesman if he is no longer here. People want to see him back home from time to time.

Last year, I visited 54 out of my 55 counties, at least once, and my rollcall voting record was better than 99 percent. The year before that, I was in each of the 55 counties of West Virginia at least once—in some cases twice, three times, four times, five times, or six times. And West Virginia is not the most level State in the Union. Sometimes, it is a little difficult to get from place to place. Other Senators have similar problems.

So, let it not be said by those who

ought to know better, that these recesses are vacations.

I am not looking for a vacation. To be very frank about it, just to be away from the Senate floor, for me, and to be back in my office doing my office work, is a period of relaxation for me.

#### SENATE LEGISLATIVE ACHIEVEMENTS— JANUARY 4 TO MAY 27, 1977

I compliment the Members of the Senate on the splendid attendance record to which I have just referred. I also compliment the Senate on the legislative record that it has made thus far during this session.

A good lawyer knows where to find the law. In the past 5 months, the Senate has addressed a variety of problems. Of prime importance have been programs instrumental to improving the Nation's economy. The 95th Congress has enacted the major portions of the President's economic stimulus proposals.

We have authorized an additional \$4 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

We have enacted \$20.1 billion in a special economic stimulus appropriation to implement programs for public service employment, public works projects, countercyclical revenue sharing, and training of unemployed youths, veterans, unskilled workers, and older Americans.

We have authorized \$3.25 billion to extend the countercyclical revenue sharing program to help States and local governments to maintain basic services until national unemployment drops below 6 percent.

We have enacted the 3-year, \$34 billion tax cut for individuals and businesses.

Forty-six million Americans, 90 percent, with incomes under \$20,000, will pay less taxes.

Corporations will be allowed a tax credit on hiring new employees in an effort to encourage business expansion and reduce unemployment.

Moreover, 96 percent of all taxpayers will benefit from having a simpler method of computing their taxes.

In January, we sent the President a measure granting him special emergency pricing and allocation authority to deal with the national gas shortage during the record cold winter months.

The Senate has passed a surface mining bill.

The Senate last week passed the cornerstone of the President's energy program—legislation creating a Department of Energy, which will administer a national energy policy.

As passed by the Senate, the energy-related functions of some 50 agencies will be incorporated into a single Cabinet-level department that will have pricing, allocation, pipeline, and other authorities previously splintered, scattered, and dispersed among numerous entities.

The Senate confirmed a new Cabinet shortly after the President's inauguration.

The Senate this week passed an omnibus farm bill, a bill that extends for 5

years the basic price support program for major commodities.

The Senate has passed an omnibus judgment bill.

The Senate has passed legislation dealing with the Arab boycott.

The Senate has passed a measure to halt the importation of chrome from Rhodesia. I did not support the bill, but the Senate passed it.

The Senate passed legislation authorizing the President to submit plans for reorganization of Federal agencies—one of the basic, fundamental cornerstones of the President's program. Congress has already enacted that authority for reorganization of the Federal agencies.

The Senate passed an extension of the unemployment compensation program to aid those temporarily unemployed.

In 2 days, the Senate passed the \$35.9 billion authorization for procurement of aircraft, missiles, naval vessels, and weapons.

It passed a military construction authorization bill in the amount of \$3.7 billion.

Other measures enacted by the Senate are: An extension of important public health programs; a bill seeking to eliminate the problem of oil pollution from tankers and to improve vessel safety; and with regard to internal Senate reforms, the Senate early in the session agreed to an extensive realignment of committee jurisdictions and other changes that will expedite the flow of business.

The Senate adopted a tough Code of Conduct for Members and staff which requires extensive financial disclosure.

These are just a few of the many measures that have been acted upon by the Senate already this year. For a more detailed account of total Senate legislative achievements, I ask unanimous consent to have printed in the RECORD a report prepared by the Democratic Policy Committee staff, so that the public may read and see for themselves the list of measures which have been acted upon already by the Senate this year.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

#### LEGISLATIVE DIGEST—JANUARY 4–MAY 27, 1977 ECONOMY–UNEMPLOYMENT

**Tax cut.**—Congress has enacted a 3-year \$34 billion tax cut. Forty-six million Americans—90% with income less than \$20,000—will pay less taxes. Corporations will be allowed a tax credit on hiring new employees. Ninety-six percent of all taxpayers will have a simpler method of computing their taxes.

**Economic Stimulus Appropriations.**—Congress has enacted a measure providing \$20.1 billion to implement the President's economic stimulus proposals including funds for public works projects, public service employment and countercyclical revenue-sharing to help State and local governments continue their basic services and to target employment and training programs to youth, veterans and unskilled workers.

**CETA—Youth Employment.**—The House and Senate passed a bill extending CETA through fiscal year 1978 with provisions for increased participation by disabled and Vietnam-era veterans under 27 years of age and added a new title designed to deal with the problems of youth unemployment.

**Public Works Employment.**—Congress has

enacted a measure authorizing \$6 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

**Unemployment Compensation.**—Congress has extended the unemployment compensation program until October 31 to aid those temporarily unemployed with an income to meet their day-to-day living expenses.

#### ENERGY

**Emergency Natural Gas.**—Congress enacted early this year a measure giving the President special emergency authority to deal with the natural gas shortage during the winter months.

**Department of Energy.**—The Senate passed last Wednesday a bill to create a cabinet level Department of Energy incorporating some 50 energy-related agencies including FEA, ERDA and the FPC.

**Strip Mining.**—The Senate and the House have both passed a measure to minimize the degradation of the environment by requiring minimum uniform standards for mining and reclamation.

**Comprehensive Energy Policy.**—Senate and House committee hearings will continue throughout this month and next on energy supply, conservation, natural gas, and public utilities regulation as part of a broad program for cutting energy consumption, conserving energy supplies and increasing domestic sources of energy.

#### SENATE REFORM

**Committee Reorganization.**—At the beginning of the session, the Senate reduced the number of Senate committees and realigned jurisdictions into a more rational order. It agreed to numerous other changes to spread legislative responsibilities more equally among all Senators.

**Ethics Code.**—The Senate adopted an official code of conduct for Senators and staff which requires extensive financial disclosure.

#### OTHER MEASURES

**Arab Boycott.**—Under consideration by House-Senate conferees is a bill attacking the most repugnant aspects of the Arab boycott against Israel and generally improving export administration.

**Rhodesian Chrome.**—Congress acted early this year to halt the importation of chrome from Rhodesia which was in violation of U.N. sanctions against trade with that country.

**Presidential Reorganization Authority.**—Congress extended the authority of the President to submit plans for reorganization of Federal agencies which shall take effect within 60 days if Congress does not disapprove by resolution.

**Omnibus Farm Bill.**—The Senate has agreed to extend the basic price support programs for major commodities and the Food for Peace (PL 480) program. This bill also makes important revisions in these programs as well as needed reform to the Food Stamp program which is extended for two years.

**Tanker Safety.**—The Senate has agreed to a measure strengthening Federal standards governing vessels transporting oil in waterways under U.S. jurisdiction.

#### [95th Congress, 1st Session]

##### SENATE LEGISLATIVE ACHIEVEMENTS

(Prepared by Senate Democratic Policy Committee, Robert C. Byrd, Chairman)

##### SENATE ACTIVITY

record vote on passage, conference report, or reconsideration.

#### AGRICULTURE

**Federal Crop Insurance Corporation Capital.**—Amends the Federal Crop Insurance Act to increase the authorized capital stock of the Federal Crop Insurance Corporation from \$100 million to \$150 million in order to replenish its operating capital which was nearly exhausted as a result of indemnity payments to insured farmers for crop losses during the 1976 drought and harsh winter of 1977. S. 955—Passed Senate April 25, 1977 (VV)

**Grain Inspection.**—Amends the United States Grain Standards Act to facilitate and improve the implementation of the amendments made in 1976 (Public Law 94-582); establishes a temporary 12-member committee (representing farmers, consumers and all segments of the grain industry) to advise the Administrator of the Federal Grain Inspection Service (FGIS) on the implementation of the 1976 act, and provides for its termination 18 months after the date of enactment; eliminates the requirement that grain merchandisers and elevator operators using grain inspection or weighing services maintain certain itemized types of records requires them instead to keep only such records as the Administrator may prescribe for administration and enforcement; repeals, effective October 1, 1977, the authority for the charging of fees for Federal supervision of grain inspection and weighing and provides instead for funding of these activities through the regular appropriations process; makes several technical amendments; and prohibits effective May 1, 1977, subclassing of the hard red winter wheat on the basis of color, kernel content, or percentage of dark, hard and vitreous kernels. S. 1051—Passed Senate March 30, 1977. (88)

**Land and water resources conservation.**—Establishes a mechanism for making long-range policy to encourage the wise and orderly development of the Nation's soil and water resources; requires the Secretary of Agriculture to (1) prepare an appraisal of the Nation's land, water and related resources and (2) develop a national land and water conservation program setting forth the direction for future soil and water conservation efforts on the Nation's private and non-Federal lands by December 31, 1979, and to update them each fifth year thereafter; requires that the appraisal and the program together with a detailed statement of policy intended to be used in framing budget requests for Soil Conservation Service activities to be transmitted to Congress on the first day it convenes in 1980 and at each 5-year interval thereafter; requires that programs established by law be carried out in accordance with the statement of policy unless either House adopts a disapproval resolution within 90 days of receipt; provides that Congress may revise or modify the statement of policy, and that the revised or modified statement of policy shall be used in framing budget requests; requires, beginning with the fiscal 1982 budget, that requests sent by the President to Congress governing Soil Conservation Service activities express the extent to which the projected programs and policies meet the statement of policy approved by Congress; requires the President to set forth reasons for requesting Congress to approve a lesser program or policy where budget recommendations fail to meet the established policy; and requires the Secretary to submit to Congress beginning with fiscal 1982, an annual report evaluating the program's effectiveness. S. 106—Passed Senate March 23, 1977. (VV)

**Omnibus farm bill.**—Extends for 5 years through 1982 the basic price support programs for wheat, feed grains, cotton, rice, and wool; extends, with major changes, the food stamp program into 1979; extends into

1982 the Food for Peace Program (P.L. 480) with some changes; and establishes a new charter and clearer direction for the Federal role in agricultural research;

**Payments limitation.**—Places a limitation of \$50,000 on the total payments which a person may receive annually under one or more of the programs for wheat, feed grains, upland cotton, extra long staple cotton, and rice instead of the present \$20,000 limitation and the separate \$55,000 limitation on rice;

**Commodity programs.**—Milk—sets the price support at 80% of parity adjusted semiannually but reviewed quarterly; extends for 5 years the Class I base plans, seasonal base excess plans, and seasonal takeout-payback plans for 5 years; Wool—updates the support levels to 90% of the formula; Wheat—sets the target price for wheat at 1977 at \$2.90 per bushel; and the target price for 1978 at \$3.10 per bushel and an increase thereafter if the cost of production exceeds that level; Feedgrains—sets target price levels for corn at \$2.28 per bushel in 1978 and increases thereafter based on cost of production, and ties the support level for other feedgrains to corn; Cotton—establishes a target price of 51.1 cents per pound for 1978 to increase in subsequent years in relation to cost of production increases; Peanuts—establishes a national acreage allotment and a minimum national poundage quota; sets up a price support program for producers through loans, purchases or other operations; Soybeans—requires price support loans for producers on the 1978 through 1982 crops at not less than \$4 per bushel;

**Grain Reserves.**—Requires the Secretary to formulate a producer storage program on original or extended price support loans for wheat and feedgrains at the same support level as provided by the 1949 Act, as amended; authorizes the President to negotiate a system of food reserves for humanitarian food relief and to maintain such a reserve of food commodities as a contribution of the United States to the system; expands the authority of the Secretary to acquire commodities for disposition in the event of national disasters; makes the following changes in the farm storage facility loan program; authorizes the Secretary of Agriculture to use guarantees on secured loans as well as direct loans as a means of assisting farmers to construct or purchase on-farm facilities; permits the making or guaranteeing of loans for the construction of facilities to store high moisture grain and forage crops, as well as dry grain; and requires, with respect to direct loans, that the borrower put up security for the loan and base the interest rate charged to farmers on the rate charged the Commodity Credit Corporation;

**Food for Peace Program (P.L. 480) Reforms.**—Extends into 1982 the program and increases the annual authorization to \$750 million;

**Food Stamp Reforms.**—Extends the current food stamp program for 2 years; eliminates the purchase requirement and establishes a single benefit reduction rate at 30% of net income; limits participation to households at or below official Federal poverty levels; replaces current itemized deductions with standardized deductions; requires unemployed participants to seek unemployment; requires a 60-day period of ineligibility for a household whose head voluntarily terminates employment; eliminates automatic, categorical eligibility of welfare recipients; gives Indian tribal organizations greater authority over food distribution programs on reservations; increases incentives for States to root out program abuse and improve administration; authorizes pilot projects to improve administration; and extends authority to purchase commodities and establishes the Federal share of administra-

tive costs for the Commodity Supplemental Food Program.

**Food and Agricultural Research.**—Expands support for research programs, improved dissemination of research findings, increased efficiency and coordination of Federally-funded food and agricultural research including nutrition research and animal health research; creates three interrelated advisory panels to improve coordination; provides for a program of competitive grants within the Department to initiative high priority research activities; authorizes the Secretary to make grants to agriculture experiment stations and land-grant universities to support the Federal-State cooperative research program; authorizes research on solar energy as applied to agriculture; directs the Secretary to develop and implement a national nutrition research and extension program.

**Grain inspection.**—Added the language of S. 1051, the Federal Grain Inspection and Weighing Program Improvements bill as earlier passed by the Senate which amends the United States Grain Standards Act with respect to recordkeeping requirements and supervision fees, and establishes an advisory committee to provide advice to the Administrator of the Federal Grain Inspection Service.

**Other Provisions.**—Amends the authorizations for several existing rural development and conservation programs and contains other provisions including those relating to the inclusion of aquaculture and human nutrition as functions of the Department of Agriculture, beekeepers indemnity, and the importation of filberts. S. 275—Passed Senate May 24, 1977. (169)

**Wheat producers assistance.**—Provides temporary emergency assistance to wheat producers who planted prior to January 1, 1977, in order to prevent further increases in carryover stocks resulting from record U.S. wheat production and decreasing U.S. exports; requires the Secretary of Agriculture to carry out, through the Commodity Credit Corporation, a special wheat acreage grazing and hay program for the 1977 crop whereby a wheat producer who elects to participate may designate an acreage of cropland on his farm, of not to exceed 40 percent of the wheat acreage allotment, for grazing purposes or hay production only; requires that the producer designate the specific acreage on the farm to be so used; directs the Secretary to pay any participating producer an amount determined by multiplying the number of acres placed in the program times the projected yield established for the farm times \$1; makes the producer ineligible for any other payments or price supports, including deficiency payments and disaster payments under section 107 of the Agricultural Act of 1949, on that portion of the wheat allotment placed in the program; provides that such acreage shall be deemed to have been planted for harvest for the purposes of wheat acreage history; and authorizes the Secretary to issue the necessary regulations to carry out this act. S. 650—Passed Senate March 16, 1977. (60)

**Wheat referendum.**—Defers the wheat marketing quota referendum for the 1978 crop, which by law must be held no later than August 1, until 30 days after the adjournment of Congress or October 15, whichever is earlier, in order to provide additional time for enactment of legislation, presently being considered by Congress, for the 1978 and subsequent wheat crops which would eliminate the need for a referendum. S. 1240—Passed Senate April 25, 1977. (VV)

#### APPROPRIATIONS

##### Fiscal 1977:

**Continuing.**—Extends the continuing resolution (Public Law 94-473) which expires on

March 31, 1977, until April 30, 1977, to provide financing authority for the following programs traditionally funded under the Departments of Labor, and Health, Education and Welfare Appropriations Acts: higher education; National Health Service Corps; home health services; emergency medical services; library resources; teacher corps; alcohol abuse and alcoholism prevention, treatment and rehabilitation; health professions educational assistance; D.C. medical and dental manpower; activities under title VI of the Comprehensive Employment and Training Act; vocational education; and National Institute of Education; and amends the resolution to provide such amounts as necessary for the calendar quarter ending March 31, 1977, for general revenue sharing payments to State and local governments. H.J. Res. 351—Public Law 95-16, approved April 1, 1977. (VV)

**Economic stimulus.**—Makes economic stimulus appropriations in the total amount of \$20,101,484,000 in new budget obligatory authority for fiscal year 1977 which is \$3,692,365,000 under the budget estimate; includes the following to implement the economic stimulus proposals recommended by the President in his message of January 31, 1977:

**Public Works Projects.**—\$4 billion for acceleration of local public works projects;

**Revenue Sharing Program.**—\$4,991,085,000 for revenue sharing payments for the last three quarters of fiscal 1977;

**Antirecession Financing.**—\$632.5 million for increased antirecession payments under Public Law 94-369 to States and local governments in areas of high unemployment to assist them in maintaining basic services;

**Public Service Employment.**—\$7,987 billion for public services jobs which will expand the present Comprehensive Employment and Training Act (CETA) public service programs from the current 310,000 jobs to 600,000 jobs by September 30, 1977, and 725,000 jobs by December 31, 1977;

**Targeted Employment and Training Programs.**—\$1,438 billion for programs targeted to youth, veterans and those in need of new skills; and

**Older Americans.**—\$59,400,000 for an additional 14,800 jobs for community service employment for older Americans;

In addition, includes the following appropriations: \$95 million for production of NASA's third shuttle orbiter; \$300 million for the construction grants reimbursement program for sewage treatment plants; \$175 million for a drought assistance program contingent upon enactment of authorizing legislation; \$35 million increase in the obligation limitation on airport development grants; \$366 million for various programs authorized under the Federal-Aid Highway Act. \$50 million for the Northeast Corridor improvement programs to speed up construction currently underway; and \$2 million for IRS accounts collection and taxpayer service. H.R. 4876—Public Law 95-29, approved May 13, 1977. (130)

**Supplemental.**—Makes supplemental appropriations in the total amount of \$28,923,859,260 for fiscal year 1977 for almost every department and agency of the Federal Government including appropriations to cover costs associated with the October 1, 1976, general government pay raise. H.R. 4877—Public Law 95-26, approved May 4, 1977. (98)

**Urgent disaster supplemental.**—Makes urgent supplemental appropriations of \$200 million for fiscal year 1977 for disaster relief activities resulting from the severe weather conditions prevalent throughout the nation. H.J. Res. 269—Public Law 95-13, approved March 21, 1977. (VV)

**Urgent power supplemental.**—Makes urgent power supplemental appropriations of \$6.4 million for fiscal year 1977 for the Department of the Interior, Southwestern Pow-

er Administration, for power purchases caused by critically low stream flow conditions in the area served by the Administration; and removes the restrictions in Public Laws 94-355 and 94-373 which limit the use of funds appropriated to ERDA subject to enactment of authorizing legislation to assure the continued funding of essential energy research, development and demonstration programs. H.J. Res. 227—Public Law 95-3, approved February 16, 1977. (VV)

#### ATOMIC ENERGY

**Nuclear Regulator Commission authorization.**—Authorizes \$299,640,000 for fiscal year 1978 for the Nuclear Regulatory Commission; includes \$41,480,000 for nuclear reactor regulation, \$12,130,000 for standards development, \$36,050,000 for inspection and enforcement, \$22,090,000 for nuclear materials safety and safeguards, \$148,400,000 for regulatory research, \$10,180,000 for program technical support, and \$29,310,000 for program direction and administration; provides for a reduction in appropriations if (1) the Clinch River Breeder Reactor Project is cancelled or indefinitely deferred, (2) the license application is withdrawn or further construction is cancelled for the fuel reprocessing plant at Barnwell, S.C., and (3) plans for commercial fuel reprocessing and plutonium recycling are cancelled; and directs the Administrator of the General Services Administration to study and report to the Environment Committee by June 15, 1977, on the feasibility of consolidating the NRC which is presently housed in nine buildings throughout the Washington metropolitan area. H.R. 3733—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

#### BUDGET

##### Rescissions:

**Helium purchases.**—Rescinds 47.5 million in contract authority for helium purchases under Public Law 87-122 as recommended by the President in his message of September 22, 1976, for which purchase contracts were terminated by the Interior Department in 1973 and the contract authority therefore is no longer needed. H.R. 3347—Public Law 95-10, approved March 10, 1977. (VV)

**Second budget rescission.**—Rescinds \$644,050,000 of the \$941,278,000 in budget authority recommended by the President in his message of January 17, 1977, as follows: Department of Defense—Military—\$143.6 million in retired pay, \$452.6 million in Naval shipbuilding and conversion because of the decision not to procure the fourth nuclear powered aircraft carrier (CVN-71) or convert the nuclear powered cruiser USS Long Beach to the Aegis air defense weapons system, and \$145.35 million for Air Force procurement because of termination of the Advanced Logistics System (ALS); \$41.5 million in funds appropriated to the President for foreign military credit sales; and \$12 million for the Department of State contributions for international peacekeeping activities because of the lower budget levels established by the U.N. General Assembly; and disapproves \$277,228,000 as follows: Department of Commerce—\$525,000 for salaries and expenses of the U.S. Travel Service and \$1.5 million for operations, research and facilities of the National Oceanic and Atmospheric Administration to continue surveys, mission and cost analysis and initiation of design and engineering studies for Oceanlab; and \$6,803,000 for the Department of Transportation for retired pay for the Coast Guard. H.R. 3839—Public Law 95-15, approved March 25, 1977. (VV)

##### Resolutions:

**Third Budget Resolution, 1977.**—Revises the Second Budget Resolution (S. Con. Res. 139) for fiscal year 1977 setting the level of revenues at \$347.7 billion, outlays at \$417.45

billion, deficit at \$69.75 billion, budget authority at \$472.9 billion and public debt at \$718.4 billion; contains an adequate funding level to permit enactment of up to \$13.8 billion in tax legislation stimulus as proposed by the administration and \$3.7 billion in increased outlays to produce jobs in areas of high unemployment; sets a level of budget authority at \$1.1 billion and outlays at \$760 million for EPA construction grants, railroad and highway construction and improvement in recreational facilities; sets the following levels of funding for the relief of individuals and families hard hit by the recession and the harsh winter: (1) 1.8 billion in budget authority and outlays for direct payments to recipients of social security, SSI, and railroad retirement, or any similar stimulus proposals, (2) \$508 million in budget authority and \$508 million in outlays to extend the Federal supplemental benefits program for the unemployed, and (3) \$200 million in budget authority and \$200 million in outlays for Federal assistance to low- and moderate-income families to help them meet fuel costs during the winter emergency; includes adequate levels of budget authority for housing to support increased reservations for a total of 360,000 dwelling units for low- and moderate-income families; and makes the following revisions to the totals for budget authority and outlays contained in the Second Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars):

National Defense—BA: \$108.8 instead of \$112.1, O: \$100.1 instead of \$100.65;

International Affairs—BA: \$7.9 instead of \$8.9, O: \$6.8 instead of \$6.9;

General science, space, and technology—BA: \$4.5 instead of \$4.6, O: \$4.4 instead of \$4.5;

Natural resources, environment, and energy—BA: \$18.7 instead of \$18.2, O: \$17.2 instead of \$16.2;

Agriculture—BA: \$2.3 instead of \$2.1, O: \$3.0 instead of \$2.2;

Commerce and transportation—BA: \$17.3 instead of \$17.2, O: \$16.0 instead of \$17.4;

Community and regional development—BA: \$14.8 instead of \$9.55, O: \$10.55 instead of \$9.05;

Education, training, employment and social services—BA: \$30.4 instead of \$24.0, O: \$22.7 instead of \$22.2;

Health—BA: \$40.6 instead of \$40.5, O: \$39.2 instead of \$38.9;

Income Security—BA: \$170.9 instead of \$155.9, O: \$141.3 instead of \$137.2;

Veterans benefits and services—BA: \$18.9 instead of \$20.3, O: \$18.1 instead of \$19.5;

Law enforcement and justice—BA: \$3.5, O: \$3.6;

General Government—BA: \$3.5 instead of \$3.6, O: \$3.5;

Revenue sharing and general purpose fiscal assistance—BA: \$7.6, O: \$7.7;

Interest—BA: \$388 instead of \$39.6, O: \$38 instead of \$39.6;

Allowances—BA: \$0.8 instead of \$0.7, O: \$0.8;

Undistributed offsetting receipts—BA: \$15.6 instead of \$16.8, O: \$15.6 instead of \$16.8. S. Con. Res. 10—Action complete March 3, 1977. (38).

First Budget Resolution, 1978.—Sets the level for total budget outlays for fiscal year 1978 at \$460.95 billion, estimated revenues at \$396.3 billion, new budget authority at \$508.45 billion, and the estimated deficit at \$64.65 billion as compared to the President's estimates of \$462.6 billion in budget outlays, \$404.7 billion in revenues, \$506.2 billion in new budget authority, and a proposed deficit of \$57.9 billion; sets the appropriate level of the public debt at \$784.9 billion and the

amount by which the statutory amount may be increased to \$33.6 billion; for estimated revenues (1) assumes the level of fiscal stimulus in fiscal 1978 provided in the Tax Reduction and Simplification Act as agreed to by House and Senate conferees; (2) accepts a \$65 million allowance for miscellaneous tax and tariff legislation; (3) considers the entire cost of the earned income credit as a reduction of revenue; and (4) postpones the treatment of tax credits in excess of recipients tax liabilities until development of the second budget resolutions; recommends outlays for budget programs by function for fiscal year 1978 as compared with the President's proposed budget outlays as follows:

National Defense: \$110.0 billion as compared to \$112.8 billion;

International Affairs (conduct of foreign affairs, foreign information and exchange activities, the Peace Corps, Food for Peace, and non-military foreign assistance): \$7.3 billion as compared to \$7.2 billion;

General Science, Space and Technology: \$4.7 billion, which is the same estimate submitted by the President;

Natural Resources, Environment, and Energy: \$20.0 billion as compared to \$20.9 billion;

Agriculture: \$4.35 billion as compared to \$4.4 billion;

Commerce and Transportation: \$19.4 billion as compared to \$19.9 billion;

Community and Regional Development: \$10.8 billion as compared to \$9.9 billion;

Education, Manpower, and Social Services: \$27.2 billion as compared to \$27.0 billion;

Health: \$44.3 billion as compared to \$44.6 billion;

Income Security (social security and unemployment insurance, retirement systems for Federal and railroad employees and assistance programs for the needy): \$146.7 billion as compared to \$148.7 billion;

Veterans Benefits and Services: \$20.2 billion as compared to \$18.8 billion;

Law Enforcement and Justice: \$3.85 billion as compared to \$3.8 billion;

General Government: \$3.85 billion as compared to \$4.0 billion;

Revenue Sharing and General Purpose Fiscal Assistance: \$9.7 billion, which is the same estimate submitted by the President;

Interest: \$43.0 billion as compared to \$40.9 billion;

Allowances (includes Federal pay increases for civilian agencies and other expenditures which cannot be reasonably assigned to other functions): \$1.9 billion as compared to \$1.2 billion; and

Undistributed Offsetting Receipts (includes receipts from rents and royalties on leases on the Outer Continental Shelf and other deductions from outlays which cannot be reasonably assigned to other functions): \$16.3 billion in undistributed offsetting receipts in the Congressional budget as compared to \$16.0 billion in the President's budget. S. Con. Res. 19—Action completed by both Houses May 17, 1977. (137, 142)

#### CONGRESS

Congressional Campaign Committee Employees Retirement Credit.—Amends title V, U.S.C., to provide that a congressional employee may credit not to exceed 10 years of service as an employee of the Democratic Senatorial Campaign Committee, the Republican Senatorial Campaign Committee, the Democratic National Congressional Committee or the Republican National Congressional Campaign Committee for Civil Service Retirement purposes provided the required deposits for such service are made to the fund; and makes the provisions of this act applicable to an employee who retires on or after the date of enactment. S. 992—Passed Senate March 5, 1977. (VV)

Joint Committee on Atomic Energy Abolishment.—Abolishes the Joint Committee on Atomic Energy and provides for the disposition of its staff and the transfer of its statutory functions and authority to other congressional committees having jurisdiction over the development, utilization or application of atomic energy; establishes, until March 31, 1979, an Office of Classified National Security Information under the policy direction of the Majority and Minority Leaders and the administrative direction of the Secretary of the Senate which shall be responsible for safeguarding national security information and other restricted data; authorizes the office to classify and declassify information within the guidelines developed for restricted data by the responsible executive agencies and to establish a central repository in the Capitol for safeguarding such data; directs the Office, within 30 days of enactment, to furnish the Senate Armed Services, Energy, Environment and Foreign Relations Committees with a listing of all records, data, charts, and files to be transferred and to indicate which committee may have jurisdiction; directs the chairmen of the committees involved to resolve any jurisdictional problems which may arise; makes necessary conforming amendments to certain laws which pertain to the Joint Committee on Atomic Energy; and provides that this act shall become effective on the tenth day after the date of enactment. S. 1153—Passed Senate March 31, 1977. (VV)

#### CRIME—JUDICIARY

Daughters of the Confederacy Patent Renewal.—Extends for 14 years design patent number 29,611 which is the insignia of the United Daughters of the Confederacy. S. 810—Passed Senate May 13, 1977. (VV)

Jefferson F. Davis.—Restores posthumously full rights of citizenship to Jefferson F. Davis effective December 5, 1968. S.J. Res. 16—Passed Senate April 27, 1977. (vv) U.S. District Court Terms: Amends section 104(a) (1), title 28, U.S.C., to provide for holding terms of the U.S. District Court for the Eastern Division of the Northern District of Mississippi at Aberdeen, Ackerman, and Corinth. S. 662—Passed Senate April 7, 1977. (vv)

North Dakota Judicial District.—Amends title 28, U.S.C., to realign the judicial districts of North Dakota by transferring Bottineau, McHenry, and Pierce Counties from the Northeastern Division to the Northwestern Division and transferring Sheridan and Wells Counties from the Southeastern Division to the Northwestern Division in order to reduce the average distance which litigants, attorneys, and jurors in these counties must travel to the nearest place of holding court by approximately 100 miles. S. 195—Passed Senate May 24, 1977. (vv)

Omnibus Judgeship.—Provides for the appointment of 110 additional permanent district court judges in 65 specified judicial districts; creates three temporary district court judgeships, for a minimum of 5 years, in the Eastern District of Kentucky, Southern District of West Virginia, and Southern District of Florida; divides the fifth circuit into a new fifth circuit consisting of Alabama, Florida, Georgia, and Mississippi which would have 14 judges, and a new eleventh circuit consisting of Louisiana and Texas which would have a total bench of 12 judges; creates a total of 35 new circuit court judgeships distributed as follows: one new judgeship in the first circuit; two in the second circuit; one in the third circuit; three in the fourth circuit; five for the revised fifth circuit; two for the sixth district; one for the seventh circuit; one for the eighth circuit; ten for the ninth circuit; one for the tenth circuit; and six for the new eleventh circuit; contains a "report back" provision which re-

quires the Judicial Council of the Ninth Circuit Court to make recommendations for a solution to the unique problems of that circuit within one year of the date on which the tenth new judge is appointed; authorizes the Administrative Office of the United States Courts to upgrade and reclassify eight employee positions; and amends existing law to require that actions brought against rail or motor carriers on claims for damage or delay to shipments be subject to a minimum jurisdictional amount of \$10,000 for each bill in lading, in order to prevent abuse of the Federal judicial process by persons bringing such actions simply as a means of tolling the statute of limitations while settlement negotiations are undertaken. S. 11—Passed Senate May 24, 1977. (16)

## DEFENSE

**Coast Guard authorization.**—Authorizes \$1,360,421,000 for fiscal year 1978 for the Coast Guard for the procurement of vessels and aircraft, construction and improvement of shore and offshore facilities, alteration and removal of obstructions, aids to navigation, pollution abatement, administrative expenses, and operating expenses; authorizes a year-end strength for active duty personnel of 39,129; contains authorization and personnel to supplement the recent Presidential program of boarding and inspecting oil tankers; funds for the reactivation of Coast Guard cutters to be used as back-up vessels in the enforcement of the 200-mile Fishery Conservation Zone; funds and personnel to supplement the present enforcement of the Fishery Conservation and Management Act of 1976; funds and personnel to create a search and rescue mission capability at the Portage, Mich., Coast Guard station; restoration of funds expended by the Coast Guard as a result of the unanticipated winter storm damages; funds for two additional ice-breaking tugs and one large ice-breaker; funds for the procurement of radar and other equipment for a continuation of various vessel traffic systems; and funds for the study of oil spill containment in high seas or fast rivers; and authorizes the commandant of the Coast Guard to assist HEW in providing medical emergency helicopter transportation services to civilians. H.R. 8823—Passed House May 16, 1977; Passed Senate amended May 25, 1977. (VV)

**Defense production extension.**—Extends for two years, through fiscal 1979, the titles of the Defense Production Act of 1950, as amended, which contain the sole authority for a number of programs designed to maintain the national defense production base in peacetime, prepare for mobilization, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated defense contracts, provide for the examination of national policy with regard to material supplies and shortages, and continue the Joint Committee on Defense Production. S. 853—Public Law 95—, approved 1977. (VV)

**Military construction authorization.**—Authorizes \$3,726,633,000 for construction and other related authority for the military departments, and the Office of the Secretary of Defense within and outside the United States; contains authority for the construction of new projects which will create an estimated 50,000 jobs in the construction industry and to operate and maintain the current inventory of military family housing; directs DOD to give the chemical weapons storage site program top priority; contains \$100 million for energy conservation programs; direct DOD to examine long-term goals which would eliminate reliance on oil and natural gas and utilize coal as a fuel

source and to report to Congress before submitting the 1979 authorization; directs DOD to report on the construction backlog for the U.S. Forces in Europe including efforts to increase NATO and/or host nation participation; includes \$7.3 million for construction of support facilities for personnel stationed at Diego Garcia; increases from \$400,000 to \$1 million DOD authority for emergency minor construction projects without specific authorization; makes clear congressional intent that commissary surcharge funds may be used to provide new commissaries and renovate existing commissaries anywhere in the world; permits the Secretary to acquire by exchange certain lands contiguous to Fort Bliss Military Reservation, El Paso, Texas; increases from \$2 million to \$3.3 million the authorization for the construction of shore-side facilities for the U.S.S. Arizona memorial in Hawaii; and permits the use of certain former military land conveyed to San Francisco for public purposes other than park and recreational uses thus permitting the city to construct a sewage treatment facility on the site. S. 1474—Passed Senate May 13, 1977. (VV)

**Military enlistment and reenlistment bonuses.**—Amends chapter 5, title 37, U.S.C. to extend for 15 months, from June 30, 1977, to September 30, 1978, present law authorizing the armed services to pay enlistment and reenlistment bonuses to select enlisted personnel who possess a critical skill or to those who enlist for service in a critical skill including the combat arms; and adds a provision whereby a member would forfeit his bonus if he becomes technically unqualified in the skill for which the bonus was paid unless it is the result of an injury, illness, or other impairment which is not a result of his own misconduct. H.R. 583—Passed House February 8, 1977; Passed Senate amended May 2, 1977. (VV)

**Military procurement authorization.**—Authorizes \$35.955 billion for fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development test, and evaluation for the Armed Forces; prescribes the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense; and authorizes the military training student loads. H.R. 5970—Passed House April 25, 1977; Passed Senate amended May 17, 1977; In conference. (144)

## DISTRICT OF COLUMBIA

**D.C. Armory Board.**—Amends the Home Rule Act to allow the Armory Board of the District of Columbia, which manages Robert F. Kennedy Stadium and the D.C. Armory, to operate under a fiscal year coinciding with the calendar year, rather than the October 1–September 30 fiscal year required of all city government agencies in order to accommodate the special seasonal nature of the revenues earned by the concerns, and changes the filing date for the Board's annual reports from January to July. S. 1062—Passed Senate May 26, 1977. (VV)

**D.C. Bonds.**—Adds a new subsection to that section of the Home Rule Act authorizing the issuance of revenue bonds to provide that payments made pursuant to acts authorizing such bonds may be made without further authorization or approval. S. 1063—Passed Senate May 26, 1977. (VV)

**D.C. reciprocal tax collection.**—Authorizes any State, territory or possession to bring suit in the Superior Court of the District of Columbia to recover any tax lawfully due and owing to it, if a reciprocal right is accorded to the District by the State, territory

or possession. S. 1103—Passed Senate May 26, 1977. (VV)

**George Washington University.**—Restates completely the charter of the George Washington University, substituting a more adequate, flexible and modern document for the cumbersome and antiquated original charter granted in 1821; changes the name from George Washington University to The George Washington University; cites the school's purposes and states explicitly that a policy of nondiscrimination must govern its pursuit of those objectives; enumerates the specific powers of the University to control and direct its operations; provides for the creation of a board of trustees and its executive committee; vests in the board the powers to control and direct the operation of the University, in addition to authority over school personnel and the bylaws; empowers the trustees to merge the University with other nonprofit organizations; and ensures the continuity of the school's corporate status. S. 1060—Passed Senate May 26, 1977. (VV)

## ECONOMY—FINANCE

**Export Administration—Arab boycott.**—In title I, amends and extends the Export Administration Act of 1969 to September 30, 1979; requires reviews of export control lists and rules and regulations issued under the act within 1 year of enactment; provides for a continuing analysis of national security export controls so that a country's Communist or non-Communist status is no longer the sole determinant of U.S. policy; provides for a review of national security export controls to determine whether modifications are necessary in light of evolving technology, the availability of restricted items from sources outside the United States, and other relevant matters; improves the role of industry representatives in formulating and implementing national security export controls; improves the process of export licensing review and decision; increases the penalties applicable to violations of the Export Administration Act; and otherwise improves the administration of U.S. export controls;

Exempts agricultural commodities purchased for export and stored in the United States from subsequent export restrictions; requires that when export controls are imposed on farm commodities for foreign policy reasons or domestic shortages, the President must submit a detailed report of his reasons to Congress which has 30 days to veto the action; requires a study of the national security impact of the export of technical information to restricted countries within 6 months of enactment; and adds reporting and notification requirements to the act;

In title II, seeks to prevent most forms of compliance with foreign boycotts; prohibits refusal to do business with blacklisted firms and boycotted friendly countries pursuant to foreign boycott demands; prohibits discrimination against other U.S. persons on the grounds of race, religion, sex, or national origin in order to comply with a foreign boycott; prohibits U.S. persons from furnishing information about another person's race, religion, sex or national origin for foreign boycott enforcement purposes; provides for public disclosure of requests to comply with foreign boycotts; requires domestic U.S. persons who receive such requests to disclose publicly whether they are complying with such requests; provides that these provisions apply to all domestic concerns and persons, including intermediaries in the export process;

Exempts the following from the antiboycott provisions: (1) transactions in which a unilateral and specific selection is made by a boycotting country, or national or resident thereof; (2) to allow United States persons residing in a foreign country to comply

with the laws of that country with respect to his activities exclusively therein; (3) to permit a negative certification with respect to carriers or route of shipment in order to comply with requirements protecting against war risks and confiscation; and (4) to allow compliance with immigration or visa requirements with respect to the individual and members of his family; preempts all State foreign boycott laws; provides a 2-year grace period for agreements in effect on or before March 1, 1977, with three additional 1-year extensions available in cases where good faith efforts are being made; and generally strengthens U.S. law against foreign boycotts to reduce their domestic impact. H.R. 5840—Passed House April 20, 1977; Passed Senate amended May 5, 1977; Conference report filed. (140)

Foreign corporate bribes and domestic disclosure.—Amends the Securities Exchange Act of 1934 to require companies subject to the jurisdiction of the Securities and Exchange Commission to maintain accurate records, prohibit certain bribes, and expand and improve disclosure of ownership of the securities of U.S. companies;

In title I, requires companies subject to SEC jurisdiction to maintain strict accounting standards and management control over their assets; prohibits the falsification of accounting records and the deceit of accountants auditing the books and records of such companies; makes it a crime for U.S. companies to bribe a foreign government official for the specified corrupt purposes; imposes a maximum fine \$500,000 on companies and \$10,000 and 5 years imprisonment on individuals for violation of the criminal prohibitions;

In title II, requires those persons who already file reports with the SEC when they own more than 5 percent of the shares in a U.S. company to identify their residence, citizenship, and the nature of their beneficial ownership; provides for the development of a comprehensive system in publicly held companies; requires the Commission to consolidate the various beneficial ownership reporting requirements of the Securities Exchange Act into a centralized nonduplicative system for the collection of such information, and to tabulate and make it available to regulators and the public; requires the Commission, within 30 months of enactment, to report to Congress with respect to the effectiveness of the ownership reporting requirements and the desirability and feasibility of reducing or otherwise modifying the 5-percent disclosure threshold giving appropriate consideration to specified regulatory and public policy; and provides the Commission with authority to assure that the jurisdictional effectiveness of section 15(d) of the Securities Exchange Act is not inappropriately limited because of the use of nominee and street name registration of securities. S. 305—Passed Senate May 5, 1977. (VV)

Interest rates (Regulation Q)—Federal Credit Unions.—Extends from March 1, 1977, until December 15, 1977, existing authority (commonly known as Regulation Q) under the Interest Rate Control Act by which Federal financial regulatory agencies set interest rate ceilings on deposits in financial institutions under their respective jurisdictions; extends until August 31, 1977, the Treasury Department's authority to borrow funds from the Federal Reserve System;

Modernizes the powers of Federal credit unions under the Federal Credit Union Act in order that they may provide more contemporary financial services to their members; considers demand deposit accounts of state chartered credit unions as member accounts, if they qualify pursuant to state law, thus making them eligible for Federal

share insurance; establishes varying self-replenishing lines of credit to member borrowers; removes the distinction between secured and unsecured loans and raises the maximum loan to 12 years (currently 5 years on unsecured loans and 10 years on secured loans); empowers the board of directors to establish their own loan maturity and collateral requirements; removes the \$2,500 maximum amount for unsecured loans; provides the necessary flexibility to meet members' needs in accordance with the applicant's creditworthiness and the credit union's soundness rather than arbitrary loan ceilings; permits real estate loans with maturities up to 30 years; and includes the following restrictions on such lending authority: (1) loans must be secured by a first lien, (2) loans must be for a one-to-four family dwelling, (3) the dwelling must be the principal residence of the borrower, and (4) the sales price must not exceed 150 percent of the median sales price of residential real property to be determined on a market area basis; allows loans with maturities of up to 15 years for the purchase of mobile homes used as the member's residence or for the repair, alteration or improvement of a member's residence; permits Federally guaranteed or insured loans, such as the VA guaranteed mobile home loans, with maturities as specified in those statutes; increases the officials' borrowing limits on unsecured loans from \$2,500 plus pledged shares to \$5,000 plus pledged shares and permits them to guarantee or endorse up to the same amounts without board approval; clarifies the existing provisions regarding the penalty for excess interest and the provision regarding loan amortization; ensures that a member may repay his or her loan prior to maturity with no penalty; authorizes loans to other credit unions and credit union organizations; and contains other provisions. H.R. 3365—Public Law 95—, approved , 1977. (VV)

Securities and Exchange Commission Authorizations.—Amends the Securities Exchange Act of 1934 to increase the authorization for fiscal year 1977 from \$55 million to \$56.5 million. S. 1025—Public Law 95—, approved , 1977. (VV)

Authorizes \$58,290,000 for fiscal year 1978 for the operation of Securities and Exchange Commission. H.R. 3722—Passed House May 17, 1977; Passed amended Senate May 25, 1977. (VV)

Small business amendments.—Disaster relief loans.—Amends the Small Business Act to authorize \$954.7 million for the Small Business Administration for fiscal year 1978 of which \$47.1 million is for the surety bond guarantee program, \$4 million for the lease guarantee program, and \$171 million for salaries and expenses; places ceilings for the first time on SBA lending programs except for the physical and economic injury disaster loans which are open ended authorizations; places greater emphasis on the non-lending programs by (1) directing SBA to develop a small business procurement source data bank, (2) authorizing additional procurement officers to increase the total value of small business set asides awarded by the Federal Government, and (3) increasing the authorization for development of various business management training program; gives SBA the discretionary authority to suspend interest and principal payments on both direct and guaranteed loans made by private lenders, authorize SBA to certify a small business company's ability to perform a specific Government contract; makes handicapped sheltered workshops eligible for small business set-aside procurement contracts; directs that priority be given to labor surplus areas when awarding small business

set-aside contracts; enables homebuilders to obtain SBA financial assistance by permitting financial for residential or commercial construction or rehabilitation for sale or rental; provides that nonprofit groups of 75 members or less who have organized for purposes of rehabilitating blighted urban or rural areas may also obtain loans; allows SBA to make compliance loans to small firms who must meet Federal regulatory standards adopted prior to 1974;

Authorizes the Administrator, upon certification by a State Governor, to make loans to small business concerns that have suffered economic injuries as a result of a disaster occurring after July 1, 1975, and are in need of financial assistance not available on reasonable terms in the disaster area; places a \$100,000 limitation on the amount of a loan and permits the Administrator to defer payment of principal and interest for 1 year; lowers the interest rate on physical disaster loans for the uninsured damaged portion of a principal residence and property from the present rate of 6% percent to the following: 1 percent on the first \$5,000 worth of damage, 2 percent on the second \$5,000, and 3 percent on all damage above \$10,000; limits to 3 percent the interest rate on all other loans and permits the forgiveness of principal amounts over \$500 as follows: up to \$1,000 when the uninsured damage is equal to between 10 and 20 percent of the market value, up to \$2,000 when the uninsured damage is equal to between 20 and 30 percent of the market value, and up to \$3,000 when the uninsured damage is equal to 30 percent or more of the market value; gives qualifying applicants the option of receiving a one-third payment equal to the amount that would be forgiven in place of a loan; makes the loan rate of the Farmers Home Administration compatible with that of SBA by reducing from 5 to 3 percent the interest rate on loans to finance the repair or replacement of property, including crops and livestock, which was lost, damaged or injured because of a disaster occurring on or after July 1, 1976; authorizes SBA to increase the principal of a loan by not to exceed \$2,000 in order to insulate property which was damaged or destroyed during the period April 1, 1977, to October 1, 1977, whether or not the property was insulated at the time of the damage; and requires the Administrator to submit a report to Congress evaluating the program and making recommendations as to its continuation, modification or termination. H.R. 692—Passed House February 9, 1977; Passed Senate amended May 19, 1977; Senate requested conference May 19, 1977. (VV)

Small business loan ceilings.—Amends the Small Business Act to increase the fiscal year 1977 authorization ceilings for the following SBA financial assistance programs: Business Loan and Investment Fund from \$6 billion to \$7.4 billion, Economic Opportunity Loans from \$450 million to \$525 million, and Small Business Investment Company Program from \$725 million to \$887.5 million; and amends the Small Business Investment Act of 1958 to increase the fiscal year 1977 ceiling on the Surety Bond Guarantee Program from \$56.5 million to \$110 million. H.R. 2647—Public Law 95-14, approved March 24, 1977. (VV)

U.S. International Trade Commission.—Authorizes \$12,187,000 to the U.S. International Trade Commission for fiscal year 1978; makes the Chairman, rather than the full Commission, responsible for administrative matters; and authorizes the Commission to continue publication of its reports on synthetic organic chemicals until 1981. H.R. 6370—Passed House April 25, 1977; Passed Senate amended May 17, 1977. (VV)

White House Conference on Small Business.—States as the sense of the Senate that

the President should convene a White House Conference on Small Business to develop recommendations that will increase public awareness of the importance of small business; identify the problems of new, small, and independent business enterprise; and suggest appropriate governmental actions to encourage and maintain the economic interests and potentials of the small business community in order to strengthen the overall economy of the Nation. S. Res. 105—Senate agreed to March 28, 1977. (VV)

#### EDUCATION

**Education of the Handicapped.**—Extends certain programs under the Education of the Handicapped Act for 5 years, through fiscal year 1982, with authorizations for each of fiscal years 1976 through 1982, respectively, as follows: (1) Part C, Centers and Services to Meet Special Needs of the Handicapped—\$76 million, \$80 million, \$86 million, \$89 million, and \$93 million; Part D, Training Personnel for the Education of the Handicapped—\$77 million, \$82 million, \$87.5 million, \$92.5 million, and \$97.5 million; Part E, Research in the Education of the Handicapped—\$20 million, \$22 million, \$24 million, \$26 million, and \$28 million; Part F, Instructional Media for the Handicapped—\$24 million, \$25 million, \$27 million, \$29 million, and \$29 million; and provides the authority for the Bureau of Education to support model education projects for all handicapped children under section 641 of the act. H.R. 6692—Passed House May 9, 1977; Passed Senate May 23, 1977. (VV)

**Higher education technical amendments.**—Makes technical and miscellaneous changes to higher education provisions contained in the Education Amendments of 1976 (Public Law 94-482). H.R. 6774, Public Law 95—, approved—1977. (VV)

**Vocational education amendments.**—Makes a number of technical amendments to title II of the Education Amendments of 1976, Public Law 94-482, dealing with printing and clerical errors and changing certain reporting dates; removes the \$25 million a year limit for State administrative expenses and authorizes funds under the basic State grant for this purpose with the requirement that States match Federal funds used; requires States to set forth in their State plan the amount of Federal funds it plans to retain at the State level for administration; and gives each local recipient the option of using a percentage of Federal funds which is equal to the percentage of Federal funds in their vocational education program or to use any amount of Federal funds as long as they are matched by State appropriated funds for administrative expenses. H.R. 3437—Public Law 95—, approved—1977. (VV)

#### ELECTIONS

**Federal Election Commission Authorization.**—Authorizes \$7.5 million for activities of the Federal Election Commission for fiscal year 1978. S. 1435—Passed Senate May 5, 1977. (VV)

**Overseas citizens voting rights.**—Amends the Overseas Citizens Voting Rights Act of 1975 and the Federal Voting Assistance Act of 1955 to improve the administration and operation of these laws; vests the authority and responsibility for collecting and disseminating absentee voting information to citizens overseas in the President's designee (currently the Secretary of Defense) under the Federal Voting Rights Assistance Act; authorizes utilization of the same ballot application and free airmail postage provisions presently contained in the Federal Voting Assistance Act for all citizens residing overseas; provides the designee with the authority to revise the absentee registration and ballot application forms currently recom-

mended for use by military personnel and civilians temporarily residing abroad and to develop a single form which could also be used by citizens covered by the Overseas Voting Act; provides that any balloting material sent from the United States to persons covered by either act or returned by them to this country shall be sent by priority airmail or by the most expeditious postal service available; directs the designee to publicize and notify appropriate citizens and State election officials of the availability of free postage and the expedited mail delivery of balloting material; and provides that the exercise of the right to register or vote in Federal elections by citizens residing overseas shall not affect the determination of his place of residence or domicile for the purpose of any tax imposed under Federal, State, or local law. S. 703—Passed Senate May 9, 1977. (VV)

#### EMPLOYMENT

**CETA.**—Extends the authorization of sums as may be necessary for all titles of the Comprehensive Employment and Training Act (CETA) through fiscal year 1978; extends the amendments to title VI made by the Emergency Jobs Programs Extension Act of 1976 which provides that each prime sponsor of a public service employment program may use its allocation, first, to sustain its existing number of public service job holders under the Act, and shall thereafter fill any additional public service jobs with low-income persons unemployed for at least 15 weeks who have been receiving or are eligible for unemployment compensation, and also provide that 50 percent of title VI job vacancies due to attrition must meet those eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements (15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas). H.R. 2992—Passed House March 29, 1977; Passed Senate amended May 25, 1977. (VV)

**Emergency unemployment compensation.**—Extends the Emergency Unemployment Compensation Act to October 31, 1977, to provide a maximum of 13 weeks of emergency benefits (which combine with the 26 weeks of regular and 13 weeks of extended benefits for a total of 52 weeks of unemployment benefits) in States where the insured unemployment rate is 5 percent or more, with a phase-out under which individuals eligible before October 31, 1977, may continue to receive benefits until January 31, 1978; extends until April 30, 1977, the maximum 26 week program now in effect (which combine with 26 weeks of regular and 13 weeks of extended benefits for a total of 65 weeks of unemployment benefits) in order to avoid terminating benefits for certain participants in that program; provides that the cost of emergency unemployment compensation paid after March 31, 1977, be met from nonrepayable general revenues without the present law requirements that the costs ultimately be met from Federal Unemployment Tax.

Provides that, in addition to any eligibility requirements of State law, an individual would be disqualified from receiving emergency benefits for failing to (1) actively seek work, (2) apply for any suitable work which was referred by the State agency, or (3) accept any offer of suitable work; defines suitable work as that which (1) is within the capabilities of the claimant, (2) meets conditions of present Federal law, (3) meets the conditions of State law and practices pertaining to suitable or specific disqualifying work such as unreasonable travel distance or threat to morals, health, or safety, (4) pays wages equal to Federal or State minimum wages, (5) pays gross average weekly remuneration equal to the individual's weekly un-

employment benefits plus any Supplemental Unemployment benefits he might be entitled to and (6) was listed with the State employment service or offered in writing; allows a State to waive these requirements if an individual furnishes satisfactory evidence that prospects for obtaining work within a reasonable period of time in his or her occupation are good;

Establishes new statutory authority and procedures for the treatment of fraud and erroneous payments; disqualifies applicants submitting false or erroneous information; requires States with certain exceptions, to recover any overpayments made to individuals; makes fraud in connection with the program a Federal crime and imposes a fine of up to \$10,000 and imprisonment for up to 5 years;

Provides for State implementation of changes made by this act; requires each State to enter into a modification if its present agreement within 3 weeks after the Secretary of Labor proposes the modification to the State; provides that if modification is not entered into, the Unemployment Compensation Program in that State would expire within the last week which ends on or before March 31, 1977; permits Kentucky, which does not have a scheduled meeting of its legislature during 1977, to defer until 1979 compliance with certain requirements of the act;

Simplifies administration by terminating an individual's entitlement to emergency benefits two years after the end of the benefit year for which regular benefits were payable; extends for two years, through 1979, the moratorium under which the Federal unemployment tax is automatically increased to recapture any loan to a State which is unpaid after 2 years; prohibits benefits to an individual who was illegally working at the time he earned his eligibility; allows States to deny unemployment compensation to teachers during brief mid-year vacation periods if the teacher was employed by the school system immediately before the start of the vacation and has reasonable assurance of the employment continuing at the conclusion of the vacation; makes clear that groups of local governments are to be provided the same options for financing unemployment compensation as those provided to single government units; extends from September 30, 1979, to March 31, 1980, the provision contained in Public Law 94-566 which requires States to reduce the unemployment benefits of an individual by the amount of any public or private pension including social security and railroad retirement annuities in order to conform this enactment date with the final reporting extension granted the National Commission of Unemployment Compensation; extends the time by which the National Commission on Unemployment Compensation must submit its interim report from March 31, 1978, to September 30, 1978, and the time by which it must submit its final report from January 1, 1979, to July 1, 1979; and amends present law to require an affirmative vote of the Senate and the House to make effective the President's quadrennial recommendations regarding the salary increases of Members of Congress, the Federal judiciary Cabinet officials and other top Federal personnel. H.R. 4800—Public Law 95-19, approved April 12, 1977. (82)

**Public works employment.**—Authorizes an additional \$4 billion to extend the program of grants to State and local governments to provide jobs through construction in places with the most distressing levels of unemployment as originally authorized under Title I of the Public Works Employment Act of 1976; provides that 65 percent of the funds be allotted on total numbers of unemployed and 35 percent on the basis of the relative severity of unemployment, with States participation in the 35 percent allocation only if their

unemployment rates exceed 6.5 percent for the most recent 12-month period; provides that no State shall receive less than three-fourths of 1 percent nor more than 12.5 percent, requires that with a State 70 percent or more of the funds be spent in areas with rates of unemployment above the national average and 30 percent for areas with rates below the national average but above 6.5 percent, provides a \$70 million set aside for grants that were not received, considered or rejected solely because of an error by a U.S. employee or officer; contains a 2½ percent set-aside for Indian and Alaskan Natives projects to insure a substantial fund for such projects while permitting high-unemployment non-Indian communities a competitive chance to be awarded projects in States with Indian communities; includes the transportation of water to drought-stricken areas within the term "public works project" and permits an applicant who received a grant to substitute one or more projects for the project for which the grant was made under certain conditions approved by the Administrator; requires that all articles, materials and supplies used in a project be produced and made from substances mined or produced in the U.S. except in certain cases; requires a grant applicant to expand 10 percent of the funds for minority business enterprises if available within project areas; requires that priority and preference be given to pending applications resulting in energy conservation; repeals the provision permitting the Secretary to consider the unemployment rate in adjoining areas from which the labor force for a project may be drawn; ensures that all laborers and mechanics employed on projects are paid the prevailing wage rate under the Davis-Bacon Act; requires the Secretary to consider only those applications for grants submitted on or after December 23, 1976, and before the date of enactment except for applications from the Trust Territory of the Pacific, Indian tribes and Alaska Native Villages or any applicant if a sufficient number of applications were not received; requires the Secretary of Commerce to study public works investment in the U.S. and report his findings to Congress within 18 months of enactment; requires the promulgation of regulations assuring special consideration to the employment of qualified disabled and Vietnam-era veterans;

Mandates, in Title II, the obligation of funds for water resource projects for fiscal 1977 (with the exception of the Meramec Dam in Missouri) and states congressional intent not to uphold any prospective budget rescissions or deferrals regarding these projects; provides that the rates of interest or discount used to access the return on Federal investment in projects carried out by the U.S. Army Corps of Engineers or the Department of Interior Bureau of Reclamation be those established by the Water Resources Development Act of 1974 or by prior law authorizing such projects. H.R. 11—Public Law 95-28, approved May 13, 1977. (48,126)

Youth employment and training.—Adds a new title VIII to the Comprehensive Employment and Training Act of 1973 (CETA) and authorizes such sums as may be necessary to carry out the new title; creates, in part A, a National Young Adult Conservation Corps to provide work for unemployed youths in the Nation's parks and forests; authorizes, in part B, youth community conservation and improvement projects to put unemployed youths to work on the rehabilitation or improvement of public facilities, neighborhood improvements, weatherization and basic repairs to low-income housing, and conservation, maintenance, or restoration of natural resources on non-Federal public lands; authorizes, in part C, support for a

broad variety of employment and training programs designed to enhance job prospects and career opportunities for young persons, including activities involving useful work experience opportunities in community betterment and appropriate training and services such as outreach, counseling, occupational information, institutional and on-the-job training, and transportation assistance;

Requires the Secretary of Labor to take steps to increase CETA participation by disabled veterans and Vietnam-era veterans under 27 years of age; provides that, in filling teaching positions in public schools with financial assistance under CETA title II (public service employment in high unemployment areas) or title VI (Jobs Corps), each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA; and adds the Soil Conservation Service to government agencies where youth employment may be used.

H.R. 6138—Passed Senate amended May 26, 1977; Senate requested conference May 26, 1977. (170)

#### ENERGY

Coal Conversion Authority.—Extends for 6 months, from June 30, 1977, until December 31, 1977, the authority for the Federal Energy Administration to issue coal conversion orders pursuant to section 2 of the Energy Supply and Environmental Coordination Act of 1974 in order that Congress has sufficient time to study pending coal legislation without disrupting the present conversion program. S. 1468—Passed Senate May 11, 1977. (VV)

Deepwater ports.—Extends through fiscal year 1980 the annual \$2.5 million authorization under the Deepwater Port Act of 1974 which established a licensing and regulatory program governing offshore deepwater port development beyond the territorial limits of the United States. S. 891 (Identical to H.R. 6401)—Passed Senate May 17, 1977. H.R. 6401—Public Law 95—, approved 1977. (VV)

Department of Energy.—Creates a cabinet-level Department of Energy (DOE) to permit coherent administration of the national energy policy by merging the following components: all functions of the Federal Energy Administration, the Energy Research and Development Administration, and the Federal Power Commission; four Regional Power Marketing Administrations and the power-marketing functions of the Bureau of Reclamation currently under the Department of Interior; functions relating to fuel supply and demand analysis currently under the Bureau of Mines; authority for development and promulgation of new building conservation standards now vested in the Secretary of HUD; Commerce Department programs to promote voluntary industrial energy conservation; jurisdiction over three naval oil reserves and three naval oil shale reserves currently administered by the Department of Defense; authority currently vested in the Interstate Commerce Commission to regulate oil pipelines; and authority to publish guidelines for the Rural Electrification Administration on the issuance of loans or loan guarantees for generation and transmission facilities;

Provides that responsibility for promulgation of automobile efficiency standards will remain with the Department of Transportation but gives the Energy Secretary the right to appeal to the President if he is dissatisfied with the DOT's regulations; leaves responsibility for policing clean air standards with the Environmental Protection Agency; continues responsibility for actual leasing of resources for the extraction of energy sources

from public land in Interior, but places control over economic terms and conditions of such leases in DOE; requires cabinet-level departments and agencies with conservation responsibilities to designate a principal conservation officer within their Department;

Creates a three-member Energy Regulatory Board, whose members shall be appointed by the President, subject to Senate confirmation, with responsibility for all major direct pricing actions and certification of pipeline routes; gives the Board primary responsibility for actions which directly establish rate and charges under the Natural Gas Act and the Federal Power Act, including the wellhead pricing for natural gas, wholesale electric rates, pipeline transmission charges; gives the board primary responsibility for actions under the Emergency Petroleum Allocation Act which affect the price and allocation of crude oil or oil products; creates an Energy Information Administration and an Economic Regulatory Administration; strengthens energy-related data-gathering authority; provides for Congressional review of transfer authority relating to oil transportation and remedial orders by the Energy Regulatory Board; requires an annual financial profile of the energy industry which includes an accounting of foreign ownership of domestic energy sources; contains measures to ensure public accountability; requires the preparation and submission of a national energy policy plan. S. 826—Passed Senate May 16, 1977. (148)

ERDA authorization.—Authorizes a total of \$4,946,261,000 for the Energy Research and Development Administration for fiscal year 1977, of which \$1,175,671,000 is designated for non-nuclear scientific research and programs, and \$3,770,590,000 is designated for non-weapon nuclear scientific research programs; includes: \$461,801,000 for fossil energy; \$286.2 million for solar energy; \$65.7 million for geothermal energy; \$221 million for conservation research and development; \$10 million for a high Btu pipeline gas demonstration plant; \$5 million for a fuel gas low Btu demonstration plant; and \$10 million for solar energy projects; authorizes funds for numerous plans to make improvements to comply with safety regulations; contains authorizations for capital equipment not related to construction to replace obsolete or worn-out equipment and to purchase certain new equipment to meet the needs of expanding progress and new technology at ERDA installations; provides an additional \$50 million for the clean boiler fuel demonstration plant authorized by Public Law 94-187 and \$15 million for the 5 megawatt solar thermal test facility authorized by Public Law 94-187; provides guidelines under which funds for fossil energy programs may be utilized; deauthorizes authorized fossil energy projects which were not appropriated within 3 full fiscal years; allows the Administrator to assist in the demonstration of the production of synthesis gas, methane, methanol, anhydrous ammonia, and similar energy intensive products from municipal waste by entering into agreements with units of local government or persons proposing to construct facilities for the manufacture of such products; provides authority by which ERDA may reprogram funds between major program areas; directs ERDA to relate the funds authorized and appropriated in annual authorization and appropriation measures to the objectives and goals of the various enabling legislation under which the Agency operates; amends the Federal Nonnuclear Energy Research and Development Act of 1974 to transfer responsibility for preparation of demonstration project water assessments from ERDA to the Water Resources Council; requires the Administration to classify the recipients of ERDA contracts into

various categories including: Federal agency, non-Federal governmental entity, profitmaking enterprise, non-profit enterprise, and nonprofit education institution; authorizes the establishment of a small grants program to promote the research, development, and demonstration of energy related systems and technologies appropriate to the needs of local communities; requires the Administrator, in consultation with ERDA, to report to the Congress on the environmental monitoring, assessment and control efforts related to its various energy demonstration projects;

Authorizes \$464,302,000 for work in biomedical and environmental research, operational safety, environmental control technology, the materials sciences, and molecular and geosciences portion of the basic energy sciences program and program supports; provides \$26.7 million for plant and capital equipment obligations including construction, acquisition, or modification of facilities, land acquisition, and acquisition and fabrication of capital equipment not related to construction; prohibits ERDA from starting projects if the current estimated cost exceeds the original estimated cost by more than 25 percent;

Authorizes ERDA to transfer sums from its "Operating Expenses" to other agencies for work which the moneys were appropriated; authorizes "Operating Expenses" and "Plant and Capital Equipment" as no year funds; authorizes any Government-owned contractor operated laboratory, energy research center or other laboratory performing functions under contract to ERDA to use a reasonable portion of its operating budget for funding employee suggested research projects up to the pilot plant state of development; permits ERDA to contract for advanced architect/Administrator services for construction projects essential to meet the needs of national defense or the protection of life, property, health or safety prior to congressional authorization; requires any officer or employee of ERDA in a policy making position to report certain known financial interests in various energy technologies and related resources; directs the Administration to develop regulations that would avoid conflicts of interest in ERDA contracts with private persons or organizations involved in energy research and development; and authorizes the establishment of a National Energy Extension Service. S. 36—Public Law 95—, approved 1977. (VV)

ERDA defense program.—Authorizes a total of \$1,780,436,000 for fiscal year 1977 and \$2,030,144,000 for fiscal year 1978 for certain Energy Research and Development Administration (ERDA) programs which have military applications; includes funding of the three national defense programs; (1) weapons activities—supporting the operation of the three weapons laboratories; research on advanced weapons and the full scale development of the following 7 weapons—B-61 and B-61-4 tactical bombs, Trident I missile warhead, full fuzing option strategic bomb, Mark 12-A warhead, 8-inch artillery projectile, and common warhead for land attack cruise missiles and short range attack missile; continued development of improved nuclear test detection methods necessary to monitor compliance with the limited Test Ban Treaty, Threshold Test Ban Treaty and Peaceful Nuclear Explosives Treaty; operation of the Nevada Test Site and the related costs of tests of advanced weapons concepts; maintenance and reliability assessment of the current weapons stockpile, production engineering for new weapons, nuclear materials recycle and recovery and security measures to protect nuclear shipments; and production of the following 9 new weapons for the war reserve: B-61-3, B-61-4, and B-61-5 tactical bombs,

Lance enhanced radiation warhead, Trident I missile warhead, full fuzing option strategic bomb, Mark 12-A warhead, 8-inch artillery projectile, and common warhead for the land attack cruise missiles and the short range attack missile; (2) special materials production—supporting 3 reactors which produce enriched weapons grade uranium, plutonium and tritium; R & D associated with special materials production and management of radioactive wastes; and surveillance, maintenance and management of production reactor waste; and (3) nuclear explosives applications—supporting development of understanding of applications of nuclear explosives for peaceful purposes; includes \$411,344,000 for plant and capital equipment; provides for cost variations in the authorized amounts for projects; provides authority to merge funds appropriated in different years for the same requirement category; directs that funds appropriated pursuant to this act remain available until expended; authorizes ERDA to proceed to design any project subject to the total amount authorized for the activity; authorizes ERDA to retain monies received from outside sources and use them for operating funds; and authorizes ERA to transfer funds to other agencies supporting its programs. S. 1339—Passed Senate May 22, 1977. (VV)

ERDA synthetic fuel loan guarantee program.—Amends the Federal Nonnuclear Energy Research and Development Act of 1974 to establish a loan guarantee program to be administered by the Energy Research and Development Administration (ERDA) whereby the Administrator may guarantee the payment of interest and principal of bonds, debentures, notes, and other obligations issued for the purpose of financing the construction and initial operation of commercial-sized demonstration facilities for the conversion of biomass into synthetic fuel or other useable forms of energy; authorizes guarantees of up to 75 percent of the total project cost and, during the construction and start up period, up to 90 percent; limits the total outstanding indebtedness that may be guaranteed at any one time to \$300 million; requires ERDA, before approving an application, to notify the appropriate State and local government officials and to give the Governor of the State an opportunity to make his recommendation respecting the facility; prohibits ERDA from guaranteeing a project if the Governor recommends against it; authorizes the Administrator, in the event of default, to complete the project and assure management of the facility including the authority to sell the products or energy produced; provides that any patents and technology resulting from the facility will be treated as assets in cases of default and requires that the guarantee agreement contain a provision assuring their availability to the Government if needed to complete the facility; and requires ERDA to submit a report of the proposed guarantee and facility to the appropriate committees of Congress which shall have 90 days to disapprove by passage of a disapproval resolution. S. 37—Passed Senate March 31, 1977. (VV)

Natural gas emergency.—Authorizes the President to declare a natural gas emergency if he finds that a severe shortage exists or is imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses; provides that these authorities shall terminate when the President finds that shortages no longer exist and are no longer imminent.

Emergency allocation.—Authorizes the President, during a declared natural gas emergency, to require (1) any interstate pipeline to make emergency deliveries or trans-

port interstate natural gas to any other interstate pipeline or a local distribution company served by an interstate pipeline; (2) any intrastate pipeline to transport interstate natural gas from one interstate pipeline to another or to any local distribution company served by an interstate pipeline; or (3) the construction and operation by any pipeline of necessary facilities to effect deliveries or transportation; directs the President, in issuing such orders, to consider the availability of alternative fuel to users of the interstate pipeline ordered to make deliveries and to determine that they would not have an adverse effect on the natural gas supply or exceed the transportation capacity of the pipeline; provides that these authorities shall terminate by April 30, 1977, or after the President terminates the emergency, whichever is earlier.

Emergency Sales at Deregulated Prices.—Authorizes interstate pipelines or local distribution companies to purchase supplies of natural gas for delivery before August 1, 1977, from intrastate pipelines at unregulated prices as reviewed by the President for fairness and equity; provides that these purchases could be delivered from intrastate pipelines and any producer of natural gas not affiliated with an interstate pipeline unless such natural gas was produced from the Outer Continental Shelf, and the sale or transportation of the gas was not, immediately prior to the date of the contract for purchase of the gas, certificated under the Natural Gas Act; authorizes the President to require, by order, any interstate or intrastate pipeline to transport gas and operate facilities necessary to carry out emergency purchase contracts;

Miscellaneous.—Authorizes the President to subpoena information to carry out his authority under the Act; contains antitrust protection provisions available as a defense against civil or criminal action brought against any person for violation of the antitrust laws with respect to actions taken pursuant to a Presidential order; gives the Temporary Emergency Court of Appeals exclusive jurisdiction to review all cases including any order issued or other action taken under this act; imposes civil penalties of up to \$25,000 a day for violations of orders and \$50,000 a day for willful violations; directs the President to require weekly reports which shall be made available to the Congress on prices and volume of natural gas delivered, transported or contracted for, and to report to Congress by October 1, 1977, on all actions taken under this act; and authorizes the President to delegate all or any portion of the authority granted to him to such executive agencies or officers he deems appropriate. S. 474—Public Law 95-2, approved February 2, 1977. (21)

Radiation exposure.—Extends the program of the Energy Research and Development Administration (ERDA) to provide financial assistance to limit radiation exposure resulting from the widespread use of sand containing mill tailings in the construction of approximately 500 public and private buildings in the Grand Junction, Colorado area; calls for a cooperative arrangement with the State of Colorado whereby ERDA is authorized to provide 75 percent of the costs to the program; extends the deadline for applying for remedial work under the program from 4 to 7 years; provides that property owners who removed mill tailings at their own expense prior to the date of enactment and without the administrative determination required may apply for such reimbursement within the first year of enactment; permits the State of Colorado to waive the requirement that it perform the remedial work; and increases the authorization therefor from \$5 million to \$8 million. S. 266—Passed Senate April 4, 1977. (VV)

Stripmining control and reclamation.—Establishes a program for the regulation of coal surface mining activities and the reclamation of coal mined lands to assure that surface coal mining operations—including exploration activities and the surface effects of underground mining—are conducted so as to prevent or minimize degradation to the environment and that such surface coal mining is not conducted where reclamation is not feasible; sets forth a series of minimum uniform requirements for all coal surface mining on both Federal and State lands which deal with (1) preplanning (requires that an operator applying for a permit do certain research regarding adjacent land uses, the characteristics of the coal and the overburden, and hydrologic conditions and requiring inclusion in his application of the planned methodology and timetable for the operation in a reclamation plan); (2) mining practices (requires that mining methods be used which will minimize or obviate environmental damage or injuries to public health and safety including restrictions on the placement of overburden, blasting regulations, water pollution control requirements, and waste disposal standards); and (3) post-mining reclamation (requires reclamation and restoration of the mined land to its pre-mined condition including backfilling and regarding to approximate original contour, restoration of water quality and quantity, revegetation to pre-mining conditions and elimination of erosion and sedimentation); provides that these minimum Federal standards be administered and enforced by the States and by the Secretary of the Interior on Public lands; authorizes funds to assist States in improving their regulatory and enforcement programs; provides for Federal enforcement of a State program if a State fails to comply with the Act; Provides for the protection of scarce and vital water resources in the permit application requirements, reclamation standards and provisions for designation of areas unsuitable for mining; provides for a mechanism on both State and Federal lands for citizens to petition that certain areas be designated as unsuitable for surface coal mining; prohibits stripmining of lands which cannot be reclaimed under the standards of the Act, national park areas (except for such lands which do not have significant forest cover within those national forests west of the 100th meridian); and areas which would adversely affect such parks; prohibits stripmining 300 feet from an occupied building, 100 feet from a public road or 500 feet from an underground mine;

Permits certain variances to the mining-reclamation standards of the bill by allowing (1) a surface mine operator to postpone reclamation of limited segments of his mined area where he can prove to the regulatory authority that such segments are necessary to the operation of a planned underground coal mine; and (2) the Secretary of the Interior at his discretion to permit variances for experimental practices that show potential for improved environmental protection over prescribed or currently accepted practices; requires with regard to lands where the Federal government owns the coal but not the surface estate that if the surface owner does not consent, he shall be compensated at twice the difference between the fair market value, without reference to the coal, before and after mining plus relocation costs, 2 years loss of income, and other damages; exempts mining operators with under 100,000 tons annual production from compliance with provisions of the Act for 24 months;

Bans strip mining in alluvial valleys only if it interrupts or prevents farming but exempts strippers who were already mining in 1976 or had received a State permit to do so by January 4, 1977;

Requires that applicants seeking to stripmine on prime farmland demonstrate to the State regulatory authority that they can restore the land to its full premining agricultural potential;

Establishes a fund to be used to reclaim abandoned mined lands to be derived from a reclamation fee to be levied on every ton of coal mined at 35 cents per ton for surface mined coal and 15 cents per ton for all coal mined by underground methods or 10 percent of the value of the coal at the mine, whichever is less; requires that 50 percent of all fees collected in any one State be returned to that State; provides that the fee does not apply to lignite coal;

Provides that, beginning no later than 6 months from the date of enactment continuing until a State program has been approved or a Federal program has been implemented, the Secretary is required to carry out a Federal enforcement program which includes inspection and enforcement actions in accordance with the act; and contains comprehensive provisions for inspections, enforcement notices and orders, administrative and judicial review, penalties, and citizen participation. H.R. 2—Passed House April 29, 1977; Passed Senate amended May 20, 1977. Senate requested conference May 25, 1977. (159)

#### ENVIRONMENT

Disaster relief programs.—Amends the Disaster Relief Act Amendments of 1974 to extend the authorizations for the Federal disaster assistance programs of the Federal Disaster Assistance Administration, which expire on June 30, 1977, through fiscal year 1980. H.R. 6197—Passed House May 17, 1977; Passed Senate amended May 24, 1977. (VV)

Drought Emergency Authority.—Provides temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought conditions affecting irrigated lands in the western States; authorizes the Secretary, acting through the Bureau of Reclamation and the Bureau of Indian Affairs, to: (1) study available means to augment, utilize, or conserve Federal reclamation and Indian irrigation projects water supplies and to undertake construction (which must be completed by November 30, 1977), management, and conservation activities to mitigate drought damage, (2) acquire water supplies by purchase from willing sellers and redistribute the water to users based upon priorities he determines, and (3) undertake evaluations and reconnaissance studies of potential facilities to mitigate the effects of a recurrence of a drought emergency and make recommendations to the President and Congress; provides that payment for water acquired from willing sellers be at negotiated prices; directs the Secretary to determine the priority of need in allocating the acquired or developed water; authorizes the Secretary to defer without penalty, the 1977 installment charge payments, including operation and maintenance costs, owed to the U.S. on Federal reclamation projects, with the costs to be added to the end of the repayment period which may be extended if necessary; requires that this program be coordinated, to the extent practicable, with emergency and disaster relief operations conducted by other Federal agencies under existing provisions of law; requires the Secretary to report to Congress by March 1, 1978, on all expenditures made under this act; authorizes the Secretary to make interest-free five year loans to individual irrigators for construction, management and conservation activities or acquisition of water; authorizes \$100 million to carry out the water purchase and reallocation (water bank) program of which 15 percent shall be available to carry out other programs authorized by this act; and pro-

vides that up to 15 percent of fiscal 1977 funds available to the Secretary for the Emergency Fund Act may be used for non-Federally financed irrigation projects, 5 percent for State Government drought emergency programs, and \$10 million for the purchase of water. S. 925—Public Law 95-18, approved April 7, 1977. (54)

Drought emergency relief.—Authorizes \$225 million in grant and loan authority to the Economic Development Administration for assistance to States, Indian tribes or units of local government with a population of 10,000 or more for drought-related projects; includes among the permissible activities for which grants may be made the improvement or expansion of existing water supply facilities, construction of new facilities, well drilling or impoundment where appropriate, transportation of water by pipeline, and purchase of water if it is the most economic method of providing the needed supply; gives the Secretary of Commerce authority to designate areas eligible for assistance; limits grants to 50 percent of the cost of any project and provides that loans shall be at 5 percent interest for not to exceed 40 years and at terms determined by the Secretary; directs the Secretary to consider the relative needs of the applicants giving priority to communities facing the most severe problems; permits obligation of funds for drought impacted projects conducted by eligible applicants during fiscal year 1977 if they are compatible with the purposes of the act; permits funds to be obligated to December 31, 1977, and requires that projects be completed by April 30, 1978; and extends the time allowed for convening the White House Conference on Balanced Growth and Economic Development from 12 to 18 months after the date of enactment of Public Law 94-487. S. 1279—Public Law 95-31, approved May 23, 1977. (VV)

Earthquake hazards reduction.—Establishes a national earthquake hazards reduction program under the direction of the President to minimize the loss and disruption resulting from future earthquakes; specifies the objectives of the program which includes the following four elements: (1) a research element dealing with fundamental earthquake risk analysis for land-use consideration, hazards assessment, and engineering and research to reduce earthquake vulnerability; (2) an implementation plan to be prepared within 6 months setting year-by-year targets through at least 1985, specifying roles for Federal agencies, and recommending appropriate roles for State and local units of government, individuals, and private organizations; (3) a State assistance program allowing assistance to the States under the Disaster Relief Act of 1974; and (4) the opportunity for wide sectors of the population to participate in the formulation and implementation of the program; calls for cooperation among a number of Federal agencies including the U.S. Geological Survey and the National Science Foundation; requires the President to report annually to the Congress on progress achieved in the program; and authorized therefor \$55 million, \$70 million and \$80 million over a 3-year period for the U.S. Geological Survey and National Science Foundation to undertake specific activities and such sums as necessary for other agencies involved in the program. S. 126—Passed Senate May 13, 1977. (VV)

Endangered species.—Extends through fiscal year 1980 the authorization for section 6(1) programs under the Endangered Species Act of 1973 at a rate of \$9 million for the Department of the Interior and \$3 million for the Department of Commerce to assist States in developing programs for the protection of threatened and endangered species

of fish, wildlife, and plants. S. 1316—Passed Senate May 25, 1977. (VV)

National Advisory Committee on Oceans and Atmosphere.—Repeals the Act of August 16, 1971, which established a National Advisory Committee on Oceans and Atmosphere and establishes a new and smaller National Advisory Committee on Oceans and Atmosphere (NACOA) to replace it, consisting of 15 members (which is reduced from 25 in the original act) appointed by the President for staggered 3-year terms; sets more stringent qualifications for membership; provides for the transfer of the personnel, positions, records, and unexpended funds to the new Committee; directs the Committee to undertake a continuing review of national ocean policy (on a selective basis), coastal zone management, and the status of U.S. marine and atmospheric science and service programs and advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration; requires the Committee to submit a report by June 30 of each year to the President and Congress and such other reports as may from time to time be requested; gives the Secretary of Commerce 60 days (instead of 90 days) to review and comment on the annual report; directs the Secretary to provide administrative support and services to the Committee; and authorizes \$480,000 for fiscal year 1978. H.R. 3849—Passed House May 16, 1977; Passed Senate amended May 23, 1977. (VV)

EPA authorization.—Extends through fiscal year 1978 the authorization for the environmental research and development program conducted by the Environmental Protection Agency. S. 1417—Senate passed May 27, 1977. (VV)

Noise control.—Authorizes \$10.9 million for general technical assistance, regulatory and administrative responsibilities under section 19 of the Noise Control Act of 1972 and \$2.1 million for research and development for fiscal year 1978. S. 1511—Passed Senate May 18, 1977. (VV)

Safe drinking water.—Amends the Safe Drinking Water Act of 1974 to extend through fiscal year 1978 the following authorizations which expire on September 30, 1977: \$17 million for technical information and training, \$20.5 million for State water supply supervision programs, \$6 million for State underground injection control program, \$25 million for technology demonstration grants, and \$16 million for research and development activities; and requires the Administrator of the Environmental Protection Agency to make grants under section 1444(c) of the Act which authorizes funding of projects demonstrating technology for cycling waste waters for drinking purposes. S. 1528—Passed Senate May 24, 1977. (VV)

Sea grant program.—Extends for 2 years, through fiscal 1979, the authorization for the national sea grant program as follows: \$50 million annually for the basic sea grant projects, and \$3 million annually for international cooperation assistance. H.R. 4301—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

#### FISHERIES

Atlantic tunas.—Extends for an additional 3 years, until 1980, the Atlantic Tunas Convention Act of 1975 which implemented an international convention governing fishing for tuna and tuna-like fishes in the Atlantic Ocean and authorizes therefor such sums as necessary; and redefines the term "fishery zone" to mean the 200-mile fishery zone described in Public Law 94-265. H.R. 6205—Public Law 95—, approved 1977. (VV)

Commercial fisheries.—Extends the Commercial Fisheries Research and Development Act for 2 years, through fiscal 1980, and increases the annual authorization for fiscal year 1978 and the two subsequent years as

follows: \$10 million for section 4(a) general programs (increased from \$5 million); \$3 million for section 4(b) which provides funds on an emergency basis if there is a commercial fishery disaster or serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes (increased from \$1.5 million); and \$500,000 for the section 4(c) program of grants to develop new commercial fisheries (increased from \$100,000). H.R. 6206—Passed House May 10, 1977; Passed Senate amended May 17, 1977. (VV)

Fishery conservation zone transition.—Gives Congressional approval of the fishery agreements between the United States and the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic; provides that these agreements will enter into force on the date of enactment of this joint resolution; waives the 60-day Congressional review period; limits to 7 days the 45 day period for review and comment on application permits required of the Regional Fishery Management Councils created under the Fishery Conservation Zone Act during 1977 for those applications received by the Council on or before the date of enactment and those received by the Council from the Secretary of State after the date of enactment to provide for an orderly transition from the 12 mile to 200 mile fishing limit; waives, until May 1, 1977, the requirement that foreign fishing vessels have a valid permit on board and permits the Secretary to waive the fee required before fishing permits may be issued if he is satisfied that the foreign nation will pay the fee before May 1, 1977; and repeals, effective March 1, 1977, the Northwest Atlantic Fisheries Act of 1950. H.J. Res. 240—Public Law 95-6, approved February 21, 1977. (VV)

Gives Congressional approval of the fishery agreements between the United States and Spain, Japan, South Korea, and the countries of the European Economic Community (Iceland, France, Italy, Luxembourg, the United Kingdom, Denmark, Belgium, West Germany, and the Netherlands); contains essentially the same provisions as H.J. Res. 2440 (Public Law 95-240) to provide for an orderly implementation of foreign fishing within the 200-mile fishery zone of the United States after March 1, 1977, including the 7-day period of comment by the Fishery Management Councils and the public with respect to applications for permits, the May 1 extension of time for the payment of fees and permit requirements, and waives the 60-day Congressional review period. H.R. 3753—Public Law, 95-8, approved March 3, 1977. (VV)

Fishermen's protection reimbursement program.—Extends the provisions of the Fishermen's Protective Act of 1967 which expires October 1, 1977, to October 1, 1979; establishes a Federal Government loan program whereby the Secretary of Commerce may make a loan after October 1, 1977, to the owner or operator of any U.S. vessel to replace or repair vessels or gear lost, damaged, or destroyed by any foreign vessel; conditions loans upon assignment to the Secretary of all rights of recovery and directs the Secretary, with the assistance of the Attorney General, to take appropriate actions to collect on any right assigned to him; cancels repayment of a loan if it is determined that the owner or operator was not at fault; and provides that loans may be granted for any damage which occurred after October 1, 1976. S. 1184—Passed Senate May 24, 1977. (VV)

#### GENERAL GOVERNMENT

Age discrimination report.—Nutrition programs for elderly.—Amends the Age Discrimination Act of 1975 to extend for 6 months,

until November 1977, the time in which the U.S. Commission on Civil Rights must submit its report on unreasonable discrimination based on age in programs and activities receiving Federal financial assistance; and

Amends the Older Americans Act to extend the surplus commodities provision of the title VIII nutrition program for the elderly through fiscal year 1978 in order that it will coincide with the authorization period of the other programs of the act; and gives States the option to receive cash in lieu of such commodities. H.R. 6668—Passed House May 9, 1977; Passed Senate amended May 18, 1977. (VV)

Federal assistance program information.—Increases the availability of information about Federal domestic assistance programs by requiring the Director of the Office of Management and Budget (OMB) to: (1) establish and maintain a data base containing specified information on all Federal domestic assistance programs; (2) develop and maintain a computerized information system to provide for the widespread availability of information contained in the data base by computer terminal facilities; and (3) publish annually a catalog of Federal domestic assistance programs containing information from the data base, a detailed index and any other information deemed appropriate; authorizes therefor \$1.2 million for the first year; \$1.7 million the second year and \$2.2 million the third year;

Amends section 201 of the Intergovernmental Cooperation Act of 1968 to give OMB the responsibility to insure that information is provided to the States through their Governors or designated information centers on Federal financial assistance; requires the Director to report his recommendations to Congress for improving, consolidating and further developing Federal financial information systems; and requires the General Accounting Office to submit a report to Congress 1 year after enactment on actions taken by OMB to implement this act and, within 2 years of enactment, a progress report including an evaluation of its effectiveness and any legislative recommendations. S. 904—Passed Senate May 17, 1977. (VV)

GAO audits of IRS and ATF.—Amends the General Accounting and Auditing Act of 1950 to provide that the General Accounting Office may conduct management and financial audits of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms; contains provisions to insure the confidentiality of information including Congressional oversight and penalties for unauthorized disclosure; and requires the Comptroller General to submit to the Senate Finance and Governmental Affairs Committees, the House Ways and Means and Government Operations Committees, and the Joint Committee on Taxation, every six months, the names and titles of GAO employees having access to tax returns and information; to submit as frequently as possible results of the audit; and to submit annually a report of his findings and recommendations which must also include the procedures established for protecting the confidentiality of tax return information and the scope and subject matter of the audit. S. 213—Passed Senate March 11 1977. (VV)

Kennedy Center authorization.—Authorizes \$4.7 million for the John F. Kennedy Center for the Performing Arts, to remain available until expended, for the Secretary of the Interior, acting through the National Park Service, to correct leaks in the roof, terraces, kitchen, and East Plaza Drive and the damage which has resulted from these leaks; and authorizes \$4 million for fiscal year 1978; S. 521—Passed Senate February 24, 1977; Passed House amended March 4, 1977; Senate agreed to conference report May 27, 1977. (VV)

**Kennedy Presidential Library.**—Authorizes the Administrator of General Services to accept land, buildings, and equipment that have been or may be offered to the United States without reimbursement, for the purpose of maintaining, operating and protecting as part of the National Archives system a Presidential archival depository located next to the University of Massachusetts campus on Columbia Point in Boston in memory of John Fitzgerald Kennedy. H.J. Res. 424—Public Law 95—, approved 1977. (VV)

**Library services and construction.**—Extends through October 1, 1982, and revises the Library Services and Construction Act; retains current use and allocation of funds but adds a provision to direct one-half of the funds after the appropriation level of \$80 million is reached (current funding level is \$56.9 million) to urban resource libraries, which are defined as public libraries in incorporated areas with populations exceeding 100,000; provides that any State that does not have an incorporated area with at least 100,000 persons will nevertheless be considered to have at least one urban resource library; adds a new title to the Act which provides special aid to and study of urban libraries; authorizes funds for projects to make libraries more energy efficient; and contains other provisions. S. 602—Passed Senate May 20, 1977. (VV)

**NASA authorization.**—Authorizes \$4,038,789,000 for the National Aeronautics and Space Administration for fiscal year 1978 of which \$4.04 billion is for research and development, \$161.8 million is for the construction of facilities, and \$846,989 million is for research program and management; includes funds to support the following new programs: (1) 5 space shuttle orbiters, (2) development of the shuttle-launched space telescope for research in astronomy, (3) a third generation earth resources survey spacecraft, Landsat-D, to carry an advanced scanning instrument, (4) initiation of a search and rescue satellite system in cooperation with Canada, and (5) initiation of a Jupiter orbiter probe mission; provides continued funding of the Space Shuttle; and includes the second funding increment for a fuel efficient aircraft technology development program designed to decrease fuel consumption of commercial jet transports by 50 percent. H.R. 4088—Passed House March 17, 1977; Passed Senate amended May 13, 1977. (VV)

**National Science Foundation authorization.**—Authorizes \$894.0 million for fiscal year 1978 and \$1,051.4 million for fiscal year 1979 to the National Science Foundation and an additional \$5 million for fiscal 1978 and \$8 million for fiscal 1979 in foreign currencies which the Treasury Department determines to be in excess to the normal requirements of the U.S.; specifies amounts to be spent for programs to support minorities, women and handicapped persons in scientific fields, graduate fellowships, continuing education for scientists and engineers, "Science for Citizens" and "Public Understanding of Science" programs which are designed to improve public understanding of public policy issues involving science and technology, and a study to assess the science education in two-year colleges; and contains other provisions. H.R. 4991—Passed House March 24, 1977; Passed Senate amended May 5, 1977; in conference. (VV)

**Presidential reorganization authority.**—Extends for three years from the date of enactment, the authority of the President under chapter 9, title 5, U.S.C., to submit reorganization plans to Congress proposing the reorganization of agencies in the executive branch; expresses Congressional

intent that the President provide appropriate means for public involvement in reorganization; requires that the President, on a continuing basis, examine the organization of all agencies of the executive branch and determine what changes are necessary to accomplish the purpose of the statute;

Provides that reorganization plans may: create new agencies, transfer or consolidate the whole or part of agencies or their functions to other agencies, abolish all or part of the functions of an agency except any enforcement function or statutory program, change the name of an agency, authorize an agency official to delegate any of his functions, and provide that the head of an agency be an individual, commission or board with a fixed term not to exceed 4 years;

Requires that each plan be based upon a Presidential finding stated in a message to Congress that the proposed action is necessary to accomplish one or more of the purposes of the statute; requires that the message specify, with respect to each plan, the reduction of or increase in expenditures likely to result from the plan, as well as any improvements in the effectiveness or efficiency of the government anticipated as a result of the plan;

Prohibits the use of reorganization authority to: create a new executive department, abolish an executive department or an independent regulatory agency, abolish any function mandated by Congress through statutes, increase the term of an office beyond that provided by law, create new functions not authorized by pre-existing statutes, or continue a function beyond the period authorized by law;

Requires the President to submit each plan, which must deal with only one logically consistent subject matter, to both Houses of Congress simultaneously for referral to the Senate Governmental Affairs Committee and the House Government Operations Committee; requires the Chairman of the respective committee to introduce a disapproval resolution whenever a reorganization plan is submitted to assure that there will be a resolution for the Committee to act on and to report either favorably or unfavorably a disapproval resolution for each proposed plan; provides that plans shall become law at the end of 60 calendar days of continuous session of the Congress or if specified, at a later date, unless either House passes a resolution of disapproval or prior to that time if both Houses defeat a disapproval resolution; requires the committees in both Houses to file recommendations on each plan with the full House within 45 days and provides, if the committee has not done so, the resolution will automatically be discharged from further consideration and placed on the calendar; specifies that no more than three reorganization plans may be pending in the Congress at any one time;

Allows the President to (1) amend a plan within the first 30 days after submission if neither committee has ordered reported a disapproval resolution or made any other recommendations on the plan, or (2) withdrawn a plan at any time prior to the conclusion of the 60 day period;

Provides that any member may move to proceed to consider a disapproval resolution once it has been reported or discharged; limits to 10 hours floor debate on a disapproval resolution and on appeals and motions made in connection therewith, and makes motions to postpone consideration or amend the resolution out of order;

Provides that suits brought against an agency affected by a reorganization plan, or regulations or other actions taken by an agency under a function affected by the plan shall not abate as a result of the plan, ex-

cept in the case where the function is abolished; specifies that plans may provide for the transfer or other disposition of affected records, property, and personnel, and for the transfer of unexpended appropriations if the funds will be used for their original purpose; and requires that unexpended funds revert to the U.S. Treasury. S. 626—Public Law 95-17, approved April 6, 1977. (40)

**Privacy Protection Study Commission extension.**—Extends the life of the Privacy Protection Study Commission from July 10, 1977, to September 30, 1977, to provide additional time for the printing of a set of appendix volumes for its final report. S. 1443—Public Law 95—, approved 1977. (VV)

**Smithsonian Institution—Canal Zone biological area.**—Increases from \$350,000 to \$750,000 the annual authorization for the Canal Zone Biological Area (the Barro Colorado Island Facility of the Tropical Research Institute of the Smithsonian Institution). S. 1031—Passed Senate May 2, 1977. (VV)

#### GOVERNMENT EMPLOYEES—FEDERAL OFFICIALS

**Federal salary increases.**—Denies the October 1 cost-of-living increase to Members of Congress, the Supreme Court Justices and other members of the Judiciary, Cabinet officials, and top Executive personnel who received the March 1 quadrennial pay increase under which salaries were increased as follows: Members of Congress from \$44,600 to \$57,000; Cabinet officers from \$63,000 to \$66,000; the Vice President, Speaker, and Chief Justice from \$65,000 to \$75,000; the President Pro Tempore and Majority and Minority Leaders from \$52,000 to \$65,000; circuit court judges from \$44,600 to \$57,500; district judges from \$42,000 to \$54,500; sub-cabinet assistants from \$44,600 to \$57,500; and other top Federal personnel from \$42,000 to \$52,000. S. 964—Passed Senate March 10, 1977 (44)

**Secret Service protection of former Federal officials.**—Authorizes the Secret Service to continue to furnish protection to certain former Federal officials (Secretaries Kissinger and Simon and Vice President Rockefeller) or members of their immediate families who received such protection immediately preceding January 20, 1977, if the President determines that they may be in significant danger, and provides that such protection shall continue for a period determined by the President but not beyond July 20, 1977, unless otherwise permitted by law. S.J. Res. 12—Public Law 95-1, approved January 19, 1977. (VV)

#### HEALTH

**Public health programs—biomedical research.**—Extends through fiscal year 1978, without major substantive modifications, the assistance programs under the Community Mental Retardation and Community Mental Health Centers Act and the programs under the Public Health Service Act, including biomedical research; computes the authorizations for these programs generally on a formula of the higher of the fiscal 1977 authorization or the fiscal 1977 appropriation plus 20 percent;

Establishes five supergrade positions for the National Institute of Alcohol Abuse and Alcoholism in order to attract highly qualified senior level scientific personnel; increases the number of National Cancer Institute consultants from 100 to 200; authorizes the Secretary of Health, Education and Welfare to develop minimum public health standards to maintain preventive health care programs; directs the Secretary to arrange for studies of international health issues and opportunities and to submit a final report by January 1, 1978; authorizes an additional \$185 million to enable the Secretary to make grants for construction and modernization projects to assist public hos-

pitals to meet life and safety codes and avoid loss of accreditation;

Amends the Health Profession Educational Assistance Act to provide for equity in student loan programs, scholarship programs, and payback provisions for medical students within the National Health Service Corps (NHSC) who had made commitments under previous legislation; assures that all physicians graduating from medical schools accredited by the Liaison Committee on Medical Education are treated equally; provides that individuals with obligated service to the NHSC may participate in residency training programs as officers in the regular or reserve corps of the Public Health Service prior to fulfilling the obligated service in an underserved area; permits an area Health Education Center to conduct training in general pediatrics as well as in family medicine and general internal medicine; allows the Secretary to repay, in return for service in a health manpower shortage area, educational loans obtained by health professions students before October 12, 1976; guarantees that students who graduated from two year U.S. medical schools will be treated the same as U.S. students who completed 2 years at a foreign medical school when transferring to degree-granting institutions; authorizes construction assistance for the establishment or expansion of regional health professions programs; and amends the Public Health Service Act to conform certain provisions of the student loan program with those in the NHSC;

Increases to \$399,864,200 the authorization for the maternal and child health grant programs under the Social Security Act and extends through fiscal 1980 the authority for 100 percent Federal financing of medicare skilled nursing and intermediate care facility inspection and enforcement costs; extends the Committee on Mental Health and Illness of the Elderly for 1 month, until August 30, 1977, to coordinate its actions and recommendations with the Presidential Commission on Mental Health; provides that States shall not receive less than their 1976 formula grant allotments under the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act; and authorizes \$140 million for preventive family planning project grants and \$5 million for the Sudden Infant Death Syndrome Counseling and Information Services. H.R. 4975—Passed House March 31, 1977; Passed Senate amended May 4, 1977; Senate requested conference May 4, 1977. (131).

#### HOUSING

Supplemental housing authorizations.—Authorizes additional funds for housing assistance for lower income Americans in fiscal year 1977; extends the riot insurance and crime insurance programs; and establishes a National Commission on Neighborhoods;

Increases, in title I, the authorization for section 8 rental assistance; the major housing program for lower income Americans, by \$378 million for a total of \$1,228,050,000; increases operating subsidy funds for public housing projects by \$19.6 million to pay for this winter's unexpectedly high heating costs; extends the contract period for new, privately developed section 8 housing from 20 to 30 years in order to attract more private financing; authorizes such appropriations as may be necessary for reimbursement of the FHA general insurance fund for losses on the sale of foreclosed properties from the FHA inventory; contains a \$10 million increase for a total of \$15 million for the HUD urban homesteading program as a means of attracting additional rehabilitation funds into neighborhoods and disposing of the HUD inventory of foreclosed properties; increases from \$500 million to \$1.341

billion the ceiling for losses incurred by the Federal Housing Administration General Insurance Fund; extends HUD's authority to write crime insurance and riot reinsurance policies through September 30, 1978, and authorizes continuation of policies in force before April 30, 1978, through September 30, 1981; extends from April 30, 1978, to September 30, 1978, the date that the Secretary must submit a plan for the liquidation and termination of these programs; deletes the requirement whereby mortgages may be insured under section 220 of the National Housing Act only if the property is located in an area which has a workable program for community development; makes clear that mortgages insured under section 221(d)(4) of the Act may be executed by a mortgagee which is a public body or agency, or a cooperative, limited dividend corporation or other entity, private nonprofit corporation or association, as well as a profit motivated entity, as defined by the Secretary; and

Authorizes, in title II, \$1 million for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs having an impact on neighborhoods and make recommendations regarding investments in city neighborhoods, community government participation, economically and socially diverse neighborhoods, rental housing, and rehabilitation of existing structures, among other issues. H.R. 3843—Public Law 95-24, approved April 30, 1977. (VV)

#### INDIANS

American Indian Policy Review Commission.—Extends from February 18, 1977, to May 18, 1977, the period of time in which the American Indian Policy Review Commission must submit its final report to the Congress and increases the authorization therefor from \$2.5 million to \$2.6 million. S.J. Res. 10—Public Law 95-5, approved February 17, 1977. (VV)

Indian Claims.—Extends the statute of limitation for filing land claims by Indian tribes, bands and groups. S. 1377—Passed Senate May 27, 1977. (VV)

Sioux Black Hills claim.—Authorizes the U.S. court of Claims to review, without regard to the technical of res judicata or collateral estoppel the determination of the Indian Claims Commission entered February 14, 1974; that the act of February 28, 1877, effected a taking of the Black Hills portion of the Great Sioux Reservation in violation of the fifth amendment. S. 833—Passed Senate May 3, 1977. (VV)

Wichita tribal land claim.—Authorizes the Indian Claims Commission to consider claims by the Wichita Indian Tribe and affiliated bands with respect to aboriginal title to lands which were acquired by the United States without payment of adequate compensation. S. 773—Passed Senate May 5, 1977. (VV)

Zuni lands.—Directs the Secretary of the Interior to acquire through purchase, trade or otherwise the 618.41 acres in the State of New Mexico upon which the Zuni Salt Lake is located and hold such land in trust for the Zuni Indian Tribe; confers jurisdiction upon the Court of Claims to hear and determine an aboriginal land claim that the Tribe failed to file with the Indian Claims Commission under the Act of August 13, 1946, which established that forum; and authorizes the Tribe to purchase and exchange lands in the States of New Mexico and Arizona notwithstanding the restrictions in the act of May 25, 1918, expressly prohibiting further expansion of Indian reservations in these States. S. 482—Passed Senate May 3, 1977. (VV)

#### INTERNATIONAL

Abu Daoud.—States as a sense of the Senate that the release by France of Abu Daoud, a known terrorist who is accused of having planned the murder of Olympic athletes in Munich in 1972, is harmful to the effort of the community of nations to stamp out international terrorism; further states that the United States should consult promptly with France and other friendly nations to seek ways to prevent a recurrence of a situation in which a terrorist leader is released from detention without facing criminal charges in a court of law; and directs the Secretary of the Senate to provide a copy of this resolution to the Secretary of State for transmission to the Government of France. S. Res. 48—Senate agreed to January 26, 1977. (13)

Harp seal killings.—Urges the Canadian Government to reassess its present policy of permitting the killing of newborn harp seals in Canadian waters which is considered by many citizens of the U.S. to be cruel and, if continued at the current high level, may cause the extinction of that species of seal. H. Con. Res. 142—Action complete April 6, 1977. (VV) to amended March 31, 1977. (VV)

International cooperation on nuclear proliferation.—Commends the President for his stated intentions to give diplomatic priority to the pursuit of nonproliferation measures; endorses and strongly supports active consultations with world leaders on the highest level to: (1) curb the spread of nuclear enrichment and reprocessing facilities and otherwise discourage the diversion of nuclear energy from peaceful uses to nuclear weapons or other nuclear explosive devices, (2) achieve universal acceptance of international safeguards on all peaceful nuclear activities, as well as to seek international cooperation to improve the packaging and handling of high-level wastes and to provide for international storage of plutonium, spent reactor fuel, and other sensitive nuclear materials, (3) explore possible international arrangements for the provision of nuclear fuel services to help meet the legitimate energy needs of cooperating states, (4) reach agreement on sanctions to be applied against any nation which seeks to acquire a nuclear explosives option, and (5) strengthen the safeguards of the International Atomic Energy Agency; and pledges prompt Senate action on legislation to enact a clear statement of goals for U.S. nonproliferation policy providing guidance and support to these Presidential diplomatic initiatives, and to establish a clear statutory framework for the development and implementation of U.S. nuclear export policy. S. Res. 94—Senate agreed to April 28, 1977. (VV)

Peace Corps authorization.—Authorizes \$84.8 million to finance the operation of the Peace Corps for fiscal year 1978 and \$1 million for increases in salary, retirement, or other employee benefits authorized by law. S. 1235—Passed Senate May 26, 1977. (VV)

Portugal military assistance.—Modifies the existing statutory limitations on the allocation of military assistance funds for fiscal year 1977 contained in section 504(a)(1) of the Foreign Assistance Act of 1961, as amended, to add Portugal to the list of eligible countries and specify that \$32.25 million be allocated to that country to upgrade its armed forces which were debilitated as a result of prolonged colonial wars in Africa. S. 489—Public Law 95-23, approved April 30, 1977. (VV)

Rhodesian chrome.—Amends the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome by nullifying the effect of Section 203 (the so-called Byrd amendment) of the Armed Forces Appropriations Act of 1972, Public Law 92-

156, which permitted the importation into the United States of chromium and other strategic minerals from Rhodesia, despite mandatory U.N. sanctions against trade with that country which the United States supported by its vote in the United Nations Security Council and by Executive Order 11419; prohibits the importation into the United States of Rhodesian commodities and products as specified in that Executive Order, of July 29, 1968, as well as steel mill products containing Rhodesian chromium in any form, establishes an enforcement mechanism which requires a certificate of origin for these products confirming that they do not contain chromium from Rhodesia; and authorizes the President to suspend the act if he determines that it would encourage meaningful negotiations and further the peaceful transfer of government from minority to majority rule in Rhodesia. H.R. 1746—Public Law 95-12, approved March 18, 1977. (59)

Romanian earthquake.—States as a sense of the Senate that the United States should join with other nations and international, public, and private organizations to assist the people of Romania following the 1977 earthquake; and expresses deepest sympathy to the victims and their families on behalf of the people of the United States. S. Con. Res. 12—Action complete March 17, 1977. (VV)

Romanian earthquake authorization.—Authorizes \$20 million to the President for fiscal year 1977, to remain available until expended, for the relief and rehabilitation of refugees and other earthquake victims in Romania; requires the President to transmit a report to the Foreign Relations Committees of the Senate and House 60 days after enactment and quarterly thereafter on the obligation of authorized funds; and states that nothing in this act shall be interpreted as endorsing any measure undertaken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki Declaration) Final Act and the United Nations Declaration on Human Rights or as constituting a precedent for or commitment to provide development assistance to Romania and requires that the Romanian Government be so notified. H.R. 5717—Public Law 95-21, approved April 18, 1977. (VV)

Soviet expulsion of George A. Krinsky.—States as a sense of the Senate that: (1) the Soviet expulsion of Associated Press reporter George A. Krinsky is contrary to the spirit of the Helsinki Declaration respecting the rights of journalists; (2) the decision serves only to obstruct the implementation of the free flow of information provisions contained in the Declaration; (3) the action only invites and justifies steps of a reciprocal nature by the U.S. Government; and (4) the U.S. and Soviet Governments should seek greater communication in this area to prevent similar events of a counter-productive nature from occurring in the future; and directs the Secretary of the Senate to transmit a copy of this resolution to the President for the Department of State to convey directly to General Secretary Leonid Brezhnev of the Central Committee of the Soviet Communist Party. S. Res. 81—Senate agreed to March 4, 1977. (VV)

Soviet freedom of emigration.—Conveys to the Soviet Government the sustained interest of the American people regarding Soviet adherence to the Helsinki Declaration, including their pledge to facilitate freer movement of people, expedite the reunification of families, and uphold the general freedom to leave one's country. S. Con. Res. 7—Action complete March 22, 1977. (39)

State Department supplemental authorization.—Provides a supplemental authorization of \$89.5 million for the Department of

State for fiscal year 1977 as follows: (1) \$60 million to pay U.S. dues and assessments to UNESCO for 1975 and 1976, in arrears because of Congressional action suspending further payments until the President certified that UNESCO's policies were in line with its objectives and less political, and part of the 1977 assessment, (2) \$11,325,000 for aid to Soviet and East European refugees not settling in Israel and \$7.4 million for the Indochinese Refugee Program administered by the United Nations High Commissioner for Refugees to continue U.S. support of 80,000 refugees in Thailand who arrived from Vietnam, Cambodia and Laos in 1975, and (3) \$10,775,000 to provide for the construction of 108 apartment units for the U.S. mission in Cairo—36 for the State Department and 72 for AID; authorizes the Secretary to use appropriated funds to provide emergency medical attention, dietary supplements, and other assistance to U.S. citizens incarcerated abroad; requires that the Chairman or Vice-Chairman of the Senate and House delegations to the four interparliamentary union groups (Canada-U.S., Mexico-U.S., North Atlantic Assembly, and Interparliamentary Union) be a member of their respective foreign affairs committee; increases from 18 to 24 the size of the delegation to the North Atlantic Assembly and specifies that no more than 7 of the Senate Members be of the same political party; and amends Public Law 94-203 (known as the Case Act which requires the Secretary of State to transmit the text of any international agreement entered into force with respect to the United States) to require any department or agency entering into an international agreement on behalf of the United States to transmit the text of the agreement to the Department of State within 20 days following the date on which the agreement was signed. H.R. 5040—Public Law 95- , approved 1977. (VV)

Uganda human rights.—Expresses the sense of the Senate that the actions of the current regime in Uganda violating the human rights of its citizens and residents deserve condemnation by the world community and by the Organization of African Unity; urges all nations supplying lethal arms to Uganda to halt all deliveries of weapons; and urges the U.S. Ambassador to the United Nations to request that the situation in Uganda be investigated by an appropriate agency in the United Nations. S. Res. 175—Senate agreed to May 25, 1977. (VV)

Vietnam POW's and MIA's.—Directs the President, as Commander in Chief of the Armed Forces, to require an accounting of all military personnel presently categorized on personnel rosters of the various branches of the U.S. Armed Forces as prisoner of war, missing in action, or killed in action in Southeast Asia; directs the President, by executive order, to require the Secretary of State to pursue enforcement of the Paris agreement of January 27, 1973; states that the Congress, having passed Public Law 88-408 authorizing the deployment of U.S. Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding duty and obligation to determine the fate of missing or unaccounted for Americans; requires that the President, through the Secretary of State, hold the Democratic Republic of Vietnam and the Provisional Revolutionary Government of the Republic of South Vietnam responsible to account for and provide information not otherwise available to satisfactorily dispose of the POW/MIA problem in accordance with the Paris agreement or seek alternatives that might resolve the question; and requires responsible officeholders in the executive and legislative branches to address the authority of their office toward a satisfactory resolution of the problem, make a public accounting,

and remove any question as to the integrity of their function. S. Con. Res. 2—Senate agreed to February 21, 1977. (VV)

States as a sense of the Congress that the honor of those Americans who upheld the dignity of the law and served in the U.S. Armed Forces should be reaffirmed and that the Government should do everything possible to address the problems of those who served during the Vietnam war; and urges that there be established, in view of the recent issuance of a general pardon for U.S. draft evaders of the Vietnam war era, a Presidential Task Force on Missing in Action and Prisoners of War to purpose courses of action to achieve the fullest possible account for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning Federal policies relating to POW's and MIA's. S. Con. Res. 3—Senate agreed to February 21, 1977. (VV)

#### MEMORIALS, TRIBUTES AND MEDALS

Alex Haley.—Honors and pays tribute to Alex Haley for his exceptional achievement in writing *Roots* and extends to him the highest praise of the Senate. S. Res. 112—Senate agreed to March 14, 1977. (VV)

Charles A. Lindbergh.—Honors Charles A. Lindbergh for his service to our country in peace and war, and expresses appreciation for his leadership and advocacy in the conservation of natural resources and for his daring and courageous contributions to the field of aviation and aeronautical science. S. Res. 177—Senate agreed to May 19, 1977. (VV)

Cora Rubin Lane 100th birthday.—Expresses the gratitude and appreciation of the Senate to Cora Rubin Lane for her long and outstanding service as an assistant to Senator William E. Borah and expresses best wishes to her on the occasion of her 100th birthday. S. Res. 162—Senate agreed to May 3, 1977. (VV)

Francis R. Valeo.—Commends Francis R. Valeo for his long, faithful and exemplary service as an employee of the Senate and his ten years of service as Secretary of the Senate. S. Res. 133—Senate agreed to April 1, 1977. (VV)

Gerald R. Ford Building.—Names the Federal building located at 110 Michigan Avenue, N.W., in Grand Rapids, Mich., the "Gerald R. Ford Building". S. 385—Public Law 95-25, approved May 4, 1977. (VV)

Jaycees International Conference.—Commends the "Old Sourdough Jaycees" of Anchorage, Alaska, the U.S. Jaycees, and the Jaycee International for bringing together Jaycee leaders around the world who have contributed to the betterment of mankind. S. Res. 137—Senate agreed to April 6, 1977. (VV)

Lt. Gen. Ira C. Eaker Medal.—Authorizes the President to present, on behalf of the Congress, to Lieutenant General Ira C. Eaker, U.S.A.F. (retired), a gold medal of appropriate design in recognition of his distinguished career as an aviation pioneer and Air Force leader; provides a \$5,000 authorization therefor; and authorizes the Secretary of the Treasury to have duplicate medals struck in bronze and sold at cost. S. 425—Passed Senate May 13, 1977. (VV)

Marian Anderson Medal.—Authorizes the President to award to Marian Anderson, in the name of the Congress, a gold medal with suitable emblems and inscriptions in recognition of her highly distinguished and impressive career; provides that bronze duplicates of the medal shall be coined and sold under regulations prescribed by the Secretary of the Treasury; and authorizes therefor \$2,500. H.J. Res. 132—Public Law 95-9, approved March 9, 1977. (VV)

Motion Picture Academy 50th anniversary.—Congratulates the Academy of Motion Picture Arts and Sciences for its past achievements on the occasion of its 50th anniversary

on May 11 and extends best wishes for the future. S. Res. 168—Senate agreed to May 11, 1977. (VV)

Philip A. Hart, death of.—Expresses the sorrow of the Senate over the death of Senator Philip A. Hart, of Michigan. S. Res. 15—Senate agreed to January 4, 1977. (VV)

President and Mrs. Ford.—Congratulates and commends President and Mrs. Ford on their exemplary conduct as President and first lady and for their dedicated public service to the Nation during their entire career of public service. S. Res. 22—Senate agreed to January 10, 1977. (VV)

President Ford.—Commends President Ford for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 38—Senate agreed to January 18, 1977. (VV)

President-elect Carter.—Extends best wishes to President-elect Jimmy Carter and to all those who will serve in his administration. S. Res. 23—Senate agreed to January 10, 1977. (VV)

St. Patrick's parish anniversary.—Commemorates the people of St. Patrick's Parish, in Pottsville, Pennsylvania, who this year are celebrating the 150th anniversary of the founding of the parish. S. Res. 116—Senate agreed to March 17, 1977. (VV)

Vice President Rockefeller.—Commends Vice President Rockefeller for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 37—Senate agreed to January 18, 1977. (VV)

William O. Douglas.—Dedicates the canal and towpath of the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas; directs the Secretary of the Interior to provide the necessary identification to inform the public of the contributions of Justice Douglas and to erect and maintain within the exterior boundaries of the Park an appropriate memorial; and authorizes such sums as necessary to carry out the act. S. 776—Public Law 95-11, approved March 15, 1977. (VV)

#### NATURAL RESOURCES—NATIONAL HISTORIC SITES

Eleanor Roosevelt national historic site.—Authorizes the Secretary of the Interior to establish 175 acres, including the Val-Kill estate in Hyde Park, New York, as the Eleanor Roosevelt National Historic Site to commemorate the life of Eleanor Roosevelt as well as provide a location for the conduct of studies and seminars relating to the issues with which she was concerned. H.R. 5562—Public Law 95—, approved, 1977. (VV)

Land and Water Conservation Fund.—Amends the Land and Water Conservation Fund Act of 1965 to establish a special account for use in acquiring the backlog of lands previously authorized for inclusion in the national park system and certain similar Federal areas; increases the authorized level of the fund from \$600 million to \$900 million in fiscal year 1978 and from \$750 million to \$900 million in fiscal 1979 with the additional \$450 million to be credited to the special account and to remain available until appropriated; provides that prior acquisition ceiling limitations on authorized areas may be exceeded in any one fiscal year by up to \$1 million or 10 percent of the statutory limitation, whichever is greater; gives the Secretary the authority to make boundary revisions under specified conditions; and permits preacquisition work such as title searches, mapping, and other preliminary work which does not interfere with the rights of private landowners if Congressional authorization appears to be imminent. H.R. 5306—Public Law 95—, approved 1977. (VV)

Reclamation projects.—Authorizes \$31,050,000 for fiscal year 1978 for continuing construction of the distribution system and

drains of the San Luis Unit, Central Valley project, California; and provides for the establishment of a task force to review the management, organization and operation of the Unit and to report to Congress by January 1, 1978, the results of an examination of certain specified issues. H.R. 4390—Public Law 95—, approved—1977. (VV)

Water resources development.—Authorizes appropriations for rivers and harbors works of the Corps of Engineers for flood control, navigation, water supply, and other purposes for fiscal year 1978. H.R. 6752—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

Water Resources Development—Saline Water Conservation.—Authorizes general water resources research; repeals the Water Resources Act of 1964 and replaces it with similar, but stronger and more comprehensive language; authorizes maintenance of State water institutes, which were established under the old Act; continues support of non-academic water resource research centers; expands the saline water program and reestablishes many of the provisions of the expired Saline Water Conservation Act of 1971; redirects and strengthens saline water conversion programs which are developing technology to help states expand available water supplies. H.R. 4746—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

#### WILDERNESS AREAS STUDIES

Montana wilderness.—Directs the Secretary of Agriculture to study 9 areas of land totaling approximately 973,000 acres located within the following National Forests in Montana to determine their suitability for designation as wilderness under the provisions of the Wilderness Act of 1964: Beaverbrook National Forest—West Pioneer Wilderness and Taylor-Hillard Wilderness; Bitterroot National Forest—Bluejoint Wilderness and Sapphire Wilderness; Kootenia National Forest—Ten Lakes Wilderness and Mt. Henry Wilderness; Lewis and Clark National Forest—Middle Ford Judith Wilderness and Big Snowies Wilderness; and Gallatin National Forest—Hyalite-Porcupine-Buffalo Horn Wilderness; requires the Secretary to complete the studies and report his findings to the President within 5 years of enactment who is to submit his recommendations with respect thereto to the Congress within 7 years of enactment; and directs the Secretary to administer the areas so as not to diminish their presently existing wilderness character and potential until Congress determines otherwise. S. 393—Passed Senate May 18, 1977.

Wildlife refuges.—Extends through fiscal year 1980 the authorization for the acquisition and development of the San Francisco Bay National Wildlife Refuge in California (consisting of approximately 21,000 acres), the Tinicum National Environmental Center in Pennsylvania (consisting of approximately 1,200 acres), and the Great Dismal Swamp National Wildlife Refuge in Virginia (consisting of approximately 107,360 acres). H.R. 5493—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

#### NOMINATIONS

##### (Action by Rollcall vote)

Griffin B. Bell, of Georgia, to be Attorney General.—Nomination confirmed January 25, 1977. (10)

Joseph A. Califano, Jr., of the District of Columbia, to be Secretary of Health, Education, and Welfare.—Nominations confirmed January 24, 1977. (7)

Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General.—Nomination confirmed April 5, 1977. (99)

Ray Marshall, of Texas, to be Secretary of Labor.—Nomination confirmed January 26, 1977. (12)

Andrew J. Young, of Georgia, to be U.S. Representative to the United Nations.—Nomination confirmed January 26, 1977. (14)

Paul C. Warnke, of the District of Columbia, for rank of Ambassador for SALT negotiations and to be Director of the Arms Control and Disarmament Agency.—Nominations confirmed March 9, 1977. (41 and 42)

#### PROCLAMATIONS

American Business Day.—Designates May 13 of each year as "American Business Day." S.J. Res. 40—Passed Senate April 27, 1977. (VV)

Grandparents Day.—Designate the first Sunday of September of each year as "Grandparents Day." S.J. Res. 24—Passed Senate May 16, 1977. (VV)

#### SENATE

Commission on the Operation of the Senate.—Extends for an additional 30 days, until April 1, 1977, the Commission on the Operation of the Senate. S. Res. 93—Senate agreed to February 24, 1977. (VV)

Committee reorganization.—Amends the Standing Rules of the Senate to reorder and rationalize the jurisdictions of Senate committees, effective February 11, 1976, among 15 standing committees and 6 other special, select or joint committees; abolishes the Aeronautical and Space Sciences Committee and transfers its jurisdiction to a newly created Committee on Commerce, Science, and Transportation; abolishes the District of Columbia Committee and the Committee on Post Office and Civil Service and transfers their jurisdictions to a newly created Committee on Governmental Affairs; transfers the jurisdiction of the former Interior Committee to an Energy and Natural Resources Committee; transfers the jurisdiction of the former Public Works Committee into a new Environment and Public Works Committee; transfers the jurisdiction of the former Labor and Public Welfare Committee to a new Human Resources Committee; continues the existence of the Special Committee on Aging with membership reduced to 9 in the next Congress; continues the existence of the Select Committee on Nutrition and Human Needs until December 31, 1977, after which its jurisdiction will be transferred to the Committee on Agriculture, Nutrition and Forestry; establishes a temporary Select Committee on Indian Affairs to consider all legislation relating to Indians for the duration of the 95th Congress after which its jurisdiction will be transferred to the Human Resources Committee;

Limits the number of committee and subcommittee memberships a Senator can hold generally to two major or class "A" committees and one class "B" committee and eight subcommittees thereof; prohibits committees and eight subcommittees thereof; prohibits committees from establishing subunits other than subcommittees; permits the Majority and Minority Leaders to temporarily increase the sizes of committees to ensure majority party control; allows Senators to serve on joint committees where such service is required to be from members of a committee on which such Senator serves; prohibits Rules Committee members from serving on any joint committee unless the Senate members of such committees are required by law to be from the Rules Committee; exempts members of the Budget Committee during the 94th Congress from certain assignment limitations during the 95th Congress; continues grandfather rights for Senators who are serving on three standing committees as a result of an exemption in the Legislative Reorganization Act of 1970 to continue to do so during the 95th Congress; allows the chairmen and ranking minority members of the Post Office and Civil Service Committee and the District of Columbia Committee to serve on the Governmental Affairs Committee and two other committees of the same class, as long as their service on Governmental Affairs remains continuous; prohibits a Senator from serv-

ing as Chairman of more than one standing, select, special, or joint committee unless the jurisdiction is directly related to that of the standing committee he chairs; prohibits Senators from serving as chairman of more than one subcommittee of each standing, select, special or joint committee; limits members to two class A committee or subcommittee chairmanships and one class B committee or subcommittee chairmanship, effective at the beginning of the 96th Congress; requires that not later than July 1, 1977, the appropriate standing committees shall report legislation terminating the statutory authority of the Joint Committee on Atomic Energy, on Congressional Operations and on Defense Production; requires that the appropriate standing committees report recommendations not later than July 1, 1977, with respect to the Joint Committees on the Library and on Printing; allows Senators to serve on joint committees considered for termination pending final disposition of the issue;

Provides for sequential and joint referral of bills that cross jurisdictional lines based on motions by the Majority and Minority Leaders, instead of by unanimous consent; provides for a computerized schedule of committee meetings by the Rules Committee; permits committees to meet without special leave until the conclusion of the first 2 hours of a meeting of the Senate or 2:00 p.m., except for the Appropriations and Budget Committees which may meet at any time without special consent; requires that morning meetings of committees and subcommittees be scheduled for one or both of two periods, one ending at 11:00 a.m. and a second beginning at 11:00 a.m. and ending at 2:00 p.m.; provides for continuous review of the committee system by the Rules Committee in consultation with the Majority and Minority Leaders; prohibits consideration of committee amendments to bills when the amendments are not in the jurisdiction of the committee proposing them; requires committee reports to contain an evaluation of the regulatory impact which would be incurred by individuals and businesses in carrying out the provisions of the bill; provides for the transition of staff from abolished or realigned committees to the new committees and provides for salary and tenure of committee staff during a transition period; provides that committee staff reflect the relative numbers of majority and minority members and that one-third of the committee staffing funds be allocated to the minority members for compensation of minority staff; provides that such adjustment be made over a four-year period beginning July 1, 1977, with not less than one-half being made in 2 years; provides for funding of increases in the expenditures of new committees resulting from this resolution; incorporates provisions of S. Res. 60 of the 94th Congress relating to individuals appointed by Senators to assist them with committee work; provides for the referral of measures according to the realigned jurisdictions; and provides that legal references to old committees are to be construed as referring to their successors. S. Res. 4—Senate agreed to February 4, 1977. (36)

Deputy President pro tempore.—Establishes, effective January 5, 1977, the Office of Deputy President Pro Tempore which shall be held by any Senator who is a former President or Vice President of the United States; authorizes the President Pro Tempore and the Deputy President Pro Tempore each to appoint an administrative assistant, a legislative assistant and an executive secretary; authorizes the Sergeant at Arms to provide and maintain an automobile for use by the Deputy President Pro Tempore and to employ a driver-messenger; and authorizes the Secretaries of the Conferences of the Ma-

jority and Minority each to appoint two staff assistants in each office. S. Res. 17—Senate agreed to January 10, 1977. (VV)

Names Hubert H. Humphrey of Minnesota Deputy President Pro Tempore of the Senate, effective January 5, 1977. S. Res. 27—Senate agreed to January 11, 1977. (VV)

Senate Ethics Code.—Amends the Standing Rules of the Senate to create a Code of Official Conduct; amends Senate Resolution 338, the original resolution establishing the Select Committee on Ethics, to provide for additional procedures for enforcing the new Code as well as other laws and rules of the Senate; and directs other Senate committees to study certain matters related to this resolution;

Public Financial Disclosure.—Requires Senators, candidates for the Senate, officers and employees of the Senate earning in excess of \$25,000 per year to file a report listing their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

Gifts.—Prohibits knowingly accepting a gift or gifts having an aggregate value of over \$100 during a year from any individual or organization defined as having a "direct interest in legislation;"

Outside Earned Income.—Limits outside earned income of a Senator, officer or employee earning over \$35,000 to 15 percent of the person's salary; limits each honorarium to \$1,000 for Senators and to \$300 for officers and employees; allows Senators or staff to accept honoraria up to \$25,000 if immediately donated to a tax-exempt charity;

Conflict of Interest.—Bars the use of one's official position to introduce or aid the progress of legislation the principal purpose of which furthers one's own financial interest; allows Members or staff who earn over \$25,000 to provide professional services for compensation if not affiliated with a firm or association and if their work is not carried out during regular Senate office hours; directs committee employees earning over \$25,000 to divest themselves of any holdings which may be directly affected by the actions of the Committee for which they work unless permitted by their supervisor and the Ethics Committee; prohibits Senators from lobbying the Senate for one year after leaving the Senate; applies a similar prohibition to employees lobbying the Committee or office for which they worked;

Unofficial Office Accounts.—Abolishes unofficial office accounts, those accounts defined as not including personal funds of a member, official funds, political funds and reimbursements;

Foreign Travel.—Prohibits "lame duck" travel by a defeated or retiring member; prohibits receipt of counterpart funds where there has been reimbursement from another source; restricts per diem allowance to food, lodging and related expenses and places the responsibility on the person receiving the per diem to return any unused funds;

Franking Privilege—Radio-TV Studio—Senate Computer.—Prohibits mass mailings and the use of the radio-TV studios within 60 days of an election; requires the use of official funds to purchase paper, to print, and prepare mass mailings under the frank; requires a Senator to register mass mailings annually for public inspection; prohibits the use of the Senate computer to store names identified as campaign workers;

Political Activity by Officers and Employees.—Restates the present ban on staff soliciting or receiving campaign contributions; allows a Senator to name one assistant each in his Washington and State office to receive and handle campaign funds;

Discriminatory Employment Practices.—Prohibits discrimination on the basis of race, color, religion, sex, national origin, or state

of physical handicap in employment practices in the Senate;

Enforcement.—Sets forth procedures for the Select Committee on Ethics in investigating complaints of violation of the Code and enforcing its provisions;

Further Studies.—Requires the Appropriations Committee to report within 120 days regarding an adjustment of official allowances; requires the Finance Committee to report within 120 days on the tax status of funds raised and expended to defray ordinary and necessary expenses of Members; directs the Rules Committee (1) to report within 120 days on the desirability of promulgating rules providing for: (a) periodic audits by GAO of all committee and office accounts; (b) a centralized recordkeeping system of accounts, allowances, expenditures and travel expenses of all committees and offices; (c) suggested accounting procedures for committee and office accounts; and (d) public disclosure and availability of information on the accounts of all committees and offices in a form which segregates the allowances and expenses of each committee and office; (2) to report within 120 days on the desirability of requiring that only official Senate funds may be used to pay for any expenses incurred by a Senator in the use of the radio-TV studios; and (3) to study laws relating to contributions made by officers or employees as well as on proposals to prohibit the misuse of official staff in election campaigns and report thereon within 180 days; requires the Governmental Affairs Committee to report (1) within 180 days regarding employee discrimination complaints and the desirability of establishing rules requiring "blind trusts" by members, officers and employees of Senate and (2) within 120 days regarding the use of simplified form of address for franked mail; and directs the Foreign Relations Committee to report in 90 days on the problem of travel, lodging and other related expenses provided members and staff paid for by foreign governments where it is not possible to procure transportation, lodging or other related services or to reimburse the foreign government for those purposes. S. Res. 110—Senate agreed to April 1, 1977. (94)

Special Committee on Official Conduct.—Establishes a temporary Special Committee on Official Conduct composed of fifteen members appointed by the President pro tempore of the Senate (eight appointed upon the recommendation of the majority leader and seven upon the recommendation of the minority leader, with the chairman designated by the majority leader and the vice chairman by the minority members) to conduct a complete study of all matters relating to standards of conduct of Members, officers and employees of the Senate in the performance of their official duties including standards for: (1) annual public disclosure of income, assets, debts, gifts, and other financial items; (2) restrictions on the elimination of, outside income from honoraria, legal fees, gifts and other sources of financial or in-kind remuneration; (3) conflicts of interest arising out of investments in securities, commodities, real estate, or other sources; (4) office accounts, and excess campaign contributions; (5) Senate travel; and (6) engaging in business, professional activities, employment, or other remunerative activities, so as to avoid any conflict with the conscientious performance of official duties; requires the Committee to submit a report of its findings by March 1, 1977, together with a resolution setting forth, by way of proposed amendments to the Standing Rules of the Senate, a Code of Official Conduct for Members, officers, and employees of the Senate;

Provides that on March 1, 1977, after the conclusion of routine morning business, the resolution shall become the pending busi-

ness of the Senate under a 50 hour time limitation with a 2 hour time limitation on amendments thereto and 1 hour on amendments in the second degree, debatable motions or appeals; provides that amendments not germane to the bill will not be received; states that motions to limit debate are not debatable and that motions to table or recommit are out of order;

Authorizes the Committee to utilize the facilities and services of the staff of any other committee and provides that expenses of the Committee shall be paid from the contingent fund of the Senate. S. Res. 36—Senate agreed to January 18, 1977. **NOTE:** (On March 3, 1977, the Senate, by unanimous consent, extended until midnight, March 7, 1977, the time for the Committee to file its report and provided that the leadership may call the resolution up on March 8, 1977, or any time thereafter.) (VV)

Teamsters pension fund.—Authorizes the Committee on Human Resources to inspect and receive any tax return, return information, or other tax related matter held by the Secretary of Treasury with respect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any related matter which the committee demonstrates, to the satisfaction of the Secretary, contains or may contain information directly relating to its study and oversight proceedings. S. Res. 139—Senate agreed to April 22, 1977. (VV)

#### TAXATION

Sick pay exclusion.—Delays for one year, to taxable years beginning after December 31, 1976, the changes made by the Tax Reform Act of 1976 with regard to the exclusion of "sick pay" from income; makes a similar delay of the effective date of the provisions regarding the tax treatment of income earned abroad by U.S. citizens; modifies the withholding requirement enacted in the 1976 Tax Reform Act on proceeds of wagers placed in parimutuel pools with respect to horse races, dog races, and Jai Alai requiring a 20 percent withholding tax on winnings of \$1,000 or more only if the odds are 300 to one or more; extends for one year the provisions of the Internal Revenue Code to allow State legislators to treat their place of residence within their legislative district as their tax home for purposes of computing the deduction for living expenses; and waives the interest and penalties with regard to certain errors regarding underpayments of estimated tax and withholding that might be made in the tax returns for 1976. H.R. 1828—Passed House April 4, 1977; Passed Senate amended April 6, 1977; House agreed to Senate amendments with amendment which omitted the provisions regarding the treatment of income earned abroad by U.S. citizens April 6, 1977; Senate requested conference April 19, 1977; (100) (**NOTE:** Provisions included Tax Reduction and Simplification which became Public Law 95- ).

Tax reduction and simplification.—Amends the Internal Revenue Code of 1954 to extend the individual and business income tax reductions enacted in 1975 and to provide tax simplification as follows:

Standard Deduction and Tax Simplification.—Permanently changes the standard deduction to \$2,200 for single returns and heads of households and \$3,200 for joint returns; revises the tax tables to simplify tax computation for 96 percent of all taxpayers by building into the tax tables the personal exemption, the general tax credit, and the standard deduction;

Individual and Corporate Tax Reductions.—Extends through 1978 the general tax credit of \$35 per person or 2 percent of the first \$9,000 of taxable income, whichever is larger; extends the earned income credit equal to 10 percent of the first \$4,000 of earned income which is phased out as income rises from \$4,000 to \$8,000;

Extends through 1978 the corporate tax cuts, enacted in 1975 and subsequently extended, which reduced the tax rate on the initial \$25,000 of corporate taxable income from 22 percent to 20 percent and reduced the rate on the next \$25,000 from 48 to 22 percent;

Filing Requirements and Withholding Changes.—Increases the income level at which a tax return must be filed from \$2,450 to \$2,950 for a single person and a head of household and from \$3,600 to \$4,700 for a joint return; requires modification of the withholding rates to reflect the changed standard deduction;

New Jobs Credit.—Provides a new jobs tax credit for 1977 and 1978 equal to 50 percent of the increase in each employer's wage base under the Federal Unemployment Tax Act (FUTA) above 102 percent of that wage base in the previous year; reduces the employer's deduction for wages by the amount of the credit, thereby reducing the maximum gross credit for each new employee from \$2,100 to \$1,806; limits the credit to no more than: (1) 50 percent of the increase in total wages paid by the employer for the year above 105 percent of total wages in the previous year; (2) 25 percent of the current year's FUTA wages; (3) \$100,000 per employer; and (4) the taxpayer's tax liability with provision of carrying back credit for 3 years and carrying forward credit for 7 years; provides an additional 10 percent nonincremental credit for hiring the handicapped, including handicapped veterans, who have received vocational training;

Postponement of Changes in 1976 Act.—Postpones for one year the effective date of revisions made by the Tax Reform Act of 1976 in the tax treatment of sick pay and income earned abroad; relieves individual taxpayers for periods prior to April 16, 1977, and corporations for period prior to March 16, 1977, from additions to tax and interest arising from changes in the tax law made applicable to 1976 by the 1976 Act; relieves employers from penalties for under withholding in 1976 on remuneration which became taxable prior to January 1, 1976, as a result of the 1976 Act; lifts the exclusive use of the test in the 1976 Act for business deductions for the use of the home for day care services for children, handicapped individuals and the elderly and limits such deductible expense; extends for 1976 the election to treat a State legislator's place of residence within the legislative district he represents as his tax home for purposes of determining deductions for travel and expenses;

Minimum Tax on Intangible Drilling Costs.—Provides for taxable years beginning in 1977 that intangible drilling costs incurred in oil and gas production operations are to be subject to the minimum tax to the extent that these expenses exceed oil and gas production income;

Charitable Contributions of Conservation Easements.—Extends through June 13, 1981 the period during which deductions are allowable for charitable contributions of remainder interests in real property exclusively for conservation purposes as well as the period during which deductions are allowable for charitable contributions exclusively for conservation purposes of easements with respect to real property, if the easement is perpetual;

Work Incentive (WIN) Program.—Authorizes an additional \$435 million in each of fiscal years 1978 and 1979 for employment and supportive services for welfare recipients with no requirement for State matching funds;

Child Care Facilities Amortization.—Extends through 1981 the 5-year amortization provision for expenditures relating to child care facilities for children of the taxpayer's employees;

Retirement Income Credit Election.—Allows taxpayers over age 65 to choose be-

tween the retirement income credit as it existed before the 1976 Act and as revised by it for 1976 taxes only;

Accrual Accounting for Farm Operations.—Postpones until 1978 the effective date for requiring accrual accounting by any farm corporation if either (a) two families own at least 65 percent of the stock, or (b) three families own at least 50 percent of the stock and substantially all of the remaining stock is owned by employees or their families;

Gambling Withholding.—Modifies the 1976 requirement for withholding on gambling winnings to provide that withholding is required on proceeds of more than \$1,000 from bets placed on parimutuel pools involving horses, dogs or jai alai but only if the amounts of the proceeds is at least 300 times as large as the amount wagered;

Extension of Countercyclical Revenue Sharing.—Extends for 6 quarters, or until national unemployment drops below 6 percent, the current countercyclical revenue sharing legislation which expires September 30, 1977 to help State and local governments maintain services; authorizes up to \$1 billion in additional funding for fiscal year 1977 for a total of \$2.25 billion; authorizes up to \$2.25 billion for FY 1978; requires that the most recent data be used in the allocation formula and that the national amount be determined on the basis of tenths of the unemployment percentage in excess of 6 percent rather than on half percentage points; provides that each tenth of a percentage point will generate \$80 million for allocation in addition to the basic \$125 million; extends the program to Guam, American Samoa, Puerto Rico and the Virgin Islands;

Other Provisions.—Amends the Social Security Act to clarify the law which provides for the garnishment of Federal payment for purposes of child support and alimony; and contains other provisions. H.R. 3477—Public Law 95-30, approved May 23, 1977. (128)

Air Transportation Subsidy.—Amends the Federal Aviation Act of 1958 to provide explicit statutory authority for the payment of "flow-through" subsidy pursuant to an experimental local air service program administered by the Civil Aeronautics Board (CAB) in cooperation with Frontier Airlines during the period August 1, 1973, through July 31, 1975. H.R. 6010—Passed House May 17, 1977; Passed Senate amended May 27, 1977. (VV)

#### TRANSPORTATION

Aircraft Registration.—Amends the Federal Aviation Act of 1958 to permit citizens of foreign countries lawfully admitted for permanent residence in the U.S. and corporations lawfully organized and doing business under U.S. or State laws to register aircraft in the United States provided that (1) the aircraft is based or primarily used in the U.S. thus enabling the Secretary of Transportation to condition registration on reasonable inspection by FAA personnel and (2) as at present, the aircraft is not registered under the laws of any foreign country. H.R. 735—Passed House February 2, 1977; Passed Senate amended May 11, 1977. (VV)

Interstate Commerce Commission Interim Regulatory Reform.—Amends the Interstate Commerce Act to authorize \$71,216,000 for fiscal year 1978, \$80,474,000 (for fiscal 1979), \$90,935,000 for fiscal year 1980 and \$102,755,000 for fiscal 1981; provides for regulatory reform of the ICC by requiring the agency to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and applying certain provisions with respect to one or more of the independent regulatory agencies and found to be both useful and practicable such as (1) timely consideration of petitions, (2) Congressional access to information, (3) avoidance of conflict of interest, (4) appoint-

ment of the chairman by the Presidency by and with the advice and consent of the Senate, and (5) Congressional oversight through the process of an authorization of appropriations not to exceed 4 years S. 1534—Passed Senate May 20, 1977 (VV)

**Maritime Authorization.**—Authorizes \$552,974,000 for programs of the Maritime Administration for fiscal year 1978 as follows: \$135,000,000 for acquisition, construction, or reconstruction of vessels and construction-differential subsidies, \$372,109,000 for payment of ship operating differential subsidies, \$20,725,000 for research and development, \$5,137,000 for the reserve fleet, \$14,633,000 for maritime training at the Merchant Marine Academy at Kings Point, N.Y., and \$5,370,000 for financial assistance to the State marine schools which includes an increased annual student subsidy from \$600 to \$1200; authorizes additional supplemental amounts to cover increases in salary, pay, retirement, or other employee benefits authorized by law and for certain expenses of the Merchant Marine Academy at Kings Point; and authorizes an additional Assistant Secretary of Commerce to be the principal advisor to the Secretary for Congressional relations. S. 1019—Passed Senate May 24, 1977. (VV)

**Rail Reorganization.**—Office of Rail Public Counsel.—Amends the Regional Rail Reorganization Act of 1973 to authorize an additional \$15 million for fiscal year 1978 to the United States Railway Association to cover litigation and other anticipated expenses involving the reorganization of the Northeast railroads, and amends the Interstate Commerce Act to authorize an additional \$2 million for the Office of Rail Public Counsel which is the statutory successor to the Office of Public Counsel of the Interstate Commerce Commission. H.R. 4049—Passed House May 3, 1977; Passed Senate amended May 23, 1977. (VV)

**Tanker Safety.**—Amends the Ports and Waterways Safety Act of 1972, which creates vessel traffic services and systems in the Nations waterways; establishes more stringent construction and maintenance standards for all tankers entering U.S. ports; provides clear authority for the Secretary of Transportation to bar substandard vessels from U.S. waters; authorizes the creation of a Marine Safety Information System to identify substandard vessels and true ownership of ships; authorizes the establishment of regulations for controlling vessel-to-vessel transfer of cargo; mandates that all self-propelled vessels of 20,000 dead-weight tons or larger carrying oil in bulk be equipped with specified safety equipment and systems by June 30, 1979, and others by June 30, 1983; creates an expanded inspection and enforcement program; authorizes the promulgation of improved manning and qualification standards; and provides for study and evaluation of shore-station monitoring systems of vessels as defined in the Fishery Conservation and Management Act of 1976. S. 682—Passed Senate May 26, 1977. (VV)

#### VETERANS

**Veterans' Care in State Homes.**—Amends title 38, U.S.C., to consolidate the construction grant-assistance programs under section 644 (for State home domiciliary and hospital facilities) and under subchapter III of chapter 81 (for State home nursing care facilities) and create new statutory authority for grants for the construction of new domiciliary facilities and the expansion of domiciliary and hospital facilities, and for initial equipment in both categories; increases to \$15 million the annual authorization for fiscal years 1978 and 1979; removes the 3-fiscal-year limitation on the availability of sums appropriated for the consolidated programs, making the funds available until expended; makes the allowable nonveteran population of a grant-assisted State nursing home domiciliary, or hospital facility 25 percent in order to make

allowance for veterans' spouses, surviving spouses, and Gold Star mothers; sets at 33½ percent the limit which any one State may receive in any year of the total amount appropriated for the program; includes domiciliary and hospital projects under the statutory nursing home program recapture provision; allows the Administrator to reduce the recapture period to less than 7 years in cases of expansion, remodeling, and alteration; limits recapture to not more than the amount of grant assistance provided for the project; repeals existing statutory authority for making grants for the remodeling of State home domiciliary and hospital facilities and governing the operation of this program; provides for an October 1, 1977, effective date with a savings provision for hospital and domiciliary grants made under the section to be repealed; and gives existing nursing home program grantees the right to obtain grant modifications consistent with the new act. H.R. 3695—Passed House April 4, 1977; Passed Senate amended May 24, 1977. (VV)

#### INDEX FOR SENATE LEGISLATIVE ACHIEVEMENTS (Prepared by Senate Democratic Policy Committee, Robert C. Byrd, Chairman)

##### AGRICULTURE

Federal Crop Insurance Capital (S. 955).  
Grain Inspection (S. 1051).  
Land and Water Resource Conservation (S. 106).  
Omnibus Farm Bill (S. 275).  
Wheat Producers Assistance (S. 650).  
Wheat Referendum (S. 1240).

##### APPROPRIATIONS

###### Fiscal 1977

Continuing (H.J. Res. 51, P.L. 95-16).  
Economic Stimulus (H.R. 4876, P.L. 95-29).  
Supplemental (H.R. 4877, P.L. 95-26).  
Urgent Disaster Supplemental (H.J. Res. 269, P.L. 95-13).  
Urgent Power Supplemental (H.J. Res. 227, P.L. 95-3).

##### ATOMIC ENERGY

Nuclear Regulatory Commission Authorization (H.R. 3733).

##### BUDGET

###### Rescissions

Helium Purchases (H.R. 3347, P.L. 95-10).  
Second Budget Rescission (H.R. 3839, P.L. 95-15).

###### Resolutions

Third Budget Resolution, 1977 (S. Con. Res. 10).  
First Budget Resolution, 1978 (S. Con. Res. 19).

##### CONGRESS

Congressional Campaign Committees Employees Retirement (S. 992).  
Joint Committee on Atomic Energy Abolishment (S. 1153).

##### CRIME-JUDICIARY

Daughters of the Confederacy Patent Renewal (S. 810).  
Jefferson F. Davis Citizenship (S.J. Res. 16).  
Mississippi Court Terms (S. 662).  
North Dakota Judicial District (S. 195).  
Omnibus Judgeships (S. 11).

##### DEFENSE

Coast Guard Authorization (H.R. 6823).  
Defense Production Extension (S. 853, P.L. 95- ).  
Military Construction Authorization (S. 1474).  
Military Enlistment and Reenlistment Bonuses (H.R. 583).  
Military Procurement Authorization (H.R. 5970).  
District of Columbia:  
D.C. Armory Board (S. 1062)  
D.C. Bonds (S. 1063)  
D.C. Reciprocal Tax Collection (S. 1103)  
George Washington University (S. 1060)

##### EDUCATION

Education of the Handicapped (H.R. 6992).  
Higher Education Technical Amendments (H.R. 6774).  
Vocational Education Amendments (H.R. 3437, P.L. 95- ).

##### ELECTIONS

Federal Election Commission Authorization (S. 1435).  
Overseas Citizens Voting Rights (S. 703).

##### EMPLOYMENT

CETA (H.R. 2992).  
Emergency Unemployment Compensation (H.R. 4800, P.L. 95-19).  
Public Works Employment (H.R. 11, P.L. 95-28).  
Youth Employment and Training (H.R. 6138).

##### ENERGY

Coal Conservation Authority (S. 1468).  
Deepwater Ports (S. 891), (H.R. 6401, P.L. 95- ).  
Department of Energy (S. 826).  
ERDA Authorization (S. 36, P.L. 95- ).  
ERDA Defense Program (S. 1339).  
ERDA Synthetic Fuel Loan Guarantee Program (S. 37).  
Natural Gas Emergency (S. 474, P.L. 95-2).  
Radiation Exposure (S. 266).  
Stripmining Control and Reclamation (H.R. 2).

##### ENVIRONMENT

Disaster Relief Programs (H.R. 6197).  
Drought Emergency Authority (S. 925, P.L. 95-18).  
Drought Emergency Relief (S. 1279, P.L. 95-31).  
Earthquake Hazards Reduction (S. 126).  
Endangered Species (S. 1316).  
EPA Authorization (S. 1417).  
National Advisory Committee on Oceans and Atmosphere (H.R. 3849).  
Noise Control (S. 1511).  
Safe Drinking Water (S. 1528).  
Sea Grant Program (H.R. 4301).

##### FISHERIES

Fishermen's Protection Reimbursement Program (S. 1184).  
Atlantic Times (H.R. 6205, P.L. 95- ).  
Commercial Fisheries (H.R. 6206).  
Fishery Conservation Zone Transition (H.J. Res. 240, P.L. 96-6), (H.R. 3753, P.L. 95-8).

##### GENERAL GOVERNMENT

Age Discrimination Report—Nutrition Program for Elderly (H.R. 6668).  
Federal Assistance Program Information (S. 904).  
GAO Audit of IRS and ATF (S. 213).  
Kennedy Center Authorization (S. 521).  
Kennedy Presidential Library (H.J. Res. 424, P.L. 95- ).  
Library Services and Construction (S. 602).  
NASA Authorization (H.R. 4088).  
National Science Foundation Authorization (H.R. 4991).

Presidential Reorganization Authority (S. 326, P.L. 95-17).  
 Privacy Protection Study Commission Extension (S. 1443, P.L. 95- ).  
 Smithsonian Institution—Canal Zone Biological Area (S. 1031).

## GOVERNMENT EMPLOYEES

Federal Salary Increases (S. 964).  
 Secret Service Protection of Former Federal Officials (S.J. Res. 12, P.L. 95-1).

## HEALTH

Public Health Programs—Biomedical Research (H.R. 4975).

## HOUSING

Supplemental Housing Authorizations (H.R. 3843, P.L. 95- ).

## INDIANS

American Indian Policy Review Commission (S.J. Res. 10, P.L. 95-5).  
 Indian Claims (S. 1377).  
 Sioux Black Hills Claim (S. 838).  
 Wichita Tribal Land Claim (S. 773).  
 Zuni Lands (S. 482).

## INTERNATIONAL

Abu Daoud (S. Res. 48).  
 Harp Seal Killings (H. Con. Res. 142).  
 International Cooperation on Nuclear Proliferation (S. Res. 94).  
 Peace Corps Authorization (S. 1235).  
 Portugal Military Assistance (S. 489, P.L. 95-23).  
 Rhodesian Chrome (H.R. 1746, P.L. 95-12).  
 Romanian Earthquake (S. Con. Res. 12).  
 Romanian Earthquake Authorization (H.R. 5717, P.L. 95-21).  
 Soviet Expulsion of George A. Krinsky (S. Res. 81).  
 Soviet Freedom of Emigration (S. Con. Res. 7).

State Department Supplemental Authorization (H.R. 5040, P.L. 95- ).  
 Uganda Human Rights (S. Res. 175).  
 Vietnam POW's and MIA's (S. Con. Res. 2), (S. Con. Res. 3).

## MEMORIALS, TRIBUTES AND MEDALS

Alex Haley (S. Res. 112).  
 Charles A. Lindbergh (S. Res. 117).  
 Cora Rubin Lane 100th Birthday (S. Res. 162).  
 Francis R. Valeo (S. Res. 133).  
 Gerald R. Ford Building (S. 385, P.L. 95-25).  
 Jaycees International Conference (S. Res. 137).  
 Lieutenant General Ira C. Eaker Medal (S. 425).  
 Marian Anderson Medal (H.J. Res. 182, P.L. 95-9).  
 Motion Picture Academy 50th Anniversary (S. Res. 168).  
 Phillip A. Hart, Death of (S. Res. 15).  
 President and Mrs. Ford (S. Res. 22).  
 President Ford (S. Res. 38).  
 President-Elect Carter (S. Res. 23).  
 St. Patrick's Parish Anniversary (S. Res. 116).  
 Vice President Rockefeller (S. Res. 37).  
 William O. Douglas (S. 776, P.L. 95-11).  
 NATURAL RESOURCES—NATIONAL HISTORIC SITES  
 Eleanor Roosevelt National Historic Site (H.R. 5562, P.L. 95- ).  
 Land and Water Conservation Fund (H.R. 5306, P.L. 95- ).  
 Reclamation Projects (H.R. 4390, P.L. 95- ).  
 Water Resources Development (H.R. 6752).  
 Water Resources Development—Saline Water Conservation (H.R. 4746).  
 Wilderness Areas Studies: Montana Wilderness (S. 393). Wildlife Refuges (H.R. 5493).

NOMINATIONS (ACTION BY ROLL CALL VOTE)  
 Griffin B. Bell to be Attorney General.  
 Joseph A. Califano, Jr., to be Secretary of HEW.  
 Peter F. Flaherty to be Deputy Attorney General.  
 Ray Marshall to be Secretary of Labor.  
 Paul C. Warnke for Rank of Ambassador for SALT Negotiations and to be Director of the Arms Control and Disarmament Agency.
